The Commissioners are to maintain and protect the forests, and through the wardens as agents they are to punish trespass; and town supervisors are made forest protectors. The Commissioners are to take measures to impart through the public schools elementary instruction upon forestry. A very important and wholesome provision relates to the precautions against forest fires to be taken by railroads passing through forest lands. The bill, on the whole, is a capital beginning, and if it becomes a law, New York State will be well started in forestry reform.

THE DEER HOUNDING BILL.

THE bill to forbid the hounding of deer in this State is still unsigned in the hands of Governor Hill. After hesitating to give it his signature, the Governor last week intimated that his objections to it referred to the clause of the bill which concerned the giving of evidence. Upon this the bill was recalled and passed a second time by the Senate and Assembly, receiving a larger vote than on its first passage. Now that it has again come to Governor Hill with the objectional portion removed, we cannot conceive any reason for this delay. The bill is what the people want. Public sentiment demands, and this with no uncertain voice, that the water butchery of deer in the North Woods be stopped. Governor Hill cannot afford to disregard this sentiment; he cannot afford to withhold his signature from the bill, not even to please the few personal friends who are seeking to influence him for their own selfish ends.

MASSACHUSETTS.—The Massachusetts Senate is considering a new game bill, of which the provisions have become by repeated amendments so vague that in the present stage it is quite impossible to forecast what the character of the several sections may be when they come up for final action. One clause provides for the posting of land, and declares that the game on such land "shall be the exclusive property of the person preserving the same." Another clause permits the snaring of ruffed grouse "by owners of land upon their land, or by any person or persons authorized by them," between certain dates. This might do for the interior of Africa, but the Massachusetts Legislators under the gilt dome ought to be heartily ashamed of it.

THE DUCK NETTING BILL.—Misled by an erroneous report from Albany last week we stated that Senator Otis's duck netting bill had passed the Assembly. On the contrary, owing to the opposition of his constituents on Long Island, Senator Otis has withdrawn his bill. So the Long Island duck netters will have things all their own way, and can play heathen a while longer.

The Sportsman Tourist.

WILD BOAR SHOOTING IN SYRIA.

ON an April morning of a year not yet attained to the rusty dignity of antiquity, a traveler might have been seen (in the language of novelists) riding along the shore at the head of the Dead Sea. By his side rode an Arab, swathed up in the lavish folds of his blanket and turban-cloth, and mounted on a miserable specimen of the equine race. But why this Arab should have thought fit to make a human chrysalis of himself in this manner is not to be explained, save by mention that it was a little way of his, for the traveler aforesaid being the present writer, he will vouch for it that the day was about as hot as the average wicked mortal could hope to experience in this world. Indeed, the tablets of his memory were so fused and blended together by the heat, that it is not altogether easy to separate and reproduce some of the incidents of that day. A fierce sun, already high overhead, blazed down upon this drear and desolate corner of the world. Gaunt hills and sterile plains of dust and sand reflected back its glare tenfold, and between the rays of one and the terrestrial oven of the other, the air danced in angry ebullition as though fretting over its futile attempts to play the role of peacemaker in the warfare above and beneath. Great fissures and cracks gaped in the sun-dried bridle path, so that the horses had to be allowed to pick their own way, which they did with many a stumble and slip suggestive of foundering like a ship at sea. Countless green, brown and bronze lizards lay basking on the blistering rocks, and startled by the clattering hoofs, would scuttle away in precipitous haste to dive down into the darkness of these cracks which filigreed the road. Stretching far away into the blue hills of Moab shone the Dead Sea, in the near waters of which could be traced the blue meandering line of the entering Jordan wandering disconsolate in the "lake of sorrows," till it spread in undefined limits, and was lost.

Most gloomy is the aspect which this tomb of the cities of the plain wears at all times, and not less now that the full noonday sun mocked with glittering its saline waters; redoubled the grimness of the bordering hills with lights and shadows, and intensified the ghostly glare of its shores, decorated with the whitened ornaments of death, withered leafless branches, camel bones and debris cast up to bleach upon these stony, colorless margins. So weird an attraction had the lake for me that I rode down to its brink, and announced to Hassan, my attendant dragoman, my intention of having a dip in it—for experience and novelty's sake. But strenuously did Hassan endeavor to dissuade me, saying, "the howaga no bathe in bad lake, or the sun hit him plenty heavy, and he then come fool," which being interpreted (Hassan's English being a little shaky) meant that a dip in these bituminous waters, combined with the heat of the sun overhead, would in all probability land me with a sunstroke. However, I insisted on having my own way, and forthwith set about putting my purpose into execution. But I confess that the game was not worth the candle, and I would not recommend invalids from any hospital, except a lunatic asylum, to "take the baths" of the Dead Sea. Water has an aggravating way of finding entrance to the bather's mouth, be he never so wary, and that of the Dead Sea has a very much more pronounced flavor than warm flat irons. I tasted it well, so I know. A faithless stone giving way under my foot precipitated my immersion, and the exclamation which involuntarily sought for expression was cut short in its career by a thorough and most disagreeable acquaintance with a taste of Sodom and Gomorrah, and to judge by the sample, I have now no doubt that the sins of those twin go-as-you-please cities had that strong odor which is said to have ascended even to the skies. You cannot sink if you try in these waters, wherefore would-be suicides had better look for some other watery grave, and the best thing you can do when you bathe in the Dead Sea is to do as I did and get out again as quickly as possible. On emerging I was a veritable pillar of salt, and long after Hassan and I had ridden back into the hills too far to look back into the hollow of the lake whereon the angry sun rained fire, I had an uneasy sensation that I was not quite so comfortable in the saddle as I had been before my dip. Nevertheless it was necessary to ride now as hard as the rough road and stumbling horses would let us if we hoped to catch up with the rest of the party, and reach our destination, Jericho, before night should overtake us.

Traveling with me at the time was my sister, and knowing that the day's journey would be long and tedious, I had arranged that she should set out early from our last resting place with our four or five Syrian servants and the baggage mules, so that the requisite pace might be easier for her. The usual midday halt was to be made at the well of Hagdar, and to this rendezvous Hassan and I now made all haste. And a welcome sight to us after our quick ride was this wayside fountain, overshadowed by a gnarled and ancient sycamore, and watched over by the spirit of the Moslem sheykh, whose white-domed tomb shone out among the neighboring rocks—a guiding landmark for all thirsty travelers in these sandy wastes. The scene had an uniqueness of its own, and with the Eastern party resting under the shade of the patriarchal tree, the horses and mules browsing on the sparse desert grass, and the sterile framework of the picture, seemed a cameo of Semitic history. One could hear in fancy the flocks of a Nathan bleating on the hillside, and see in one's mind's eye the Arab shepherds chatting round the peaceful fountain, whereto

> All the daughters of the waters
> Brought their pitchers there to fill.

Nor had we long to wait before, in some sense, we realized the traditionary imaginings of the place. Shortly after rejoining my party another cavalcade appeared, issuing from an opposite gorge in the hills, consisting of some half dozen loaded camels and a few donkeys ridden by a motley assortment of Syrians. Arrived at the well, they likewise dismounted, and after watering their beasts produced their bags of dates and bread for the noonday meal. They were a band of merchants carrying their wares to southern bazaars. At their head was a good-looking young Arab who, from the respect shown him by his fellows, was evidently a man of means, and one that "hath two coats." After the customary salams had passed between us, and we had jointly and severally wished that prosperity might wait upon each other's households, silence reigned between us for awhile. I noticed that every now and then this young trader cast furtive glances at my sister, but believing them to be partly due to astonishment that any girl should go unveiled, I was not at all prepared for the somewhat abrupt remark which suddenly broke the silence between us, nor the conversation which followed in this wise:

"What would the howaga be willing to sell her for?"

"Disappointment vex not my brother, but I could not sell her."

"I will give the howaga a camel and two donkeys for her."

"The offer is generous, but I have no wish to part with her. She is the howaga's sister."

"Tiab, but your brother is rich, and will give even two camels and a donkey for her. The offer is great."

"No, I desire not to bargain. It is impossible that she be bought."

"Does the howaga speak as a true man not wishing to sell, or even as one who desireth a large price?"

"As a man that meaneth what he hath said."

"Good."

And here our exchange of ideas relapsed into silence again, and so continued until I had once more started with my own party from the well of Hagdar, wishing that ardent youth before departing some choice and florid Syriac expressions of good will, and praying that success might follow him in all his journeyings.

This incident combines instruction with amusement or I would hasten to apologize to my reader for resting so long by the wayside when wild boar shooting is what I promised to discourse upon. But all in good time. Rests are necessary, even to the sportsman, and have I not the authority of Scott's lazy minstrel to justify me in finding that "the way was long and the wind was cold," with the slight difference that in the present case there was a most deplorable lack of wind, cold or otherwise. Yet, oh most patient reader! the longest lanes have turnings, even Syrian ones, which wind among mazes of hill and plain as though inclined to thwart the adage, and as the sunset hour approached, ourselves and jaded steeds took heart of grace to see in the distance the many tiny white-domed houses of our goal, Jericho, "the city of palm groves." Why so called I know not, for its gardens hardly justify the name, and far more apt had been the title "the city of dust, dogs and fleas." For this trio reigns supreme in the squalid huts and tortuous streets—the human burrowings of an animated dust-heap.

Of all the grimy, dirty towns that I have seen (and they are not few) commend me to Jericho, where a thorough experience may be gained of the practical working of Mohammed's tenet that for purposes of ablution dust may be used in lieu of water. Exists there not among English colloquialisms, the retort courteous to undesired company, "Oh, go to Jericho?" Such a wish is filled with all uncharitableness, and should be uttered only in dire necessity. Fearful will be the fate of him who followeth such advice and goeth there. The dust of trumpet-crumbled walls has seemingly never settled, but with the augmentations of ages drifts homelessly upon the air; ragged, hungry dogs prowl round the narrow streets seeking a precarious living on rubbish by day, and making night hideous with canine serenades; and fleas—well, this is a delicate subject, but I may suggest that it is always advisable to turn the bed clothes down before reposing, and to brush some of them out with a broom. That unregenerate traveler, who, when informed by the pastor that Noah took two and only two of every living thing into the ark with him, could not reconcile his experience of Easterns with the idea that Noah and his family had only two fleas among them, had perchance been to Jericho. A visit there would justify any scepticism on the subject.

For all which reasons and sundry others, we elected to make our camp outside the town rather than endure the manifold ills of its cabined, cribbed and confined interior. But the disposition which the dogs evinced to howl at the departing sun was proof enough to me that their welcoming of the moon would be a prolonged agony, and play havoc with the mists of Morpheus. Moreover, the heat retained by the sun-baked earth already made oppressive the evening air and warned me that sleep would be of the feverish kind this night; wherefore I cast about me for some excuse for wakefulness. There is a wondrous solace to the nerves in thwarting the enmity of circumstance, and in Mark Tapleyian mood making your desire that which you foresee Fate means to thrust upon you. So now I took occasion by the hand, and together we went forth in search of a reason for turning into a vigil a night which to all appearances was destined to be a sleepless one. Kind fortune befriending me, I had not wandered far from camp before I met a group of Syrians returning from the town to their homes in some outlying village. They were wild-looking fellows enough, clad in very dilapidated attire, and armed with heavy sticks and matchlocks. Evidently these were the indigenous sportsmen of the soil—native correspondents of a future Jerichonian FOREST AND STREAM—and to their company I accordingly betook myself for advice. In answer to my inquiries as to whether there were any hyenas about, or where I could watch for the early morning flights of geese, they either did not know or did not wish to betray their own hunting grounds, for they asserted that I should find neither of these hereabouts.

However, I was bent on hunting something, and so entered into a general sort of conversation with them, in the course of which it leaked out that in the immediate neighborhood there were plenty of wild pigs. Now, as the Moslem hates the "kanseer" with fanatical zeal (as full many a Coptic pig, whose daily existence is embittered by the beatings received from Arab children, could tell—he could hardly "unfold a tail"), and as I had an equally strong desire to wage war upon the unoffending, but nathless Koran-condemned swine, arrangements were soon made with these natives for a regular out-and-out moonlight hunt; I taking some care to promise a largely increased backsheesh if success attended on our excursion. My brave porcine conspirators told me that just before daybreak would be the best hour, and that their own party of men would be amply sufficient for all purposes, only, they added, they must first go home and procure dogs, guns, sticks, tobacco, dates, and all the paraphernalia which a Syrian considers due to the dignity of a hunting expedition. All this being agreed upon—I being in blissful ignorance of where and by what means the Jericho pig was to be lured to destruction—it was finally settled that the spokesman of the party, who seemed to be the one having authority, should come to my camp, which I pointed out to him, some hours later, and I would be ready to go with him whithersoever he listed. According with this understanding we parted for the present; they to their homes to procure all needful armament, and I to my cheery little camp, lifted up in heart, and knit to do great deeds against the "wild hog that breaketh into the vineyard by night and rooteth among the vines."

On regaining the camp, I found that the faithful Hassan had duly seen that all was in order for the night. The two tents had been pitched and the baggage stored, the beasts hobbled and turned loose upon the hillside to find their supper, while round the camp-fire were squatting in a ring the men laughing, smoking and telling those tales which Easterns, like children, are ever ready to listen to. Gradually night settled upon town and camp, a moon, half waned, rose bright above the shadowy hills, and countless stars peeped down through the cracks of the great black sky. One by one the figures at the smouldering fire crept noiselessly away to wrap themselves in their camel-hair rugs, and sleep till the sun's warmth should awake them, and no sounds disturbed the universal peace save the subdued murmur of the two watchmen at the fire, the plaintive cries of those aerial elfs of darkness—bats, and the occasional yelping of some prowling dog which lifted up its voice and wept exceedingly. How I longed for those quiet hours to pass, as I sat before my tent weaving in my mind the warp and woof and weft of many useless theories, and wondering where could be my ciceronian sportsman who should lead me forth to a new experience in hunting. Tediously the minutes went by, until I almost feared that he might have forgotten his promise except for a knowledge of the magnetic power of "backsheesh," and an inward consciousness that the kettle of time, even like unto other kettles, boils slowly when watched.

But more punctually than my expectancies gave him credit for, my cicero appeared at last. Emerging from the shade of a sont-tree a muffled figure walked softly up to the watchmen by the fire, and saying something which distance rendered unintelligible, received an answer and came on toward me. "Is that Salami?" (the name he had given me). "Yes; is the howaga ready?" "Quite;" and telling him not to talk until we should be beyond hearing of the sleepers, I picked up my rifle and cartridge case and together we walked forth into the quiet gully lying below the town. There is always to my mind something strangely uncanny in the ways of moonlight, and weird was this walk of mine with my silent companion trudging on ahead. I was in no mood for talking, my thoughts being filled with the twisted fancies betaught of those air-sprites who whisper their secrets to mortals at such times, and, as I stumbled and groped my way among the rocks and hollows of the moon-checkered path, hobgoblins and gnomes haunted the no-man's land which lay among the light and shadow draperies of the ground, and danced and vanished at my feet. Now and then some sudden word of warning from my guide would jar upon my reveries, or a knock against some harder stone than usual recall me to a world more tangible than that of dreams, but otherwise the night was spectral and the stillness of the air seemed the deeper when, in contrast to its silence, some owl, startled from its prey, sped away into the dark with a ghostly shriek, or a village dog whined piteously its woes to a sleeping world.

Steadfastly on kept the muffled figure before me, and closely I followed. All villages we had seemingly left behind, and to judge by the roughness of the path, and the dim outlines of the hills around us, we were in some wild and lonely gorge to the south of Jericho. Where was this strange guide leading me to, who spoke not, turned not, rested not, but hidden in the copious folds of his cloak which must have been handed down through many generations of prophets, so ragged and time-worn was it, held on the even tenor of his way? Was it quite well, I wondered, to trust too much to him when I had other cares than myself to attend to? I began almost to doubt his good faith, and whether I ought to proceed any further, so stepping up to his side, I asked him how far had we yet to go before reaching our destination. "Can the howaga see down in the hollow a clump of trees? Those trees stand at the mouth of the valley where we will hunt the kanseer, and the men and dogs are awaiting us there." All right, thought I, we will humor your little ways as far as the trees at least, and on we went as before, he leading in eloquent silence, and I following and wondering divers things. A little more stumbling over stones which looked shadows, and treading on shadows which looked like stones, with oftimes a sad shock to the nervous system, and we arrived at the clump of sont-trees which Salami had pointed out.

Whether the men were there or not, I could not at first see, but as for the matter of dogs his statement was promptly and thoroughly justified. No sooner had we clambered up the hillock whereon was the rendezvous, and taken on us the semblance of mortal visitors, than a pack of every kind and colored quadruped, which by distant relationship with canine ancestors could call itself a dog, came rushing down the slope at us and commenced sniffing and snarling and growling in most unwelcome unison. Big dogs and little dogs; shaggy-coated and smooth-coated; dark, light, medium, parti-colored beasts; puppies and patriarchs, all were here. This, if you please, was the Jerichonian idea of the necessary dog element in a wild boar hunt. Obviously the members had been gathered from the highways and hedges, and apparently seemed accustomed to such calls of emergency. Obedience they appeared to owe to no one in particular, but consistently played the role of jovial freebooters on their own account, tempered by a due respect for flying stones and uplifted sticks; and it occurred to me that if they worried the kanseer with half the zeal they worried me there was every prospect of my getting a shot at the Eastern piggy.

Among the trees were five or six dusky sportsmen awaiting our arrival, carefully muffled up like my guide to guard against the chills of the night air. Two of them were armed with long Bedouin matchlocks, the muzzles of which I took care to shun as a Hottentot is said to shun his mother-in-law, and the rest carried the "nebut" or thick quarter-staff which all Syrians and Arabs possess.

All things being now considered ready, my guide, philosopher and friend commenced to marshal his forces into working order. It appeared that the *modus operandi* of betraying the Jericho pig was to be in this wise. From our tree-crowned hillock a narrow valley led westward, which, at a short distance beyond its neck, bifurcated into three divisions, wherein the wild boar held nocturnal revelry. The plan was for the entire party of men and dogs to start from the far end of each of these radiating valleys in succession, and spreading over the hillsides drive before them the game, whose haunts they thus purposed so unceremoniously to disturb. Meanwhile I was to be conducted to some hiding place at the joint entrance of these valleys, and from my vantage ground stop any porcine rambler that fortune should send me. All this appeared to be simplicity itself, and on my acquiescing to the arrangement, everybody forthwith proceeded to put his own part of the performance into execution. With a rush and a tumble the dogs vanished into the dark as if anxious for the fun to begin, and the men, shouldering their matchlocks and nebuts, started off in an apparently different direction to that destined for their energies—a fact which my faithful Arab explained to be necessary in order to

enable them to reach the head of the valleys by a round-about route, so as not to disturb the animals to no purpose.

As soon as they were all lost to sight, Salami and I set forth upon our travels again. By this time some experience had made me clever in frustrating the ill designing traps of the road, and as the men and dogs had yet far to go before reaching their working ground, and dawn was still lingering somewhere down in Persia, hurry was out of the question. But steadily on kept this involved guide of mine, nor made the way short by being other than silent company. Happily we had not far to go, for I was beginning to grow something weary of communing only with stars and earth, and it was not an unwelcome sight, therefore, to see Salami suddenly pull up in his impetuous career, and hear him greet me with the announcement that we had at last reached our lair. He had stopped at a ruined well, long since barren as the hills around, whose envious enmity had choked its thirsty throat with wind-drifted sand and splinters from their overhanging crags. Its crumbling walls of brickwork promised, however, the needful screen, and so into the tumbling remnant of "better days" we clambered, and built ourselves rude chairs from stones whereon the pitchers of Leahs and Rachels had perchance one time rested.

Here then amid these weird surroundings were we to keep our midnight vigil. And a lonely and silent vigil it was too, for the sense of the glen's solitude was appalling, and our murmured conversation sounded like sacrilege to its silence. How slowly the minutes seemed to pass. Time, who dies all too readily in his natural death, makes a brave fight against his would-be killer, and when weary of watching you nod, tilts the run-out hour glass up again. So it was with me, and I was trying inanely to answer self-invented mental riddles, when suddenly Salami aroused my dormant faculties by saying, "Listen, howaga." I could hear nothing and told him so. "The howaga had better be ready, Salami can hear the dogs." I needed no second advice, but from my ruined well eagerly listened for the sounds which my keen companion heard, and strained my eyes peering forth into the dark, but could hear nothing and only make out the dim outlines of the three valleys, and some hundred yards of moon-checkered, rock-bestrewn ground around me. However, my hopes were awakened now, and I kept open ears and eyes, until presently a long, deep baying sounded down the glen—then silence again. Five minutes more and a distant babel of shouts and barking sets the wild echoes flying, growing subdued once more, to break forth in fitful yells and yelps. Nothing moving; oh for the eyes of an owl or the vision of an Oberon! Salami is by my side searching the shadows, as quiet as the stone he leans against. How fast the air sleeps. "Ah, Salami, what's that, a rock? see it moves; no, it's down again; what is it, a shadow?" Suddenly it moves. A grunt, another, "Aiwah, aiwah, kanseer;" up goes the rifle—bang, and the shadow tumbles from a ledge into the moonlight, where it moves a moment and then is still, while far up into every cave and hollow of the hills the startled silence hurries off in rumbling echoes.

Then follows quiet, broken by the occasional cries of the men and dogs who are out upon the hillsides, and for awhile nothing visits our lurking place. My companion is gazing away from the place from whence the boars should come, and whispers that he heard a stone fall among the others in that quarter. Can he make out anything? No, not for certain; but in the dark shadow underneath that big rock there lies a darker. Can I see it? Which rock; point it out! "There, there; quick, howaga, the smaller shadow is creeping off." Ye gods of daylight, roll your sun here a moment, for my eyes are mortal and I cannot see the quarry caught in this tangled web of black and silver. Is it yet there? Yes, and motionless again. Now, hold your arm out in the direction—what, in that big shadow shaped like a camel? His answer is drowned by a furious barking on the distant hills, and in a moment that camel's neck has left the body and is up and trotting across the glen, all innocent of our biding so near. Suspense proves itself bad for the nerves, for my hand shakes as I fire, and I hear the thud of the bullet striking on a rock in front of the runaway. For an instant the hog comes to a standstill, uncertain of the whereabouts of the danger so rudely announced, and I see his ugly tusks glisten in the moonlight, but apparently deciding that he had best flee from the dogs on the hill, he gives an angry grunt and comes briskly down the glen toward the well. This makes it difficult to see him clearly among the rocks, but chancing the second barrel at what I take to be his shoulder, down on his knees he topples. He is only wounded it seems, however, for staggering to his short legs, he savagely grunts and looks round him for an enemy. His small dark eyes glitter like glow worms in the sand, when he turns his shaggy head to me, and presage ill-luck for us should he discover our whereabout, before we are ready. Bah, why won't the empty cartridge case come out, hasty fingers make least speed. There, it's out at last, and two others in. As I close the rifle breech he hears the click, and turning his fierce head sharply toward us, rushes forward with a quavering uncertain gait, straight for our low mud wall. Now for a steady and cool hand, for those tusks look better white than red, and two's company and three's none, even in a ruined fountain. Into the shade, into the light; over the rock, and down the path; seventy paces, fifty, thirty, bang, and with a tottering rush he falls, rises, and falls as quiet as his shroud of shadow.

After this incident quiet again reigns for a time. Once or twice we think we hear the expostulations of retreating kanseers, and the sounds of trotting feet among the stones; but distance and darkness (for the moon has well nigh disappeared) screen their protegés faithfully. The cries of the men and dogs seem to come from the third and last valley, but they are so varying and will-o'-the-wisp-like, that we cannot be certain even of this. Dawn should be breaking soon, for the air bites shrewdly with that eager nippingness which heralds morning on the desert, and which so troubled Hamlet on the turret walls of Elsinore. I hope that this deserted well is not the home of some eastern ghost, to appear and say in sepulchral tones, "follow me"; no Undine protectoress of the glen to arise in misty draperies and carry me off to those fair watery palaces of Gothic myth. Perhaps at another time I could reconcile myself to the latter fate, but just now I have other business in hand—business which surely a golden-tressed, blue-eyed nymph can take no heed of, nor for which she could upbraid me. If she spoke at all, it should be like the lispings of some falling fountain that—why! what a voice she has; listen Salami, for all the world it's like the squeaking of young pigs, clamoring because—"kawam, howaga, kanseer"—ah! reveries, there you go again; it is pigs that I hear, thank Juno, and not Undine, and the faithful Salami has got hold of a considerable portion of my arm under the impression that it's my coat, and is wildly persuading me to be ready. Ready! I should think I was; just hear those squealers, there must be a whole family of them. It's so dark that I can barely see sixty yards ahead in the gloom, but Salami and I are all ears and eyes. What a commotion the frightened little ones are making, and how angry the old mother is, to judge by the deep grunts with which she chides her offspring every now and then. They ought to be in sight in a moment—yes, there they are, one big black object and six or seven lesser black objects, hurrying down the glen to the encouraging strain of a running full-choral ditty. It would be a misfortune to waste a shot, yet I dread to risk losing the chance they are giving me, so up goes my rifle, a moment more and —no, gallantry forbids, and the old lady passes on all unconscious of her danger. Not so her eldest son, for youthful piggy will be welcome in to-morrow's camp, and with a mild utterance of reproof he falls to the first barrel. Then such a rush and skurry and *sauve qui peut*. The members of the family being divided in council flee pell mell in every direction, the mother disappearing up the slope of the hill grunting anxiously to her scattered litter, and the little ones answering her from all quarters with frightened squeaks and porcine sobs. But no longer can they say that "we are seven," for near the dead body of the elder brother lies another pathetic little corpse beyond the need of squeaking, a victim to the second barrel. Poor betrayed animals! ill-starred innocents! forgive a Herod whose camp is hungry.

Their deaths was the last this night. Slowly the black sky grew lighter, the stars faded, and across the east crept the streak of gray which the Arabs call the "wolf's tail" or "false dawn," and which precedes the real eastern sunrise. This disappeared for another spell of darkness, to be succeeded by the breaking of the true morning in all its Syrian colors, tinting the desert hills with golds and reds, binding the shades of night in sunlight; and the horses of Apollo shake from their manes the day which rouses the birds, and sends them crying through the air, to wake the sleepy world.

No more we dream amid the ruins of a Syrian well. Men, dogs and day have joined us again, and while these allies retrieve the slain, Salami shall lead us back to camp where rest will be welcome to reader and J. B. A.

DUKTECH, Scotland.

Natural History.

THE BIRDS OF MICHIGAN.

BY DR. MORRIS GIBBS.

(Continued.)

32. *Protonotaria citrea* (Bodd.) Baird.—Prothonotary warbler.

A rare accidental straggler, only mentioned by one authority in the State. I have never met with it and consider it as merely an accidental visitor.

33. *Helminthotherus vermivorus* (Gmel.) Salo. and Godm. Worm-eating warbler.

First embraced by D. D. Hughes in 1868, who mentions it as taken by a Mr. Hurd in June of that year. A. H. Boies, in his "Birds of Southern Michigan," 1875, which in fact is a list only of the birds of the southern counties of the Lower Peninsula, and not of the entire southern peninsula, as one would infer, says of this species: "Summer sojourner; breeds." Mr. Boies's inference that the species breed is undoubtedly drawn from his knowledge of the fact that the birds are found during the summer, for as yet no one has offered observations of the nesting habits of this species. A. B. Covert, in a list of the birds of Michigan, 1878 (?), published in the FOREST AND STREAM, includes this bird and gives it as an accidental visitor. No other collector has as yet reported the worm-eating warbler, and we may consider it as a rare bird in Michigan, rarely, if ever, taken north of 42° north latitude.

34. *Helminthophaga pinus* (Linn.) Brd.—Blue-winged yellow warbler.

A bird of local distribution, but not common in any section. Given as rare by all the lists at hand, excepting one. Jerome Trombley, of Monroe county, gives this bird as a transient and very rare. He resides in the extreme southeastern corner of the State, while Mr. Boies, living one hundred miles west of him, reports it as a summer sojourner. It may be called a rare bird in Michigan, and I prefer to think that it rarely goes north of 44°. It has been secured but once in Kalamazoo county, about 42°. It is a species which will undoubtedly appear in greater numbers as the country develops, more common at present in certain localities than is generally supposed, but has been overlooked by the collectors.

35. *Helminthophaga chrysoptera* (Linn.) Baird.—Golden-winged warbler.

Our most common representative of the genus, and the only one as yet known to nest with us. Abundant during May, June and July north of 42°, and very common north of 44°. Reported from the southern counties, but is not as frequent during summer as further north. A beautiful and very interesting species known to nearly all collectors in the Southern Peninsula, but not as yet reported from the northern, although undoubtedly a visitor to that region.

I have known it to appear as early as April 26, while one season it did not reach us until May 11. About May 1 is the usual time for the males to arrive, the females appearing a few days later. Soon after arriving, the males make their presence known by their peculiar notes, which can scarcely be termed a song, although the little fellows make a great effort in their anxiety to appear musical, and, like the conceited yellow-winged sparrow, keep up the refrain in evident admiration of their own effort. The ordinary note or notes may be best described by a long-drawn *Z-w-e-e-e-e-e-e-e-e-e*, or often more like *Wh-e-e-e-e-z-e-e-e-e-e*. The sound is quite penetrating, and can be heard at a considerable distance. It has a peculiarity which makes the listener quite uncertain as to the exact locality of the performer. The notes often appear to come from beneath our feet, when in reality the singer is twenty or thirty rods away. Again we are led to believe that the bird is at a distance, while he is overhead in a tree or is flushed before we walk a rod. The note is always long-drawn out, and is pleasing from its very oddity. Sometimes, more often while the female is sitting, we hear the song modified to *Whe-zee-zee-zee-ze*, and there are various changes occasionally heard, all of them variations of its common song, I think. There are also some low call notes common to both sexes, which are heard from the birds as they skip among the weeds and low bushes.

The females are rarely seen after the first week with us, and are difficult to secure as specimens, as they remain concealed during the entire summer. The only ones I have taken were birds flushed near or from the nest, or during migration. The males on the contrary are often seen; but during the nesting season are rarely taken because of their extreme wariness. The nesting habits of the blue and gold beauties, therefore, are but little known. There are not a dozen recorded instances of nest discovery in the State.

One sultry afternoon, June 5, 1876, while hunting for a nest of the yellowthroat in a partially cleared tract, surrounded by low basswood and elm forest, a female goldwing was flushed at my feet, and feeling satisfied from her actions that a nest was near, she was dropped from a neighboring bush in order to identify her with certainty. Judge of my disappointment, after a few minutes' search, on discovering that five young birds occupied the well-concealed nest. Leaving the motherless creatures to their fate, the trip was continued with caution, as many males were heard along the edge of the woods. In a short time another bird was flushed, this time a male, which shows that both sexes perform the duties of incubation. I was also led to hope from this instance of the male's attention to domestic affairs, that the helpless nestlings before mentioned would be properly cared for. The second nest contained five eggs, which were so far advanced in incubation as to make very poor specimens This nest like the first was placed on the ground, and was supported by small shoots and dried grass of last year's growth. In make up, the structure resembles in no way the nest of any bird with which I am acquainted, unless it be that of the Maryland yellowthroat. The body of the nest is composed of coarse leaves and grasses, with plenty of grapevine bark intermingled to give it strength and form. The lining is of fine roots. The whole is a very bulky structure, large for the size of the bird.

The eggs are white, covered more or less thickly, mostly at the larger end, with fine reddish dots. They are exceedingly fragile. Average dimensions .65x.54 of an inch. No more nests were found, although a number of males were seen, and a few females observed in the long grass. The indications are that the species breeds in isolated scattered colonies. The following year a thorough search was made in the same quarter, but not a trace of the birds was discovered, probably from the fact that all of the weeds and tall grasses usual to a new clearing had been burned, allowing no chance for the seclusion which the species seems to favor.

The goldenwing evidently prefers low sections of land, and appears most at home in quarters where deep woods surround marshy tracts. I have yet to meet with the birds in very high localities, although they are occasionally seen in elevated swampy lands if beech and maple, or elm and basswood forests adjoin the marsh. I have never found the birds in oak or hickory lands or in sandy districts.

Mr. Jerome Trombley, of Monroe country, writes me that a favorite location for a nest as selected by this species is a low group of spice bush sprouts, *Lindera benzoin*, he has also taken nests in thickets of hazel and briers, but the nests are always on the ground or within three or four inches of it, and invariably in low sections of land.

After the nesting season is over the males become nearly silent, and the song is but rarely heard. I have been unable to satisfy myself as to the date of their departure because of their being so rarely seen in late summer. The goldenwing is rarely if ever seen in villages or thickly settled localities, and unlike the Nashville and Tennessee warblers which invade the hearts of the cities in quest of trees and bushes during migration, they keep in dense brambles or in marshes at the edges of wooded tracts.

NEW YORK AND SCIENCE.

AN interesting address was recently delivered by Dr. C. H. Merriam at the dinner given by the Linnæan Society to Mr J. A. Allen on the occasion of his coming to New York to assume the curatorship of birds and mammals at the Central Park Museum. In the course of his remarks, Dr. Merriam alluded to scientific work in New York early in its history, and to the fact that naturalists and scholars who have labored here failed to receive that support from the people which is so essential to permanent progress. Continuing he said: "That this cannot be attributed to lack of ability, enthusiasm and earnestness on the part of the workers themselves is clear from their character and writings. Among the founders and early members of the Philosophical Society, and of the Lyceum of Natural History, we are proud to enumerate such names as those of DeWitt Clinton, Samuel Mitchell, N. F. Moore, John Terry, J. LeConte, John Anthony, James DeKay, Issachar Cozzens, Joseph Delafield, Julian Verplank, George Catlin, H. C. DeRham, Asa Gray, George N. Lawrence, James Giraud, James G Chilton, Martin Zabriskie. Of these but one naturalist remains, the veteran ornithologist, Mr. George N. Lawrence, who has spent a fruitful lifetime within the precincts of this city. His name and labors are known and honored all over Europe, and yet but few of our citizens are aware of the extent and importance of his writings. He has outlived his comrades, and for many years has toiled alone, away from the stimulus and support of sympathetic associates. It is impossible to disguise the fact that these men—men whose untiring labors have left a lasting impress upon the science of the nineteenth century—have been unappreciated by their fellow-citizens. The city and the times were not yet ready. The first great effort to convert New York into a center of learning and culture failed. The Philosophical Society has long since passed out of existence, and the old Lyceum of Natural History has been transformed into the present Academy, which is devoted chiefly to the physical sciences. Leaving out of consideration the more or less constant progress that has been made in the physical sciences, literature and the fine arts, and confining ourselves to the branches of knowledge commonly spoken of under the somewhat indefinite heading, 'Natural History,' it may be said that the first period of activity reached its maximum development about fifty years ago, when the Lyceum was in its most flourishing condition, and that the second period of activity began with the organization of the Linnæan Society in March, 1878. Between the two was an interval of general inactivity, broken only by the labors of Torrey, Lawrence, Prime, Sanderson Smith, and that distinguished explorer and naturalist, Professor John S. Newberry, now one of the most eminent of living geologists and palæontologists, who for the past nineteen years has honored our city by his presence. For some time Professor Whitfield has been at work upon the fossil invertebrates in the American Museum of Natural History of this city, and has published several valuable bulletins containing the results of his labors. This museum has long been in possession of mammals and birds of great value, including the Prince of Wied's birds, among which are many types and other unique

specimens. To guard these from injury, and also (let it be hoped) to promote original work, its trustees have finally secured the services of one of the foremost of American naturalists. Foreign naturalists have hailed this movement with expressions of unfeigned joy, and we can but regard it with the utmost satisfaction. We congratulate ourselves both upon the accession of so distinguished a person as Mr. Allen, and upon the significance of the fact of his appointment. The citizens of New York, surfeited with the cultivation of purely commercial interests, have come at length to look for something which will adorn their city with more lasting monuments—which will enable it to take rank with the other great cities of the world in promoting the advancement and diffusion of knowledge by the encouragement of natural science. The more thoughtful of them are slowly but surely arriving at the conviction that no true progress in higher civilization can be made until science, literature and the arts receive the hearty support of the people and of the commonwealth. We are gathered about this table to celebrate the coming to our city of a man whom all honor and esteem. The guest of the evening, in his younger days, accompanied the elder Agassiz to South America. He has crossed the mighty Amazon, and, following the immortal Humboldt, has explored the pathless tropical forests of the Orinoco. Among his multifarious publications is one on the vertebrate fauna of Lake Titicaca, nestled in the heart of the higher Andes. In our own country his travels have extended from the tangled everglades of Florida to the dark coniferous forests of the North, and from the shores of the restless Atlantic to the highest summits of the Rocky Mountains. His journeyings have not been those of the idle tourist, for wherever he has gone he has been a tireless student of nature, and the results of his researches have vastly enriched our knowledge of the natural history of America. His masterly memoir on the 'Mammals and Birds of Florida' contains an essay on the distribution of species which, together with his subsequent papers on the same subject, has won him everlasting renown in all the countries of Europe. His monographs of North American bisons, living and extinct; of the seals, sea lions and walruses, and of various groups of rodents, are universally recognized as models of exhaustive research and philosophical treatment; while the multitude of his minor papers as well as the able manner in which he has conducted the 'Bulletin' of the Nuttall Ornithological Club, now the *Auk*—have placed all working naturalists under the deepest and most lasting obligations. It is in feeble recognition of your services to science, Mr. Allen, that we have done ourselves the honor of making you our guest this evening. We welcome you in the name of the citizens of New York, firmly believing that your coming to the American Museum may be regarded as marking the beginning of a new era in the progress of science in the Empire State—and let us trust that the impetus thus gained may never cease, but transmitted like an earthquake wave upon the ocean, may spread in ever-widening circles till the remotest corners of the earth have felt its irresistible influence."

PRESENT DISTRIBUTION OF THE AMERICAN BISON.—*Editor Forest and Stream:* There is a very small herd of buffalo on the western range of Texas, bordering on New Mexico. Herders on the Good Night ranch have seen them due west of Hall county, near Palaicedo Cañon.—ALMO (Henrietta, Clay county, Tex.).

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN.—Purchased—One female otter (*Lutra canadensis*), one common crossbill (*Loxia curvirostra*), one male California quail (*Lophortyx californicus*), and two Gambel's partridges (male and female) (*Lophortyx gambeli*). Presented—One female prairie wolf (*Canis latrans*), one male Virginia deer (*Cervus virginianus*), one raccoon (*Procyon lotor*), two cayenne rail (*Aramides cayennensis*), one great-horned owl (*Bubo virginianus*), two yellow birds (*Chrysomitris tristis*), one red-tailed hawk (*Buteo borealis*), and one alligator (*Alligator mississippiensis*). Born—One female mazame deer (*Cervus campestris*) and three prairie wolves (*Canis latrans*).

Game Bag and Gun.

NOTES FROM ROCHESTER.

Editor Forest and Stream:

The dreary winter had a rather depressing effect on sportsmen in this vicinity, and scarcely anything was done during the cold weather, except gallery shooting, in which line of sport several Rochester men excel, both with pistol and rifle. Some of the more hardy and enthusiastic of the fishing fraternity were not prevented, even by prolonged zero weather, from indulging in their favorite sport, for they cut through eighteen inches of ice on Irondequoit Bay and drew out pickerel and perch in large numbers.

The return of fine weather has reawakened the old instinct in all our sport-loving fellow citizens and they are again ready with rod and gun to try what fortune awaits them in forest and stream.

Before the season closed I made a flying trip to Braddock's Bay after ducks, and was fairly rewarded. During the day, while my companion and self were in a blind on the sandbar between the bay and Lake Ontario, we heard at intervals of half an hour a strange noise out on the lake. It began in an indescribable tone and increased until it seemed to be the united cackling of a thousand geese. There was nothing in sight to which we could attribute the noise; but there was a large field of ice floating down the lake, three or four miles out from shore, and we thought that the birds or demons which were making the welkin ring might be among the ice. The improbability of the last-named class of creatures being found on ice did not occur to us at the time, but its force must be apparent to every reflecting mind. The lake was very calm, and in order to ascertain if possible what the noise did proceed from, I rowed out until I discovered an unusually large gull cavorting in and over the water. It did all the cackling, and how it managed to emit such a volume of sound will ever remain a matter of wonder to me. The ice field gave one a good idea of the appearance the ocean must present in the far North. There were peaks of ice towering above the water to an amazing height, giving all the scenic effects of genuine salt-water icebergs. I am not sure but that the effect was produced by the phenomenon of looming, rather than by the actual elevation of the ice, for looming is a very common occurrence here.

Snipe shooting has been going on here briskly for about two weeks. One man had rather hard luck this week, for while driving along with a valuable setter tied under the wagon the rope in some way got around the dog's neck, and when his owner got out to to enter a field he found the dog strangled.

Robert Tangneuy, the veteran sportsman and inventor of fishing tackle, has just returned from a winter's sojourn in the woods of Michigan. He went up last fall and had rare sport fishing before the small lakes closed. His recital of the details in contests with muscalonge set the blood of anglers bounding. Up to the time the season for deer shooting closed he had shot seventeen of them, and one large bear. He kept no account of the number of small game bagged, the amount being too great. Grouse, rabbits and foxes were particularly abundant, and he has one trophy in the skin of a frightful porcupine of unusual size. Bob, as he allows his familiars to call him, accomplished a noteworthy feat in angling last season. He long entertained the belief that whitefish could be caught with a hook, and to test his theory went out on the lake several miles and fished in water a hundred and fifty feet deep, early in the morning. As the result of his first morning's effort he hooked four or five whitefish and drew them to the surface, but did not succeed in getting them into the boat. He intends to experiment with bait and improve his tackle until he can offer both to anglers with assurance that they will take whitefish as surely as a minnow does a bass. E. REDMOND.

SOME REMARKABLE SHOTS.

Editor Forest and Stream:

The shot fired at Lexington and heard around the world was the report of a potato popgun in comparison with some you have cheeked the public with in your collection now being aired through the columns of the FOREST AND STREAM. "The woods are full of them," but all do not come out.

Did I ever tell you about "a remarkable shot" I once saw made upon the stage of the Boston Theater? The Ravels were playing one of their pantomimes, and in the piece the clown comes upon a scene set in the fourth grooves, taking up a large portion of the stage. This scene represented a street or square with many gabled houses around three sides. Upon a high gable in the center through the dim light could be seen a cat. The clown had a gun in his hands, and spying the cat took good aim and fired. The result was a surprise both to him and to the audience, for such a shower of cats responded to that shot as to be perfectly wonderful. They fell from all parts of the flies absolutely by the dozens, first augmenting in numbers with every moment until there were several hundreds upon the stage, completely covering it. The poor clown stood for a few moments in perfect surprise, and finally took to his heels for safety. These cats were of all colors, Maltese, black and white, all white, all black, tabby, gray, gray and white, and so on through the full gamut of possibilities in cat skin, and were skins stuffed. I laugh even now when I think of it.

One time we were on Montauk shooting woodcock. There was a gully with some fair-sized trees upon each side growing down part way, and the rest filled in with dense bull briers and bushes so thick no human being could penetrate it; toward the lower end a path had been cut for carts and a sort of road established. Our party separated, a portion going each side; and sending the dogs in we were prepared to take the birds as they were flushed and flew out. One of the party was an Englishman, and we had stuffed him quite a good lot during the day, as he was one of the kind who was seeking information, and all of our ways were so very odd to him, "you know." John Hull, the sportsman landlord of the Atlantic House, Bridgehampton, had poured into his ears the most outrageous lies all day, and the poor fellow had taken all as gospel. It happened that John, the Englishman and myself were together upon one side of this gully, and had arrived opposite the road or path before mentioned, when "Mark!" was shouted, when Hull threw up his gun and fired across through the opening at a woodcock coming directly toward us. The bird was killed, but such was his momentum that Hull as he dropped the muzzle of his gun held out his left hand and caught the bird as cleverly as one could have caught a ball with preparation to do so. The Englishman opened his eyes, and Hull coolly remarked, "I always like to retrieve my birds that way, for I don't like to have the dogs tumble their feathers." Johnny Bull said, "Do you do that thing often, you know?" "Yes," replied Hull, "we don't consider it much of a feat—when you know how." REIGNOLDS.

BOSTON, Mass.

Editor Forest and Stream:

The effect of encouraging hunters to tell of their remarkable shots is undoubtedly to cultivate an army of liars. Either Munchausen did not die, as is commonly reported, or he has left some very near of kin who emulate their renowned ancestor.

I should think that "J. C. B.," in your issue of Jan. 8, could claim blood relationship with the old Baron, for he just as coolly tells his remarkable shots and just as much expects us to believe them, too, as that truly magnificent liar, the venerable Munchausen.

"J. C. B." does not quite reach the sublimity of lying the old Baron did, for he had reduced it to a science. As, for instance, see how fruitful of expedients, when upon seeing a pond full of ducks he ran toward them with his big gun; but finding that the flint had been lost from the lock, he leveled the musket at the fowls and struck his eye with his fist, producing such a shower of sparks as fired off the piece and killed fifty brace of ducks, twenty widgeons and three couple of teal.

There is nothing like being exact. Let "J. C. B." and others read Munchausen and learn his style. H. B. S.

MARIETTA, O.

Editor Forest and Stream:

Yours inclosing remarks on remarkable shots, by "H. B. S.," received. I think he does us remarkable shooters, and especially the undersigned, much injustice. In the few items I gave I was very careful to state the inelastic facts. In truth I cramped myself somewhat, so that I feared the little narratives would seem stiff and heavy. I retained other items, and have them in my mental system yet, simply because of this danger of encountering factious skeptics. There are people who haven't been abroad with a gun, who don't know the luxury of occasional good luck and jolly recompenses in the way of unexpected pot shots, to mitigate the asperities of many misses and surprising disappointments. Some of these remarkable shots are of excellent pattern and penetration, and I for one have been very much interested in examining them, noting the good hits, and seeing what a large proportion was well calculated to make game of odd experiences, and contribute to amelioration of mankind.

I once shot at a sketch of a black-tailed deer, made by an artistic Indian on the side of a rock, and wondered it didn't fall; I have shot at a moss-covered bump on a log, and scattered the surroundings of a pair of glow worms, thinking I was peppering the head of a wildcat, and I suppose if these experiences were carefully elaborated, giving accurate measurements, river weights and other vital statistics, some cool calculator would rise somewhere and try to prejudice the minds of readers in relation thereto. All right, give me the good camp story with its tested tension and all-inclosing scope and power, and "H. B. S." can have the undeviating prose to his heart's content. J. C. B.

P. S. What a charming writer "Nessmuk" is! Bless his facile pen and out-door sympathies and inclinations! He is my beau ideal of a camper, sportsman and gentleman. May he live long and prosper, and never fail to let us hear from him as long as he is able to paddle his canoe, fry bass, and smoke in rapt contemplation on a log. B.

THE BORE OF GUNS.

Editor Forest and Stream:

Without pretending to "know all about it," I will give my deductions from a very extensive experience with small-bores, and a rather limited one with medium and large calibers. The first small-bore I ever owned was a 20-bore, 30-inch barrels, weight 8 pounds 7 ounces. Why the maker put so much metal in it I never could conjecture. I used this gun a good deal on ruffed grouse and pigeons, and now and then on ducks, generally shooting heavy charges. Sometimes I would kill a duck at 50 or 60 yards, but more often I would fire both barrels at from 30 to 40 yards and get never a feather. My next purchase was a 16-bore 6½-pound single, with 34-inch barrel. It was made for a celebrated railway contractor, and his sons sold it to me when they were about to follow him to Texas, whither he had "skipped." This was the most deadly small-bore I ever used, and with it I made all my heaviest scores on ruffed grouse. Anything it hit at from 25 to 35 yards was cleanly killed, beyond that range I seldom used it. In course of time this gun had to step aside for the breechloader, and I resolved to get a heavy one.

The glib-tongued clerk at the gun store where I dealt, assured me that the little 6½-pound double 14-bore, to which I took such a fancy, was heavy enough, and I bought it, though I had probably done more shooting in a week than he had in his entire life, and should have known exactly what I wanted. A man is usually ready to take advice, if it is the kind he wants, no matter how poor the quality. This gun fitted me and would make a target equal to the last 16-bore, save, perhaps, the smallest trifle in penetration, but never could equal the performances of its predecessor on game. The last two months of the season of 1879 I shot a double 20-bore, 26-inch barrels; it was good, considering its size, but I voted it a nuisance on ruffed grouse. For three or four years I used on ducks a heavy single-barreled, muzzleloading, 11-gauge, weight about 11 pounds (estimated). Some idea of its length of barrel may be gleaned from the facts that I am over six feet high, and when the butt of that gun rests on the ground the muzzle is on a level with my chin. That is the deadliest gun I ever handled, and it is probably at this very moment doing its work among the geese less than ten miles from where I write. I tried to buy it but failed, though, strange to say, other hands than its owner's usually do the shooting with it. When my guns all "went up" in a holocaust, August, 1880, I resolved to buy, as a "make-shift," a heavy 10-bore single breechloader, but in the end I yielded to a "sneaking desire" for a light gun, and bought a 6½ pound 12-bore.

I know, Mr. Editor, that you newspaper men do not care to have the work of makers who are considered respectable run down, or spoken lightly of in your columns; but I cannot refrain from saying, and I wish it to go on record, that aside from the Remington, which has a good, safe action, and the American Arms Company's semi-hammer, which I have not examined, I do not know of a single-barreled breechloader manufactured in America that I would take as a gift. It is a pity to waste good barrels on such flimsy actions as some of them have. Mine is now unsafe, as are also two others (of other manufacturers) that are in use in this neighborhood; but it will outshoot any of the small-bores mentioned above. The man with whom I board here has a 7-pound 16-bore muzzleloader, which he deemed invincible. Last Tuesday, during a discussion before a number of witnesses on rifle-shooting, "breech vs. muzzle," I offered to shoot with a breechloader against him for $10 a side. He wouldn't do that, but he would shoot me a match with the shotguns, distance 43 yards, BB shot. I accepted, and he put 8 shot in the target and I 32—penetration a little in my favor. He'll not shoot against any more shaky breech loaders this week.

To sum up, I always shot better with single guns than with double, with long barrels than with short, and all other things being equal, with the larger gauges than with the smaller. A small-bore may be all very well for a man who shoots nothing but quail and snipe, or is able to own two or three guns, but I believe there is no work that a 16 will do that a 12 will not do better, and the latter gun is made as light as seven pounds, which is a weight that most any one can handle and carry with ease. As for the difference in cost of ammunition, I am poor enough, but I consider it to be too slight to be regarded, and by the time you fire two 16s to do the work of one 12, the balance is in favor of the latter. My main objection to small-bores is the number of cripples they make. To any one wanting an all-round gun for duck, grouse, snipe, etc., I would say get nothing smaller than a 12, and get a 10 if you can handle it. You will find plenty who will tell you that a 16 will shoot as hard as a 10, but I challenge published last spring failed to bring out one of those wonderful 16s. When I place an order for a new gun, as I hope to do before many months, it will not be a small-bore, and I have not come to that conclusion hastily, for in addition to the guns mentioned above, I have shot two more 14s and one 18, but they call for no special notice.

QUEENS COUNTY, N. B. L. I. FLOWER.

UNCLE LISHA'S SHOP.—*Editor Forest and Stream:* There was a fluttering in my throat and more than a suspicion of moisture of the eyelids when I reached the conclusion of "Uncle Lisha's Shop." Perhaps one needs, like me, to be reared in a backwoods settlement to fully enjoy the beauties and merit of those chapters. As far back as I remember I longed for stormy days and winter evenings that I might make one of the charmed circle at the village shoemaker's. What happiness I have enjoyed as man and boy in that old shop. Happy days were those, and I lived them over again in "Uncle Lisha's Shop." Alas, that they are concluded. I have looked forward for their coming from week to week till it seemed they were a part of my life and being. Dear Uncle Lisha, how much he will be missed.—MARLIN.

AN EXERCISE IN PARSING.—Probably no one would suspect the Committee on Agriculture of the Massachusetts Legislature of a tendency to humor, but Senate Document No. 209, reported by that committee, is as full of unpremeditated and unconscious humor as an egg is of meat. Here is a specimen: "Sec. 10. It shall be unlawful to willfully take or kill any pinnated grouse, commonly called prairie chicken or heath hen, unless upon ground owned by him, and, unless placed thereon by the owner, shall be punished by fine of twenty dollars for every such bird." Even Mr. Toodles, at his drunkest, was never more wildly maundering or more deliciously inconsequential. The imagination is fairly appalled at the ability of the Committee on Agriculture to muddle the syntax of the English language. Section 10 ought to be introduced into the schools and colleges as an exercise in parsing, and the pupil who could extricate the English grammar from the horrible mess into which the committee have plunged it should be entitled to graduate *Summa cum laude.—New England Farmer.*

ANTIQUITY OF WILDFOWL NETTING.—Netting wildfowl has been a custom with many people all over the world for hundreds of years, yet in these times the palm must be awarded to the "pot-providers" of the Chesapeake and Long Island waters. In the lower portion of the first named bay thousands of "flock ducks" are netted every winter. At times the supply greatly exceeds the demand, and in warm changes of weather many of the drowned fowl spoil and are fed to the hogs. As an instance of old-time netting, Boich, in his book of "Manners and Customs of the Ancient Egyptians," says: "Geese are still common on the banks of the Nile. The ancients used to catch them in a wild state in clap-nets. The fowl were brought to the poulterers who salted and potted them in earthenware vessels." This method should commend itself to the Shinnecockers.

SNIPE SHOOTING AT SOUTH OYSTER BAY, L. I.—For the last few days the yellowleg and other snipe have been coming in the bay in great numbers, and the gunners and some of the sportsmen of New York have had good shooting at them. The snipe as well as the ducks were very late in getting here this season, but they have arrived at last, and if the weather continues warm, we expect plenty more to drop in on us and give us good shooting for three or four weeks longer. They then start for their breeding places, and pay us another visit about the middle of July to stay with us until November.—O. C. (South Oyster Bay, N. Y.).

SOUTH DUXBURY, Mass., May 4.—Quail wintered very well. Have seen several coveys this spring, and if hawks let them alone there will be some good shooting this fall. A few ruffed grouse can be heard drumming, but are not plenty. Word comes to me from Southern New Hampshire that they are very plenty there this spring. We shall pay them a visit in October if nothing prevents, and would be pleased to take any Boston sportsman with us that can shoot in brush and that has dogs that will work in the same.—SOUTH SHORE.

MISSOURI AND ARKANSAS.—Savanna, Ill.—I have just returned from a hunting and trapping trip South. I went down the Mississippi 700 miles in a fifteen-foot clinker-built skiff, and spent the winter in the swamps of Southern Missouri and Northern Arkansas. Bear and turkeys are plenty. The first week in January we killed two large bucks, one of them apparently old. Both had dropped their horns. The old one had tusks in the upper jaw about three-quarters of an inch in length. Is this usual in old deer?—S.

KANSAS GAME.—Columbus, April 29.—At this point I have had the best English snipe and duck shooting that ever fell to my lot. There are splendid prospects for good quail and chicken shooting this fall, but the best sport is found about thirty miles south of here in the "Nation," and as I am looking for the cream it is more than likely that I will get down in that country before locating permanently. I will drop you a line from time to time with all points of interest.—H. D. T.

PHILADELPHIA NOTES.—May 9.—The flight of shore birds has begun to arrive, word reaching Philadelphia to-day to that effect. This news has started those who are fond of the sport to load shells, and many sportsmen will start the first of the coming week for the New Jersey bays.—HOMO.

ELDORADO GUN CLUB.—At the annual meeting of the Eldorado (Wis) Gun Club the following officers were elected for the current year: President, S. B. Dilley; Vice-President, F. Sharratt; Secretary, Buell Anderson; Treasurer, M. M. Anderson.—S. B. D. (Eldorado, Wis., May 2).

RIPON GUN CLUB.—At the annual meeting of the Ripon (Wis.) Gun Club the following officers were elected: President, W. G. Lambert; Secretary, J. E. Follett; Treasurer, F. W. Kingsbury; Captain, S. B. Dilley.—S. B. D. (Ripon, Wis., April 30).

COLORADO.—Yampa, April 26.—The deer and antelope are now with us as thick as mosquitoes on a Jersey shore. This is the finest game country in the world.—F. DE G.

Answers to Correspondents.

LAKESIDE.—The laws will be printed as soon as the session is over.

ASHBURNHAM.—We cannot tell you what the eggs were, for you do not describe them definitely enough.

R. M.—The data for determining longevity of brook trout are very meagre. Perhaps 15 years is the average limit.

J. S. C.—The make of gun is a good one, and for the price named you ought to get a serviceable and perfectly safe arm.

J. S. S., Jr.—What flies would be most suitable for the Moosehead Lake region about the first of June, both lake and stream fishing? Ans. Montreal, grizzly king, queen of the water, silver doctor, brown hackle and coachman.

W. C. M., Brooklyn, N. Y.—Can you suggest some place in the mountains and as far away from the usual summer resorts as possible, where I can find good black bass fishing in July? Ans. You will find good black bass fishing in the north fork of Holston and in New rivers, Virginia. These are not much fished except by the natives. Some bass can be taken in Adirondack waters, especially in Raquette Lake and adjoining lakes.

Sea and River Fishing.

BLACK BASS IN LAKE CHAMPLAIN.

IT is perhaps a pardonable weakness in an angler that he is slow to believe that any fishing water should, for the game qualities of its finny inhabitants, be rated above some well-known local stream or pond that has filled boyish hopes to repletion. Born nine miles from Lake George, in New York, and having fished its clear, pure waters almost from the short-dress period of my existence, I have learned to love its wooded shores, quiet bays, shadowing mountains and its many islands whose shore-lapping waves are, summer after summer, sounding to the prow of each passing fishing-boat an invitation to rest. But however much these settings may excite my admiration—and they are always attractive, whether the season be spring, summer or autumn—it is the gem itself, the crystal water, and the game fish therein that have penetrated most deeply into my heart and esophagus. Guide books and the advertisements of hotel proprietors have, perhaps, helped me out in forming a proper estimate of the general plan of the "Como of America;" but of the beauties of its interior arrangements I learned from days and weeks spent in dragging its depths with a trolling line for lake trout or whipping its surface for black bass. I can produce evidence that I have performed the dragging and whipping thoroughly if not well—so thoroughly at least that I have been on quite intimate terms with many of its fish. I have frequently differed with them, it is true, but after a misunderstanding that might almost be termed a fight, we have generally gone together to the same table, and, speaking for myself, I have always risen up from these love feasts at peace with all the world. If the fish treasured resentment they made no sign except on one occasion when they caused the nightmare, or rather a squadron of nightmares with a battery of artillery and other things, that discounted the "Greatest Show on Earth," to charge over me while I was sleeping after an exceedingly pleasant "first day of the open season."

From my long and close acquaintance with the black bass in this lake I had come to regard them as a trifle better than the "standard"—a sort of XXX brand— of bass from lake or pond waters. Why not? Where were to be found superior conditions for producing fighting fish? Was not the lake one vast spring of clear, cold water, filled with food in plenty and variety; with acres of breeding shoals and miles of shores of clean white sand, gravel and broken rocks, and other acres of fine grass under twenty or thirty feet of water? Was there not an absence of reeds, rushes and other rank water vegetation that enervates even bass of good training and lofty aspirations if they look upon it when it is red with the larva or pupa of water insects, or tarry long therein at other seasons? Yea, verily.

When fishing for black bass in other lake waters I have always, if I caught fish, compared them with the Lake George bass, and found them, if memory is to be trusted, lacking in the performance of some of the more difficult acrobatic feats, at which my favorite bass would, also in memory, give a flirt to its caudal fin and turn up its disreputable looking, blood-shot eye, as much as to say, "The handwriting on the wall was not aimed at me."

Now begins another period for the black bass of Cooper's Lake Horican—not Horicon, as some writers and steamboatmen make it—for they got into the balances once too often and were "downed" by some bass that I will write more about; but let me say:

> "No words suffice the secret soul to show,
> For truth denies all eloquence to woe."

Which means that an angler must not set his favorite fish upon a pinnacle to show that they are better than some other fellow's fish, for under a republican form of government a cyclone is liable to come meandering along and upset the fish and the pinnacle too. My chagrin at the downfall of my old friends is deeper because the bass that have, in my estimation, beaten them are from a lake that I have considered as a fit home only for catfish, ling and eels. Be it understood that in making a comparison between the black bass of two different lakes, I group the entire catch or series of catches from each, for it would be manifestly unfair to select individual fish as representing all. I saw a black bass after being hooked jump from the water seven times before he was brought to net; but many bass that I caught from the same water did not jump once, and it was not because they were hooked in the gullet. As a general rule, I have found that when a black bass, after being hooked, bores to the bottom without breaking water, he has swallowed the hook until it is fast in the inner recesses of his food ventricle. This action is explained usually in this way: The fish, when hooked in the gullet or stomach, suffers pain and makes every effort to find refuge at the bottom, where he can repair damages; but when hooked in the cartilage of the mouth he feels no pain, and devotes himself to freeing his mouth from the hook by leaping. This is plausible, but if there is any portion of a fish's anatomy that is sensitive to pain it would seem to be the eye.

One morning while fishing in Schroon Lake near the boat of a friend, I saw his boatman catch a black bass by hooking him foul in the eye-ball, and the fish acted as though the water was not his native element, and he must get out of it or perish. In the afternoon of that day I hooked a bass in identically the same manner—there's a fish story for you—that did not once break the surface of the water until he was brought to net. A few days later at the same place I hooked a bass through the skin just under the dorsal; this one did not break water either, and I thought for a time he would weigh about eleven pounds. Each of the three bass weighed three and one-half pounds. When Mr. Levison narrated his wonderful catch I thought of writing of these burglarious catches somewhat in detail—the first mentioned bass had parts of two baits (crayfish) inside of him that he had taken from my hook only a moment before—and sending the account to FOREST AND STREAM, but before I could do so Mr. Mather went under the wire an easy winner with his croppie story, and the distance flag shut me out.*

The water in which I found the gamest black bass that it has ever been my good fortune to catch is the Great Back Bay of Lake Champlain. When first a friend wrote of the fishing at this place, I admired his enthusiasm but deplored his knowledge of what constituted proper water for the small-mouth black bass. When he wrote again and described the clear, sparkling water of Back Bay, I was convinced that either his mind was wandering or there was a part of Lake Champlain that had been secreted from my eyes, for the color of Lake Champlain water and the water of the North River at New York were to me identical; but another youthful creation was in a decline, and I was soon to attend its obsequies. I did not don the usual habiliments of woe, but imitated the early Christians of Rome upon the death of a friend, rejoiced in bright garments that a better land had been reached.

Finally my friend Mr. Backus wrote me from Back Bay, where he was spending the summer, and described the place and the fishing as he had found it, and the Texas Club was immediately fired with a desire to share his good fortune; but let me introduce the club. The president is Major Benj. A. Botts, of Houston, Texas. The treasurer, William D. Cleveland, of the same city. The secretary, the writer. We have no more members because there are no more offices. Besides four would make a dead-lock, for we never agree. If the president desires to go to Schroon Lake the treasurer and secretary are sure to vote for the St. Lawrence River. If the treasurer wishes to go to Brant Lake, his associate members feel that they are called to Long Pond. If one really wishes to go to a particular fishing place he suggests some other place, confident that the other two members will combine and suggest still other places, and in fishing around at random strike the desired spot. This club peculiarity may, to the casual reader, appear embarrassing, but it is not at all so. It keeps the mind as active as in a diplomatic training school; teaches one to get up early in the morning so that he will not "get left;" tones down hasty tempers, or tires them out—when two men sit down on one; forms the habit of patience, in waiting for one's own turn to come to lead the procession; furnishes entertainment as a continual "circus" and altogether comes nearer to the miraculous fountain of perpetual youth than anything discovered by Ponce de Leon.

The club has a prudant in the person of Louis or "Mr. Scroggins, the Navigator." Louis is body servant to the president, when he is not navigating or wrecked. He has a system of rowing called the "creek system," which is so complicated that but few can grapple with it; but, in one sense, it is economical, for with boats hired by the day two days' work is pulled or rowed into one. The course between two given points is like that of a magnified rail fence, so the person who sits in the stern of the boat can, without moving his head, watch for squalls from any point of the compass. Had Samuel Lover ever fished with the Texas Club there would have been no need for him to tax his fertile brain to give birth to "Barny O'Reirdon, Navigator."

The club began to start for Back Bay in July, but owing to the peculiarity previously mentioned, other waters were fished for more than a month before the actual start in September. Just here let me say that if any angler proposes to go to Back Bay, I advise him to start from New York, Boston, Liverpool, Khartoum, or any other place on the globe rather than Glens Falls. Another thing, don't go at the time the Vermont State Fair is held unless you go on foot. It was the treasurer who finally fixed the day for our departure on the coming Wednesday, Sept. 10. At the last moment the treasurer wavered, and if his rod had been at the depot, he would have joined the majority when they took their seats in the car on that Tuesday morning.

We reached Rutland for dinner after making two changes in cars, and after dining were ticketed to St. Albans by the Vermont Central Railroad. We had been traveling along a footpath and had struck one highway. The cars of the Vermont Central—and it was a long train—were full, and so was one of the passengers. The State Fair was in operation at Burlington, and such a variety of old-fashioned coaches as had been gathered together to transport the people I never saw on a railroad. It is a pleasant ride along the valley of Otter Creek except for the dust and the long stops. These were filled in by the hilarious passenger, who, I suppose, was going through Vermont in bond to Canada, with interesting personal reminiscences of agricultural horse trotting. At Essex Junction we again changed cars, but this was an agreeable change, for before the rods were deposited in the racks of a comfortable modern car, we were greeted by Mr. Herbert Brainerd, an accomplished angler, and also one of the Fish Commissioners of Vermont.

We fought over several old struggles with fish that were saved and fish that were lost; discussed rods, flies and tackle, in the midst of which Mr. Brainerd, pointing from the car window, showed us Back Bay, the water looking like molten silver as, unruffled, it reflected the afternoon sun fast sinking to its rest among the peaks of the Adirondack Mountains, across the lake. I made a memorandum of the weights of some small-mouthed bass that were reported to the Commissioner as having been caught in an interior pond of Vermont, but I cannot now find it. My impression is that one of the fish was said to weigh eight pounds, and others to weigh over seven pounds each. If I am wrong about the weights I am willing to be forgiven. Mr. Brainerd is thoroughly familiar with all the fishing grounds of the great Back Bay, and it was with pleasure that I accepted his invitation to fish one day with him, provided he could release himself from other engagements. Upon reaching St. Albans we found a carriage from the hotel waiting to meet us, and we were quickly seated behind a rattling pair of horses for a five-mile drive over an excellent road. The sun had disappeared, there was no dust, and as we sped along the driver told us of the catches of bass that had been made during the summer, and this added to our enjoyment, for we believed that what had been done could be done again.

Three miles from St. Albans the road touches and then skirts the head of St. Albans Bay, which is a small part of the so-called Back Bay. Passing the model dairy farm of ex-Governor Smith on the right, we cross over St. Albans Point, and soon the smell of damp earth tells us we are nearing the low lands. The bay and its islands spread out before us at a turn in the road, and our driver locates some of the fishing grounds for us and points to incoming boats as those of guests of Lake View returning from a day's fishing. It was all very pleasant to look upon, but the glassy surface of the water prompted us to ask our charioteer if the bay was given to this repose, and he replied that it was not, although it had been resting quietly for a week past, and consequently the fishing had not been of a superior order. There was an exclamation about some nation or other that must have come from the front seats. I was not thinking of governments or peoples, and I don't think the Major was, for he asked if I could tell how many times we had been too late or too early by a day or a week for the best fishing, and I could not, as I lost the count after it reached one hundred. In the gloaming the horses drew up at the door of the hotel, having done the five miles in 28 minutes. Of the anglers

* I notice that anglers have become discouraged and that there have been but few entries in the "Remarkable Catch" column since Mr. Mather took the cup, and I would suggest that in the future there be two classes for remarkable catches, one for amateurs and one free-for-all.

gathered at the hotel some were old acquaintances, and while smoking our cigars after supper we had an experience meeting on the piazza. There was but one complaint and that was universal; there had been a dead calm for several days and but few bass taken, as the fishing was in comparatively shoal water where the fish could see each motion of their would-be captors. Even as we were talking there came a fresher air from lakeward, and before bedtime there was a gentle beating of the waves upon the shale beach. After inspecting the bait—crickets, crayfish, minnows and frogs—and learning that the boatman we had telegraphed for would present himself at an early hour we, as "Nessmuk" says, "prepared to turn in."

Back Bay deserves to be distinguished as a lake of itself. It is about twenty miles long and five wide, and is separated from the lake by the islands of North and South Hero on the west; upon the south it is cut off from the lake by what is called the sandbar bridge; upon the north there is an opening into Missisquoi Bay, which, in its turn, opens by a narrow strip of water—Alburgh Passage—into the lake. Between North and South Hero is "The Gut," a still narrower passage, and this and Alburgh Passage form the only communication between the lake and the bay. The charts of the United States Coast Survey show that no streams of importance flow into the bay from Vermont, but there is every indication that the bottom abounds in springs and the water, to my surprise, is as clear as crystal. From a hasty examination of the soundings, as shown on the charts, I should judge nearly one-half the bay had a depth of water of from five to forty feet, and there are innumerable reefs, shoals and sandbars, furnishing acres upon acres of breeding and feeding grounds for the black bass. If there are weeds and other noxious water growth, I did not discover them. There is fine grass to be sure, but the bottom is largely of boulders, gravel and sand—

> "And the deep pool hath not ooze and sludge
> To mar your fishing."

As I read the series of entertaining papers in FOREST AND STREAM entitled "Camp Flotsam," I became deeply interested in one of the many admirable descriptions therein found. "Wawayanda," in making a trial of a new rod, casts over a bed of water weeds and moss, and fastens to two black bass of a total weight of four and a half pounds, which immediately take themselves into the moss only to emerge when clad in ulsters of weeds and wraps of moss. I have witnessed such proceedings, and the description was so real that the bending of "Wawayanda's" rod gave me a severe pain under the pectoral fin caused by the fear that its maiden cast would also be its last. I breathed a sigh of relief when the bass were captured without injury to the rod, and my thoughts brought Back Bay vividly before me as free from this particular style of handicap. I do not know how many times I have challenged fish to combat in places that I knew must give them almost every advantage, and when safely out of it resolved that I would not again subject a rod deliberately to such an imposition, but I presume I shall continue to be too weak to resist the temptation; if I do, the resolutions shall have justice done them on each occasion. I was tempted and fell during the trip I am trying to write about. Should I fail to mention the particulars, it will be because the editor's patience gives out before my paper.

Situated within easy distance of the hotel are Butler's, Knights, Gull, Wood's, Pop Squash, Potter's and Diadama islands, Gull Island Reef and Long Point Shoal. These are all favorite fishing places, and I presume there are others deserving of recognition; but I have named sufficient places for a first-class retail business, or even catching bass by wholesale. Of the places visited, Diadama Island pleased me full as much as any for the variety of fishing ground about it. Stretching out northward is a shoal of sand and gravel with a sudden pitch toward the east into deep water and grass. On the west is a collection of huge boulders that forms an attraction for bass, and on the northeast is a rocky shoal extending to Butler Island, half a mile away. On the east of Wood's Island is a sandbar reaching midway to the main shore, which makes the finest bottom for fishing when the bass are on it. Perhaps the most extensive ground in one bunch is Gull Island or Middle Reef. Soundings developed rock and rock and grass in combination. West of Gull Island the shoal pitches down into the deep water of the steamboat channel, and by anchoring on the edge of the shoal the bass are intercepted as they come out of the deep water to feed in the shallows.

We found that it was the custom to get breakfast about 7 o'clock and make what we considered a late start, for the Texas Club believe in being on the fishing ground by daylight in the morning in order to catch the larger black bass. The first morning we did as the Romans did; even then our boatman did not put in an appearance. Without the boatman, who had been engaged for us, we would have to content ourselves with a good oarsman, but one who knew nothing about where to fish. All the anglers had departed except Mr. W. W. Ladd, Jr., of New York, who very kindly waited to see that we were properly provided for or to put us on to the grounds himself. The gentle wind that had survived the night gave evidence of an early death, and all were eager to avail themselves of its last moments; therefore, Mr. Ladd's politeness was being exercised at the expense of his fishing, and we took the oarsman and pushed off. Diadama was our destination, and it was three miles away. We anchored near the boulders of which I have spoken, and immediately I had a strike from a bass of three and three-quarter pounds, and the Major followed suit with one just a pound less. The next one was of the same weight, also to the Major's rod, and then I just had time to catch three in rapid succession that varied little from two pounds each, when the wind failed utterly, giving us an opportunity to compare notes. Every fish made a vigorous fight, leaving nothing to be desired, so far as we could discover. Even a pike (*E. lucius*) seized my bait and made a rush and leap after the manner of a bass. The only thing lacking was wind to ruffle the surface of the water, beneath which we could see a score of big bass lazily sculling around, perfectly indifferent to everything we offered them. We wished for wind with such vehemence that we overdid the matter, as we found the next day. There was nothing to do but to row around, armed with Mr. Ladd's chart, and examine the different fishing places. This became monotonous after a time, and we headed for Butler Island and lunch, to escape the heat and reflection of the sun upon the mirror-like water. We had missed the best fishing of the day by our tardy start. Mr. Ladd's boat showed several fine bass, and while we were lounging and smoking after our lunch Mr. A. Lee Wager and a friend, on their way to shore to escape the heat, paused long enough to say that they had three bass of over three pounds each, and Dr. Ferber and Mr. Louis Giles, fishing together in the first boat out that morning, had caught about a dozen large fish, but there had been no strikes since the wind ceased.

While we rested in the shade we saw several bass make rushes into the shoal water near our landing place to prey upon the small fish playing about, which proved that they would feed if the water was still, provided there were no steel intestines inside the minnows, and they were sharp enough to make discrimination between those tied to a string and those not. Just as the sun was sinking we pushed out to have another try at them with our rods. There was no wind, but we hoped for aid from the twilight. Several anchorages were drawn blank, when half an hour after sundown we anchored near the steamboat channel west of Gull Island; directly north and about thirty feet away was a channel buoy sticking from the water at an angle of about 45°, and pointing a little to my right on N. E. After trying all about us without a strike from a bass I remarked to the Major that I believed there was a bass directly under the leaning buoy waiting for a chance to wind some one's line around the stick, and I should gratify him. Putting a crayfish on my hook I dropped the "craw" and hook within a foot of and almost under the leaning warning post. The bait had hardly settled a foot beneath the surface of the water when such a swirl as the blade of an oar will make, replaced the widening circles caused by the plunge of the crayfish. Striking, as much at the sight of the swirl as in response to the communication telegraphed up the line, I was fast to a good fish. There was a whir of my reel, and from the other side of the buoy appeared a four-pound bass shaking his head as though he were a terrier worrying a rat.

I was using a new Nichols bamboo rod that had tasted its first blood that day, and although it was comparatively untried, I knew the family characteristic from the use of its brother. As the bass jumped I saw only too plainly that the line from my reel to the fish formed an obtuse angle with the vertex of the angle down in the water under the stub. Quicker than I can write it there was another leap, and this time it was a right angle that the line made, with the vertex in the same place. I saw that it was a mathematical bass, and I expected the next demonstration would be an acute angle or a circle around the buoy. I was not idle during these exercises in geometry, but getting to the bow of the boat I pulled in the slack of the anchor rope with one hand and held the reel up with the other, so that the next figure described was a straight line and a curved rod. Reeling rapidly, I managed to get the bass barely past the danger signal, but he discovered his error and tried to regain his vantage ground. With my rod erect and thumb on reel, I backed the leader against the strength of the bass and won. The struggle was worth the price of admission while it lasted, and although it is half-past two o'clock in the morning at this very writing, the thought of the contest tempts me to hurrah just once, even though it wake the family. If fish were provided with eyelids, I don't think that black bass would ever use them to veil their eyes, for

> When the hand of man has brought them low,
> They look the defiance they can no longer show.

That was not premeditated. In fact I did not know it was loaded until I stumbled over it; then, I admit, I attempted to change the architecture of the two lines, but when the paper looked like one of Balzac's proof sheets, I gave it up and fell back upon the original inspiration. The treasurer is the poet of the club, and his training as a verse builder enables him to keep in stock a sufficient amount of poetic license to properly weigh all fish that escape.

We reached the hotel after dark that evening to find that the treasurer had arrived, and that Dr. Ferber's boat was high hook with fourteen bass, twelve of which weighed 43¼ pounds. The next morning the president pushed out in solitary state, leaving the treasurer and secretary to join forces. I neglected to state that before leaving the Gull Island shoal or buoy the previous evening we baited the ground by throwing over the dead crayfish in the bait bucket, in consequence of which this anchorage promptly returned ten bass of 26½ pounds. Diadama Rocks and Wood's Island sandbar returned eleven other bass weighing 26¾ pounds, or a total of 53 pounds for the day. Before the morning was half gone the returns from a week of wishing began to come in in the shape of wind. Fishing was out of the question, and we pulled to the hotel, just beating a heavy shower from the west. After dinner, the sea having gone down, we went to Wood's Island bar, where the fishing was excellent until another heavy shower came down as though there was a break in the sky water-works. This was followed by wind in such force that we concluded that New York must have joined Vermont in the petition for a breeze. One bass that Mr. Cleveland caught when the wind was blowing its hardest made six vigorous jumps from the water, and when exhausted it turned side up to be seen sixty or seventy feet away on the crest of wave after wave that tossed and caressed and fondled it and held it back with the assistance of the wind until it gathered fresh vigor to make another valiant but hopeless fight. It was a splendid fish, but when safely in the net the treasurer decreed that it should go back to the water it was so loath to leave, and there remain to breed others of its kind for anglers of a later day. I fished but little this second day, and such fish as I did catch I returned to the water, for it was evident that we were to get more fish than we ought to keep, and as it was the treasurer's first day he could not be expected to throw all his fish back. I was not idle, however, as I had some of the treasurer's own poetry that I read aloud to him in installments of one stanza, until he offered me a large part of Texas not to repeat more until I could get the president alone in the boat. This gave me a sure thing on the Lone Star, for I knew the president would give me the balance of the State and part of Mexico if I would contract to postpone the recital indefinitely. It was good, satisfying poetry, very little of it satisfied every one, but it was getting too familiar.

I did not see any bass brought in that would weigh less than one pound each, and very few of the pound size; but there were too many fish saved for the number of people to eat them. No matter how plenty the fish may be, such fishing should be discouraged. Last winter the Vermont Legislature passed a law that forbids the catching of, or having in possession, any bass less than ten inches in length; but there is an unwritten law that should also be observed—do not retain more fish than can be eaten while they are at their best. If the desire to catch more cannot be controlled, return the excess to the water.

The boats at Back Bay, although rather large for racing purposes, are perfectly safe, and the men handle them with as much skill as the famed St. Lawrence boatmen. Our ride in from Wood's Island bar was through a sea that frequently presented a wall of water between the Major's boat and ourselves, and the wind was on our beam, but we did not take in water faster than I could bale it. The boatman explained this by saying he never could become interested in a series of magnificent fishing exploits—the treasurer did most of the talking—and express the proper degree of admiration without taking in a little water. When we reached the hotel the treasurer found one of those telegrams that follow a man everywhere, and he was obliged to take the back track in the morning, so we concluded to go in a body. Some one caught a sheepshead, or really a fresh-water drum, during the day, and our boatman took out its ear bones and presented one to Cleveland and one to me for "lucky stones." Every angler ought to have one. We have carried ours for six months and are both alive to-day; but there are some few things in which the lucky stones are not potent.

The club left Back Bay in the morning, and reached St. Albans safely; but at Burlington we missed the train for Rutland, whereupon the Major suggested that lucky bones did not work well on land. We then took steamer for Port Kent to catch another train on the Canada Railroad, and when within a half mile from the dock, we saw the train depart from the station, the Major remarked that they did not work on the water, and it must be that in order to receive benefit from them we must learn to fly. I still think they will work if we can discover the proper combination of elements. Having missed the train at Port Kent, we drove to another Lake View House—I think a pot-shot in Northern New York would bag several Lake Views—near Keesville for dinner, and then went through Au Sable Chasm. We managed to strike the Montreal sleeper in spite of the lucky stones, and reached Glens Falls early in the morning. Mr. Wager wrote me that the day we were in search of a train of cars or a steamboat (for we missed one steamer that I have not mentioned) that would take us home, he was fishing in a high wind at Back Bay, and caught twenty-one bass weighing forty-four pounds. The bass that we caught proved themselves gamer than any other pond or lake bass that we have taken.

A. N. CHENEY.

GLENS FALLS, N. Y.

SNELLING HOOKS.

Editor Forest and Stream:

As Mr. Cheney has not replied to the questions asked by "J. W. T.," under the above caption, in your issue of March 19, I will venture a few remarks, although I well know that either of these gentlemen is better qualified to discuss this question than I am. "J. W. T." asks whether the wax would not be improved by substituting linseed oil for tallow (my receipt says lard). He says linseed oil possesses the drying element. For that reason I would not use it. I am using this season wax that I made last year, and I find it unchanged. I have not used the wax he mentions, and have no doubt it is a good one, but the difficulty of removing it from the hands is an objection. The wax I am using is not my own invention. I adopted it on seeing it recommended by a well-known English angler, whose interesting contributions have recently adorned the pages of FOREST AND STREAM. The wax I have found perfect for the purposes for which I have used it up to date. When it fails me I will, like "J. W. T.," look for something better.

I inclose two snooded hooks, tied with this wax, which I used last season. They are complete wrecks, but the waxed silk wrapping, or at least that part of it which was not chewed off by the fish, is still there, and the gut still adheres firmly to the hooks. On one of these hooks about one-third of the wrapping is gone, the worn off part being in the middle, leaving two ends of the thread entirely loose and unprotected. I have tried and failed to pull the gut from the hook, and request the editor to do the same, and if he fails also, to send the hooks to "J. W. T." for a final test. These hooks and snoods have been wet and dry many times and show no effects of expansion and contraction complained of by "J. W. T." As to the "knotty" question, these snoods will show the kind of knot I invariably use not only for loops, but for joining gut lengths together to make leaders. It may be trimmed as closely as possible and will never come open.

The hooks are Harrison's No. 4. sproat, and I had a number break off just under the beard, like sample inclosed. I think they are tempered too hard, and that too much temper in a fish hook is worse than none at all. E. A. LEOPOLD.

NORRISTOWN, Pa., May 8.

A HOME-MADE MINNOW NET.

IN your last issue your correspondent, "L. R. K.," asks how to make a net to catch minnows. I will describe a net which I have used for the past three seasons, and which I think possesses several points of superiority over any other which I have seen. It is made from a worn out umbrella, only the steel bows and the ring which slides on the handle being used. An ordinary sized umbrella with eight bows is the proper kind to use. Take the umbrella apart, remove the small clamps from the bows, the clamps I refer to are those that attach the ends of the braces to the bows, fasten the upper ends of the bows to the ring, or tube, which formerly slid up and down the umbrella handle in opening and closing. This fastening is effected with a piece of stout wire, just as the braces had been fastened at the same place. The net is octagonal in form and fastened at the eight corners to the other ends of the bows. To spread the net use a hard wood block, three inches in diameter at the large end. One end is trimmed down to such thickness as to fit loosely in the tube, and long enough to extend through about an inch when the net is spread. Insert the block from underneath, and force up between the bows until the net is spread taut, and the bows sprung out slightly. Bore a small hole through the block just above the tube and insert an iron pin to hold it in place. A nail or a wood screw will answer the purpose, and must be so loose that it can easily be removed with the fingers. The netting must be flat, not bagging. Ordinary mosquito netting will answer the purpose, and should be white, or a very light shade of color, so you can see when the minnows are over your net.

Attach a short string to the middle of the net, to which tie a small piece of stale bread, Put a stone the size of a hulled walnut in the net to sink it. Where the water is from two to three feet in depth allow the net to settle to the bottom, if deeper the net may be suspended by a cord. If fishing from the top of a perpendicular wall the cord may be held in the hand, but if from a sloping bank, a handle five or six feet long will be necessary. The net must be raised with a quick, strong pull. Every part of the net frame must be strongly made or something will give way. A hard pull will catch the large minnows; a slow, easy pull will catch only small ones. If they are slow about coming to the net, a few

crumbs of bread scattered on the surface of the water will attract them. Some use no bait on the net, but depend altogether on the crumbs scattered over the net.

With such a net the lone fisherman can catch enough bait in a few minutes to last him for a few days' fishing, and need not depend on any one for assistance. The net can be folded up in one minute by simply removing the block, and occupies less space than any other net of the same capacity. The size I use measures thirty-six inches across. I used mosquito netting two years, but last year I got a square yard of good, strong netting at a fishing tackle store for which I paid ninety cents. This net complete, made up with mosquito netting, will cost about twenty cents. E. A. LEOPOLD.

NORRISTOWN, Pa., May 5, 1885.

PROTECTION FOR THE POTOMAC.

Editor Forest and Stream:

The Act of Congress approved March 2, 1885, in reference to fish and fishing in the District of Columbia, is of considerable importance, more for the moral effect, perhaps, than for the legal power that may be exercised under it. Heretofore the Potomac River has been filled with the nets described, and it has been almost impossible for a bass, perch, shad, mackerel, anything, in fact, but an eel or catfish to escape being caught. Consequently fishing with rod and line has been of very little consequence for the past twenty years. Even with the act given, the situation will not be much improved, as the territory of the District is very limited, and Maryland and Virginia do not agree in providing suitable enactments in reference to the waters of the Potomac and the tributaries.

SECTION 1. That from and after date of passage of this act, for a term of five years, it shall not be lawful to fish with fyke-net, pound-net, stake-net, weir, float-net, gill net, haul-seine, or any other contrivance, stationary or floating, in the waters of the Potomac River within the District of Columbia.

SEC. 2. That any person who shall offend against any of the provisions of this act shall be deemed guilty of a misdemeanor, and upon sufficient proof thereof in the police court or other court of the District of Columbia, shall be punished by a fine of not less than ten dollars nor more than one hundred dollars for each and every such offense, and shall forfeit to the District his nets, boats, and all other apparatus and appliances used in violation of law, which shall be sold; and the proceeds of such sales, and all fines accruing under this act shall be paid into the treasury; *Provided*, That nothing in this act shall be construed to prohibit angling or fishing with the outline, or to prevent the United States Commissioner of Fish and Fisheries, or his agents, from taking from said waters of the Potomac River in the District of Columbia, in any manner desired, fish of any kind for scientific purposes or for the purposes of propagation.

It is made unlawful to allow any tar, oil, ammoniacal liquor or other waste products of any gasworks, or of works engaged in using such products or any waste product whatsoever of any mechanical, chemical, manufacturing or refining establishment to flow into or be deposited into the Potomac River, or any of its tributaries within the District of Columbia.

This latter clause is important; whether it can be enforced remains to be seen. In any event the step is a step forward.

J. C. B.

WASHINGTON, April 22.

THE PIONEER SEA FISH.

TO us dwellers by the shore your editorial of some months ago upon "Salt-Water Fishing" seemed a good-humored challenge for stories of our favorite amusement. We were told that the pursuit of the innumerable variety of denizens of the deep induced a morose, selfish and taciturn disposition. That the salt-water angler became a solitary, a rogue among the craft, and that he grudged communicating to his fellows the localities where he achieved success. The truth of this contrast to the hilarious welcome which the fresh-water brother gives the adventurer who attempts to share his trout stream, or the likely spot which he is trying for bass, explains why the challenge for "copy" of the kind sought for has not been accepted.

Let those who like take the fresh-water brooks for their recreation. It is a matter of taste the scrambling over rocks and through underbrush and fallen timber, and the hardships of a life absolutely separated from every comfort or convenience, and stimulated into angry activity by impertinent entomology. There are those who love better the breath of ocean, the unvarying brilliancy of sky and sea, the social life of the comfortable hotel or the roving vessel after the day's labors, the almost certain success in the pursuit of the fish, their variety and super-excellence for the table, than the odor of reeking decay, the frequent storms, the very many unsuccessful days, the swarming insect pests which make darkness a relief and torment inevitable, not to mention the general worthlessness of the rare trophies of the angler's skill. We of the shore have enjoyed the charming stories of camp life told by "Kingfisher" and others as skillful literary work; but they are very much like the "Ride to Khiva," good to read, but bad to imitate. The man who tasted his own capacity for enjoyment more keenly than any other, sums up his experience:

> "There is a pleasure in the pathless woods,
> There is a rapture on the lonely shore!"

But I did not intend to ramble into controverted ground. I merely wanted to convey to the fly (and insect) fishers that there are gross and vulgar souls who like to try conclusions with weightier prey. The opening season of sea fishing is upon us. Ten days from this time the drum will enter Delaware Bay, and the shore opposite the "drum beds," just above Cape May, will be dotted over with the skiffs of the fishermen, ready on "the young flood," to cluster a mile from shore, and await the coming of the "wallowing herds" of their favorite fish. It is a tradition, verified by long observation, that the drum appears with the dogwood blossoms, and outside my window the swelling buds indicate that it is time to overhaul the lines which have served me well these many seasons.

The drum is a large fish, weighing from twenty to one hundred pounds, the average weight about sixty. They congregate from the middle of May to the middle of June upon the Cape May shore of Delaware Bay from Diamond Beach, which is about four miles above Cape May to Fishing Creek four miles further. About a mile off shore at intervals are beds of clams or quahaugs, and upon these the fish feed, crushing the hard shells in their powerful jaws. Parties of fishermen come in large vessels from the different harbors along the bay and anchor on the grounds, and great numbers of small boats put out from shore on the rising tide, and all form a compact cluster so soon as any boat strikes the run of the fish. Usually the pursuit requires patience, but at times the bait is taken freely and excitement runs high. A sixty-pound drum on a rod and reel requires some skill in manipulation, besides thoroughly testing the muscles.

There is not much selfishness in sea fishing, and any one who wishes to try these fish should do so about the middle of May, and no one will begrudge his presence and competition. He will find good accommodations at the Bay View House, at Pierce's Point, to be reached by stage from Court House Station on the Cape May Railroad, distance four miles. For a large party, probably a better plan would be to go to Port Norris by way of Bridgeton, and engage a boat there. There is a good hotel at Port Norris, and the town being the center of the oyster industry, plenty of boats and competent sailors can be procured. In the latter case notice should be given to Mr. Middleton, the landlord.

F. S. J. C.

CAPE MAY, May 1, 1885.

THE WILLEWEMOC CLUB'S WATERS.

Editor Forest and Stream:

A gentleman lately negotiated with me to buy one of the twenty shares of Willewemoc Club, par value $250, and yesterday I received his finale saying, "Inclosed I return you the Willewemoc Club By-Laws. If later on the hotel men and others do not interfere with your rights, and you do not dispose of your stock I will make arrangements to take it."

Now is it not a shame that the illogical, and doubtless irresponsible person (Best, is that his name?), who has been writing in a Kingston paper, has been able to damage me so much, absolutely without cause? No hotel keeper nor other person ever interfered with our rights in ten years past; our neighbors are our friends; we have several thousand dollars worth of property back in that wilderness, and have spent hundreds there yearly; our lake is surrounded by our own 160 acres of land, bought and paid for; we have never put any State trout in our waters; and if the names and addresses of our members were published it would be admitted at once that no more reputable gentlemen can be found in the whole country. The same is true of the Balsam Lake Club, and, I have no doubt, of the Neversink Club, with some of whose members I am acquainted. The statements of this outrageous person in the Kingston paper are absolutely without foundation in fact, as regards the clubs I know about. Nor do the members of these clubs kill, or take away very many fish; all small ones are put back, and in the Willewemoc Club but six can be taken away from the premises by any one at one time, it is true they will run from one pound to two and a half pounds apiece in weight.

The fact remains that I am damaged $200 cash by this person, and have no redress. GEO. W. VAN SICLEN.

NEW YORK, May 7.

THE TARPOM AS A GAME FISH.

THE brilliant success of Mr. W. H. Wood in the killing of five specimens of the tarpom on a rod in Florida, shows what can be done by a skillful angler with the proper weapons. I have always believed that this was a possible feat, and it has turned out to be less difficult than I supposed it to be. Less difficult because the fish are killed in much shorter time than I expected. Mr. Wood's five fish averaged 100 pounds each, and were killed in the average time of twenty-six minutes, according to the published accounts. This is, I think, less than the average time consumed in the capture of a large salmon, striped bass, or channel bass. That the tarpom is a very active and powerful fish and a furious fighter, I think there is no doubt, but he probably exhausts his strength by long runs and lofty leaps. I myself have several time shooked a tarpom at Halifax Inlet while fishing for channel bass with rod and reel, but my line was instantly cut by the knife-like labial bones, so that there was no contest.

Some armature of the line is necessary, such as wire or chain, and no doubt something will be devised by the tackle makers for the purpose.

Mr. Wood's capture is, however, not the first of that kind. A tarpom was killed in the Indian River, East Florida, with rod and reel, by Mr. S. H. Jones, of Philadelphia, some years ago, I think about 1878. This specimen measured over seven feet in length, 32½ inches in circumference at the dorsal fin, and weighed 174 pounds. The contest lasted more than three hours, if I remember right, and was carried on from a boat which was towed some distance by the fish. I heard of this affair in Florida the year after it happened, and got the dimensions and weight of the tarpom from the boatman who waited on Mr. Jones, who himself gave an account of the capture to an angling friend of mine, so that I have no doubt as to the correctness of the story.

In writing the name of this fish, I follow the spelling of Captain B. Romans, who in his "Concise Natural History of East and West Florida," New York, 1775, mentions the "tarpom;" and also the pronunciation of the fishermen of the East coast, who call it "tarpom" or "tarpum." S. C. C.

WOODMONT ROD AND GUN CLUB.—At the annual meeting of this organization, held last evening, the following named officers were elected for the ensuing year: President, Curtis J. Hillyer; Vice-President, William Lee; Secretary and Treasurer, B. E. J. Eils; Auditor, W. C. Woods; Executive Committee, C. C. Glover, S. H. Kauffmann, Andrew McCallum and the President and Treasurer. The report of the retiring president showed the club to be in good condition, financially and otherwise, with a highly satisfactory outlook for the future, in every respect, and only four vacancies existing. There is, by the way, good reasons to believe that gunning and angling on the estate of the club will alike be better the coming season than ever before, as both fish and game seem to be rapidly increasing in that locality. Ground for this belief as to the last named recreation was afforded by the experience of a party of members and guests who went up to the club house on Saturday. The party numbered ten, but only six really indulged in the fascinating diversion, and their catch, extending a little over two days, aggregated one hundred and sixteen fine bass, weighing from a half pound to three pounds and a quarter. Of these about twenty were taken with the fly. This result was regarded as very satisfactory, considering the backwardness of the season and the coldness of the water in the upper Potomac. Especially does it apply to fly-fishing, as experience generally shows that bass will not rise to the artificial lure until the weather is hot and the water warm. The champion of the party for this visit, it may be added, was Mr. Levi Woodbury, who took not only the heaviest fish but the greatest number.—*Washington Evening Star, May 1.*

NETS SEIZED AND BURNED.—The ice has only been out of the St. Lawrence River a few days, but the fish thieves have been at work already with their nets at various points. Tuesday, General Sherman, of the State Commission, placed State Game Protector Schwartz, of Rochester, Special Protector Drew, of Washington Mills, at the service of the officers of the Anglers' Association of the St. Lawrence River for a tour of inspection. They had an assistant from this section and made a trip along the lines. The water in the river is very high, but the pirates were found getting ready for their unlawful work. Nothing was heard of the State officials until 4 P. M. yesterday, when the following telegram was received by the President of the Association in this city: "CLAYTON, May 1.—We have just returned from Chippewa Bay with two large gill-nets, one 40 rods long and the other 50 rods. We had the steam yacht Junita, Captain Elliott. The river was very rough, and it was very difficult to get them. A northeast wind made things lively. The nets are now burning at the dock.—SCHWARTZ AND DREW." Gill nets measuring over a quarter of a mile in length are liable to draw in a large number of fish that belong to the State and the taxpayers thereof. It is not known thus far who the owners of the nets are, but it is known that some of the pirates who operated successfully in Oneida Lake for a long time have been stealing fish at Chippewa Bay and other points. These fellows know State Protectors Steele and Leonard, of the St. Lawrence and Jefferson districts so well, that it is difficult for them to get within sight or reach of a net; this is why the agents from other districts were sent out. This good work will be kept up until every fish pirate on the river is exterminated and his nets destroyed. Protector Schwartz captured and burned twenty three nets in his district last week, and Protector Drew has been doing excellent special work at various points. Both are trusty and intelligent men, and they fear no one. Other reports are expected from them before they leave the St. Lawrence, although the weather is unfavorable for stretching or capturing nets.—*Utica (N. Y.) Observer.*

JUNE ANTICIPATIONS.—Boston.—I have been counting the days and weeks looking forward to the approach of June, that month of all the year the best for trout fishing and woodland recreation. And just now I recall the fact it is the month in which I first saw the light of day, how many years ago I will not state. I wonder if for that reason the month and its sports, its rose-perfumed and health-giving air, have for me any special influence. Perhaps so, perhaps not; for I love the lakes in July, and I love the forests always. Be that as it may, at the approach of June I always have a presentiment that to retain my present vigorous health and fit myself for battling through the heated term soon to follow, I must go a fishing, ramble and row, paddle and pack, and so develop and harden the muscles and strengthen the brain. I always have many excuses for going trout fishing, but the most important and potent is that I like it. Now we are admonished that the season is near at hand, and that we may be ready, we must begin to overhaul last year's duffle. The rods must be repaired, the lines and reels tested, this stock of well-worn flies and leaders renewed, get a new net, and don't forget the blackfly cream. What's this? a flask, and full, left over from last year's trip? How unlike a flask, and yet, how like some men to remain "full" during the entire trip. We took it along as a preventive; we love old friends proved by age and experience, so we will put it in and give it another opportunity to render service. The box is packed, and right here let us thank "Nessmuk" for that word "duffle." We have for years insulted good guns and rods and the various gems of artistic workmanship that comprise the outfit of the shooter or fisherman by calling them "traps," "stuff" or "tackle," and have often felt the need of a name. So now the duffle is packed and ready.—M.

EASTERN PENNSYLVANIA.—Philadelphia, May 9.—At the monthly meeting of the Anglers' Association of Eastern Pennsylvania, last evening, Mr. Penrose Collins, the corresponding secretary, stated that arrangements had been made for bringing several hundred rock bass from Lake Erie and putting them in the Schuylkill and other streams in the vicinity of Philadelphia. The Association will pay all the expenses. This is a good move and one your correspondent has long advocated, as the rock bass will take the fly readily and furnish excellent sport. Shawmont Dam should be selected as one place in which to liberate the fish and the water of this part of the river will be suitable for them. The sunfish in Shawmont Dam rise to artificial flies. How much better it will be then for practice when the rock bass increase in these waters.—HOMO.

MAKING TAPERED HOOKS.—Several of your correspondents have said they did not know why tapered hooks were not marked. I wrote it had been suggested to me that it was because their shanks are too slender. Now, Mr. Allcock shouts from across the stormy Atlantic that the suggestion is an error. Before he snoods hooks he marks them. I think he is wise. I do the same but I wish the manufacturer to do it for me. If marked tapered hooks are not too good for him and me, they are right for other sportsmen. If it does not cost too much to mark straight hooks it does not tapered ones. If straight ones need to be marked, tapered ones need it more. If Englishmen can afford to purchase them, Americans can and will. By all means let us have them now, before August.—J. W. T.

SPLICED LEADERS.—We have received a patent spliced salmon leader from Messrs. Samuel Allcock & Co., Redditch, England, the well-known makers of hooks and fishing tackle. The ends of the gut are indented and placed side by side, and bound firmly together, making a knotless cast. A loop at each end is also made without a knot. The whipping of joints appears to be done with silk covered with some sort of varnish, and it makes a neat finish and a handsome leader.

THE RANGELEYS.—Richardson, Me., May 7.—The Rangeley Lakes will probably all be clear of ice by the 12th or 15th of the month. The first trout of the season was taken by Capt. Crosby from the wharf in front of the Mooselookmeguntic House. It weighed 6¾ pounds—a pretty good one for a starter.—CAPT. F. C. BARKER.

MEACHAM LAKE.—Duane, N. Y., May 7.—The ice is out at last and the fishing begins good. Yesterday four rods took 312 trout; weight, 106 pounds. To-day four rods took 225 trout in half the day; weight, 74 pounds. The water in the lake is not unusually high, and everything indicates good spring fishing.—A. R. FULLER.

PHILADELPHIA, May 9.—The streams on the Camden & Atlantic Railroad, within fifteen miles of Philadelphia, where trout are known to be, are teeming this year with fish too small to be taken. On some of these brooks dams have been made which back the water and the larger trout resort to them altogether. These ponds are the only places where fly-fishing can be had, but the owners of the land bordering them will not allow fishing. It is impossible to fish the streams proper with anything else than a rod a yard long, and worm must be the bait, as the underbrush prevents fly-casting.—HOMO.

CONEY ISLAND ROD AND GUN CLUB.—Brooklyn, N. Y., May 6 —The fishing interests of the club will be confined to Coney Island Creek and Gravesend Bay, and it is expected that the gamy striped bass and the beautiful weakfish caught in these waters by our members during the fishing season will be the means of securing some club prizes. Our monthly shoots at Kings Highway during the year will also offer prizes to the best marksmen in their respective classes.—GEO. L. AYERS, Secretary.

MR. WALTER BRACKETT, the well-known artist of Boston, has recently completed a trout painting, which is said to be one of the best, if not the best, picture he ever painted. It goes to Paterson, N. J., we believe.

Fishculture.

THE AMERICAN FISHERIES SOCIETY.

(AMERICAN FISHCULTURAL ASSOCIATION.)

THE fourteenth annual meeting of the Society, and the first under the new name, was held in Washington, in the lecture room of the National Museum, on May 5 and 6. The meeting was called to order by the President, Hon. Theodore Lyman, of Massachusetts, with the following remarks:

GENTLEMEN OF THE AMERICAN FISHERIES SOCIETY: We are at a season of the year when important events repeat themselves. It is the spring. Baneful influences have passed away. Ice-bound winter, as by a miracle, has given place to southern breezes, and—still more strange—Congress has adjourned and gone home. Good things come to the front, full of hope and energy, and intent on growth and reproduction. Asparagus protrudes its welcome green nose from the soil; the suggestive pea flourishes defiant of late frosts. The English sparrow industriously builds its nest in spots carefully selected to render it as much a nuisance as possible; the cows go forth to pastures green and reward the aqueous milkman with abundant flow of milk pleasingly redolent of garlic. Nor do the waters less respond to genial warmth; for now the shad and the herring, intent on spawning and oblivious of the fatal seine, push up the Potomac and seek the safe shores of the District of Columbia, where they may breed under the parental protection of a special act of Congress. Last and greater than all these come the members of the American Fisheries Society, pregnant with great ideas and anxions to deposit them in Washington for the benefit of an ichthyophagous nation.

Gentlemen, I bid you welcome. You are surrounded here by great traditions and mighty influences. From the capstone of yonder monument ten entire weeks look down upon you. In the grand pile of the War, State and Navy Departments, you will have a valuable lesson of what is to be avoided in architecture. The hurrying crowds of office-seekers will prove to you how the busiest bee may, under adverse circumstances, collect no honey, and how the earliest bird may fail to catch the truly astute and resolute worm. The numerous hansom and herdic cabs will point the moral, that however long or agreeable or smooth be the road, we must all pay a price at the end. The suave manners of our negro population will bring to your minds the fact that some of the most agreeable lights in life, like those in a cathedral, come through a colored medium. In a single word, then, I bid you welcome to a sojourn which cannot fail to be profitable alike to humanity and to fish.

On motion of Col. M. McDonald that a committee of three be appointed to revise the constitution and by-laws of the Society and report at the next annual meeting, the president appointed Messrs. F. Mather, W. V. Cox and F. N. Clark.

The following gentlemen were appointed to nominate officers for the ensuing year: Prof. G. Brown Goode, W. L. May, T. B. Ferguson, E. G. Blackford and Dr. T. H. Bean, and a recess was taken until 2 P. M. The following is the list of papers announced to be read at the meeting:

1. "The Giant Clams of Puget Sound," Prof. R. E. C. Stearns.
2. "Hibernation of the Black Bass," James A. Henshall, M.D.
3. "Smelt Hatching," Fred Mather.
4. "The Porpoise Fishery of Cape Hatteras," F. W. True.
5. "Results of Artificial Propagation and Planting of Whitefish in the Great Lakes," Frank N. Clark.
6. "Does Transplanting Affect the Food or Game Qualities of certain Fishes?" A. Nelson Cheney.
7. "How to Restore our Trout Streams," J. S. Van Cleef.
8. "Exhibition of Complete Series of Salmon and Trout of North America," Tarleton H. Bean.
9. "Objective Points in Fishculture," M. McDonald.
10. "A Glance at Billingsgate," W. V. Cox.
11. "Work at Cold Spring Harbor," Fred Mather.
12. "Oyster Beds of New York," E. G. Blackford.
13. "On some of the Protective Contrivances developed by and in connection with the Ova of various species of Fishes," John A. Ryder.
14. "The Use of the Throwing-Stick by Eskimo in Fishing," O. T. Mason.
15. "The Chief Characteristics of North American Fish Fauna," Theodore Gill.
16. "Suggestions as to the Development of Oyster Culture in the Chesapeake Area," M. McDonald.
17. "Biennial Spawning of Salmon," Charles G. Atkins.

During the meeting the following were proposed and elected to membership: Hon. Geo. M. Robeson, of New Jersey; Dr. E. W. Humphries, Commissioner for Maryland; W. W. Ladd, Jr., New York city; Frederic R. Ryer, New York city; Prof. H. J. Rice, New York city; Prof. Chas. V. Riley, Agricultural Department, Washington; S. H. Kauffman, *Evening Star*, Washington; W. A. Butler, Michigan Commissioner; Gwynne Harris, Inspector of Marine Products, Washington; S. C. Brown, Register National Museum; J. P. Wilson, W. E. Bailey, Engineer, Geo. H. H. Moore, Newton Simmonds, W. F. Page, J. F. Ellis, J. J. O'Connor, J. E. Brown, A. Howard Clark, W. W. J. Murphy, Thomas Lee and Peter Parker, Jr., all of the U. S. Fish Commission; Ed. H. Bryan and Henry W. Spofford, both of the Smithsonian Institution; Major G. I. Lydecker, U. S. Engineers, and Lieut. Pietmyer, U. S. N., commanding steamer Fishhawk.

On the second day the following officers were elected to serve the coming year: President, Col. M. McDonald, U. S. F. C.; Vice-President, Dr. W. M. Hudson, Commissioner of Connecticut; Treasurer, Mr. E. G. Blackford, Commissioner of New York; Corresponding Secretary, Mr. M. V. Cox, National Museum; Recording Secretary, Fred Mather, FOREST AND STREAM; Executive Committee—Prof. G. Brown Goode, National Museum, chairman; Roland Redmond, New York; Geo. Shepard Page, New Jersey; W. L. May, Nebraska; F. N. Clark, Michigan; Dr. J. A. Henshall, Kentucky; S. G. Worth, North Carolina.

During recess the Society called on the President of the United States and visited the carp ponds and the central hatching station in the Armory building.

On Thursday, 7th, a trip was made on the Fishhawk down to Fort Washington, where planked shad were served, and then a visit made to the station for hatching shad, where 4,000,000 eggs were in process of packing for the central station. On the return a meeting of the Executive Committee was held, and it was decided to hold the next meeting in Chicago.

The Committee on the Constitution offered the following, to be considered until the next meeting, when it will be voted on:

PROPOSED CONSTITUTION.

ARTICLE I.—NAME AND OBJECTS.

The name of this Society shall be The American Fisheries Society. Its objects shall be to promote the cause of fishculture; to gather and diffuse information bearing upon its practical success, and upon all matters relating to the fisheries; the uniting and encouraging of the interests of fishculture and the fisheries; and the treatment of all questions regarding fish, of a scientific and economic character.

ARTICLE II.—MEMBERS.

Any person shall, upon a two-thirds vote and a payment of three dollars, become a member of this Society. In case that members do not pay their fees and are delinquent for two years, they shall be notified by the treasurer, and if the amount due is not paid within a month, they shall be, without further notice, dropped from the roll of membership. Any person can be made an honorary or a corresponding member upon a two-thirds vote of the members present at a regular meeting.

ARTICLE III.—OFFICERS.

The officers of the Society shall be a president and a vice-president, who shall be ineligible for election to the same offices until a year after the expiration of their terms, a corresponding secretary, a recording secretary, a treasurer, and an executive committee of seven, which, with the officers before named, shall form a council and transact such business as may be necessary when the Society is not in session, four to constitute a quorum.

ARTICLE IV.—MEETINGS.

The regular meetings of the Society shall be held once a year, the time and place being decided upon at the previous meeting, or in default of such action, by the executive committee.

ARTICLE V.—CHANGING THE CONSTITUTION.

The constitution of the Society may be amended, altered or repealed, by a two-thirds vote of the members present at any regular meeting.

THE MENHADEN QUESTION.

Editor Forest and Stream:

I notice in your issue of April 9 that a correspondent from Brooklyn, N. Y., states the points made by me in your paper of Feb. 21, 1884, in regard to our fisheries, are incorrect. If so why not produce facts to refute them, simple denial is not argument. I now reiterate every statement made in that article and challenge him to refute a single point. At a meeting held by the U. S. Menhaden Oil and Guano Association, January, 1885, the following figures were given: Number of steamers in use during 1882, 83; number of menhaden taken, 346,638,555; number of steamers in use during 1883, 69, number of menhaden taken, 613,461,776; number of steamers in use during 1884, 59; number of menhaden taken, 858,592,691. The question comes up, why the increase in fish and decrease of fishermen? The first question is answered by the fact that menhaden were plenty during 1884 on all the menhaden fishing grounds of our whole coast west from Rhode Island, and the decrease of fishermen is explained by saying that as a whole it is not a paying business on account of low prices of oil and guano, and high cost of men and material.

Your correspondent speaks of his long experience and tells of shore seines and there not being used as of old. It is the old man's lament for old times with stage coaches instead of railroads, sailing vessels instead of steam, mounted messengers instead of electricity. Why is it that fishermen can't keep abreast and utilize the improvements of the age without being kicked at not only by fossils but by the editor of FOREST AND STREAM? It is an industry that stands on its own bottom and fights its own battles and asks only to be let alone and would, if it was rightly understood, be fostered, protected and encouraged, instead of being hampered by unjust laws administered by men that know practically little or nothing of fish or fishing.

I submit the following facts for his digestion. During summer of 1885, between Fire Island and No Man's Land, and between Newport and 25 miles off shore, there were over 1,600 square miles of water that swarmed with menhaden, and a Rhode Island steamer called the Humphrey caught in ten weeks 35,000 barrels of menhaden and did not go west of Montauk to get them. Steamer Seven Brothers started after menhaden one month after they made their appearance and with a crew of two men and six boys caught over 17,000 barrels, and most of them in Narragansett Bay. Sloop Ida Lee with one boat to freight fish began to cruise last of June and caught between Providence and Beaver Tail over 11,000 barrels. Why menhaden did not slip down to Westport is of course known only to themselves, they did visit West Island, Seaconnet, and our Little Compton friends sent us word that the waters in that vicinity were full of them. Westport is only six miles east from West Island and if the menhaden come to this coast this season his old heart may be made glad by the sight of menhaden on their old grounds and in quantities more than equal to those seen in his youth.

Does your friend recollect the menhaden oil factory that was built on Penikise Island, Buzzard's Bay, forty or more years ago? If so, he knows it was put there because there were plenty of menhaden in the vicinity. Does he recollect that soon after it was built menhaden disappeared from that locality and on that account it was not used for years and at last rotted down? Does he recollect of menhaden swarming around Penikese, Cuttyhunk, Martha's Vineyard and in all the waters from Montauk to Nantucket, outside and inside during the year 1876, and that they were so plenty that the bass fishermen could catch their bait by standing on the shore and throwing hand lines with hooks attached into the schools and haul them ashore? What a chance for shore seines! Does he recollect that during 1882 there was not a single school of menhaden seen east of Montauk? If he is familiar with the above facts will he explain, or give us a reasonable theory for their presence and absence for years together at and from the same locality? I have heard a great many men explain and give reasons but no two agreed. The fishermen report that during 1884 there were with the menhaden more sharks than usual, schools from one acre to five acres in extent were common. The result was wholesale destruction, which if continued, will in a short time wipe out the 1884 crop.

Provably more menhaden were destroyed every day last season by sharks than all the menhaden fishermen of the United States could catch in ten years. It is a fact well known to those posted and familiar with the subject that man is only a cipher in comparison with the engines of destruction furnished by nature to destroy fish that live, breed and have their homes in our rivers, bays and the ocean.

DANIEL T. CHURCH.

TIVERTON, R. I., April 18.

SHAD GO OVER A FISHWAY.—The superintendent of fisheries for South Carolina reports to the U. S. Fish Commission, under day of May 5, as follows: "The fishway on the Saluda River is working nicely. I was told by the superintendent of the factory yesterday, that shad and round fish are going over it constantly. This I do not doubt, as while inspecting the way myself I found fish on it near the head." This is the older form of the McDonald fishway, erected in 1882, and is very crude in construction and inefficient as compared with new designs.

The Kennel.

FIXTURES.

BENCH SHOWS.

May 13, 14 and 15.—Third Annual Dog Show of the Toronto Dog Show Association. W. S. Jackson, Secretary, Toronto, Ont.

May 19, 20, 21 and 22.—Show of the Philadelphia Kennel Club. F. A. Diffenderfer, Superintendent, Philadelphia, Pa.

June 2, 3, 4 and 5.—First Annual Dog Show of the Illinois Kennel Club. John H. Naylor, Secretary, 3,182 Archer avenue, Chicago, Ill.

FIELD TRIALS.

Nov. 16, 1885.—Seventh Annual Field Trials of the Eastern Field Trials Club, High Point, N. C. Entries for Derby close May 1. W. A. Coster, Secretary, Flatbush, L. I.

Dec. 7.—Seventh Annual Field Trials of the National Field Trials Club, Grand Junction, Tenn. Entries for Derby close April 1. B. M. Stephenson, La Grange, Tenn., Secretary.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **2386.**

BRUNO.

THY coat of arms, the symbol of thy knighthood,
Is thy coat of shaggy black and fawn;
Thou comest doubly of a house that's knighted,
For deeds of valor and courage done,
Thy fawn is the fawn of thy sires who peril'd
Their lives for life in the Alpine snows,
And thy black is their black who knew the waters,
When dark death lurked in their ebbs and flows.

Thy deep, glad bark at my call, and thy bounding,
Touch my heart with a flush of joy,
For the trust of a dumb, dependent creature
I count a blessing without alloy.
Be many thy joys, faithful friend, that gladden,
Few, faithful friend, thy sorrows that ache,
For thine is the depth of love and devotion
Even to death for thy master's sake.

Thine eyes have almost more than human pleading,
Brimming with eloquent mute appeal;
And thy brown head's reassuring pressure,
Doth thy loyal sympathy reveal.
If speech were thine, what thoughts were thine to utter,
What emotions thine to be expressed,
Expressed what floods of staunch and steadfast feeling,
Surging and glowing within thy breast!

There is a touch of pathos in the offer
Of thy paw, when on my lap 't is laid;
Thine honest paw no traitor pulses flutter,
Thou hast no taint of blood that e'er betrayed;
And the clan of nature's nobles that claims thee
Insures thy fealty till life shall end;
So I hold thee one of my best and truest,
We are pledged together friend and friend.

JENNIE MAXWELL PAINE.

CINCINNATI DOG SHOW.

Editor Forest and Stream:

Before offering any observations on the above-named show, permit me to hark back to that of New York, held the previous week, to remark upon and reply to the criticisms on my decisions, which I have read in your columns and that of your Western contemporary.

On the points I desire to touch you are in agreement, and I am told similar expressions of opinion have appeared in other papers, which I have had no opportunity of reading.

I am not surprised at the unanimity in the mild censure on the particular decisions with which you differ from me, and that for two reasons: Firstly, because the manner in which adverse opinion has been expressed is characterized by the courtesy to a visitor which has marked my reception here, and which past and present experience teaches me is a prominent trait in the American character. Secondly, because my publicly expressed criticisms on several awards made by me is in accord with that of your own and other reporters.

In the two cases of the mastiff bitch class and the pug dog class, I must now recall my admission that I was in error in my decisions, for having had a second opportunity of seeing Rosalind and Prussian Princess together, and to take a more leisurely survey of them, and with time to consider the subject in its various bearings, I am prepared to stand to my first decision, as in fact I have done, as the Cincinnati prize list given below will show.

It would, however, be wanting in respect to all concerned, if, apparently seesawing from one opinion to another and back again, I did not offer the reasons by which I justify myself, at least to myself.

In your introductory remarks to your critique of the New York dog show, you very justly say that "comments on the dogs should be for the benefit of the public and as a guide to the breeder who has no opportunity of examining them;" and your further observation in reference to mating, with the view of eliminating faults and improving desirable qualities, I thoroughly indorse.

I believe that every one of your readers will agree in that view, and that difference of opinion will only begin when we come to discuss the methods to be pursued to attain that desired end. The subject is too big to be exhaustively treated in the preliminary of a dog show report; I will, therefore, confine myself to an explanation of the principle I laid down for my guidance and which I followed as well as I was able, and as the circumstances of the case (the classes of animals before me) permitted of, merely premising that I shall be pleased to return to the subject to discuss it with any one interested.

You are in this country engaged in founding a breed which, whatever we may call it now, will in future be the American mastiff.

In doing so you naturally and wisely seek your parent stock in its home; and I looked upon it as my duty to select from the specimens before me those of the best type of English mastiffs, as that type is defined and accepted in England at the present day. I say nothing of the old English mastiff, for although a club of that name exists, under the pretension of preserving the ancient broad-mouthed dogs of Britain, it would be as absurd to speak of a show dog as at all resembling his progenitor of the bear garden as to speak seriously of the present existence of the mastodon. It is my opinion that Prussian Princess is nearer to the present accepted standard than Rosalind in type or family character, and that for breeding purposes, for stamping the character on the breed in this county, she possesses the requisite qualities in an intensity which Rosalind does not. I am not overlooking her physical defects in legs, but such faults are oftener due to bad kennel management than inheritance, and treated as a loss in calculating the ideally perfect animal, is of less consequence from a breeder's point of view

than lack of family character, and taking these two things into consideration, I look upon Rosalind as the better dog, Prussian Princess as the better mastiff. I am not "a kicker," and I look for and can stand the brunt of criticism without flinching; all I desire is that to mutually benefit each other—which should be the primary object—we should take into consideration the different standpoints from which we severally view the case.

The pug case I will deal with further on.

"It's a lang cry tae Loch Awe," says the Scotch proverb, but the originator of the saying would have found it a still langer cry tae Cincinnati; that at least was my experience, beautifully picturesque and charming as many of the surroundings of that journey are, and the length of the way must be my apology to the reader for not having introduced him to the dog show there half a column sooner.

Arrived at the St. Nicholas House, I was soon in the presence of General W. B. Shattuc, to whose kindness and attention I shall ever remain indebted.

Quickly driven to Power Hall, a part of the Music Hall, an imposing and handsome building, I found a show of 407 dogs, divided into 125 classes, well arranged and comfortably benched, under the superintendence of Mr. W. A. Coster.

I had been requested to begin my work on Thursday morning, but Major J. M. Taylor, who adjudicated on the setters, and Mr. Seitner, who did the like by the pointers, having completed their duties, I soon had champion mastiffs before me, with the result given in prize list. Hero II. is a well grown dog, and as I looked at him thoughtfully I remembered a ring in "Bonnie Dundee" when I could not persuade Vero Shaw that Hero's sire, Salisbury, was better than the sinister-faced Cardinal (sire of Ilford Cromwell), and Rawdon B. Lee (London *Field*) as umpire, deciding in favor of the former, laughed at us for being so long over so easy a task. Hero is not quite the style of head modern fancy demands, but whether better or worse is open to argument.

One thing is certain, short heads means short bodies, and that again means loss of activity. As I have already said, I endeavored at New York and again at Cincinnati to arrange the mastiffs in the order of their approach to the modern type, and it is for American breeders by association to lay down a standard most suited to the uses to which they mean to put the dog, and for such purposes of breeding they possess already a good foundation, and I hope in doing so they will be bound by no straight-laced shibboleths of English fanciers, but modify the dog to suit his new conditions and uses. It is over a century since you cut your mother's apron strings over a caddy of tea; do the same in regard to dogs. In the open class Ilford Cromwell won easily; he is the best, although not the biggest brindle I have ever seen, and has little of that forbidding expression of countenance which characterize his sire and his grandsire Wolsey. Adam J., a young dog, only fourteen months, is a nice clear fawn or fallow, well built, with a good type of head, though not quite massive enough; he will, however, improve, and I expect to read of this American bred dog holding his own in the best of company. Moses was entered but absent. Hildebert is a good specimen. I need say nothing more than I already have done anent the bitches except to notice the handsome Bal Gal, shown in splendid order. Minerva and Scipio are both promising puppies, only requiring care in management to take their place hereafter in the highest competition.

St. Bernards.—These numbered but sixteen in all, but were, on the whole, a very fair lot. In rough-coated dogs, Turk, a large orange tawny and white, entered without pedigree given, hails from Chicago, and however bred, he shows so much St. Bernard character and is of such good shape and finish, he should hold his own at his home show a fortnight hence. In the corresponding bitch class, the very good and exceedingly well-shown Bertha took the prize. In smooth dogs, Verone repeated his New York victory, here defeating a big, upstanding, red and white, a handsome dog, but not a particularly good St. Bernard. He is prettily marked, and doubtless spoken of by "everybody" [that indefinite entity, that misleads so many dog owners of inexperience] as a "handsome dawg;" but he is what we call in English kennel jargon, "a flat-catcher;" a dog that imposes on the eye but fails to satisfy the judgment. Wanda was alone; had she dark shadings, the plainness would give way to perfection of finish.

Newfoundlands.—In this class there were three very good specimens, Miro, Major and Ponto, placed as named, the rest out of court. Miro repeated his New York win, but he was very closely pressed by Mr. Laidlaw's Major, who rather lacks size.

Irish Water Spaniels.—It was a pleasant surprise to find no fewer than eleven of these thoroughbred Irish dogs so far from the Emerald Isle; in fact, I am not sure that I ever saw eleven at any Irish show, and I am pretty sure so large a number never put in an appearance at an English one. What is still more pleasant to record is, that all were good save "wan," and that was not "wan" at all, for it was a poodle, so it was. Sinbad II. victorious over Count Bendigo! How have the mighty fallen? Ahem! I mean, how the poor judge will be scarified by those terrible fellows who write to newspapers. Worse still, King Slash, first in his class, beat the champion for the special prize. Well, I think he is an exceedingly well-made dog, good, straight forelegs, well feathered all round, his head is of the right shape, fairly domed in the skull, muzzle not too square, the head with sufficient, but not overdone in topknot; in body, too, he is good, the loin strong and back ribs well let down, saving him from even an approach to "tuckedupness," which spoils some otherwise good specimens of the breed. Praise of King Slash, be it understood, is not disparagement of the competitors that ran him so close; the two bitches, and especially Judy, are a credit to their race.

Field and Cocker Spaniels.—But that I fear launching into a too lengthy dissertation, I would cut the division of spaniels that now obtains into very small ribbons. It is based on a stupid fallacy which a study of the history of the spaniels as used for sport would correct, but to study cockers first and spaniels after as seems to be the fashion, is to reverse the natural order of things as much as it would be to teach a youth the genera and species of plants before he knew the difference between an exogen and an endogen. These classes were too much sub-divided so that a walk over was the order of the day. The prize list will show well-known names, including several winners at New York. Mr. Andrew Laidlaw carried off the special prize with his very handsome and useful team.

Chesapeake Bay Dogs.—I had the assistance of Major Taylor in this class, and to that gentleman I am also indebted for relieving me of the classes of American foxhounds. I could not, in justice to exhibitors, the show committee or myself, award prizes of merit in classes I did not understand, for the hounds in these classes are totally different from English foxhounds with which I am familiar.

Greyhounds.—Major and Memnon competed in champion class and whatever chance the former might have stood, his soft condition heavily handicapped him, muscles flabby and feet open and spreading indicates want of work and grooming and injudicious feeding. In the open class, which was a very good one, Death, a big strong black, won, but by a close shave from the brindle and white Ben. Death also was in bad form for either work or show, but he is built on right lines and if put into strongish work in the hands of a judicious trainer so as to reduce him eight or nine pounds he would come out well. This was a very good class. The bitch class was also good, Queen, a handsome fawn, winning over the blue Daisy with nothing to spare. In the puppy class a smart one, Lufra, of a smutty red color, won, the next best being Dave, a nice white puppy of ten months, and the blue Skelper was another one of good promise.

Deerhounds.—There were only four of these in three classes, but the quality compensated somewhat for scarcity of numbers.

Beagles.—A dozen very nice specimens made up the three classes; they were not, however, nearly equal to the lot shown at New York the previous week. In dogs Mort was awarded second prize only, first being withheld. The bitches were better, Mrs. C. E. White's prettily flecked little Bonnie taking premier honors. Marjory might be better in ear and was closely pressed by Linnie for second place.

Dachshunde.—From an English standpoint these were below par, and on a review of my own work, I felt disposed to think I was wrong in not having placed Waldine III. first prize.

Collies.—With Ben Nevis and Robin Adair both absent, Rob Roy had a walk over. Gordon is a neat dog and of pleasing expression. This breed does not appear to be appreciated in the West, and yet a more intelligent and agreeable companion dog does not exist.

Fox-Terriers,—A very poor show—Raby Tyrant entered as by Bailiff II.—Peach; but still certainly not *the* Raby Tyrant, was here and won second prize. The two winning bitches, with Scarsdale, saved the class from mediocrity. The bitches were by owner both entered as Clover Blossom. The winner, a white one, has a lot of dash in her, and reminded me of Tom Fir in build and carriage as well as color.

Bull-Terriers.—In a middling class of three, Young Bill, sadly gone off, won over Saxon, but with nothing to spare.

Black and Tan Terriers.—Prize withheld for want of merit.

Skye, Scotch, Dandie Dinmont and Bedlington Terriers.—First prize in Skye dogs withheld, ditto in bitches. Mr. John H. Naylor exhibited a genuine and really good hard-haired Scotch terrier or Die-hard, Rosie, a dark grizzle, whose only fault is a too gay carriage of the tail. The same gentleman showed two excellent Dandies. These valuable breeds would be more cultivated in America if better known. The Bedlington, Elsick Lad II., was too good a specimen to be denied the prize.

Bulldogs.—Alas, there was but one, Leon by name, with a back long enough to please your reporter of New York show; but long backs in bulldogs is not a feature I admire, so first prize withheld.

Great Danes.—Three good ones. A magnificent slate-colored pup of eleven months, with immense limbs and well-knit frame; he will be a splendid dog, but is rather too truncated in muzzle. Pinto, a tiger Dane, more matured but slighter built; better in head than winner.

Pugs.—When I took a second look at the pugs at New York and saw Bradford Ruby with the others on the bench, I thought and said I had made a mistake. I have changed my opinion. Bradford Ruby excels in wrinkles, in color, in trace, in tail; he has a structural defect, which is a very bad feature in a pug; he is as flat-ribbed as a Bedlington, and this shows his too long legs. Shown fatter, he would look better; but nothing can make him a first-rate pug, and I defy the Pug Club's appointed judges in England to justify the prizes they have awarded this dog by the standard they adopted from my book, "British Dogs." The toy terriers were pretty, but none up to my idea of good specimen; and nothing else calls for special notice.

As circumstances compelled me to make my visit to Cincinnati a very hurried one, I, with much regret, had to content myself with a very general and too cursory examination of the setter and pointer classes to enable me to offer remarks on many of the specimens.

I was very favorably impressed with the setters, and thought that, as a lot, they were even better than the classes at New York. The famous Gladstone I saw under favorable circumstances, and can reiterate the praises of his handsome appearance and the evidence of his sustained vigor, and I have no doubt he will leave his mark on many American setter kennels of the future.

Dido II. was surrounded by a crowd of admirers, so that a good look at her on the bench was impossible. On getting her out where it was possible to see her points, I was impressed with her perfection of form, and consider her the handsomest setter bitch I know of at the present day.

The special prize for the best puppy of any breed, donated by a young lady of Cincinnati, was very properly awarded to a beautifully-shaped and altogether very promising orange belton bitch.

The foxhounds, slim build, and with long folding bloodhound-like ears, appear a cross of that hound and the pointer. The broken-haired variety are much nearer to English foxhounds in appearance. If I understand correctly the work required of these hounds, I am of opinion it might prove of great advantage to introduce the German Schweisshund for crossing, as they possess great staying powers. The Schweisshund is described, the points accepted by German sportsman being given, in "British Dogs."

HUGH DALZIEL.

AWARDS.

POINTERS.—CHAMPION—*Dogs*: Prize, G. N. Appold's Bravo (Bragg—Kate). *Bitches*: Prize, J. W. Munson's Spinaway (Garnet—Keswick).—OPEN—OVER 55LBS.—*Dogs*: 1st, E. C. Sterling's Robert le Diable (Croxteth—Spinaway); 2d, Will Davidson's Landsdaun (Bow—Gipsey). Very high com., C. L. Dick's Young Sleaford (Lort—Lass); A. Sander's Duke (Bodine—Dare). High com., Mrs. John Schrink, Jr.'s Lamplighter (Ranger—Queen). Com., J. W. Munson's Carto (Sefton ——).—OVER 50LBS.—*Bitches*: 1st, E. C. Sterling's Belle Faust (Faust—Countess Vesta); 2d, Knickerbocker Kennel Club's Flirt (Glenmark—Girt). High com., R. R. Moore's Fanchon (Bow—Queen).—UNDER 55LBS.—*Dogs*: 1st, J. B. C. Lucas's Monarch (Bow—Keswick); 2d, John E. Zimmerman's Glendale (Bodine—Betz). Very high com., R. Cornell's Prince of Orange (Sensation—Lass). High com., Geo Ligowsky's Mack, and Miss Louise Devereux's Captain Dash.—UNDER 50LBS.—*Bitches*: 1st, F. R. Hitchcock's Modesty (Croxteth—Trinket); 2d, Stocky & Baker's Ray (Brownie—Clip). Very high com., S. A. Kaye's Fannie (Young Sensation—Nellie). *Puppies*: 1st, C. J. Bremer's Bow Faust (Faust—Musette); 2d, J. R. Daniels's Daisy Donald (Donald II.—Fan). Very high com., E. C. Sterling's Gen. Gordon (Meteor—Beta). High com., W. R. Huntington's LeRoy and R. H. Wood's Sister (Meteor—Jewess). Com., J. R. Daniels's Royal (Donald II.—Fan).

ENGLISH SETTERS.—CHAMPION—*Dogs*: Prize, W. B. Gates's Paul Gladstone (Gladstone—Lavalette). *Bitches*: Prize, Howard Hartley's Queen Alice (Druid—Cubas).—OPEN—*Dogs*: 1st, Dr. G. G. Ware's Gladstone's Boy (Gladstone—Sue); 2d, C. F. Loudon's Stanton (Gladstone—Frost). Very high com., W. B. Mallory's Dave B. (Coleman's London—Belle of Hatchie); J. M. Avent's Roderigo (Count Noble—Twin Maud). High com., G. B. Hawley's Brenta (Dashing Berwyn—Maud Miller); F. S. Hughes's Paris III. (Paris II.—Lady Princess); Ontario Kennel Club's Ontario Ben (Druid—Star). Com., Joun Overman's Dandy Cambridge (Cambridge—Lucky Dean); Dr. G. G. Ware's Ben Hill (Druid—Ruby). *Bitches*: 1st, J. M. Avent's Juno A. (Druid—Ruby); 2d, S. A. Kaye's Madonna (Roscoe—Armida). Very high com., P. Wolfenden's Vixen III. (Dash—Vixen II.); T. Potter's Glen (A.K.R. 1953). High com., P. O. Butler's Early Dawn (Gath—Lit); Ontario Kennel Club's Ontario Myrtle (Druid—Star). Com., H. L. Kyler's Slip (Royal Lothair—Nonie); R. B. Morgan's Appelle Belle II. (Mark—Betsy). *Puppies*: 1st, J. S. Louis's Lady Rock (Royal Rock—Nellie); 2d, Mr. J. N. Macklin's Gath's Mark (Gath—Gem). Very high com., J. S. Hudson's Gath Lit (Gath—Lit). High com. and com., R. B. Morgan's Akron Girl and Akron Boy (Lug Dhu—Mollie). Com., Chas. Schwein's Dolly S. (Gath—Lit).

GORDON SETTERS.—CHAMPION—*Dogs:* Prize, Charles R. Taylor's Gem (A.K.R. 928). *Bitches*: No entries.—OPEN—*Dogs*: 1st, withheld; 2d, S. M. Strader's Ben (Hal—Lill). *Bitches*: 1st, Charles R. Taylor's Rhoda (Flash—Chloe); 2d, J. W. Amberhue's Grouse (Dart—Fly). Com., H. R. Parker's Gip. *Puppies*: Withheld.

IRISH SETTERS.—CHAMPION—*Dogs*: Prize, Dr. (Wm. Jarvis's Elcho, Jr. (Elcho—Noreen). *Bitches*: J. T. Walker's Reeta (A.K.R. 1338).—OPEN—*Dogs*: 1st, W. D. & B. L. Mallory's Duke (Biz—Lady Clare); 2d, J. H. Roberts's Bruce (Elcho—Noreen). Very high com., J. T. Walker's Glencliare (A.K.R. 1192). High com., F. F. Blythe's Red (Norwood—Virginia Reel). Com., Henry Overman's Brad (Norwood—Nelly). *Bitches*: 1st, H. E. Chubb's Zella Glenduff (Glencho—Daisy); 2d, W. W. Kendall's Lorna Doone (Berkley—Madge). Very high com., J. A. J. Sprague's Megorra (Elcho—Rose). High com., Mrs. Patrick Nolan's Flora (Norwood—Effie), J. F. Blythe's Blanche (Norwood—Virginia Reel). Com., H. C. Bradley's Lotti (Norwood—Nelly). *Puppies*: 1st, W. Hoyt's Noreen IV. (Elcho—Noreen); 2d, E. Duval's Fidget (Norwood—Effie). Very high com., Tagan & Burran's Addie B. (Norwood—Clara Belle). High com., W. E. Limberg's Wick's Fly (Norwood—Clara Belle).

MASTIFFS.—CHAMPION—*Dogs*: Prize, Ashmont Kennels' Hero II. (Salisbury—Venus). *Bitches*: Prize, Ashmont Kennels' Lorna Doone (Crown Prince—Ilford Baroness).—OPEN—*Dogs*: 1st, Ashmont Kennels' Ilford Cromwell (Cardinal—Cleopatra); 2d, A. C. Johns's Adam J. (Jumbo—Rowdy). Very high com, Winlawn Kennels' Hildebert (Little Nero—Hilda V.). High com., Winlawn Kennels' Hector (Nevison—Venus); James Barker's Mej (Frank—Flop). *Bitches*: 1st, Winlawn Kennels' Prussian Princess (Crown Prince—Nina); 2d, Ashmont Kennels' Bal Gal. Very high com., Winlawn Kennels' Rosalind (Crown Prince—Lady Rowena). High com., Ashmont Kennels' Juno (Turco—Queen II.); Winlawn Kennels' Liberty (Crown Prince—Ilford Baroness). *Puppies*: 1st and very high com., Winlawn Kennels' Minerva and Scipio (Homer—Queen II.).

ST. BERNARDS.—ROUGH-COATED—*Dogs*: 1st, H. Weinhardt's Turk. Com., H. C. Dinklake's Carlo (—— —Nelly). *Bitches*: 1st, Mill Brook Kennels' Bertha (Bruno—Elsa); 2d, withheld. *Puppies*: 1st and high com., R. J. Sawyer's Noma and Clio (Cantoni—Mona).—SMOOTH-COATED—*Dogs*: 1st, Mill Brook Kennels' Verone (Rex—Alma); 2d, J. Hick's Mark Anthony (Fido—Rosary). High com., F. D. Emerson's Rex (Sultan—Finnette). *Bitches*: Withheld. *Puppies*: 1st, Mill Brook Kennels' Kobold (Hermit—Alma); 2d, Mill Brook Kennels' Keeper (Mentor II.—Brunhild). High com., Mill Brook Kennels' Girola (Cæsar—Daphne II.).

NEWFOUNDLANDS.—1st, S. S. McCuen's Miro; 2d, Andrew Laidlaw's Major. Very high com., J. S. Carter's Ponto.

SPANIELS.—IRISH WATER—CHAMPION—*Dogs*: Prize, R. B. Morgan's Sinbad II. (Sinbad—Queen). *Bitches*: No entries.—OPEN—*Dogs*: 1st, C. B. Rodes's King Slash (Pat—Tide); 2d, Excelsior Irish Water Spaniel Club's Mack (Mike—Judy). Very high com., John R. Daniel's Pat (—— —Fanny). High com., W. R. Huntington's Texas (Barney———). *Bitches*: 1st, Excelsior Irish Water Spaniel Club's Juda (Barney—Judy); 2d, Excelsior Irish Water Spaniel Club's Tipsey (Barney—Irish Nell). FIELD SPANIELS.—1st, A. Laidlaw's Toronto Jet (Nigger—Belle); 2d, W. Reiring's Lucky. BLACK COCKER SPANIELS.—CHAMPION—*Dogs*: Prize, Hornell Spaniel Club's Hornell Silk (Obo—Chloe II.). *Bitches*: No entries.—OPEN—*Dogs*: 1st, Hornell Spaniel Club's Hornell Jack (Dandy—Spider) only entry. *Bitches*: 1st, W. O. Partridge's Helen (A.K.R. 654); 2d, A. Laidlaw's Dido (Bengal—Rose). *Puppies*: 1st, A. Laidlaw's Belle (Silk—Woodstock Flirt).—OTHER THAN BLACK.—CHAMPION—*Dogs*: Prize, A. Laidlaw's Sport (Jet—Daisy). *Bitches*: No entry.—OPEN—*Dogs*: 1st, withheld; equal 2d, A. Laidlaw's Dart (Sport———); and C. W. Sander's Bob (Dan—Nellie). *Bitches*: 1st, A. Laidlaw's Ruby (Brahmin—Sim's bitch); 2d, withheld. *Puppies*: withheld.

CHESAPEAKE BAY DOGS.—1st, S. A. Kaye's Mermaid (Joe—Nellie); 2d, Geo. W. Kierstead's Barnum (Monday—Maryland).

GREYHOUNDS.—CHAMPION—*Dogs*: Prize, H. W. Smith's Memnon (Caliph—Polly). *Bitches*: Prize, Fan (Bucaneer—Folly).—OPEN—*Dogs*: 1st, G. W. Rodenberg's Dash; 2d, H. W. Smith's Ben (Cremorne—Lioness). Very high com., E. W. Murphy's Doctor (imported dog—Fannie). High com., A. C. John's Captain (Ivory—Flora); Monteith Kennels' Major (Ranger—Lady); A. E. Heighway's Prince (Major—Fannie). *Bitches*: 1st, A. E. Heighway, Jr.'s Queen (Major—Fannie); 2d, Mike Schrank's Daisy (Sport—Queen). Very high com., Capt. Jas. Thompson's Maud S. (Sport—Gipsy). High com., Monteith Kennels' Lady (Ranger—Lady). *Puppies*: 1st, Miss Ellison's Lufra (Dash—Fly). Very high com., Monteith Kennels' Dave (Major— ——); E. Harrold's Skelper (Dash—Fly). Com., E. Semple's Lady (Major—Maud); G. C. Brownall's Queen (Major—Maud); E. Harrold's Spring (Dash—Fly).

DEERHOUNDS.—CHAMPION—*Dogs*: Prize, Clovernook Kennels' Mac (Paddy—Lassie). *Bitches*: Prize, Clovernook Kennels' Perth (Gillie—Lufra).—OPEN—*Dogs*: 1st, Judge N. Longworth's Dart (Lance—Lorna); 2d, Clovernook Kennels' Heather (Clansman—Countess). *Bitches*: Only entry absent.

FOXHOUNDS.—*Dogs*: 1st, withheld; 2d, Associated Fanciers' Robin Hood. *Bitches*: 1st, L. Runninsland's Girl, only entry.—SHAGGY—*Dogs*: 1st, E. H. Howard's Trinket (Billy—Clara); 2d and very high com., E. H. Howard's Clipper and Pierce (John—Dido). *Bitches*: 1st, E. H. Howard's Lana (John—Dido); 2d, E. H. Howard's Tot (Dick—Cloudy). High com., E. H. Howard's Maud (Dick—Gip). Com., E. H. Howard's Whitney (Billy—Clara).

BEAGLES.—*Dogs*: 1st, withheld; 2d, Mrs. C. E. White's Mort (King Pat—Old Sis). *Bitches*: 1st, Mrs. C. E. White's Bonnie (Searcher—May Belle); 2d, Chas. Schwein's Marjory (Duke—Midget). Very high com., F. J. D'Arcy's Linnie. Com., J. Moerlein's Gypsy (Spot—Beauty). *Puppies*: 1st and high com., Chas. Schwein's Maud and Minnie (Duke—Midget); 2d, Mrs. C.E. White's Myrtle (Rustler—Bonnie). Very high com., Louis Ruehl's Topsy (Duke—Dilly).

BASSET HOUNDS.—1st, B. F. Seitner's Countess (Nero—Lota).

DACHSHUNDE.—1st, B. F. Seitner's Prince (Bergman—Gretchen); 2d, B. F. Seitner's Wallexie (Waldman K.—Fraulein Waldeck). Very high com., H. Goodman's Waldine III. (Bergman—Gretchen). Com., D. R. Herrick's Waldeman Ray (Waldeman K.—Fraulein).

COLLIES.—CHAMPION—*Dogs*: Prize, J. A. Long's Rob Roy (Champaign—Nellie). *Bitches*: No entries.—OPEN—*Dogs*: 1st, Miss Lillie Downey's Gordan (Robin Adair—Lassie). *Bitches*: Equal 1st, J. A. Long's Nellie (Carlyle— — -) and J. E. Dougherty's Nellie D. (A.K.R. 1922); 2d, J. E. Dougherty's Bessie B. (A.K.R. 1914) *Puppies*: 1st, withheld; 2d, Associated Fanciers' Lassie Girl.

FOX-TERRIERS.—*Dogs*: 1st, Clovernook Kennels' Scarsdale (Joker—Ella); 2d, A. N. Spencer's Raby Tyrant (Baliff II.—Peach). Very high com., W. R. Bingham's Vakul (Volo—Spiteful). *Bitches*: 1st, Clovernook Kennels' Clover Blossom (Catesby—Puzzle); 2d, Clovernook Kennels' Clover Blossom (Belgrave Tony—Tricksey). Very high com., W. B. Bruckner's Spot; J. A. B. Scarsborough's Mossy (Bitters—Moss). WIRE-HAIRED—1st, L. H. Baldwin's Venom (Old Veteran—Vice); 2d, L. H. Baldwin's Foiler (Pincher—Venom).

BULL TERRIERS.—*Dogs*: 1st, Chas. R. Taylor's Young Bill (Bill—Dutch); 2d, Associated Fanciers' Saxon (Young Royal—Empress). Very high com., Geo. Keller's Gypsy (Joey—Lady). *Bitches*: 1st, L. King's Jessie G. (Jeff—Jess). *Puppies*: 1st, L. King's Peg (Braid—Floe).

BLACK AND TAN TERRIERS.—No awards.

SKYE TERRIERS.—*Dogs*: 1st, withheld; 2d, Associated Fanciers' Waltz. Very high com., C. Schwemberger's Fan Herbert, Bennie Bonner and Nellie Herbert. *Bitches*: 1st, withhdld; 2d, —— Rags (Dick—Nellie Herbert).

YORKSHIRE TERRIERS.—*Dogs*: 1st, Mrs. I. Engelhart's Paddy. High com., Charles Schwemberger's Brendamour (Sir Robert—Fan Herbert). Com., J. Engelhart's Fritz (Tommy—Topsy).

SCOTCH TERRIERS.—*Bitches*: 1st, Mrs. James H. Naylor's Rosie (Tony Dodd—Rosa); 2d, John H. Naylor's Scotland Yet (Robert le Diable—Rosie).

DANDIE DINMONT TERRIERS.—1st, Mrs. John H. Naylor's Pansy (Minstrel Boy—Linnet); 2d, Mrs. John H. Naylor's Bonnie Briton (Border Minstrel—Wee Miss). High com., Associated Fanciers' Brinnie (Peel—Kelpie).

BEDLINGTON TERRIERS.—1st, W. S. Jackson's Elswick Lad II. (Elswick Lad—Tynesider II.).

BULLDOGS.—*Dogs*: 1st, withheld; 2d, J. J. Thompson's Leon.

GREAT DANES.—1st, August Trinkle's Brock; 2d, Paul Merker's Pluto (Rolf—Cora). Very high com., August Trinkle's Flora.

PUGS.—CHAMPION—*Dogs*: Prize, G. Gillivan's Treasure (Fritz—Banjo). *Bitches*: Prize, Harry L. Goodman's Bo Peep (Fritz—Minnie May).—OPEN—*Dogs*: 1st, City View Kennels' Bradford Ruby (Lovat—Jennie); 2d, Dr. W. F. Harper's Pug. High com., J. Engelhart's Roderick II. (Roderick—May). *Bitches*: 1st, withheld; 2d, G. W. Garrard's Lady Elizabeth. *Puppies*: 1st, G. Gillivan's Peggy (Joe—Flora).

TOY TERRIERS.—1st, Mrs. John Grandy's Dot (—— —Nellie); 2d, Chas. Dickhant's Fly (Czar—Fannie). Very high com., A. W. Hitch's Dot (Tipp—Pippy). High com., Miss Alice McGraw's Daisy.

KING CHARLES SPANIELS.—1st, Associated Fanciers' Charlie; 2d, H. Mulertt's Lura.

ITALIAN GREYHOUNDS.—1st, J. Englehart's Puck (Silk Socks—Naughty); 2d, H. Detmering's Dolly. High com., J. Engelhart's Pearl (Sport—Pearl).

POODLES.—1st, withheld; 2d, Mrs. D. H. Stone's Lill.

MISCELLANEOUS.—Equal 1st, Peter Schwan's Hans and Arthur LeBoutillier's Mix; 2d, Mrs. John J. O'Connell's Bonita.

SPECIAL PRIZE LIST.

Best kennel of six St. Bernards, Mill Brook Kennels. Best kennel of six mastiffs, Ashmont Kennels. Best greyhound, Memnon. Best kennel of five cocker spaniels, Andrew Laidlaw. Best collie in open

classes, Gordan. Best St. Bernard owned in Cincinnati, Rex Best English setter puppy, Lady Rock. Best Irish or Gordon setter in open classes, Duke. Best English setter in open classes. Juno A Best greyhound owned in Cincinnati, Dash. Best decorated kennel of dog owned by lady, Mrs. I. Engelhart's Paddy. Best non-sporting dog in open classes owned by a lady in Hamilton county, O., or Newport or Covington, Ky., Paddy. Best sporting dog, same conditions, Lamplighter. Best Irish setter bitch puppy, Noreen IV. Best pointer in open classes, Robert le Diable. Best greyhound in open classes, Dash. Best bull terrier in open classes, Leon. Best stud pointer, no entry. Best greyhound in champion class, Memnon. Greyhound making highest leap, Queen. Best Irish water spaniel, King Slash. Best pointer puppy in Hamilton county, Sister Best pointer puppy, Bow Faust. Best English setter puppy, Lady Rock. Best setter in open classes owned in Hamilton county, Stanton. Best pointer in open classes owned in Hamilton county, Lamplighter. Best kennel of St. Bernards, Mill Brook Kennels Best kennel of mastiffs, Ashmont Kennels. Best kennel English setters, no entries. Best toy dog in open classes owned in Hamilton county or Newport or Covington, Ky., Dot. Best pug dog, same conditions, Roderick II. Best Great Dane, same conditions, Brock. Best black and tan terrier, same conditions, Dot. Best dog in miscellaneous class, same conditions, Mex.

THE PITTSBURGH PIECE OF PAPER.

Editor Forest and Stream:

I regret that Mr. Mortimer should feel aggrieved at my having placed his record (?) in the hands of the public. In protecting owners of dogs against "bagman" judges, "who career about the country palming off on the easy-going or uninitiated committees their damaged stock of mental wares," I had no intention of wounding supersensitive feelings or hurting sham pride.

Mr. Mortimer appears to have mistaken my object in replying to his last letter. It never was my intention to carry on a prolonged discussion with the W. K. C.'s employes, but now that Mr. Mortimer says he intends to "propound for Mr. Mason's special perusal a few questions on certain dogs," I feel disposed to continue the controversy, believing as I do that Mr. Mortimer's queries will be the means of eliciting a stock of information about certain shady transactions that have taken place during the last few years.

Mr. Mortimer's resolve to get rid of temper and malice in the pages of FOREST AND STREAM is much more commendable than that of a certain person who politely invited a gentleman to step outside of Madison Square Garden, with a view of settling existing troubles in a chalk-marked ring on the sidewalk.

The heading is the only part of Mr. Mortimer's document that touches on the subject under discussion, "The Pittsburgh Piece of Paper." If I refuse to reply to his irrelevant production, a false construction is sure to be placed upon my silence, and deliberate falsehoods may be mistaken for facts. Mr. Mortimer's imperious policy is as much lost upon me as was his policy of coercion in the New Haven dog show business. In a letter to the New Haven Club he said: "In judging at shows like yours, when there would be other judges, I would only undertake the following classes: Mastiffs, St. Bernards, collies, fox-terriers and bull-terriers; had I these classes I would be willing to take greyhounds or any other classes the committee might wish." Considerate Mr. Mortimer! Never owned a sporting dog in his life, and is willing to judge all the dogs in a show. Will he please reconcile the contents of the above letter with the following notice from the Philadelphia Kennel Club? FOREST AND STREAM, April 23, 1885: "The judges so far selected for the May show of the Philadelphia Kennel Club are as follows: * * * James Mortimer, Esq., New York, deerhounds, greyhounds, pugs, poodles and miscellaneous classes." The game of "bluff" is played out, and Mr. Mortimer is beginning to realize that a record is of some value, and that even James Mortimer, Esq., cannot get along without one now that "the influence that put him into the judges' ring and kept him there no longer exists." Let us dissect Mr. Mortimer's "cold facts." He says I proposed to raffle Blister, and for that purpose placed him on exhibition in a liquor store, that the dog made a "savage" attack on the bartender, and succeeded in destroying the latter's trouser's, and that the bartender shot the great champion and founder of Mr. Mortimer's record (?) and then held me responsible for the damaged garment.

May I "respectfully approach Mr. James Mortimer on the leeward side, so as not to get between the wind and his nobility," and ask him what that has got to do with "The Pittsburgh Piece of Paper," or with the superb cheek in undertaking to judge all the dogs in a show when, as the record proves, he is not qualified to judge one class? Mr. Mortimer's last "version" is another per-"version" of the truth. The facts as regards Blister are as follows: A real estate agent, who was transacting business for me, one day found himself the owner of a billiard and wine rooms. He put a man in to manage the business, until such time as he could dispose of it, and asked me if I could let him have a dog to guard the premises at night. I had just had the misfortune to become the owner of Mr. James Mortimer's champion bulldog Blister, and was not very long in learning that he was not quite the sort of beast to take into a kennel of valuable dogs. Consequently I handed him over to the agent with a word of advice to keep an eye on him. At the same time I asked him to sell the dog for $50, if anybody wanted him. I believed the price to be reasonable, seeing that Mr. Mortimer had previously disposed of the dog for the modest sum of $200. Well! Nobody cared to pay $50 for Mr. Mortimer's great champion, and an individual who said he would take him at $25 never came for him. Finally somebody proposed to raffle the brute, but it never came off. It is not true that the bartender held me responsible for a damaged garment. I had nothing to do with the dog from the day I loaned him to the agent. Mr. Mortimer's statement that Blister was "troubled with a villainous temper" is correct. But why didn't Mr. Mortimer tell us where the brute was educated? and why did he not inform "Mr. Thayer, of Lancaster, Mass., the enthusiastic breeder and exhibitor of bulldogs" about it, before Mr. Thayer paid him for the "very cheap dog?"

Mr. Mortimer will please pardon me for refusing to discuss either tumble-down buildings liquor, or bartenders. Mr. Mortimer's experience with such things, extending over a number of years, gives him a decided advantage over an opponent, and I never undertake to write on subjects I am not familiar with. How would it be for Mr. James Mortimer to adopt a similar resolution? Mr. Mortimer again states that he has carefully studied the records of the English Stud Book, and cannot find an instance where I have won a first prize with a pointer that I have bred, and a little further on he writes, "I have already shown by the English Kennel Club Stud Book that Mr. Mason never bred a pointer which he had exhibited successfully in England." Again I tell Mr. Mortimer that he never has studied the English Stud Book, or that he states what he knows to be false. My name runs through the stud books from the first volume (1859 to 1874) down to 1881. If Mr. Mortimer will turn to Vol. IV., he will find the following entry, and he can have some others if he is not satisfied, or if I have not succeeded in showing that what he writes is almost as unreliable as his judging: "6059. Viscount—Mr. C. H. Mason's, Higngate House, near Bradford, Yorkshire; breeder, owner; whelped Feb. 9, 1874; color, lemon and white, evenly marked head and lightly marked on body. Pedigree; by Sultan (No. 1025, Vol. I.) out of Pride (No. 1265, Vol. I.). Chief Performance: Birmingham, first prize, and twenty-eight prizes and cups at local shows."

Nobody will expect an apology from Mr. Mortimer, but it will be amusing to watch him "creep out." Mr. Mortimer says I condemn him "as a judge" because he has not been an "extensive breeder of dogs." Nothing of the sort. Mr. Mortimer never was a judge. His business in England prevented him keeping dogs, and he was never known either as a breeder, exhibitor or owner. Let him deny it if he can. In America he has a worse record than almost any other man. Fifteen prizes all told, and not one of them taken by a better dog than Blister. Let him deny it if he can

Mr. Mortimer says that the fact of a man's name being given in three standard works as a successful exhibitor and breeder proves nothing, and to support his argument he shows that the author of one book is my enemy. Vero Shaw stated that I am one of the oldest and most successful breeders because I am his enemy. Great man this Mr. James Mortimer. Will he please tell us how Mr. Dalziel, who is my friend, managed to get my name into "British Dogs"? If Shaw introduced my name because I am his enemy, why in the name of common sense did Dalziel give the name of a friend? It's just like Mr. James Mortimer to begin preaching about "the noble pointer." He has been with the W. K. C. about twenty-five minutes and of course he is a judge. Why not?

Mr. Mortimer's statement that I am not a breeder and not even a lover of dogs, etc., may be passed without comment. The record is the best denial of such malicious falsehoods. But then Mr. Mortimer says a record is good for nothing, because he can't show one. Mr. Mortimer has never been asked to consider me a judge, but I thank him for having told people that "Mason is much the best judge in America." What a splendid indorsement! But how does Mr. Mortimer know when a man is or is not a judge? Mr. Mortimer's irrelevant production is answered, and I now request his attention to my letter of April 23:

"When giving his first version, Mr. Mortimer said: 'The whole affair was so trivial that he had forgotten it.' If Mr. Mortimer had 'forgotten it,' why should any one believe him when he says my statement is 'false and exaggerated.' It is not the custom of gentlemen to accuse people of falsehood, and especially when they admit they don't know what they are talking about. Will Mr. Mortimer state over his own signature that this 'self-assorted authority' has never coached him on other occasions? Does Mr. Mortimer remember the little show held in Chicago under the auspices of Messrs. Lincoln, Olcott and a Chicago editor?

"Mr. Mortimer has 'carefully studied the English records.' but failed to find where I have been a successful exhibitor with any dog which I have bred. Mr. Mortimer must have been mixing matters, and appears to have mistaken his own record for mine.

"Now for Mr. Mortimer's record. In England he never exhibited a dog, was never known to have bred one, and some people say never owned one. In America he never showed a better dog than Blister, an animal that I sold for $25. I have not had very much trouble in looking up a complete record of prizes won by Mr. Mortimer, and here it is. As a breeder of dogs he is unknown:

Breed of Dog.	Champion and first prizes.	Second Prizes.	No. of prizes won with each breed.
Bulldog	7	..	7
Bull-terrier	3	3	6
Fox-terrier	1	..	1
Pug	1	..	1
	12	3	15

I must not ignore the fact that there is just one dog entered in the English Stud Books, which may at some time have been owned by Mr. James Mortimer. Here it is: "No. 4961. Dismal Jemmy (late Lucky Sixpence)."

Mr. Mortimer concludes his masterly work with a quotation from a foreign paper. There is lots of good reading nearer home, and if Mr. Mortimer will refer to the *Sporting Life* of this week he will find some of it. CHAS. H. MASON.

MAY 11, 1885.

CANINE THERAPEUTICS.

UNDER the title "Dogs; Their Management and Treatment in Disease," "Ashmont" gives us one of the most valuable treatises on canine management and therapeutics that has appeared on this side of the water. In his preface the author states succinctly the object of his work. He says: "The rapid advancement in science has wrought many changes in the principles and practice of medicine; added new remedies to the resources of the physician; exploded many old theories, and dissipated countless fancies and prejudices * * * No finished treatise is attempted * * * * but in simple, comprehensive language and expression, on these pages are described the prominent appearances in disease, and the manner of applying remedies, sustained largely by the results of personal observation."

The author's aim is rigidly adhered to throughout the pages which follow. In the first chapter he deals with the care of puppies after weaning, and with the general management of dogs in health under the following headings: Feeding, Exercise, Washing, Kennel Arrangements, Grooming and Vermin. Under "Feeding" he remarks that in health "the instinctive desire of animals for certain substances is the surest indication that they are in reality required for the nutritive process." This is in entire accord with physiological principles as applied to man, but it is true only within certain limits. He goes on to say that the diet should be varied, but that meat should always enter into it as a prime factor. In this we cannot altogether agree with him. It must not be forgotten that there is a vast difference between a dog in a state of nature and one which for many thousand years has been man's assistant, companion and friend. The wolf or wild dog is continually seeking food. With this sole object in view he undertakes long journeys, and is constantly on the move. The enormous amount of exercise thus taken keeps him constantly hungry. If he can obtain food he gorges himself with it, because he does not know when he will again be able to eat. Under such conditions the dog or wolf requires concentrated nourishment in the form of meat, and in his most remote descendants this craving remains. But the conditions of the animal's life are wholly changed. No longer forced by hunger to wander over the country, it has lost its gauntness, its look of constant alertness, its desire to be ever on the move. It is now a pet and favorite, receives its meals regularly, runs perhaps a mile or two each day, but it has still the appetite of its ancestors, and will still, if the opportunity occurs, gorge itself on meat. But this meat the changed conditions of the dog's existence make no longer a necessity, it is rather a positive injury to the animal for it is often not properly assimilated. Under the other headings of this chapter many practical suggestions are given.

Chapter second is one of the most useful in the volume, dealing, as it does, in the more common varieties of poisons which may be swallowed, such as arsenic, strychnine, carbolic acid, phosphorus, mercury and the lead salts. Some rules of vital importance are laid down in his general methods of treating such as, first, "get rid of the poison;" second, "stop its action;" third, "remedy the mischief it has done." On page 16 he gives a number of rules in the use of medicines, and says that every owner of kennels should at least keep the following drugs on hand: "Sulphate of zinc for emesis," "laudanum or paregoric for pain," and "chloral hydrate solution for convulsions."

Chapter three is devoted to the explanation of some of the most familiar medical terms in disease, such as pathology, diagnosis, prognosis, and a few words are added on the mode of administering drugs to our canine friends.

In chapter four he begins with the diseases of the respiratory system, first describing what the disease is pathologically, then follow in terse succession, causation, symptoms, diagnosis, prognosis, and treatment.

Affections of the mouth and tongue follow in chapter five.

Chapter six is an important one, treating of diseases of the digestive system. In this chapter is found important information regarding the symptoms and treatment of these very common diseases, indigestion, diarrhœa, dysentery, constipation and stoppage.

Chapters seven, eight and nine treat respectively of the solid organs of the abdomen, urinary organs and genitals.

In chapter ten are some good prescriptions for the different diseases of the eye.

The diseases of the ear are systematically treated in chapter eleven. The anatomy of the ear is simply described and some pages are devoted to "canker," what it is, and how to treat it.

Eczema or mange in its various forms is described, together with a half dozen other less common skin diseases in chapter twelve. "Ashmont" hits the point exactly in eczema when he states that it is often a constitutional as well as local disease, and that it should be treated as such. He gives some excellent prescriptions and lines of treatment to be followed in this exceedingly common disease.

In chapter thirteen he treats of the intestinal parasites, ascaris or round worm, and tænia or tape worm, with the appropriate remedies for each.

In chapter fourteen he gives us the diseases of the nervous system. Under this heading is first found hydrophobia, which is here described in a scientific and exhaustive manner. It contains historic allusions to the ancient beliefs regarding the dread malady, and ends with a quotation from the paper of M. Pasteur read before the International Medical Congress at Copenhagen last summer. In this chapter are also found convulsion, apoplexy and chorea.

Under "General Diseases," in chapter fifteen, is found distemper. The author gives us a definition of the disease—causation and the symptoms seriatim. This is an important, perhaps the most important, portion of the work. Surgical diseases are but lightly touched, the author thinking that beyond slight injuries these troubles come within the professional province of the skilled surgeon.

As a whole this work is a most valuable addition to the literature of its kind. Its great recommendation is that it is scientific and up to date, and at the same time quite intelligible to non-medical men. Its appearance might have been improved as regards type, but this has probably been subordinated to the idea of putting the work into compact, almost pocket size.

NEW JERSEY KENNEL AND FIELD TRIAL CLUB.

PURSUANT to a call signed by a number of well-known owners and breeders of dogs resident in New Jersey, among whom were the names of Messrs. Pierre Lorillard, Percy C. Ohl, Geo. L. Wilms, E. R. Hearn, James Lindsay, J. W. Burgess, Max Wenzel, Charles J. Peshall and R. T. Greene, a large and enthusiastic meeting of sportsmen and dog owners assembled at Taylor's Hotel, Jersey City, N. J., on Tuesday afternoon, May 12, for the purpose of organizing an association of the breeders and owners of thoroughbred dogs of the State of New Jersey.

Among those who were present were Messrs. C. J. Peshall, J. H. Phelan, G. E. McCollam, Geo. W. La Rue, H. H. Hamilton, Percy C. Ohl, representing Mr. Pierre Lorillard's Rancocas kennels, Chas. R. Thorburn, H. C. Sherman, Geo. L. Wilms, Geo. W. McNeil, Jr., L. Livesey, James Lindsay, Max Wenzel, Prof. H. J. Rice, H. Pape, A. C. Wilmerding, L. F. Brigham and Capt. J. E. Jones.

The meeting was called to order by Mr. Wilms, who said the subject of the call was to form an association composed of the dog men of New Jersey, or those who kenneled in that State, for the purpose of giving annual dog shows and field trials in the State or in other places. Mr. C. J. Peshall was chosen chairman, and Mr. Max Wenzel, secretary. On motion of Mr. Hamilton, seconded by Mr. Ohl, it was decided to call the organization "The New Jersey Kennel and Field Trial Club."

Mr. Ohl spoke interestingly about the plan to hold field trials every autumn in South Jersey. He said that he knew of a large tract of land where quail were as plentiful as they were out West, and that the expense of holding such trials so near at home would be very slight, and thus would enable a large number of sportsmen in this vicinity taking part in a sport which heretofore had been denied to them.

The secretary then read letters from A. P. Vredenburgh, W. W. Tucker, of the Mill Brook Kennels; K. E. Hopf, of the Hospice Kennels, and a number of other well-known dog men regretting their inability to be present.

The chair then appointed the following committee to draft a constitution. It was composed of Messrs. Ohl, La Rue, Brigham, Lindsay and Wilms. The appended constitution was submitted to the meeting, and after a lengthy discussion was unanimously adopted.

The subject of joining the American Kennel Club was talked over in an informal way, and although no action was taken, the spirit of the meeting seemed to be against any hasty action to join that association. The meeting was a protracted one and finally adjourned to assemble again on May 26, at 7:30 P. M., at Taylor's Hotel, Jersey City, when the election for officers will be held. The club extends a hearty invitation to the sportsmen of New Jersey to join the club, and it is thought that it can be made to be one of the most powerful organization in this country.

CONSTITUTION.

NAME.

The name of this club shall be the New Jersey Kennel and Field Trial Club.

OBJECTS.

The objects of this club shall be to encourage the breeding and improvement of thoroughbred dogs; to protect the interests of its members by every means within its power; to issue such publications as may be considered for the best interests of the club, and to hold bench shows and field trials.

MEMBERSHIP.

This club shall consist of an unlimited number of members; each of whom shall sign the constitution as a guarantee of good faith.

APPLICATION FOR MEMBERSHIP.

Application for membership must be made to the secretary on blanks furnished by the club for this purpose.

THE ELECTION TO MEMBERSHIP.

The power of election to membership shall rest with the executive committee, but it shall take a two-thirds vote of the members of the committee present to elect to membership. No persons elected to membership shall have their names placed on the list of members or become members until the annual fees are paid.

MANAGEMENT.

The management of this club shall be intrusted to an executive committee of fifteen members, of which the officers of the club shall be *ex-officio*, and the president shall be chairman of the committee. The said committee shall be elected at the annual meeting, to hold office one year, or until their successors are appointed. Vacancies in the membership of the executive committee, arising from any cause whatever, shall be filled by the executive committee till the next annual meeting of the club.

MEETINGS.

An annual meeting of the club shall be held in Jersey City, N. J., on the first Wednesday in March in each year. A special meeting of the club may be called by the secretary, on the written application of five members; at the same time the secretary shall notify each member of the club by mailing a

notice, stating time of meeting and the business for which such meeting is called.

OFFICERS.

The officers of this club shall consist of a president, a vice-president, a secretary, a treasurer, an executive committee of eleven members, and a finance committee of three to be elected by the executive committee from its members.

DUTIES OF OFFICERS.

The president or vice-president shall preside at all meetings. The secretary shall keep the minutes of all meetings of the club, shall conduct the correspondence, and have charge of and be responsible for all books and papers. The treasurer shall have charge of all moneys belonging to the club, which shall be deposited in some Jersey City bank, subject only to drafts signed by the treasurer, and countersigned by the secretary. The treasurer shall pay all bills when properly approved, and submit a report thereof to the finance committee when called upon by them to do so.

FEES.

The initiation fee shall be $5, and the annual dues $5. No member whose dues remain unpaid shall be entitled to vote at the annual meeting, and any member in arrears for dues shall not enjoy the privileges of membership until said dues are paid, and any member in arrears for dues three months shall thereby stand suspended.

EXPENSES.

Any expenses incurred by the treasurer, secretary or by the executive committee, for or in behalf of the club, shall be defrayed out of the funds of the club.

PAYMENT OF BILLS.

All bills must be presented to the treasurer, who shall have them approved by the finance committee, who shall affix their signatures and date of approval, after which the treasurer shall be authorized to pay.

DISCIPLINE.

The executive committee shall have power, by a full vote present, to suspend from membership any person who may be found guilty of fraudulent or dishonorable action in connection with dogs, and shall report the name of said member at the next annual meeting, and the cause for which such member may have been suspended, when said member may be expelled or reinstated, as the club shall decide by a majority vote. Any person violating this constitution or the rules of the club shall forfeit their membership.

REPORTS.

An annual report and abstract of the accounts, duly audited by the finance committee, shall be open to inspection of members of the club at the annual meeting.

SPECIAL.

No expenses shall be incurred by any committee of this club beyond fifty per cent. of the amount in the treasury at the last annual meeting, unless a further sum shall be voted by the club at a special meeting; and at no time shall any expense be incurred bringing the club in debt beyond the amount in the treasury.

AMENDMENTS.

No addition, alteration or amendment to this constitution shall be made except by a two-thirds vote of the members present at the regular annual meeting of the club. At least thirty days' notice of any proposed change must be given to the secretary, who shall at once notify in writing the members of the club.

THE BENCH SHOW NOVICE.

THE feelings of a novice who exhibits a dog at a bench show for the first time and gets a round "O" are not to be envied.

He always manages to reach the show bright and early on the opening day and goes carefully over the class in which his dog is entered, comparing each canine with his own. To the novice this comparison inevitably confirms the opinion formed when he entered his dog that the first or second prize will surely fall to him.

When his class is called for judging he leads his dog into the ring with a pitying glance at the other exhibitors. But after a little while he becomes convinced that the judge, for some unaccountable reason, is strongly prejudiced against his dog. No matter how cunningly he maneuvers to get the animal directly in front of the judge a passing glance is all that dignified personage will condescend to give him. A great lump comes up into his throat as he thinks of the many weeks he has spent in conditioning his dog and how he has groomed him until he has felt personally acquainted with each particular hair of his coat. And for what purpose! The judge will not even look at him closely.

At last the prizes are awarded. A dog is given "first" that the novice considers the poorest one of the class, and his own does not even get a c.

As he angrily leads his dog back to his stall he meets plenty of disappointed exhibitors who console with him. "What a shame," says one. "It is an outrage," exclaims another. "No exhibitor outside of the ring can win," chimes in a third. "Come with me and I'll show you some judging even more fraudulent than in your class," says a fourth.

This last person drags the novice down the aisle of benches before a stall in which is a dog wearing a blue ribbon, and then to one containing a dog without a card of any kind; and he is asked if he could explain how any judge could honestly prefer the former to the latter dog. The questioner is the owner of the dog who did not win. Knowing nothing of the breed in question, the novice after gazing at the two animals for full one minute answers, "It's wrong, very wrong—it's outrageous."

Brooding over his wrongs for a couple of hours he at length determines that the judge shall look at his dog, so he hunts up that much-abused person and accosts him with:

"Sir, will you look at my dog and tell me why he was not noticed."

The judge, always obliging, says "Certainly," and goes with him to the stall.

Fault after fault is pointed out to the novice (many of which the latter considers points of real merit) until at length he begins to think that the judge is actually trying to make him believe that his dog has a combination of all the bad qualities that an animal of his breed could have.

"Has my dog any good points?" ironically asks the novice finally.

"I am afraid he has but very few," replies the candid judge.

Then the novice takes his dog off the bench and after a fight with the door-keeper about the deposit money, pulls out five dollars, saying, "The show is a d—d swindle," goes home with his canine friend and under a non-de-plume berates the judge, the prize winning dogs and the show, in the sporting papers.

PAUL LOGIC.

THE PHILADELPHIA DOG SHOW.—As the entry books for the Philadelphia Kennel Club's show are being footed up we find we will have between 500 and 500 dogs. The quality of both setters and pointers will be of the highest order, and it is a question whether such a number of cracks will ever meet together again. Several packs of foxhounds will be on exhibition and will be displayed in a circular inclosure in the center of the room. Special arrangements will be made with the railroads for carrying dogs, full particulars of which will be sent to exhibitors with their tags and identification tickets. —HOMO.

THE TORONTO DOG SHOW.

[*Special to Forest and Stream.*]

TORONTO, Ont., May 13.

Editor Forest and Stream:

The best show ever held in the Dominion opened this morning. The pavilion of the Horticultural Gardens, in which the show is held, is located in a splendid park, which is thrown open to exhibitors and affords the best exercising place I have ever seen at a show. There are about three hundred and sixty dogs, but a large number of entries were refused. Quality of dogs very good. In the champion setter class for dogs Rockingham beat Paris and Leicester, and in the bitch class, Belle, a good bitch, beat Liddersdale and Blue Belle. All of the judges are here. Not many mistakes so far. Among the cracks not yet judged are Memnon, Beaufort, O'Shea's hounds, Mr. Thayer's bulldogs, and others. The weather is splendid. Warmer than in New York. All running smooth. A little confusion just at first. You will see the quality is better than at any previous show held in Canada.

AWARDS TO 2 O'CLOCK P. M., MAY 13.

ENGLISH SETTERS.—CHALLENGE CLASS—*Dogs*: Frank Wiadholz's Rockingham. *Bitches*: L. H. and M. A. Smith's Belle.—OPEN—*Dogs*: 1st, L. H. and M. A. Smith's Bristol; 2d, T. G. Davey's Prince Phœbus; 3d, F. G. Hughes's Paris III. *Bitches*: 1st, T. G. Davey's Genevieve; 2d, O. Totten's Countess Dash; 3d, O. Totten's Lady Princess. PUPPIES UNDER 12 MONTHS—*Dogs*: 1st, T. G. Davey's Jupiter; 2d, O. Totten's Rosedale. *Bitches*: 1st, George Scofield's Diana; 2d, Dan O'Shea's Nastey.

IRISH SETTERS.—CHALLENGE CLASS—Max Wenzel's Chief.—OPEN—*Dogs*: 1st, Robert Douglass's Comet; 2d, Max Wenzel's Chief, Jr.; 3d, Sam Stanel's Sam. *Bitches*: 1st, Max Wenzel's Yoube. No second. *Puppies*: 1st, Jas. Kennedy's Dan; 2d, J as. Stewart's Don.

IRISH WATER SPANIELS,—1st, H. E. Kerstemann's Rocky; 2d, John Fitzgerald's Torey.

CLUMBERS.—1st, C. E. Robinson's Judy.

FIELD SPANIELS.—CHAMPION—BLACK OR LIVER, 28LBS. AND OVER—J. Luckwell's Bob, Jr.—OPEN—*Dogs*: 1st, J. W. Kelly's Lad o' Devon; 2d, G. C. Thompson's Raven; 3d, John Wilson's Beau II. *Bitches*: 1st, J. A. Roche's Fan II.; 2d, John Wilson and R. Tinning, Jr.'s Strathaven.—ANY OTHER COLOR—1st, A. Pearce's Sappho; 2d, James Gower's Jumbo.

COCKER SPANIELS.—UNDER 28LBS., BLACK—*Dogs*: 2d, Andrew Laidlaw's Rex; 3d, Henry Talford's Black Graf. *Bitches*: 1st, Andrew Laidlaw's Belle; 2d, James Luckwell's Woodland Queen; 3d, J. W. Kelly's Woodstock Gipsey.—ANY OTHER COLOR—1st, Andrew Laidlaw's Dart; 2d, F. E. Curtis's Sport; 3d, Geo. H. McFarlane's Drum.

FOX-TERRIERS.—CHALLENGE CLASS—*Dogs*: Raby Tyrant. *Bitches*: Richmond Olive.—OPEN—*Dogs*: 1st, John E. Thayer's Surprise; 2d, D. G. Booth's Venator; 3d, W. M. Langdon's Brokenhurst Reveller. *Bitches*: 2d, W. R. Bingham's Daisy; 3d, W. M. Langdon's Flirt.—WIRE-HAIRED—1st, A. St. G. Boulton's Bristles; 2d, J. Richmond's Jasper. *Puppies*: 1st, J. Thayer's Di; 2d, W. R. Bingham's Blanch.

MASTIFFS —*Dogs*: 1st, C. H. Mason's Nevison; 2d, Hugh Scott's Nelson. *Bitches*: 1st, C. H. Mason's Miss Nevison; 2d, H. J. L. Lawes's Norah.

ST. BERNARDS.—*Dogs*: 1st, J. W. Burgess's First Choice. 2d, Fred W. Rothera's Priam. *Bitches*: 1st and 2d, Fred W. Rothera's Daphne and Orta. X.

A CLOSE CALL FOR SCOTTIE.—Napier, New Zealand, March 22.—Placidly perusing FOREST AND STREAM to-day, I am incited by a column of remarkable shots to narrate a little incident which occurred some thirteen years ago, when I was managing one of the largest sheep and cattle runs in the Province of Otago, in the South Island of this colony. One morning the station butchers told me that some sheep were wanted in the yard for killing, and it happened that the only dog then at the home station was a clever, but capricious old collie of my own, named Scottie, who rarely did any work. The killing wethers were, however, in a thirty-acre paddock, and I essayed to get them into the yards: but Scottie was in one of his inoperative moods and made a hash—in fact, several hashes—winding up with a dead failure of the performance; with the final result that, having got a (not very severe) thrashing, he retired from public view, and that I instructed the butchers to run in a bullock to kill. On my return in the evening old Scottie came sheepishly up to me after the manner of the average "chidden hound;" and, on inspection, I found that he had received a fearful wound, which at first sight appeared to be right through the middle of his neck, but which after inspection showed to have just missed the vital parts. I questioned all the men about the place, but they, with one consent, at first pleaded total ignorance. Eventually, however, the stockman admitted that the first shot he fired at the bullock missed the mark, and that, immediately on the shot, old Scottie had jumped up howling from a little grassy hillock not many yards off and about in the line of fire, where he was lying unnoticed, and had run away. This was all the evidence I could collect, but there could be no moral doubt that the bullet went through that dog's neck. Strange to relate, no serious injury was inflicted; the wound sloughed for some time and gradually healed, and the old dog's spirits and appetite were but little affected.—L. M.

ENGLISH AND NATIVE FOXHOUNDS.—*Editor Forest and Stream:* I see that "Homo" wants the standard for judging foxhounds changed, and I heartily agree with him. For my part I should as soon start out to drive a fox over granite hills with a pack of yearling calves as with English foxhounds, but for thoroughbred city fox hunters they are just the thing, as a tame fox or an anise bag is not hard to catch, and the excitement of not letting your horse stumble over them is immense. I have one of them with a pedigree a yard long, about a year old, and as like those shown at the last Boston show as can be, and he is a worker and will make a good show dog, but never will be able to keep in hearing of the best of my hounds, which are part Byron and the others the same style dogs as Dixie Jim and Topsey, shown at Boston. I did think of entering mine, but when I saw the prize winners I was glad I did not, for they would not have been noticed, though between Oct. 1 and Dec. 10, twenty-seven foxes were killed ahead of them. For an open country I presume the English hound may suit, but I would like to see how far a pack of them would drive an old dog fox on Monadnock Mountain, where a fox need not step on anything but ledge for a mile at a time, and the music from some of our native hounds on those hard spots is little like the English yelp. I hope we can have a different standard; if not, good foxhounds will be scarce at dog shows.—H. C. NEWELL.

"THE PUG MUST GO."—Must he? The Boston *Beacon* has said it, but not Beacon street. Puggie must go—yes, from England to America, and for the price of $100 to $500, to delight the hearts and homes of his new owners in every case. All who know puggie for what he really is, the happy, good-natured, thoroughly sweet tempered, devoted friend and companion of children, the waggish, merry pet of their elders, the alert little watchman, the amusing, fearless enemy of tramps and vagabonds, all who know puggie smile at the idea that his popularity is on the wane. We grant the exquisite beauty of the silky-coated Prince Charlies and Blenheims during the brief period when those troublesome coats are at their very glossiest and best, but memory recalls the handsomest specimen we ever owned clinging by his sharp little teeth to the nose of our little sister, and the picture is no more pleasing than was the real incident years ago. Silly masters or mistresses can make fools of dogs, and there must be a percentage of stupidity among our canine friends to keep pace with humanity, but let us not insult little puggie by supposing his whole race stupid. His bright, beautiful eyes and quick movements do not belie his intelligence, and though his countenance is black and wrinkled, his temper is as smooth and serene as ours ought to be. Do not malign puggie.—CONSTANT READER.

COLLIE AWARDS AT ST. LOUIS.—St. Louis, May 4.—*Editor Forest and Stream:* In the report of the St. Louis show contained in your last issue, there is an error in the placing of the awards in the open bitch class for collies. First went to Nellie instead of Flyaway, as appears in your report. Second to Madge Wildfire, vhc. to Flyaway, and hc. to Kate. All are owned by me, and while I esteem Flyaway as a very fair collie, yet the others are a long way in front of her.—J. A. LONG.

A RETRIEVER.—Weldon, N. C.—A few days ago I went to my trout lines and got a catfish off of one of the hooks. I threw it on the bank. When I got ashore I bade my seven months old puppy to bring it to me, and to my great surprise he took it up and brought it as gracefully as if it had been an old cock partridge. I then broke its fins off and sent it up to town to my father's office. Every one that saw it said it was hard to beat for a puppy.—TAR HEEL.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

H. E. P., Cleveland.—My Scotch collie, 18 months old, has some trouble with his eyes. They seem weak, and at times there is a watery discharge from the corners, and at other times, especially mornings, the discharge is thick, but never very profuse. The light appears to hurt him, and he keeps his eyes closed or partially so either when out in the sun or by gas light. The eyes seem inflamed, but I cannot see that the lids are swollen. Has been troubled for two months. His hair has come out a little all winter, but he appears to have a good coat. Otherwise appears well, good appetite, very playful and active. Ans. As a general tonic give your collie five drops of Fowler's solution of arsenic morning and evening in his food. Keep it up for three weeks. Your dog has ophthalmia. Wash eyes twice daily with a sponge and warm water. Try the following wash: Ten grains of borax to one ounce camphor water. Apply with dropper four or five times daily. If this does not benefit, use a mild solution of nitrate of silver, two grains to the ounce of water, and apply with camel's hair brush once daily.

KENNEL NOTES.

NOTICE TO CORRESPONDENTS.

Kennel notes are inserted in this column free of charge. To insure publication of notes, correspondents MUST GIVE the following particulars of *each animal:*

1. Color.
2. Breed.
3. Sex.
4. Age, or
5. Date of birth, of breeding or of death
6. Name and residence of owner, buyer or seller.
7. Sire, with his sire and dam.
8. Owner of sire.
9. Dam, with her sire and dam.
10. Owner of dam.

All names must be *plainly* written. Communication on one side of paper only, and signed with writer's name.

NAMES CLAIMED.

☞ *See instructions at head of this column.*

Conn. By W. T. Newton, Brookline, Mass., for red Irish setter dog, whelped Nov. 17, 1884, by Major (Keno—Madge) out of Primrose (Elcho—Zelda).

May Eye See. By Lehigh Kennels, Lehighton, Pa., for English setter bitch, whelped March 24, 1885 (Romeo—Lara).

Dottie Dimple. By Samuel Clark, Kennebunk, Me., for imported Skye terrier bitch, whelped April 12, 1882.

Dandy. By Jas. Bennett, Boston, Mass., for imported Skye terrier dog, whelped Feb. 16, 1882.

Loyos. By Victor M. Haldeman, General Wayne, Pa., for lemon and white English setter dog, whelped Sept. 12, 1884, by A. E. Sherman's Nep out of Josie.

Belgrave Jockie, Belle and Fairy. By W. H. Cookson, Hudson, N. Y., for fox-terriers, one dog and two bitches, whelped Feb. 15, 1885 (Mixture—Nettie).

Metis. By Thomas Bratson, Newark, N. J., for orange and white pointer bitch, age not given, by Bon Ton (A.K.R. 1436) out of I. E. Decker's May.

Darkey. By Geo. W. Fisher, Luzerne, Pa., for pug bitch, whelped Aug. 23, 1884, by Don Juan out of Chloe.

Count On-him. By L. Gardner, Mount Vernon, N. Y., for white, black and tan English setter, whelped March 28, 1885, by Blue Dick (Blue Dash—Jolly May) out of Burlesque (Belton—Rose).

Hero, Rebel and Custer. By Wm. Loeffler, Preston, Minn., for black and tan, red and chestnut and tan dachshund dogs, whelped March 14, 1885, by his Waldmann II. (Faust—Flora) out of Babette (Bock—Waldine).

Gust, George, Otto, Louise, Mina and Flora II. By Wm. Loeffler, Preston, Minn., for one black and tan and two red dachshund dogs and one black and tan and two red bitches, whelped April 12, 1885, by his Waldmann II. (Faust—Flora) out of Crawl (Waldmann—Waldine).

Faust Jr., Crook, Dove, Lilly and Chet. By Wm. Loeffler, Preston, Minn., for two red dachshund dogs and one black and tan and two chestnut and tan bitches, whelped April 21, 1885, by imported Bergmann out of Diana (Waldmann II.—Babette).

Planter. By Jas. L. Anthony, New York, for liver pointer dog, whelped Feb. 6, 1880, by Westminster Kennel Club's Sensation (A.K.R. 217) out of Black Rose.

Graphic Kennels. By James L. Anthony, New York, for his kennel of pointers.

BRED.

☞ *See instructions at head of this column.*

Brimstone—Buckellew. Field Trial Kennels' (New York) English setter bitch Brimstone (A.K.R. 29) to their Buckellew (A.K.R. 30), April 23.

Jolly Daisy—Buckellew. Field Trial Kennels' (New York) English setter bitch Jolly Daisy (A.K.R. 955) to their Buckellew (A.K.R. 30), May 1.

Bessy—Bunny. Haven Doe's (Salmon Falls, N. H.) beagle bitch Bessy (A.K.R. 1117) to his Bunny (A.K.R. 1118), April 29.

Nelly—Donald II. Dr. S. Fleet Speir's (Brooklyn, N. Y.) pointer bitch Nelly (Tam O'Shanter—Nelly II.) to Clifton Kennels' Donald II. (Donald—Devonshire Lass), April 30.

Frost—Dashing Rover. Dr. W. A. Strother's (Lynchburg, Va.) English setter bitch Frost to Dashing Rover (Count Wind'em—Norna).

Leah—Dashing Rover. Dr. W. A Strothers' (Lynchburg, Va.) English setter bitch Leah (Gladstone—Frost) to Dashing Rover (Count Wind'em—Norna).

Wallixie—Prince. B. F. Seitner's (Dayton, O.) dachshund bitch Wallixie (Waldman K.—Fraulein Waldeck) to his Prince, April 27.

Viola—Nip. J. H. Winslow's (Philadelphia, Pa.) pointer bitch Viola (Sensation—Lilly) to G. F. Jordan's imported Nip (Pilkington's Lake—Duke of Portland's Juno), April 17.

Leo—Dan. The Elm City Kennels' (New Haven, Conn.) greyhound bitch Leo to their Dan (Hector—Beauty), April 21.

Vic. Liver and white pointer dog (A.K.R. 358), by L. Gardner, Mount Vernon, N. Y., to Frank Wilcox, Dunkirk, O.

Dai y Vernon. English setter bitch (A.K.R. 812), by L. Gardner, Mount Vernon, N. Y., to Frank Wilcox, Dunkirk, O.

Lofty. Black, white and tan English setter bitch, whelped Dec. 7, 1884 (Hazel Blue—Lynn), by Edgar E. Haines, Waltham, Mass., to Dr. J. Reily Bucher, Lebanon, Pa.

Dora. Gordon setter bitch, 2½yrs. old (Dash—Mona), by Robert Lyon, New Brighton, S. I., to Chas. S. Fitch, New York.

Duchess. Collie bitch, age not given (Dash—Lassie), by Charles S. Fitch, New York, to Robert Taylor, same place.

Darkey. Pug bitch, whelped Aug. 23, 1884 (Don Juan—Chloe), by W. K. Knight, Philadelphia, Pa., to Geo. W. Fisher, Luzerne, Pa.

Watty. Imported prick-eared Skye terrier dog, age and pedigree not given, by Geo. Sanderson, Moncton, N. B., to Associated Fanciers, Philadelphia, Pa.

Loyos. Lemon and white English setter dog, whelped Sept. 12, 1884 (Nip—Josie), by A. E. Sherman, Sandy Creek, N. Y., to Victor M. Halderman, General Wayne, Pa.

Pope. Pug dog (A.K.R. 1594), by Essex Kennels, Andover, Mass., to Edward Hale, Haverhill, Mass.

Ky Ky. Pug bitch (A.K.R. 1592), by Essex Kennels, Andover, Mass., to E. E. Lewis, Suspension Bridge, N. Y.

Goldie. Italian greyhound dog, whelped April 2, 1885, by Henry C. Burdick, Springfield, Mass., to Chas. J. Turner, Topeka, Kan.

PRESENTATIONS.

☞ *See instructions at head of this column.*

Lady Dufferin. Lemon and white pointer bitch, 7yrs. old (Dash—Fan), by John G. Heckscher, New York, to the Westminster Kennel Club.

DEATHS.

☞ *See instructions at head of this column.*

C. O. D. Lemon and white pointer dog, age not given (Joker—Viola), owned by J. H. Winslow, Philadelphia, Pa., from worms.

Auld Reekie. Dandie Dinmont terrier (A.K.R. 1639), owned by Thos. H. Bell, Troy, N. Y., April 13, from enteritis.

Pride of Elm Villa. English setter dog (A.K.R. 1066), owned by L. Gardner, Mount Vernon, N. Y., March 10.

Royal Beaufort. Lemon and white pointer dog (A.K.R. 2031), owned by L. Gardner, Mount Vernon, N. Y., April 9.

King Obo. Black cocker spaniel dog (A.K.R. 2096), owned by H.W. Fuller, Hartford, Conn., from inflammation of the bowels.

Rifle and Tray Shooting.

GIVE THE PROOF.

Editor Forest and Stream:

I notice in a late issue of FOREST AND STREAM the advertisement of the Bullard Arms Company, claiming for their .40-75gr. rifle a trajectory of 6in. rise in 200yds., and for their .45.85 rifle a trajectory of 6½in. rise for same range; this with factory ammunition; that is, the former with 75grs. of powder and a 225gr. bullet, and the latter with 85grs. of powder and a 285gr. bullet.

There are a good many sportsmen who agree with me that there is a mistake in this claim that will be made manifest in a public trial. Forming an opinion from the published experiments for several years past appearing in your columns, and from an understanding of the result of similar experiments in England, such a flat trajectory has never been made with much larger charges of powder. The express rifle giving the greatest speed to its ball, as far as published, was a .45-cal., using 150grs. of powder and 270gr. bullet, and that was 2,000ft. per second. Even this ball has a trajectory of at least 8in. rise in going 200yds. Yet here we have a rifle with a lighter ball (giving it a speed of 1,700 to 1,750ft. per second) and yet making a trajectory of only 6in. (or 2in. less) going 200yds.

There is no record of as flat a trajectory ever having been made by any rifle, in any locality, and a good many sportsmen will agree with the writer, in thinking that the Bullard Arms Company are doing injustice to a doubtles meritorious arm, by claiming for it what cannot be substantiated in a public trial. Its cost will be little, but the advantages to the Bullard Arms Company in case they can substantiate their claim will be very great in the increased sale of their rifle. By a public trial is not meant the method where the shooter first sights the rifle for 200yds. and then goes up to the point 90yds. from the target and shoots a group of shots, using the 200yds. sight and then measuring to the center of the group. This is not a public trial, for there is no one beside the shooter who knows how the aim is taken and there can consequently be no witness.

The only reliable way is to catch the position of the bullet in flight at its highest point, by its puncture through very thin paper, and then measuring from the puncture down to the line joining the center of bullseye on the target, and the center of bore of rifle at the firing point. This process is very feasible and very reliable when the line is fixed by disinterested and competent persons.

We think the Winchester Company claim somewhat too flat a curve for their Express, and for their .40-60 rifle, and this could be settled at the same time. The opinion is hazarded that either of the Bullard rifles above referred to will not make a flatter trajectory in 200yds. than any good sporting rifle, using the .70-405 Government cartridge; *i. e.*, about 11-inch rise. RIFLEMAN.

RANGE AND GALLERY.

JAMESTOWN, N. Y., May 2.—Scores of the eight best men competing for prizes during March and April, Creedmoor target, reduced from 200yds. to the gallery distance. A shot to score a bull must cut half the ball in. Position, standing, free from all artificial support, 20 strings of twelve consecutive shots to constitute the prize score, making a possible 1,200 count. Seven out of the eight men whose scores are reported shoot with both eyes open, and some wonderful improvement has been made by beginners in that way of sighting. The contestants were allowed a handicap of from one to ten points on each string of twelve shots:

Burns	59	58	59	58	58	58	59	58	58	58—583
	58	59	59	59	58	59	58	58	59	59—586—1169

	54	50	48	54	50	49	46	50	46	44—491—1027

Opposite each man's name is the class he shot in, or the number of points allowed for each 12-shot string.

BOSTON, May 9.—There was a good attendance at Walnut Hill to-day, but the wind was somewhat troublesome, and during the latter part of the day the light was bad. Next Saturday there will be a match with the Pittsburg Rifle Club, and Thursday next the long range men will participate in a match. Following are the scores to-day, all at 200yds.:

Creedmoor Practice Match.—A. B. Archer 45, C. D. Palmer 44, F. Stetson 44, W. Meadows, 43, C. W. Hodgdon 80, H. Payson 40, H. White 39.

Decimal Match.—H. Cushing, A. 79, C. E. Berry, A 76, R. Reed, A 75 B. G. Warren, C 71.

Victory Match.—E. E. Berry 77, J. B. Fellows 75, J. N. Frye 72.

Rest Match.—S. Wilder, A 94, J. N. Frye, F. 92, D. L. Chase, A 92, Wm. Stone, A 85.

500yds. Match.—S. Wilder 47, B. G. Warner 47, W. M. Merrill (mil.) 43.

Team Match—Captain Charles's Team.—W. Charles 114, R. Reed 111, A. C. Gould 101, A. B. Archer 97, H. Cambridge 91; total 514. Captain Fellows's Team.—J. B. Fellows 115, C. E. Berry 110, B. G. Warren 99, Wm. Stone 90, J. N. Frye 80; total 494.

CLUB SCORES.—*Correspondents who favor us with scores are requested to send them in as soon as possible after the matches described. We go to press Wednesdays; and it is necessary that matter for publication should be in hand by Monday, or Tuesday at the latest.*

THOMASTON, Conn., May 9.—The Empire Rifle Club shot a telegraph match with the Lawrence, Mass , and the Jamestown, N. Y. rifle clubs to-day, on the following conditions: Teams of ten men, 15 shots per man, 200yds., off-hand, Creedmoor target. The weather conditions were a bright light during the first part of the match, cloudy the latter portion, with a very tricky wind veering from the 8 to 12 o'clock quarters. As we had not time to shoot two different scores, we let one score stand against both clubs:

G C Canfield	555445445555—69	G C Gilbert	445451344445444—62
W H Dunbar	554445451445554—67	C L Aling	435444444444454—61
G A Lemmon	544454554554444—66	C F Williams	544544443431154—61
F Carr	454544431455554—65	B W Pease	334544535355154—60
F A Perkins	444454445454444—63	G P North	544354443134444—59
			633

Subjoined are scores for the badge, Massachusetts ring target: Lemmon 106, Dunbar 106, Carr 106, Canfield 104, Perkins 97, Gilbert 92, Aling 91, Pease 90, North 89, Williams 89, Fox 84.

CREEDMOOR.—N. R. A. matches during May and June:

The Champion Marksman's Class Match.—Open to all members of the N. G. S. N. Y. (except as hereafter noted) and members of the National Rifle Association, the latter, however, not being eligible to win the principal prize; 200 and 500yds, five shots at each distance; the Remington rifle (N. Y. State model), standing at 200yds., lying head to target at 500yds. Entrance fee fifty cents; competitors allowed re-entries in each competition at the discretion of the executive officer, but only one score to count. Members of the N. G. S. N. Y. in uniform (jacket, cap and belt) may record their scores in this match as qualified for the N. Y. State marksman's badge, provided that, if ordered, they have attended or do once in the season attend general practice, and provided they have previously qualified in the second class—100 and 300yds. See Qualification Match. First prize, a gold marksman's badge for 1885, offered by Brigadier General Charles F. Robbins, General Inspector of Rifle Practice, S. N. Y. The badge to become the property of the competitor who, at the close of the season of 1885, shall have won it the greatest number of times. In case of a tie the highest aggregate score of all the competitions participated in up to that time to decide. Second, third and fourth prizes, five, four and three per cent. of the entrance money respectively; fifth, sixth, seventh and eighth prizes, two per cent. each of the entrance money. The same man can only win one cash prize during the season. Winners of champion marksman's badges for the past 9 years, Messrs. A. B. Van Heusen, Wm. Robertson, Jas. L. Price, C. H. Eagle, Thomas J. Dolan, H. T. Lockwood and G. W. Munson and John S. Shepherd, winners of the gold marksman's badges for 1883 and 1884, are not eligible to win the principal prize in this match. Shooting days, May 23, June 6 and 13.

The Qualification Match of 1885.—Open to members of the N. G., S. N. Y., and N. R. A., the former being in uniform (jacket, cap and belt) may count scores made as qualifying them to shoot for the N.Y. State marksman's badge distances 100 and 300yds., standing at 100, kneeling or sitting at 300yds.; five shots at each distance with the State Remington rifle. Entries 50 cents each, re-entries permitted at the discretion of the executive officer. Shooting days, May 23, June 6 and 13.

Army and Navy Journal Match.—Open only to members of the army, navy marine corps and national guard or militia of any state or territory. Rifle, the U. S. service, .45-cal, or the Remington State model, .50-cal. Competitors to shoot in uniform, jacket and cap or helmet, position standing, 200yds., rounds seven, entrance fee 25 cents, re-entry allowed. First prize, a fine Webley double-barreled breech-loading shotgun; chokebored and rebounding locks, value $200, presented by Col. W. C. Church on behalf of the *Army and Navy Journal*. The gun to be shot for semi-monthly and during the fall meeting, and to become the property of the competitor whose ten best scores, made previous to the close of the fall meeting in September, 1885, shall aggregate the highest. Second, 3d and 4th $10 cash each; 5th, 6th, 7th and 8th, $5 cash each, by N. R. A., the highest aggregate of five scores to determine the winners of the cash prizes. Shooting days May 23 and 30, June 6 and 13.

SPRINGFIELD, Mass.—The Rod and Gun Rifle Club had a good number of marksmen at their range Lake Lookout, May 9, it being the first competition for the badges offered by the club. The first class was won by I. De Clair with the good score of 110 points; the second class was won by E. S. Field with 99 points. The record match was taken also by I. De Clair, with another total of 110. De Clair used a new Farrow rifle, .32-cal. Field used a Bullard, .38-cal.:

I De Clair	11	10	12	11	11	11	12	11	10	11—110
E T Stephens	11	10	12	11	11	9	10	10	11	12—107
C Maynard	9	12	12	10	7	8	10	11	10	9—102
Z C Talbot	10	12	12	10	7	8	10	11	10	9—99
T B Wilson	11	10	11	10	10	9	9	10	11	8—99

The scores of the second class were:

E S Field	7	8	7	7	8	9	8	8	10	9—81
Re-entry	11	12	9	10	7	10	12	9	11	8—99
T T Cartwright	8	9	9	9	10	10	8	8	11	11—93
J A Whiting	10	9	6	6	9	9	8	10	9	11—87
Jas Morgan	9	7	7	7	10	7	11	10	5	6—76
J A Stirling	9	4	8	6	8	8	8	9	5	5—70
R H Hawes	7	2	10	7	2	6	2	2	2	8—48

Record Match.

I De Clair	11	10	10	10	11	12	12	11	11	12—110
Z C Talbot	11	11	10	8	10	10	11	9	12	10—102
E T Stephens	9	8	10	8	12	12	8	12	11	11—101
T B Wilson	7	9	9	10	10	11	12	10	9	10—97
C Maynard	11	7	8	9	8	10	10	11	0	11—84

PINEHEAD.

HAVERHILL, MASS., RIFLE CLUB.—Scores of May 9, 200yds., off-hand, Creedmoor target:

J F Brown	4444554545—44	J Busfield	4334544455—41
H Tuck	4544455445—44	E Brown	5334344446—40
R Griffin	5445444444—42	L W Jackson	4434444444—39
S Johnson	4444444445—41	W Worthen	4543443444—39

The club has opened a members' prize match, to continue at discretion of the directors. Prizes aggregate 75 per cent. of the entrance money.

NEW MAYNARD RIFLE.—In the advertisement of the Massachusetts Arms Co. this week is shown a remarkable target made with the new .22-cal. Maynard rifle, at 200yds.

CLUB SCORES.—*Correspondents who favor us with scores are requested to send them in as soon as possible after the matches described. We go to press Wednesdays; and it is necessary that matter for publication should be in hand by Monday, or Tuesday at the latest.*

THOMASTON, Conn.—The Empire Rifle Club, of Thomaston, Conn., will hold its third annual meeting on May 19, 20 and 21. $275 in prizes will be given in a shoot at Massachusetts target, 200yds., off-hand; any rifle of three pounds pull and upward allowed; five shots to constitute a string, aggregate of best three strings to count, entries unlimited, price fifty cents.

GARDNER, Mass., May 5.—At the last regular meet of the Gardner Rifle Club, at Hackmatack Range, there was not a large attendence. Each man shot two strings with a possible 100. The shooting was off hand, distance 200yds., with the new American decimal target. The totals were as follows:

A Mathews	87	85—172	G G Ellsworth 73 78—151
J N Dodge	67	86—153	Geo R Warfield 47 57—104
		At Rest.	
A Williams			86 88—174

BULL'S HEAD RIFLE CLUB.—May 1.—Twelve-ring target, possible 120: M. Dorrler 116, A Lober 116, G. Zimmerman 115, C. Rein 113, E. Holzmann 113, A. Stolzenberger 109, J. Jordon 119, D. Holland 107, D. Louitzki 104, B. Wragge 103, H. Sindlinger 102, J. Shaw 101.

WORCESTER, Mass., May 7.—At the regular meet to-day at Pine Grove of members of the Worcester Rifle Association, the Massachusetts target was used, 10 shots, with a possible 120 was the rule, and in the face of a strong and variable wind, the results were as follows:

A Brown	12	10	11	9	12	11	10	11	11	10—107
S Clark	10	11	10	11	8	12	11	10	11	12—106
M G Fuller	9	9	10	11	10	11	12	11	10	11—104
Thos Leighton	8	18	9	11	12	10	11	10	10	12—103
A Williams	10	10	6	8	7	11	10	9	9	8—88

THE TRAP.

Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

THE NATIONAL GUN ASSOCIATION.

THE meeting of the Association, pursuant to adjournment from New Orleans in February last, was held at the Arcade Hotel, Springfield, O., May 6.

Meeting called to order at 8:30 P. M., the president, Dr. L. C. Russell, in the chair. Present, Messrs. Bloom, A. H. Bogardus, Bishop, Bull, Chamberlin, Folsom, Russell, Stark, Sloan, Von Lengerke, Watkins, Kelley, E. Bogardus, Kirkpatrick, Whitney, Wagener, Brewer, S. E. Meyers, Allen, George, Walker, Drake, Powers, Sheldon, etc.

On motion of Chamberlin, seconded by A. H. Bogardus, Resolved, that proceedings of meetings held in New Orleans February last, as contained in first forty-two pages of first handbook, be approved. Carried. Reports of General Meige, treasurer and secretary, read and adopted. Remarks by Messrs. Russell and Bloom on subject of legislation affecting matters of interest to sportsmen.

Moved, That a committee of five on National and State legislation be appointed.

Laid before the meeting communication from representatives of Philadelphia gun clubs inviting the National Association to hold a tournament in that city during the present season.

On motion, Resolved, that a committee of three be appointed on future interstate tournaments for the year 1885. Carried.

The subject of opening a regular New York office being taken up, it was decided that same would be inadvisable at present. On motion, duly seconded and carried, Resolved, that the offer of Messrs. Von Lengerke & Detmold to make their office the temporary office of the Association in New York city for six months gratis be accepted, and that Mr. J. von Lengerke be appointed the executive officer *pro tem.* to represent the Association in New York city.

Mr. J. E. Bloom, general manager of the Association, speaking to the members upon the adoption of the report of Secretary Bishop, said:

Gentlemen: There is little for me to add to the report of the secretary, to which I have taken pleasure in affixing my countersign. The Association is now fairly started; its eventual success on the broad basis upon which it is outlined depends entirely upon the support which the shooting fraternity extends toward it. All sportsmen are doubtless now watching its course; a few are predicting its failure, but the many feel gratified to see the enterprise safely on its feet, and upon such especially do we wish to impress the importance of their now giving the Association not only their silent approval, but also and more especially their active financial support, without which the main objects of the Association cannot be successfully accomplished. As your daily experience shows you, it requires money as well as brains to carry out any project. We flatter ourselves that the 118 and odd members we now muster furnish a fair nucleus for the latter

element. We ask all fair-minded sportsmen to add themselves to the latter and contribute their mite to the former.

If you who are in doubt about joining the Association, and who, admitting the merit and the worthy cause it upholds, yet hesitate and ask yourselves, "Why should I join? How can I be benefited thereby?" we would answer, in the words of our Mr. Perry, when he subscribed for his member's share at New Orleans, "Here's five dollars for the cause." Do you ask what cause? We answer, that of the sportsmen. It is a fact well known to you all that twenty years ago we were looked upon almost as the proverbial tramp of the present day. Happily this ignorant prejudice has almost disappeared, though traces are still visible upon every side. I know an eminent solicitor who uses a cognomen among his shooting friends, simply because he knows many of his clients would leave him on account of their ignorant prejudice against the hunter and the trap shooter. It was only yesterday I heard an amusing account of a distinguished member of the shooting fraternity from New England, a dentist. Last May he made his arrangements to attend the tournament in Chicago. Numerous patients came to ask for appointments for the same dates. "Ah," said he. "I cannot give you a date until week after next, for next week I must attend a convention;" and the fair clients accepted the explanation, presuming of course he would attend a convention of dentists. Probably they would have been horrified to have known it was a convention of sportsmen he attended, where he found the exhilaration and the new vigor resulting from the outdoor open air amusement at the trap, and from which he was enabled to return to his daily life with a strength of arm and a clear brain he would not otherwise have obtained.

Now, I hold that a national association such as this, numbering many hundreds, and let us hope thousands will present so strong a front, that their cause will command a fair and favorable hearing from the world at large—and which will inure to the benefit of every individual sportsman by bringing him the respect of all his neighbors and the assistance of the lawmakers in protecting his rights and in fostering his game and fish to an extent never before attained. It is for these ends that we are striving, for these ends we propose to fight. We ask the above doubters: Do you wish to profit by our struggle and without lending your assistance? Most assuredly "no." Then

"Give us the hand that true sympaty shows,
And clings to a messmate whatever wind blows;
And says, when Aspersion, unanswered, grows cold,
Wait, one story's good till another is told."

BOSTON, May 6.—The usual semi-monthly competition at glass balls and clay-pigeons took place at Walnut Hill to-day. There were several interesting and close matches shot. Team match:

Lowell Gun Club.	Ten single.	Three pairs.	Five straight.	Lawrence Gun Club.	Ten single.	Three pairs.	Five straight.

ILLINOIS SPORTSMEN.—The fifth annual tournament of the Southern Illinois Sportsmen's Association will be held at Mt. Vernon, Ill., May 27, 27 and 28, on the fair grounds of the Jefferson County Agricultural Society. There are twelve matches as follows:

May 26.—Shoot No. 1, 7 single glass balls.

Shoot No. 2, 10 clay-pigeons.

Shoot No. 3, association special, team shoot, any 2 members of same club to compose team, 7 Peoria blackbirds to each man.

Shoot No. 4, 5 clay-pigeons.

May 27.—Shoot No. 5, 5 Peoria blackbirds.

Shoot No. 6, association special medal shoot, 20 single glass balls. Prize, association gold medal. The contestants for this medal must be members in good standing of the Southern Illinois Sportsmen's Association, and must live within the State south of the Ohio and Mississippi R. R. The party winning it must give bond to the Association for its safe keeping, and return it to the Association at its next annual meeting; when won by the same person three times in succession, it then becomes the property of the party so winning, and he shall be entitled to the record of champion glass ball shot of Southern Illinois.

Shoot No. 7, association special, 7 glass balls, 7 clay-pigeons and 7 Peoria blackbirds.

Shoot No. 8, 5 clay-pigeons.

May 28.—Shoot No. 9, 7 live birds, ground traps.

Shoot No. 10, team shoot, any 2 members of same club to compose team, 4 double blackbirds to each man.

Shoot No. 11, citizens' purse of $100 in gold, 5 balls, 5 blackbirds, 5 clay-pigeons to each man.

Shoot No. 12, club prize of $50, to be made by and donated by various clubs of the Association, team shoot, any 2 members of same club to compose team.

BROCKTON, May 5.—The tournament held on the grounds of the Brockton Shooting Club, to-day, at which a five-men team match for the gold badge of the State Association, held by the Brockton Club, was shot, resulted in the Brockton team making the largest score ever made for the State badge:

Brockton Shooting Club.

Allen	1111111111111111111—20
Howard	1011011011011110111—14
Bartlett	1111111111101101111—18
Wilbur	1011111111101111111—18
Tirrell	1010111110100111111—15—85

Worcester Sportsman's Club.

Jones	1111101100111111111—17
Holden	1111111110101110110—16
Davis	1111100111110111111—17
Webber	0111111011111011111—17
Gilman	1011110111001110111—15—82

SAN FRANCISCO, May 2.—Sixteen members of the Alameda Sportsman's Club met at Bird's Point to-day to shoot for the club's prizes, decided by the best aggregate scores of the season. Some excellent shooting was done by the club as a whole, no less than 71½ per cent. of the birds shot at being killed. As usual the shoot was at 12 single birds, Hurlingham rules and 100yds. boundary. Those using 10-bore guns stood at 30yds. and the 12-bore at 28. Havens deserves especial credit for his good work, for he shot for the first time with a new hammerless gun. The following is the club score: Slade 11, Mayhew 7, Adams 10, Havens 11, Ingalls 9, Cadman 9, Bell 9, Hopkins 9, Norton 7, Houghton 8, Batchelder 6, Brown 7, Pollock 9. West withdrew, Smith 8. After the main match, two freeze-outs, $2.50 entrance, were shot. The first was divided between Al Havens, Mayhew and Bell, with three kills each. The last, between Smith and Bell, with a similar number. The birds were a fine lot of good, strong flyers, and were assisted by a stiff breeze from the bay.

CLUB SCORES.—*Correspondents who favor us with scores are requested to send them in as soon as possible after the matches described. We go to press Wednesdays; and it is necessary that matter for publication should be in hand by Monday, or Tuesday at the latest.*

WINCHENDEN, Mass., May 6.—A few of the members of the Winchenden Gun Club met at their grounds to day, and shot clay-pigeons with the following results:

Jas Sutherland	1101101111—8	F F Hopgood	0110110001—5
P S Davis	0111111100—7	J G Henry	0110010100—4
L F Martin	0110100111—6		

TEXAS.—At San Antonio, Texas, May 16, a match will be shot between H. R. Penrose, who lately defeated Carver, and Gwinne Price.

SAN FRANCISCO, May 3.—The Occidental Club held its regular monthly shoot at the Six-mile House to-day. The weather was unfavorable, the wind at times amounting to a perfect gale, sending the clay pigeons beyond the range of the guns. The first three shoots of this club will be with terra-cotta pigeons and the last three with live birds. Hurlingham rules. In the opening match the score stood: Pete Walsh 14, F. Williams 9, Jack Ford 7, J. Headley 9, J. Fanning 14. The regular club match for the annual medals then took place, with the following score: Pete Walsh 12, Phil Funke 9, H. Reichstetter 6, E. Dunshee 12, J. Fanning 10, H. Blanken 7, T. Headley 9, J. Headley 12, W. Dunshee 10, F. Williams 12, J. Ford 3, W. Heyer 9, B. Honan 10, F. Stone 10, E. Funke 9.

BOGARDUS TEAM MATCH.—Capt. Andy Meaders and Mr. W. E. Watkins have accepted the challenge of Capt. Bogardus and son Eugene for a match at 100 singles and 50 doubles for $250 a side and the championship, under the National Association rules. Capt. Meaders and Capt Bogardus will also shoot an individual match soon. Meaders and Watkins had a practice shoot recently. Each broke 89 out of a 100 singles; Meaders 45 and Watkins 43 out of 50 doubles. Nashville people are inclined to think that they have the coming champion in Capt. Meaders.

CLUB SCORES.—*Correspondents who favor us with scores are requested to send them in as soon as possible after the matches described. We go to press Wednesdays; and it is necessary that matter for publication should be in hand by Monday, or Tuesday at the latest*

MANCHESTER, N. H., May 5.—At a meeting of the executive committee of the Manchester Rifle Association last evening it was voted to hold the annual spring meeting on May 14, 15 and 16. There are twenty five prizes in all, and their valuation exceeds $200. The event will be open to all comers, and the firing will take place upon a Creedmoor target, distance 200yds., position standing, rifle any within the rules, rounds 7, 3 cards to count, entries unlimited, entry fee 50 cents, re-entries 25 cents. Riflemen will be invited from all the rifle associations of New England, and an extremely enjoyable meeting is promised.

JACKSON GUN CLUB.—The second annual tournament of the Jackson Gun Club will be held at Jackson, Mich., June 2, 3 and 4. The club will endeavor to make this the most satisfactory tournament ever held in the State of Michigan. The adjourned meeting of the contemplated State Association will be held on the evening of the 3d, when it is hoped a constitution, by-laws and shooting rules will be adopted and officers elected. Every club in the State should be represented at this meeting. During the tournament a team match will be shot, five men in a team, at clay birds for the championship of the State and a suitable trophy. The programme, which will be out on May 15, will be made as interesting as our means will permit and a cordial invitation is extended to all. B. F. Burgess, John N. Squiers and A. Crittenden, executive committee.

SEND ten cents for handbook of The National Gun Association to F. C. Bishop, Secretary, Box 1292, Cincinnati, Ohio.

TESTIMONIALS:

"The very best and most complete rules."
April 3, 1885. (Signed) GANCHO.

"Very satisfactory comments from different parties"
April 13, 1885. (Signed) GLOAN.

"We want a national law and national officers to enforce it."
April 27, 1885. (Signed) ALMO.

"Fairly started and its future success depends entirely upon the manner in which the sportsmen throughout the country respond."
April 18, 1885. [*Adv.*] (Signed) C. M. STARK.

Canoeing.

CANOEISTS *are invited to send us notes and full reports of cruises club meets, information about canoeable waters, and other communications of interest.*

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signals, etc, of their clubs, and also notices in advance of meetings and races, and reports of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

May 23—K. C. C. Spring Regatta.
May 29, 30—Pittsburgh C. C., Camp on Monongahela.
May 29, 30—Hudson River Meet.
May 30 to June 1—Connecticut River Meet.
June 27—Merrimac River Meet.
July 18, 28—Western Meet, Ballast Island, Lake Erie.
July 24 to Aug. 8—A. C. A. Meet, Grindstone Island.

AMERICAN CANOE ASSOCIATION.

SECRETARY—C. A. Neidé, New Orleans, La. Candidates for membership must forward their names, with $2 for initiation fee and first year's dues, to the secretary, who will present the names to the executive committee. Money should be sent by *registered letter* or money order.

SHERBROOKE C. C.

Editor Forest and Stream:

I have the pleasure of announcing the birth of a canoe and boat club in this city on the evening of the 29th ult. Thirty-two of us gathered together and decided on the building of a two-story house and the formation of a club. A large portion of the capital required was subscribed for on the spot, and the committee appointed to canvas for the balance are meeting with abundant success.

We have to thank Messrs. Parmelee of Hartford, Shedd of Springfield, Van Deusen of Rondout, and Tyson of Toronto, for valuable assistance in the way of sketches and suggestions, which have been of great assistance in our deliberations on the subject.

Our opportunities are grand, and enthusiasm is in proportion. Will be happy to report progress. JOS. G. WALTON, Sec. pro tem.

SHERBROOKE, Ont., May 3.

SPRINGFIELD C. C.

Editor Forest and Stream:

The Springfield C. C. has been incorporated, and is now known as the Springfield Canoe Association. The annual meeting of the association was held May 7, and these officers were chosen:

Frank D. Foote, Commodore; Chester W. Bliss, Vice-Commodore; Fred L. Safford, Secretary; Emil C. Knappe, Treasurer.

Executive Committee—F. D. Foot, C. W. Bliss, F. L. Safford, E. C. Knappe, Geo. M. Barney.

Regatta Committee—G. M. Barney, Secretary; F. A. Nickerson, C. M. Shedd. Canoe Measurer, F. A. Nickerson.

It was voted to raise the dues to $18 a year for active members and $15 a year for associate members. The membership is now 27.

It is proposed to have weekly meetings and three regattas during the season, beside the regular weekly races.

Mr. Rushton is building a fine St. Lawrence canoe for Commodore Foot.

Mr. Bliss has purchased the Joi, and is refitting her in good shape.

E. H. Barney is building a canoe on lines designed by himself, and is different from anything yet afloat. She looks like a fast one, and has a great many new details about her sails and rigging.

Mr. Shedd is having a canoe built by Rushton after the Joi 14½×30.

Mr. Nickerson is waiting to see some of the new canoes before ordering. We hope to turn out a good number May 29, to go on the cruise to Long Island Sound; our Hartford brethren will turn out strong. C. M. SHEDD.

"CANOE HANDLING;" a book that contains about all there is to be said on that subject, will be ready next week. The author is C. B. Vaux, the publishers are the Forest and Stream Publishing Co., and the price is one dollar, postpaid.

THE ASSOCIATION BADGES.

To Members of the American Canoe Association:

Up to this date I have received and forwarded to Messrs. Tiffany & Co., Union Square, New York, orders for fifty-two badges. The manufacturers inform me that they will require one month in which to complete them. As I expect to leave here for the North by the 18th or 20th, please change my address in FOREST AND STREAM to Schuylerville, N. Y. Money to be sent in registered letter or by P. O. nores, or orders on Saratoga Springs. CHAS. A. NEIDÉ.

NEW ORLEANS, La., May 4. Secretary A. C. A.

KNICKERBOCKER C. C. SPRING REGATTA.

Editor Forest and Stream:

The annual spring regatta of the Knickerbocker C. C. will be held off the boat house, 152d street and Hudson River, on Saturday, May 23, at 3 P. M. At least one sailing race will be open to members of any canoe club and we hope the canoeists of this vicinity will take advantage of this opportunity to get in trim for the Newburgh meet. We hope to commence next Saturday our regular club races for the all-round record prize and the Whitlock sailing trophy. The new float has arrived and is in place; it is 33x18ft. and has a pointed end so arranged as to offer a convenient side to a canoe approaching from any direction. Among the new boats is the Lorelei, an Everson 15ft. Shadow No. 2, fitted with Radix board and Mohican sails of 65 and 15ft. The latest arrival is the new Sunbeam Inertia. She was christened the dude boat of the club and merits the name. Is rigged with Vaux-Stephens-Oliver-Joiner-Stoddard combination settee sails of 72 and 36ft. and an extra dandy of 18ft. The mainsail and larger dandy can both be reefed twice with the instantaneous reefing gear and the smaller dandy has one reef, same gear (Baden-Powell). She is fitted with a Radix folding board of extra size, a Joiner drop rudder, Tanner friction clutch tiller, rigging from Wm. Good & Son, of London, has three water-tight compartments and a Kalderstein life preserver and swings a 9ft. 6in. Mitchell paddle. She was sailed up under double-reefed mainsail, and with the exception of running down the Russian corvette, behaved admirably. K. C. C.

WHISPERED (ASIDE) TO THE NOVICE.

THE canoeing season of 1885 is upon us. Probably a greater number of novices will step into canoes this year than ever before in one year. The major part of all published matter on the canoe and canoeing deals only with one side of the subject, the bright side. This is natural; the disagreeable part is forgotten or so much outweighed by the pleasures experienced by those who have the true enthusiasm that it is ignored in the accounts of cruises and short trips. No canoeist yet has written of the mosquito, the perpetual head winds, the unpitying rain, or the thousand and one natural ills that canoeist flesh is heir to. These exist, however, and frequently completely overshadow the joys looked for and confidently counted on by those who have a roseate view of canoeing, without really knowing anything about it. How many such there have been who now would actually go out of their way to kick a canoe.

The reports of drowning accidents from sailboats and rowboats are beginning to come in. Are the canoeists exempt from such accidents? Up to last year we thought so. Now, after three fatal accidents last year is it not well for the novice to ponder well before he attempts too much?

How often it is that a man plans a trip, buys a canoe, and starts off, having overestimated his own endurance and paddling strength, the capabilities of his canoe, and next to totally ignorant of the topography of the country he is intending to travel through. These are the men who fall by the wayside. It is the duty of every canoeist of any experience whatever to do his best to undeceive the enthusiastic novice who has an exaggerated idea of the possibilities, and to state moderately the actual capabilities of the canoe. It is much better to err on the side of caution. If the new hand finds more in the canoe than he has been led to suppose there was, he is naturally pleased and elated. If he finds less than he counted on, disappointment and even disgust may result. Men may knowingly take certain risks—such as the running of rapids, or carrying sail in rough water and in a smart breeze—but to put sail up in a canoe without knowing how to swim nor anything about sailing is a foolhardy thing for any man to do, yet how often it is done every canoeist knows. The less a man knows, the less caution he displays frequently.

DIALOGUE.

NOVICE—What make of canoe shall I get to carry two for a long cruise on inland waters? I must get the canoe within a week, as we are to start by rail then.

CANOEIST—Have you ever done any canoeing—ever been in a canoe?

NOV.—No.

CAN.—Have you ever camped out?

NOV.—Yes, two weeks in the Adirondacks with guides last summer but we don't propose to camp out.

CAN.—Does your friend know about canoeing? Can he paddle?

NOV.—No; but I have been told it is very easy to learn, and then we expect to sail a good part of the time.

CAN.—Then you want a canoe to carry sail, do you? Of course you understand sailing of larger boats?

NOV.—No. But canoe sailing is much simpler than the sailing of larger boats, and we would learn while we are cruising.

CAN.—You and your companion both swim, of course?

NOV.—No. Why? Is canoeing dangerous?

CAN.—Not if a man goes into it gradually, acquiring the knack of the paddle and sail on still water, where he can wade ashore in case of an accident, and can swim well enough to right the canoe after an upset—bail her out and get in again without difficulty.

NOV.—Our trip has been laid out so it can be written up. We plan to go 1,000 miles in about a month, and have time to stop a day now and then to write up a place for the papers, and thus pay part of our expenses. We would have no difficulty in making from fifty to seventy-five miles a day, would we?

CAN.—If you average twenty-five miles you will be doing very well at the start. I advise you to leave your sail at home and depend alone on the paddle if you are determined to go. But why not put off your trip two weeks and try a short trip near home to learn a little about it?

NOV.—Oh, we have no time to do this, we have about made up our minds to get a double canoe with a centerboard and sails complete and start off anyway. One of the dailies has agreed to publish our communications.

CAN.—You have written for the press before and know all about it no doubt.

NOV.—No. But that is simple enough. If I can't do better than many who have articles printed I will sell out.

CAN.—My dear sir, if you will not try this business on a small scale near home, and you insist on taking sails with you when you are totally ignorant of their use and management, and moreover, you cannot swim, my only advice to you is, *à la* Punch. Don't.

This conversation actually occurred last week, right here in New York.

THE CANOE FEVER.

HAVE you ever had any experience with the canoe fever? Yes, quite extensively.

Is it dangerous? The fever itself is not, but it may have dangerous accompaniments if not properly treated.

Does the weather have any effect upon it? No, some of the worst cases occur in midwinter when snow and ice are most abundant.

How long a run does it have? The length of the run depends entirely on the patient, some runs lasting for weeks, and even months, and the "canoeist" (as the patient is called) is no better, and many times is worse than when first attacked.

Is it confined to any one section of the county? No, it extends from Maine to California, through Canada, England, and even to South America.

At what age does it yield most easily to treatment. At about one hundred and ten years unless heroic treatment is applied before.

What are the first symptoms? Catalogues, magazine articles, cruising logs. Later on useful and useless purchases. Silence, deep meditation, route maps, etc.

Is patient ever enthusiastic? Well, rather, rides his hobby like a balloonist.

Ever despondent? He never owns it.

Ever pugnacious? Laugh at him, or make light of his canoe or idea, and see.

Does he ever feel foolish? He may have such periods while going to the water in an outlandish costume, especially if alone, but when afloat he is too crazy to be anything but happy.

Does he see sights while canoeing that cannot be seen otherwise? He says so, and seems to believe it.

Have any patients ever become cured? Yes, a sudden cold bath has cured several. One now avers that an ocean steamer isn't safe from a capsize. Want of opportunity has cured more.

Is it safe to canoe? Every canoeist says yes. Every sane man and woman knows better. This little difference of opinion is probably the occasion of the disease being styled the "canoe craze."

Which is the best canoe? Mine.

Which is the worst? Some other make.

How long have you had the fever? Only a few years.

How bad have you it now? Most severe case on record.

How does it compare with the bicycle, baseball, polo and roller

skate craze? They are not to be compared with it at all. They may die out, but the only sure way to kill the canoe craze is to take the patient by the heels and thoroughly drown him, then smash his canoe and bury it with him.

Does he affect clubs? My son, he does; and if he can only become interested in a parliamentary or debating style of club, whose members all want to be boss, his chances of rapid recovery are good.

How far should a canoeist live from canoeable water? The best distance is about four thousand miles, but in some cases even eleven thousand would not be too much.

Does he have comfortable nights camping out? Of course! There may be a few who are twice enough to sleep at hotels and farm houses, and put up with their discomforts, but your real canoeist has the luxury of the bare ground (roots and stubs included) on marshy land, small fire of green wood, tent out of order or left behind, one blanket, wind, mosquitoes, showers, dogs, shivers, spring water (from the river), soft bed of clay or mud, nicely cooked beefsteak sliced from the end of the chunk of salt pork and toasted on a stick, flavored with ashes instead of the salt and pepper that were not worth carrying; also, hot biscuit direct from the cracker bag, hot baked potatoes (in imagination). These many advantages over the hotel plan induce an early morning start, sometimes an earlier start for home than was at first intended.

Does canoeing ever induce rheumatism? Never! Rheumatism may attack the canoeist, but in such cases it is either inherited or caused by a draft at home, or by becoming overheated while at regular employment. Sawing wood often causes it. Do you expect a relapse in your case? Yes, just as soon as vacation from work comes. DAD.

COFFEE.—Philadelphia, Pa.—*Editor Forest and Stream;* I am glad to see that "Nessmuk" appreciated the coffee made from that two-storied tin invention by "Tarpon." Perhaps he will give up altogether the boiling method recommended in "Woodcraft." Last winter on my cruises in Florida I used what seemed to me the "ne plus ultra" of a coffee pot. It is an ordinary tin pot with a rib on the upper part of it, which supports a wire ring. From the wire ring is suspended a chee-secloth bag, in which the coffee is placed. The advantages are that you can use finer ground coffee and get more from a given amount. Then there are fewer parts and it is easier to clean. —WINDWARD.

CANOEING NOTES.—Mr. John Boyle O'Reilly will start next month on a cruise down the Delaware, in company with Dr. Guiteras and Mr. Butler. . . The Oakland C. C. gave a hop at their house on Saturday, April 25, the fleet turning out first for a paddle by moonlight, with dancing afterward. . . Dr. C. M. Douglas, of Peterboro, is at present in the northwest, in charge of the field hospitals of the Canadian troops.

Yachting.

THE CUP RACES.

THE cable brings the news that Genesta sailed on Saturday last from Portsmouth for New York, and that her owner, Sir Richard Sutton, will leave by steamer in time to meet her here. The report of her departure has not yet been confirmed, but it is probably correct, though she was not expected to leave before the end of this month. If she has really started it will not be long before she is off Sandy Hook and ready for work. According to the *Field* she has had 10 tons of lead added to her keel, making 70 tons in all, and an addition of 3ft. to her hoist. Galatea, now afloat, is described as follows by a correspondent of the *Field:*

"She has not so much sheer as Genesta or Vanduara, and will come nearer Ives in look, but Galatea will not be mistaken for any other cutter. She looks fuller aft than Genesta and carries more of her side into her quarter than that cutter, and she has the look of a powerful vessel. Her deck fittings have been designed to occupy the smallest possible space. Her steel bitts leave the forecastle clear for handling head sheets, and a capstan and mast bitts complete what is wanted for gear. But Galatea's deck, like other recently built yachts, shows novelties. The forecastle scuttle is an oval galvanized steel pipe, round which a line might be hitched or a turn taken. Besides the forecastle skylight there is a scuttle for the sail locker and another for lowering the spinnaker boom to pass it under the for stay. There are, of course, the main saloon skylight, the cabin companion and the skylight for the after cabin. Another sail locker scuttle completes the arrangements. The deck fittings, bulwarks and stanchions are all of teak. The hull of the vessel is wholly of steel, with the lead ballast run into the hollow keel, Vanduara fashion. The keel has not so much camber and she looks like a vessel that would reach fast, and this may possibly be her point. Her plating has been admirably done. Neither bolt nor edge is seen, and, under a coat of paint, the surface looks as smooth as glass. Indeed, the Galatea looks the most perfectly built yacht to be seen, and must reflect great credit on the builders. While the exterior of the cutter is so faultless the internal fittings are equally complete. The forecastle, unusually large and airy, is not too much so for a numerous crew. The fittings are plain and comfortable, and, being ceiled with mahogany, the crew's quarters are superior to the state cabins in the older vessels. The pantry is large and complete, and adjoining is the captain's cabin, and a spare sleeping cabin, which is also a bath-room. The main saloon is panelled in walnut and maple, and has been designed with much taste. The after cabin is in walnut and Hungarian ash. The cutter will be launched about the beginning of May, and go round to the Thames. Lemon Cranfield will sail the yacht, and, after competing in the Thames, Channel and Clyde matches, is intended, I believe, to sail Galatea across to New York, and challenge for the America Cup should Genesta not be successful in carrying it off."

On this side the Sybil is well forward and will probably be launched next week. Her sails, spars and rigging will be ready on her arrival at Poillon's, where she will be fitted out. The Puritan has her decks laid and is partly planed off outside. Her cabin work is partly completed, and she too will soon be ready for the water. Pidgeon, of East Boston, is at work on the spars, and McManus & Son are making the sails. N. Boynton & Co., of the Russell Mills Duck Co. of Plymouth, are making a special lot of canvas for them. Next week a meeting of the N. Y. Y. C. will be held to perfect the programme of the races.

A CRUISE IN FLORIDA WATERS.

II.

AFTER breakfast on the following morning Professor and Mr. C. concluded to make another attempt to explore the coast in search of Salt Inlet; they therefore started immediately after the morning meal, and after a walk of fully three miles, partly through water, the tide being high, their efforts were at last rewarded. After exploring for a time and gathering a few sample shells from the outer beach, resting, etc., they retraced their steps to the Sneezer. In the course of their explorations, they found the grave of poor Whisky, as well as the remains of a large sanitarium which had been erected a few years ago. Early the next morning the Captain hoisted sail and started for Salt Inlet, all parties in high spirits in view of good hunting and beautiful shells, which we had been told we should find there. We anchored opposite a fish ranch which was inhabited by a couple of Spaniards. Here we found the best water we had during the trip. A walk of a quarter of a mile brings us to the outer beach, where, at low tide, we had already found some very nice shells. The end of the island is about three-quarters of a mile below. Near the lower point there is a long wharf, several houses, sheds, work shops and tents, occupied by two score of workmen encaged in building the house which is to be occupied by the keeper of the light.

During the evening the Mignon, of Chicago, came down the harbor wing and wing and anchored near us, and that evening the two owners (Chicago gentlemen) came and called on us and introduced themselves. They had a quantity of clams which they begged us to accept; so we were happy in the prospect of clam fritters for breakfast next morning. Next day Professor and Mr. C. caught fourteen fish—sheepshead and channel bass. They offered some to the gentlemen on the Mignon which were thankfully accepted, and soon after she left on her way to Key West. To-day we had a very high wind and rough sea. Professor and Mr. C. went ashore in the morning, and toward evening endeavored to come on board again, the Professor just managed to get here in the Wash Tub, but Mr. C. found it impossible to launch his boat safely, so he took off his clothes and swam to the Sneezer with terrible visions of sharks making him accelerate his movements. We had a very rough night, the boat rolling and pounding all the time. By morning the sea was still rough, but calming a little, and at 11:15 was comparatively quiet. Monday, March 21, the wind was still very high, discouraging alike to fishermen and hunters. Professor and Mr. C. went down the beach to visit the projected lighthouse and the workshops, returning at sunset. Shortly after supper we retired, hoping the wind would change during the night. Tuesday, April Fools' Day, wind still high, but as it abated toward noon, we decided to start immediately after dinner, which we did. The wind having veered to a more favorable quarter, but still blowing fresh, we hoisted but the jib and reached Punta Rassa in three-quarters of an hour. We stopped for the mail, then proceeded up the Caloosahatchie River to Fort Myers (still sailing under jib), which we reached at about 3 P. M. We went ashore to purchase provisions; this occupied but a short time. We then proceeded up the river (the wind freshening), a distance of about six miles, to where the Captain said we should find a good anchorage. On the right bank of the river was the small new house of a recent settler, embowered in a luxuriant growth of palm and water oaks. Just above us the river grew narrower, and was interspersed with small islands, consisting mostly of mangrove trees, and as the day drew to its close, the long lines of birds that wheeled above and settled among the branches, proved that some of these islands, at least, were rookeries, teeming with feathered inhabitants.

Next day we got into our small boats, rowing up the river, as we supposed, but about noon we espied the Sneezer in close pursuit; Captain hailed us and told us we were going down instead of up. We crept meekly on board the Sneezer, which put about and brought us up to the "Ferry" (it does not seem to have any other name). An Englishman keeps the ferry, and his house, store, and a house occupied by a workman composed the settlement. Mr. P. is a very pleasant gentleman, and we enjoyed some hours of quiet rest and refreshment in the comfortable chairs in the cool verandas about his house, as well as some fishing and hunting in his company on the river. We were at his wharf a little over a week, and after wishing him goodbye and thanking him for his very kind hospitality, we came down to a little below the mouth of Trout Creek, where we now are. The bird hunting is very good, and the black bass fishing superb in the creek. Professor has secured the skins of three alligators to take home; I believe he intends having a pair of boots made of them. We have also many fine plumes of different kinds, wings, etc.

April 13. Easter Sunday. A beautiful Sunday. Had we been conveniently situated so to do, we should have decked the Sneezer with lilies, in celebration of the day, but the best we could do was to gather some sweet white jonquils with rosy tips to their petals.

At evening, when the last glimmer of daylight had faded, we sat silently watching the myriads of fireflies darting here and there. The water was full of phosphorescence, and wherever a ripple broke the surface there would be caught a train of fire. As the fish were jumping in all directions and all manner of insects were flitting about, dipping their wings in the surface, the river seemed a restless mass of flashing lights. But later, when the rain began to fall, the scene was beyond description; every falling raindrop rebounded. We were spellbound, and took no heed that our garments were growing damp until the captain ruthlessly put up the sailcloth to shield us and our belongings, thus obstructing our view; but we peered out through the various crevices till the rain ceased. A broad band of white light appeared to extend across the river below us, which gradually drew nearer, assuming meanwhile a semi circular form till it half encircled our boat, then fading away. So passed our Easter Sunday. While at Mr. P.'s wharf we went up Telegraph Creek, a wild and most beautiful stream, where we caught a trout, black bass, hooked a tarpon, and secured a number of beautiful birds of plumage, among them one of the somewhat rare forked-tail hawk, a splendid specimen.

We ate our luncheon under an arching tree which was covered with crimson and purple flowered air plants. The banks were high on either side and covered with lovely ferns, flowering shrubs, vines and trees. Now and then the various birds of plumage, blue and white herons, lovely green bittern, redbirds, etc., glanced across our path, disappearing in the shadowy depths of the moss-hung trees on either side or falling victims to the unerring shots of our marksmen. Here and there, at bwart our bows, a dark line of ripples betrayed the silent course of some huge alligator, and we shuddered as we thought of the scaly monsters that doubtless lay in waiting under the deeply shadowed waters. Here and there a sunlit space in the stream revealed scores of fish, mullet, bass and silvery shiners darting hither and yon. On our return, as we neared the last bend of the creek, and I sat somewhat dreamily holding between my fingers the fishing line, some huge thing caught the hook and spun the line off, burning my fingers to a blister. In my surprise, I dropped line, rod and all overboard, but succeeded in recovering them. The game escaped, however, and we were left to lament the loss of a tarpon. I learned a lesson for the future, which was, not to try holding a fine line in a stream frequented by such large game, unless I was anxious for scars to show in after days.

In the evening Professor and Mr. C. stretched a line across the river, fastened one end to a telegraph pole (the line from Key West to Punta Rassa to Tampa, etc., passes here), and the other to a tree, with several large hooks fastened at intervals and baited with catfish. They were rewarded the following morning by catching three large sharks. The Little Anna, a steamboat from Punta Rassa, was expected up the river with an excursion party, and a number of people who had come to the ferry to meet it were interested spectators of the capture. A tarpon hooked himself on the line, but succeeded by terrific plunges in freeing himself. The shark skins were taken to add to the trophies of the trip.

April 14 we left the anchorage where the above record was made, intending to run to Fort Myers for provisions. Wind and tide were adverse, and we anchored six miles above Fort Myers. The following morning we anchored near the wharf, obtained the needed provisions, and lay there all night. In the morning we ran up the Caloosahatchie again, to Twelve Mile Creek, and anchored off the mouth of the creek all night. On the morrow we ran further up to replenish our casks with water. Having all the water we need we came back to Twelve Mile Creek, where we anchored. We expect to start to-morrow for Punta Rassa, for our last mail there, run over to Sanibel for one day's hunting, and then work our way to Palma Sola, Cedar Keys, up the Suawnee River, to Jacksonville, Palatka, Jacksonville again, Savannah, New York, etc. Not so fast! We are still in the Caloosahatchie, although just in the mouth. Our progress is certainly not by express, and I at least, begin to wish that our trip were over, as it is very warm and mosquitoes hold high carnival in our cabin, and then one tires of the best of things in time.

The next morning we left the Caloosahatchie River. Stopping a few moments at Punta Rassa for the mail, we came over to Sanibel, and the wind and sea were so rough and high that we were unable to get away. Thursday, April 24, was a marked day in our calendar, not only because old Neptune tossed our little bark about like a bubble and bumped us on the beach with small regard for consequences, but our nimrods wending their separate ways in search of game, came back in triumph about 4 o'clock P. M. laden with spoils. First appeared the Professor with eight fine ducks, and immediately after Mr. C. stepped into view with a good fat doe in tow. We had a feast of venison steaks for supper, and, to say the least, we did justice to them, for although the Captain prepared a liberal supply, I saw Mr. C. looking at the empty platter with a mournful, Olivertwistish expression of face quite indescribable; but then he had brought that venison about four miles over rough walking after shooting it, which would excuse an Herculean appetite.

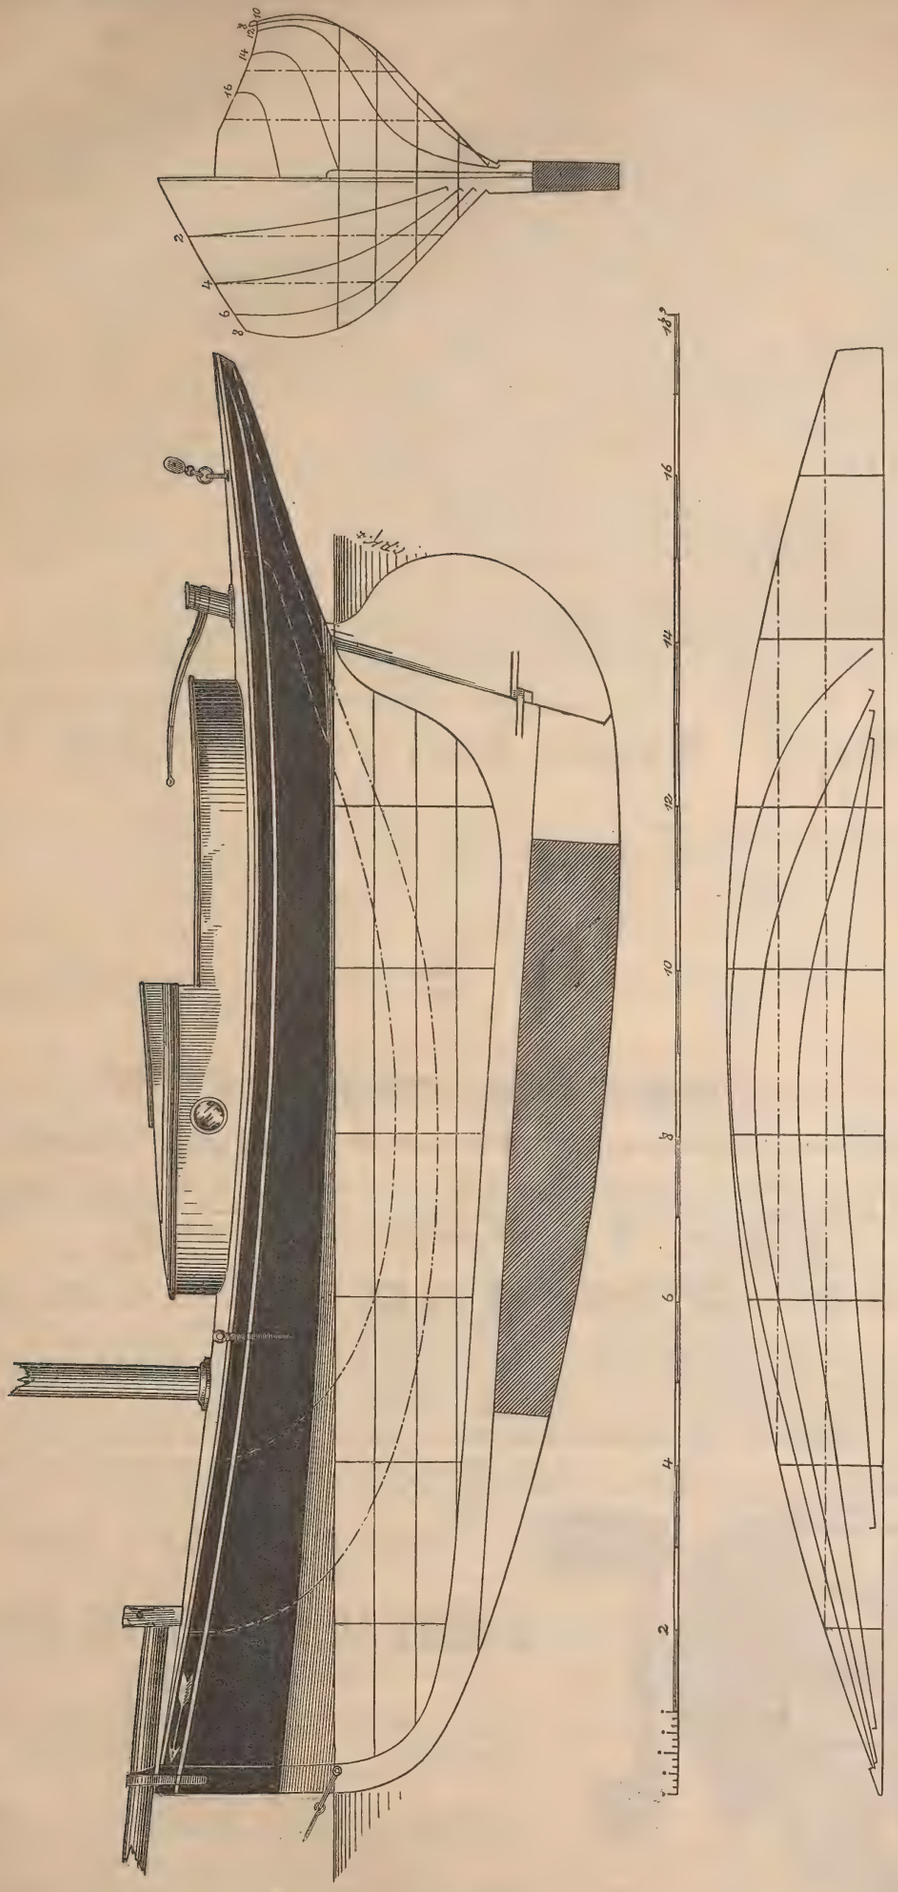
Mr. C.'s account of the capture of the deer was as follows: "As the Professor was busy writing, I shouldered my gun and ammunition and walked up the beach for some distance to a burned clearing; then I turned to the left and bent my steps toward a hummock. After walking some distance, through and beyond the latter, I concluded to stop and light my pipe (which I lost, to my great sorrow, on my way back), so leaning my gun against a neighboring palm tree I took out my pipe, tobacco, etc. As I did so I espied a doe feeding quietly about seventy yards away. I at once seized my gun and crept cautiously behind a large clump of grass. In doing this I lost sight of the deer, and when I peered out from my covert I could see nothing of it. Concluding that it had seen me and run away, I shouldered my gun and walked forward a few steps, when to my surprise I again saw my game feeding near me. I took aim and fired, the shot passing through the fore shoulders and vitals.

"Having secured my deer, I now thought with dismay of the distance between me and the Sneezer (between four and five miles). It was just possible that the Professor might come that way and meet me, but at the moment there seemed no better plan to offer than that I should carry my game. So I dressed and filled the carcass with fresh grass, tied the feet together with a rope I had brought in view of such an emergency, and slung it over my shoulders. I soon found the load too much for me, so dropping my burden, I severed the head from the body and the spine midway. Leaving the head to mark my trail and making two bundles of the severed trunk, I fastened the hindquarters around my waist, dragging the rest behind me. But this, too, soon became a burden too great for me to bear, so fastening all together, I tied the end of the rope around the barrels of my gun, and dragged with both hands behind me the whole the remainder of the distance till I came near the fish ranch, when the Spaniards ran out and helped me bring my game into one of the huts. There, on long tables used for preparing fish, we cut up the meat, leaving a portion with the Spaniards, and piling the remainder up in a wooden pail they lent me, I endeavored to get to the Sneezer; but after various vain attempts to launch the Hope, the waves being very high, I took the pail on my shoulders and waded to the Sneezer (the water not being over 2½ to 3½ feet deep) pretty well exhausted with my efforts."

Previous to the arrival of the hunters, the Captain had prepared me mentally for a ducking; the tide was falling rapidly and threatened soon to bring the bottom of the Sneezer into violent contact with the beach, in something less than 2ft. of water. When that should occur the Captain said she was bound to fill, and I must wade ashore. The constant rolling and pitching of the boat had brought my stomach into a similar condition, and it was fully able to appreciate the full force of the lines,

"Man wants but little here below,
Nor wants that little long,"

And I lay helplessly wondering whether it were worth while to make the effort of wading ashore or lie still and take my chances. But our sagacious Professor appeared in the nick of time, so to speak, grasped the situation, cast off his clothes, sprang into the raging billows, seized the anchors "ain by ain" and dragged them further out. So the Sneezer rolled in safety, thanks to the Professor. What a night we passed, when our fitful slumbers were disturbed with dreams of trip-hammers and giant pile drivers. Morning still found us rolling about, and so at 10:45 A. M. we continue, though the sea is growing calmer by very slow degrees. The next day the wind still blew a gale; Professor and Mr. C. went down to the lighthouse and around the point, whiling away the time as best we could. Captain B., not deeming it advisable for us to start until the wind and sea calmed a little.



Saturday, April 26.—We bade a final adieu to the fish ranch, and ran before a fair wind nearly all day, anchoring at night in a little land-locked harbor at the upper end of Sanibel.

Tuesday, April 27. The wind still fair and we soon came up to Petruchio or Cayo Casino, where we had decided to stop and explore the island. Professor and Mr. C. went ashore before breakfast, and came back with glowing accounts of the beauty of the island. After breakfast we all went ashore. The island includes about thirty-seven acres of land, the northern side being between thirty-five and forty feet above the level of the sea; the land sloping from this high ridge to the opposite shore, the width being about one eighth of a mile. The ruins of a palmetto but still remain, and bits of brick masonry, broken glass, etc., would seem to indicate the site of more substantial residence of former days. Nearly all of the available land has been under cultivation, and we found the remains of quite an extensive grapery, also lemon, lime, citron, guava, plum and other trees. Among the wild growth of the island we found some magnificent gum-mastic trees, covered with a yellow, sticky fruit. These trees have a very thick foliage of a dark, glossy green, and their habit of growth is much like that of the water oak. Many of the trees and shrubs were covered with a luxuriant vine, laden with leguminous fruit, the polished black bean surrounded by a bright rose-colored pith, hung from the spiral pods in showy profusion. Two large cocoanut trees rear their plumed heads on the northeast side of the island, and at that time there were a quantity of nuts, in all stages of growth, from the blossom to the half-grown nut. Many of them were lying on the ground with the pulp scooped out, showing that opposum were fond of the fruit and did not scruple to help themselves. We took one or two of the hollowed shells with the husk still on, back with us to the boat, filled with seeds, specimens of stone, shells, etc. On the summit of one of the shell mounds was a lonely grave marked by a wooden cross, upon which was a nearly effaced inscription, the only word at all legible was the first name, John. A picket fence surrounded the grave which is said to be that of a sailor who died of a fever on some vessel passing near. Perhaps for this John who sleeps on this lovely island some one is "watching and waiting" the long years through, still cherishing a hope of his coming which shall know no fruition till "in the hereafter angels may roll the stone from its grave away."

That evening the Captain sculled the Sneezer down to the end of the island, that we might make a favorable start in the morning. We saw the Mischief, Captain Harry Warner, of Palma Sola, pass the other side of the island. We made an early start Monday morning, and directed our course to Stump Pass, so called because of a ragged stump which lies midway in the pass. Leaving the harbor through Big Gasparilla Pass, we sailed along the coast to Stump Pass, where we remained one day, gathering Panama shells, of which we found a quantity. We saw here some very beautiful jellyfish, shaped like a perfect fish, and of a lovely transparent blue. Tuesday morning early we again went outside, sailing fifteen miles up the Gulf to Casey's Pass, which we entered, anchoring just inside. While we walked on the beach, Professor took the Wash Tub and went across a narrow inlet or pass to the beach above, to take a bath in the surf. An hour or two had elapsed, when we saw him returning waving, as it appeared to us, his red handkerchief; but as he came near, we discovered that his hand was covered with blood. As soon as he drew near enough, he exclaimed: "A shark tackled me, let me get in, I never fainted before in my life, but believe I am going to now," and he did. We laid him on the cabin floor and applied restoratives, which soon caused a return of consciousness. His hand was badly torn and bled profusely.

As soon as he was able to speak connectedly, he related the circumstance of his accident as follows: "I was standing well out in surf with my arms outstretched, waiting for the next big wave, intending to take a header in it, when a shark came up and seized my hand. I pulled it away so suddenly that he did not have time to bite it off, but his sharp teeth tore through the flesh to the bone. I made for shore, bound my handerchief around my arm above the elbow as tightly as possible to check the flow of blood, and attempted to dress myself; but feeling weak from the fright and loss of blood, I lay down on the beach. I, however, soon got up, thinking I had better try to get back to the boat before my strength failed; so I managed to finish dressing and with the strength of desperation to get into my boat and scull with one hand to the other beach, hallooing now and then. The roar of the surf drowned my voice, and when at length I came near the boat, I felt as though I could no more than reach it and drop useless on the deck!" I bathed and dressed his wounds as well as I could, being fortunately well provided with old linen for such contingencies, and when that operation was over concluded it was time for me to faint (I will not say whether I did or not, but if I did it certainly was with a clear conscience).

Next morning we went out through Casey's Pass, sailed fifteen miles and entered Big Sarasota Pass, went up the bay to Sarasota wharf, which we reached about 5 P. M. We walked up to the post-office, a distance of about one-half a mile. Mr. Abbey, the postmaster (lately foully murdered), and his wife very kindly invited us into the house to rest, and when we started to return to the boat Mr. Abbey offered to show us a nearer way, and at the same time give us a peep at his groves, orange, lemon, pineapple, etc. We were much pleased with all we saw, the groves being in fine condition. It was growing dark when we returned to the Sneezer. We were weary after our walk, and soon after retired with the thought that it was our last night on board. At midnight, when the tide turned, the Captain sculled the boat into the channel, and early in the morning put up sail and soon we were in the Manatee River. The wind was ahead and we beat our way but slowly. How eagerly we watched, as we rounded Shoals Point with its cluster of palmetto huts, and one familiar object after another came into view. The white warehouse, the mill, the red tank poised high in the air, the brown hotel on the hill wherein we had so pleasantly spent the earlier days of the season, and when at last we drew up beside the smaller wharf, and good Mrs. Scott and Charlie came hurrying down to meet us with smiling faces, we felt that our voyage was most happily ended. We had been gone just seventy days up to May 1. KAT Y. MONDA.

THE KEEL CUTTER DART.

THE little boat, whose lines are given herewith was described in FOREST AND STREAM of March 12, in a letter from her owner, Dr. A. H. Buck, for whom she is building, by Thos. R. Webber, of New Rochelle; and as there stated, she was designed as a safe little cruiser for Long Island Sound. Her extreme length is 18ft., on loadline 14ft., beam, 4ft.; draft. 3ft. 8in.; least freeboard, 13in.; freeboard at bow, 27in. She is fitted as shown, with a small house, leaving a cockpit 8ft. 9in. long. Her iron keel weighs 1,018lbs., the remainder of the ballast being stowed as low as possible inside. The keel is of white oak sided 5in. and moulded 7in. The frame is of oak and hackmatack, 1¼in. sided, 1¾in. moulded at heels and 1¼ at heads. She is planked below with ¾in. cedar and her wales are of ¾in. yellow pine. The cabin and cockpit are of white pine with mahogany fittings, hatches and companion. The deck is of pine ¾in. square sprung to sideline. She will be sloop rigged, with pole mast, 18ft. deck to truck, and 13ft. 6in. deck to ½ ounds. The bowsprit is 10ft. over all and 8ft. outboard. Boom 13ft., gaff 8ft.; hoist of mainsail 11ft., hoist of jib, 11ft. 6in.; foot of jib, 11ft. 6in.; topsail on luff, 13ft. 9in.

The Dart is now ready for launching and will soon make a trial trip, when we hope to give a further description. The drawings show the moulded breadths.

NOTES FROM LAKE ONTARIO.

Editor Forest and Stream:

The season which is now opening promises to be one of the most brilliant ever enjoyed by the yachtsmen on Lake Ontario. The Kingston Yacht Club has decided to join the Lake Yacht Racing Association, and Hamilton, in which the yachting spirit revived very greatly last season, will probably add another club to the association, with several new competitors for the honors. As to these a Toronto journal supplies the following:

"The deep-draft cutter Whistle-Wing, built for Mr. Æmilius Jarvis of Hamilton, from his own designs, will be launched at Hamilton on the 5th. The Whistle-Wing is a 10-tonner, 40ft. over all, and 7ft. 4in. beam. She will set with her ordinary sails nearly 2,000 sq. ft. of canvas, and is expected to be a flyer. Her outside ballast is an iron shoe weighing about eight tons. Her frames and planking are white oak and very stout. Her sticks are pine and spruce from the Georgian Bay. The new cutter will be enrolled in the yacht club that is proposed to be formed at Hamilton, and may be looked for as a contestant in the races of the Lake Yacht Racing Association. Her lines include some noveities in a lake cutter, and as she is strictly a Hamilton production, from the model to the canvas, it will be interesting to compare her perfcrmances with those of other cutters and sloops.

"Messrs. H. L. Bolstien & Son have built a handsome new centerboard sloop from their own designs, which will be launched next week. Geo. Webster has also built a fine sloop, which will be put into the water in a few days. She is called the Cruiser. Altogether the yachting season of 1885 on Burlington Bay promises to be a very lively one"

The Belleville craft, which swept the board last season, will be in excellent trim to meet all comers, and their owners will spare no expense to keep them to the front.

The unfortunate Atalanta got a bad wrenching in the ice when it broke up. She was taken from her moorings to a comparatively shallow spot, where she lies, sunk to her deck. As the ways at the local ship yard are at present occupied, the work of repairing must perforce be postponed for several days. PORT TACK.

BELLEVILLE, Ont.

THE VOYAGE OF THE CARMELITA.

THE schooner yacht Carmelita, Captain W. Y. Snow, which sailed from New York on March 9 for San Francisco, arrived at Rio Janeiro on April 16, after a successful passage of 39 days, as shown by the following extract from her log. Captain Snow writes of her as follows to Mr. A. Carey Smith:

"According to promise, I send you a few lines and abstract of schooner's log. We arrived here to-day, April 16, all right and well, after a good and pleasant passage of 39 days, which is not often beaten I think. I take great pleasure in informing you that the yacht has proved herself in every respect a staunch and able sea boat. I don't think I was ever in a better one. She has not shipped a barrelful of water since leaving New York."

LOG OF THE CARMELITA—NEW YORK TO RIO DE JANEIRO.

Date.	Dist	Lat.	Long	Wind and Weather.
March 9...	180	37° 32′	73° 32′	Strong northerly wind, clear and cold. Heavy sea running.
March 10...	165	36° 05′	70° 00′	Fresh W. N. W. wind and clear. Large sea following.
March 11...	135	35° 14′	67° 25′	Mod. north wind and cloudy.
March 12...	97	33° 54′	67° 03′	Light airs and calm.
March 13...	206	33° 32′	63° 09′	Fresh south'ly wind. Fine weather.
March 14...	119	33° 22′	59° 15′	Strong southerly wind, heavy seas. Under short sail.
March 15...	87	33° 20′	57° 30′	Mod. to light and calm, large sea.
March 16...	85	32° 34′	55° 13′	Light airs and calms. Fine weather.
March 17...	113	31° 40′	54° 39′	Light westerly winds.
March 18...	140	31° 03′	52° 05′	Strong breeze and heavy cross sea.
March 19...	130	30° 35′	49° 27′	Strong south breeze, short sail, heavy cross sea; schooner making good weather.
March 20 ..	97	30° 37′	47° 37′	Hard southerly wind; cross sea; under short sail.
March 21...	112	30° 47′	45° 30′	Fresh southerly wind and large sea.
March 22...	67	30° 42′	44° 13′	Mod. to light breeze; sea decreasing.
March 23 ..	92	29° 02′	43° 51′	Fresh breeze from S. E. by E.; beginning of trade winds.
March 24...	175	.....	.....	Strong trades and squally; heavy swell.
March 25...	168	23° 09′	42° 56′	Fresh trades; squally; large sea.
March 26...	200	20° 09′	42° 00′	Strong trades and squally; large sea; spoke the Br. bk Isle of Bath, bound to Queenstown from S. F.
March 27...	184	17° 22′	40° 47′	Fresh trades and squally; winds E.
March 28...	184	14° 33′	39° 30′	Fresh trades throughout.
March 29...	170	12° 13′	37° 15′	Fresh to moderate trades.
March 30...	195	9° 41′	36° 03′	Fresh trades and fine weather.
March 31...	170	12° 13′	37° 51′	Fresh to mod trades; fine weather.
April 1 ...	180	4° 32′	32° 17′	Moderate trades; fine weather.
April 2....	150	2° 48′	30° 25′	Mod. and fine; spoke Swed. brig Astrea.
April 3....	145	42′ S.	29° 18′ W.	Light winds; made St. Caul's Rocks; crossed equator.
April 4....	78	38′	29° 20′	Light airs and calms.
April 5....	90	2° 08′	29° 33′	Light airs and calms; latter part light breeze from E.
April 6....	118	4° 04′	30° 02′	Fine weather; beginning of trades.
April 7....	160	6° 45′	30° 39′	Light winds; fine weather.
April 8....	150	9° 04′	31° 18′	Moderate trades and squally.
April 9....	160	11° 33′	32° 20′	Moderate trades; fine weather.
April 10....	165	13° 55′	33° 39′	Mod. trades; passed a brig going to south'ard.
April 11....	164	16° 17′	35° 07′	Squally and light; latter part fresh.
April 12....	170	18° 47′	36° 42′	Moderate trades and fine weather.
April 13....	135	20° 33′	38° 12′	Light trades; occasional squalls.
April 14....	120	22° 00′	39° 10′	Light easterly airs and calm.
April 15....	118	22° 54′	41° 45′	Light winds; 10 A. M. made Cape Freo.
April 16....	70	.....	.....	Mod. breeze; middle and latter part calm; arr. in Rio de Janeiro harbor, making passage in 39 days.

YACHTING NOTES.—Petrel cutter, Mr. E. A. Stevens, is having a new suit of sails of English canvas, by Berglund of Brooklyn ... The dome steamer Meteor, which proposed, a year or two since, to revolutionize ocean travel, has been turned into a tug and is towing on the Kennebec River, Maine....Nebula, cutter, was launched last week by the Lawleys....Oceanic Y. C.—The peculiar little sloop mentioned a few weeks since is almost completed. Her owner, Commodore Lynch, has named her Trio ....Edith, steam yacht. Mr. Wm. Woodward, has been sold to Mr. E. C. Benedict, of New York, for $6,000. She was built by the Herreshoffs in 1880, and is 60ft. long....Nourmahal, Mr. Wm. Astor, was at Gloucester, Mass., on May 8 ....Norseman, schooner, was out this week for painting. She is now afloat again off Twenty-eighth street....Knickerbocker Y. C.—The club have engaged the iron steamer Sirius for May 30, to accompany the yachts at their spring regatta ...Sphinx.—Mr. Henry Taylor has sold his steam yacht to Mr. H. F. Hendouker for $4,000....Brenda, schooner, lately purchased by the government, has arrived at Jacksonville in charge of Col. McFarland and Lieut. Derby. She will be engaged in experimenting with explosives on the St. John's River ...Frolic, schooner, is still in New York, but has been transferred to her new owner, Mr. Arthur Fuller, of Boston....Gracie, sloop, is fitting out at Glen Cove. She will have new canvas this season....Rosalie, sloop, Dr. B. F. Dawson, former owner of the Valkyr, has purchased this sloop from Mr. Canfield ...Lucille, Herreshoff's, No. 122, was lately tried on Narragansett Bay, and made 17 miles. Her length as already given is 90ft. ....Aida, steam yacht, Vice-Com. Douglas, N. Y. Y. C., has received her new boiler at Bristol and has left there ...Utowana, steam yacht, has had a bridge added over the pilot house, and has been docked, cleaned and painted. She will finish fitting out at Edgartown, Mass. ....Radha, steam yacht, has also been on the screw dock for cleaning and painting... Haze, schooner, Messrs. Hogan, has been on Mumm's ways for repairs after grounding in the Horseshoe in the blow of last month. She is all in shape again and off to the Eastward.... Larchmont Y. C.—The Sylvan Dell has been chartered to accompany the yachts on July 4... New Schooner.—The centerboard schooner building for Mr. G. W. Winslow, of Boston, by James & Co., of Essex, was launched on May 4. She is 64ft. over all, 19ft. beam, 6ft. 4in. depth of hold, and measures 60 tons. The cabin contains three staterooms finished in mahogany and oak, and the galley and forecastle in ash....Mohican, schooner, is now refitting in Boston after her winter cruise....Hull.—A part of the steamboat wharf has been opened to yachtsmen, making a good landing for their boats....Gitana, schooner, has replaced her winter spars with longer ones, and is also scraping and painting ready for the summer work....Wanda.—The engines and boilers have been placed aboard Mr. Woodward's new steam yacht....Grayling, schooner, has been hauled out for scraping and painting....Mischief, sloop, is now hauled out for painting at Port Richmond, S. I.

AMERICAN Y. C.—A cruise is proposed in June, starting on the 25th with a race from Larchmont to New London, on the 25th a run to Newport and New Bedford, and thence back to New York on the 27th, with a steamboat to carry the guests of the club. A meeting was held on May 12 at their rooms. The Regatta Committee submitted a report, and two dates were suggested for the regatta, but neither was finally decided on. Several designs for prize cups were submitted to the club. The next meeting will be on May 19.

SOUTH BOSTON Y. C.—The racing programme for the year has been decided on and most of the dates fixed. Five regattas will be sailed, the yachts winning the most times to take the championship prizes. The regatta committee are Messrs. A. J. McLeod, chairman; J. J. Bligh, secretary; Henry J. McKee, F. G. Cooley, W. C. Sherrington, C. L. Braman and F. Williams. The following details are given in the circular of the races. The classification of yachts will be by "waterline" measurement as follows: Keels—First class, over 24ft. and under 30ft.; second class, 24ft. and under. Centerboards—First class, over 20ft. and under 26ft.; second class, 20ft. and under. Schooners will be allowed to enter at ⅞ of their measurement. Time allowance will be figured on "waterline" measurement, plus ½ of after overhang. Schooners on ⅞ of waterline measurement. All yachts will be restricted to working sails only. No shifting of ballast will be allowed during the races, and the judges shall reserve the right to place a man on all yachts competing to see that the rules are strictly adhered to, particularly the last. Flying start with 3 minutes' allowance in which to cross the line; time will be taken from time of crossing the line. Two prizes will be awarded in each class. The committee have laid out the courses with the intention of allowing a full view of the races from the club house, City Point, from start to finish as follows: Course No. 1, for first-class "keels" and first-class "centerboards."—From judges' boat off club house, City Point, to black spar buoy No. 1, west of wharf on Thompson's Island, leaving it on port, to can buoy No. 6, Lower Middle, leaving it on the port, to judges' boat, leaving it on the port, to black spar buoy No. 1 again, leaving it on the port to can buoy No. 7 off Fort Independence, leaving it on the port, back to judges' boat, passing between it and stakeboat, a distance of 7¼ miles. Course No. 2, for second-class "keels" and second-class "centerboards."—From judges' boat to cow pasture spar buoy No. 6, leaving it on the port, to red star buoy No. 2, north end of Thompson's Island, leaving it on the port, to judges' boat, leaving it on the port, to black spar buoy No. 2, west of wharf on Thompson's Island, leaving it on the port, to red spar buoy No. 2, leaving it on the port, to judges' boat, passing between it and the stakeboat. Distance 5¾ miles.

AN ENGLISH BUILT STEAM YACHT FOR AMERICA.—A steam yacht is now nearly ready for the water on the Clyde, which is intended for use in America, and will be enrolled in the American Y. C., her owner, Mr. John Clark, residing at Newark, N. J. She will be of steel, 212ft. on deck, 200ft waterline, 27ft. beam, 17ft. depth of hold. Her engines are of the new triple expansion type, taking steam at 140lbs. She will be built under Lloyd's supervision, and the steel will be tested to 6,500lbs. tensile strain. She will have three masts and a large sail plan.

SOUTHERN YACHT CLUB.—The annual meeting was held on May 7 at New Orleans, the officers elected being: Commodore, Emile J. O'Brien; Vice-Commodore, Alexander Brewster; Rear Commodore, Charles Schmidt; Treasurer, J. B. McConnell; Secretary, H. P. Hopkins. An entertainment will be given by the club about June 1.

BAY OF QUINTE Y. C.—The annual meeting of this club was held last week at Belleville, Ont., Commodore Biggar being in the chair. Messrs. J. McGregor Young, H. E. Burdett, F. Fellowes, Alfred Coleman, R. E. Lazier, W. Fellowes, E. L. Fellowes, A. Richardson, C. Hostage, Dr. Abbott, S. E. Lennox, R. H. Fenwick, W. P. McMahon, John H. Mackie, W. Morris, and J. L. Morkill were elected members, and Messrs. W. H. Biggar, R. S. Bell and R. M. Roy were elected as delegates to the annual meeting of the L. Y. R. A. at Toronto. The protest entered by Mr. Robertson of the Laura, against the award of the second prize in the second class at the fall regatta was considered, and the decision of the judges sustained. A motion of condolence over the death of Mr. C. J. Starling was moved and passed, after which the following officers were elected: Commodore, R. M. Roy; Vice-Commodore, Wm. Pike; Captain, D. B. Robertson; Honorary Secretary, R. S. Bell; Assistant Secretary, F. S. Campbell; Treasurer, Geo. N. Leavens; Measurer, Geo. N. Deavens and W. S. Drewry. Regatta Committee, E. Force, Chairman; W. Webster, S. A. Spangenberg, W. N. Ponton, F. S. Campbell, J. W. Johnson, Jas. Jenkins, S. R. Balkwell and W. L. Fellowes. Executive Committee, W. H. Biggar, chairman; G. S. Sutherland, W. H. Campbell, H. McKinnon, J. W. Johnson, Geo. F. Hope, Thos. Ritchie, S. A. Spangenberg, E. Corby, S. R. Balkwell, H. Corby.

QUEBEC YACHT CLUB.—This club, formed on March 6, has now a membership of 130, and fifteen yachts on its list. The officers of the club are as follows: Patron—His Excellency the Most Honorable the Marquis of Lansdowne, G. C. M. G., Governor-General of Canada. Vice-Patron—His Honor the Honorable Louis Roderique Masson, P. C. Lieutenant-General of the Province of Quebec. Commodore, J. U. Gregory, Esq.; Vice-Commodore, J. Ritchie, Esq.; Captain, J. J. Thom, Esq.; Secretary, Wm. McLimont, Esq.; Treasurer, G. C. Scott, Esq.; John Hamilton, Esq.; Albert Peters, Esq. Sailing Committee, Charles McKenzie, Esq., F. Falkenberg, Esq., Eugene Chinic, Esq., John Shaw, Esq., E. G. Meredith, Esq. An anchorage will soon be provided for the yachts, with a janitor. The pennant is triangular, with red, white and blue triangular stripes and a yellow star in the center of the white stripe.

LAUNCH OF THE BRUNHILDE.—Mr. J. J. Phelps's schooner yacht Brunhilde was launched on April 30, at Nyack, where she was built by J. E. Smith. The Brunhilde is 112ft. on deck, 102ft. waterline, 25ft. beam, 11ft. 3in. depth of hold, 11ft. draft, and was designed by C. H. Bliven, who has also superintended her construction. The interior will be finished in redwood and cherry, upholstered in blue plush. The Brunhilde will leave New York as soon as completed for a cruise around the world. Captain Frederick Evans will command her.

YACHT RACING ASSOCIATION.—Owing to some small errors in the time scale a new edition of the sailing rules has been issued. We have before spoken of these rules as containing much that is of value to young yacht clubs, being the result of many seasons' hard sailing and practical tests. Copies may be obtained of the publishers, Harrison & Sons, St. Martin's lane, London, England, their price being 1 shilling each or 9 shillings per dozen.

NEW HAVEN Y. C.—Most of the yachts are now ready for work after thorough overhauling. Rajah, Commodore Beecher, and Zephyr, Vice-Commodore Dudley, are in fine condition. The club list includes the Wild Duck, Alexander Lutz, whose spars and canvas have been increased this year; the Ceres, J. H. Parrish; Thistle, Mr. Zeigler; Nellie R., Mr. Warner; Hydras, late Roxanna, Mr. Gardner; Viola, Mr. C. N. Wayland, of the Thimble Islands; Starlight, Mr Merrill White; Vivienne, Mr. Sheffield Phelps; Brunhilde, Mr. J. J. Phelps; Marguerite, Mr. C. M. Peck; the Wave, once the unlucky Mystery; the Eva, formerly Lorelei; the Wild Pigeon, Mr. Frank Wheeler; the Mascotte, Messrs. Jacobs and Weld, the Sea Belle, Mr. Seymour, with more canvas and lead keel; the Vixen, Mr. C. W. Ranson; the Rival, Mr. Converse; the Happy Thought, Mr G. M. Graves; the Ino, Mr. Cheney; the Wanda and Louise, Mr. T. C. Hall. The steamers include the Lucy, Messrs. Andrews, and the Nereid, Mr. Osgood. The most exciting feature of this year's work will be the ocean race around Block Island, the date for which is not yet decided on.

YACHTING AT SALEM.—*Editor Forest and Stream:* Yachting matters are looking up just now. Capt. J. W. Collins, of the U. S. Fish Commission, is now at his home in Gloucester, where I believe he is to superintend the building of a schooner after ideas of his own, one good point of which will be an honest under-water body. Being a thoroughly practical man, we shall watch developements with interest. When completed I think she will be used to further advance the most efficient work of the Fish Commission.—X. Y. Z

SILVIE.—The new canvas of the Silvie, schooner, Com. C. V. Whitten, Hull Y. C., will measure 5,948ft., divided as follows: Mainsail, 2,122ft.; foresail, 1,085ft.; jib, 672ft.; flying jib, 630ft.; staysail, 598ft.; topsail, 841ft. This area is more by 1,690½ft. than her old jib and mainsail when sloop rigged. Her new topmasts are 38½ and 37. As already noticed, she has had her deck sheathed and many alterations made below.

QUINCY Y. C.—All the dates for the club and championship matches of this club have been settled upon, and the racing courses have been laid out nearer the shore, so that the entire course is in view of the spectators. Another innovation is the adoption of the flying start instead of a start from anchor. The membership has lately been increased to 14.

LARCHMONT Y. C.—The season at Larchmont was opened on May 2, when the first monthly meeting was held, a number of members being present. Sixteen new names were added to the roll.

ALBANY Y. C.—The officers for 1885 are: Commodore, W. W. Grey; Vice-Commodore, Walker Melius; Secretary, Henry Sann; Treasurer, G. H. Waggoner; Measurer, C. S. Babcock.

YALE Y. C.—The officers for 1885 are: Commodore, Thos. B. Van Buren, Jr.; Vice-Commodore, Oliver G Jennings; Secretary, George E. Haven, Jr.; Treasurer, Louis K. Hyde.

OLSEN'S YACHT LIST.—The edition for 1885 is now in press and is promised by May 20. It will be fuller and more accurate than ever before.

HUMPHREYS' HOMEOPATHIC VETERINARY SPECIFICS

For the Cure of all diseases of

Metropolitan Works, Redditch, England.
Wholesale Only. Established 1803.

The "Mayer" Minnow Casting and Trolling Rod.

This rod is made from specifications furnished by Professor Alfred M. Mayer, who with this rod and an Imbrie Black Bass Reel won first prize for black bass casting at the tournament of the National Rod and Reel Association, Oct. 23, 1884.

Its proportions were reached after a long series of experiments, the object of which was to obtain a round section bamboo rod of about 9 ounces that would feel light in the hand, be so well balanced not to throw off a delicately mouthed minnow in making long casts, and finally after striking the bass would have enough spring and flexibility to afford the angler the same pleasure as that given him when playing a bass on a fly rod.

The rod has two tips, one 6 inches shorter than the other; the shorter tip is used for trolling and in casting when wading.

This rod has been thoroughly tested in both lakes and quick water, and anglers who have used it are unqualified in praises of its staunchness and the delicacy of its action.

Our rods have taken the highest prize at every tournament in which they have been used.

New Publication.

CANOE

THE FOREST AND STREAM began a year ago the publication of a series of papers on canoe construction, by Mr. W. P. Stephens, of the New York C. C., widely known as an expert on canoe design and building. These papers, having appeared through the year in our columns, have since been rewritten, and with numerous additions are now published in a handsome volume under the title of "Canoe and Boat Building for Amateurs." Mr. Stephens is peculiarly fitted for the preparation of such a work, beginning as an amateur, and having after a long experience of the difficulties attending a learner, taken a prominent place among canoe builders, due both to the model and workmanship of his canoes. Realizing fully the difficulty of explaining to a novice an art in itself far from easy,

AND

and with which he is entirely unfamiliar, the book begins with a description of the various classes of canoes in general use, with their main features and dimensions, and definitions of the terms used in connection with them. Numerous examples of canoes are given, and in connection with them, such plain instructions in designing as will enable the beginner to select intelligently the proper craft for his pur-

BOAT

pose, and to plan her dimensions, details and fittings. To this end designs of all classes of canoes are given, with full dimensions and details. The object has been not merely to enable the tyro to build one boat as described, but to teach him the principles of designing and building in such a way that he may construct such a craft as he desires. Following the chapters on designing, the construction of a canoe is taken up in detail, the tools and appliances being first clearly described, as well as the various materials, after which follows the actual work of building. Every operation is taken up in order, from the selection of the keel to the varnishing of the finished boat, and illustrated with numerous diagrams.

A chapter on sails describes all the varieties in use by canoeists, down to the new Mohican settee, with directions for making, rigging and measuring them, while the method of proportioning the sails to the boat is clearly explained, all the calculations

BUILDING

being worked out in detail. The many minor points of a canoe, paddles, steering gears, rudders, aprons, and camp outfit are also described at length, while a chapter is devoted to canvas canoes.

The subject of boat building is fully treated, a rowboat of the usual construction being taken as an example, and described in all its parts in such a manner as to make clear the principles involved, and their application to any form of boat, either lapstreak or carvel build. Each of the numerous technical terms belonging to the subject is defined clearly when it first occurs, and as the index is full and complete, the book is in itself a glossary.

In addition to the numerous diagrams in the body of the work, twenty-four large plates are printed on bond paper, containing the working drawings of canoes for paddling, sailing, cruising

FOR

and racing, with their sail plans, rowing sailing boats, large canoe yawls, and various boats for special purposes, such as gunning boats, yacht boats, and the widely known sneakbox.

The canoe yawl, a boat between a canoe and a yacht, is illustrated by examples of various craft from 17 to 20ft. long, and suitable for a crew of two or three on a cruise. This class of boat, while little known among us as yet, is admirably fitted for cruising, and will meet the wants of many who object to a canoe as being too small, and yet desire a boat with the same excellent qualities. The boats and canoes illustrated are in all cases among the best of their class, the list of canoes including English, Scotch and American craft, and are all drawn

AMATEURS.

to scale, so as to be available as working drawings. The plates, for convenience in using, are placed loose in a tough manilla envelope and accompany the book.

Pp. 168, with 24 plates of working drawings. Price $1.50. Address,

HINDS' BLACK-FLY CREAM,
For Repelling
Flies, Mosquitoes, Midges and other Insects, and protecting the Skin from Sunburn, Irritation and Infection.
No Tar. No Stain.

GLENS FALLS, Vt., June 15, 1884.
Mr. A. S. Hinds, Portland, Me.:
DEAR SIR—I have not sooner acknowledged the receipt of box of "Black-Fly Cream," as I desired to first test it; this I have now done on two fishing trips where I found the Mosquitoes, Black Flies, Punkies and Moose or Deer Flies in great abundance. Although all these pests swarmed about me, I found the *Cream a perfect preventive* against their bites when it was applied to face, hands, ears and neck. For many years I have sought after *the* insect repellent, and have tried all manner of compounds, but yours is the most thorough, at the same time cleanly and not disagreeable.
Yours truly, A. NELSON CHENEY.

Price, 25 Cents, Postpaid.

WARNING!

As parties in the East have put on the market a horrible-toned imitation of my Duck Caller, this is to notify all sportsmen and gun dealers that none are of my make unless stamped "F. A. ALLEN, Monmouth, Ill." And I will prosecute all parties selling such villainous goods as of my manufacture.
F. A. ALLEN, Monmouth, Ill.

"FOREST AND STREAM SERIES."

DEER HUNTING.

BY JUDGE JOHN DEAN CATON.

BY and by it will be time to hunt antelope and deer. It is always time to read about them. Judge Caton's book on the antelope, elk, deer, moose and caribou of America discusses in a readable way the life history of these animals and the methods of their capture. It is the work of an enthusiastic sportsman who has had a wide experience and has devoted the leisure of years to studying these interesting game animals. The volume is very fully illustrated, and is a perfect storehouse of information and entertainment. The first edition was sold by the Boston publishers at $4. Price $2.50.

WOODCRAFT.

BY "NESSMUK."

A COMPACT pocket handbook of condensed, boiled-down, concise, clear, comprehensive, sensible, practical camp gumption. "Nessmuk" has been "in the woods" in Michigan, New York, Pennsylvania, and South America, and this is a book for outers, wherever they kindle their camp-fire. The author believes in "smoothing it." He has learned how; now he tells others. It is much easier to learn from "Nessmuk" than from Dame Experience. We should not be surprised if "Woodcraft" completely revolutionized the methods of camping out. If you are going to the woods, read "Woodcraft" before you go. It may add to your trip a hundred fold. Price $1.00.

DOG TRAINING.

BY S. T. HAMMOND.

HE was a promising puppy, and when you turned him over to the breaker to be educated, you thought he was bound to make "the best dog in the world." And you'll not soon forget how disappointed and disgusted you were when the dog, the breaker and the big bill—all three turned up together, and you saw that the animal's spirit was broken and it would take a steam calliope to make him mind. Now, this could not have happened if you had been wise enough to buy a copy of Hammond's book, and in your odd leisure moments *train* the dog yourself instead of having him *broken* by some one else. We are selling edition after edition of this book, and it is revolutionizing the system of preparing dogs for work in the field. Price $1.00.

SHORE BIRDS.

A PAMPHLET for those who "gun" along the shore. Tells of: I. Haunts and Habits—Where the bay birds live and what they do at home. II. Range and Migration—Where they go to breed and where to spend the winter. III. A Morning Without the Birds—An episode of shore shooting. IV. Nomenclature—A list of our American species of *Limicolæ*, with a description of each species. V. Localities—Where to go to shoot them. VI. Blinds and Decoys—How to shoot them after you have reached the grounds. 45 pp., paper. Price 15 cents.

ANGLING TALKS.

BY GEORGE DAWSON.

AS a political writer of conceded power, Mr. Dawson wielded a trenchant pen; when he terned from the conflict of parties to the praise of the favorite pastime of "simple wise men," his essays, limpid as the crystal streams, are aglow with the soft summer sunlight and melodious with the songs of birds. When angling was the theme, he wrote from a full heart and in closest sympathy with the scenes and pursuits described. These "Talks" are brimful of manly, wholesome sentiment; there is in them all not a particle of cant. Their sincerity and overflowing spirit at once win the reader, and he perforce shares the author's enthusiasm. The effect is magical, like that of the mimic players in Xenophon's *Memorabilia:* he who reads, if he be an angler, must go a-fishing; and if he be not, straightway then must he become one.—*Extract from Publishers' Preface.* Cloth, price 50 cents.

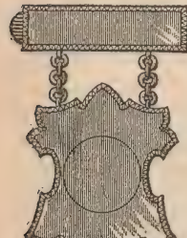
CANOE "AURORA."

BY DR. C. A. NEIDÉ.

A CHARMINGLY written and always entertaining account of a canoe cruise from Lake George, New York, down the Ohio and Mississippi Rivers to the Gulf of Mexico, by the Secretary of the American Canoe Association. To read the cruise of the "Aurora" is the next best thing to having made it; and the reading is decidedly more pleasant than would have been participation in some of the misadventures related. 216 pp., cloth. Price $1.00.

Reads like a romance from beginning to end.—SPRINGFIELD REPUBLICAN.

Old Saint Augustine.



BY CHARLES B. REYNOLDS (FOREST AND STREAM).

THE famous Florida town's three centuries have been crowded with romantic incidents; and a story of wonderful interest is this, with its Huguenots and Spaniards, Franciscan Fathers, English Sea-Kings, Boucaniers, Minorcans, Liberty Boys, and Seminoles. It is told vividly, in the briefest possible compass, with strict historical accuracy, and with an enthusiasm that is manifest from the very first page to the last. Among the illustrations are copies of some of the very rare drawings by Jacques Le Moyne, the French artist, who so narrowly escaped massacre by the Spaniards in Florida, three hundred years ago. Another very rare engraving is the plan of the city in British times. The *artotypes* (or photographs in permanent ink) are among the most beautiful book illustrations of the day. They are made from negatives taken expressly for "Old St. Augustine," and are: Fort Marion (four views), the Matanzas Fort, the City Gateway, the Cathedral, the old Palm-tree, Garden Overlooking Plaza, and two very characteristic St. Augustine Houses. Cloth, pp. 144, 8vo. Price, $1.50. **Forest and Stream Publishing Co.**

Hornbeam Rods

A SPECIALTY.

W. HUNTINGTON,

WILTON, CONN.,

Makes a specialty of the manufacture of FINE HAND-MADE RODS of Hornbeam for fly fishing. Every fly-fisher should have one of these rods, for whatever preference he may have these are the only thoroughly reliable rods, secure against breakage and capable of real hard usage. With one of these rods a sportsman may venture into the woods for a season and take no other rod, and be fairly sure of returning with it in a serviceable condition. As made from wood of my own cutting and seasoning, they are powerful, easy in action and full of endurance. For circular send to WALLACE HUNTINGTON as above.

For Sale.

SALMON FISHING

IN CANADA.

Fly-Fishing for Salmon, Grilse and Sea Trout to let in rivers discharging into the Gulf of St. Lawrence, during 1885 season, from about 10th June to 1st September. Rents from $50 to $1,000 per river.

The undersigned will receive offers for the Fly-Fishing in the following rivers, situated in the Seigniory of Mingan, on the north shore of the St. Lawrence, from the mouths of said rivers to a distance of six miles inland in a direct line.

	Rents.
Manitou	o—Great falls near the sea; untried.
Sheldrake	$100—Good pools, with salmon; untried.
Thunder River	o—Good pools, with salmon; untried.
Magpie	$125—Good pool; falls near the sea.
St. John	Reserved—Large river; good pools.
Mingan & Manitou	$750—Large rivers; good pools; plenty salmon. Rented.
Romaine	$1,000—Large river; splendid pools; large salmon.
Corneil	$125—Small river; good pools; plenty salmon.
Pashasheeboo	o—Small river; untried.
Nabisippi	$100—Good pools; plenty salmon; untried.
Aguanus	$150—Fine river; good pools; plenty salmon; untried.
Natashquan	$1,000—Large river; splendid pools; plenty salmon. Rented.
Kegashka	$100—Fair sized river; plenty salmon; untried.
Musquarro	o—Great fall near the sea.
Little Musquarro	o—Small river; plenty salmon
Washeecostai	$250—Fine river; fine pools; plenty salmon.
Olomansheebo, Coacoacho, Etamamu, Netagamu, Mecattina, Ha! Ha! St. Augustine, Esquimaux, Blanc Sablon,	Each $50. These rivers so far as known have never been tried with fly-fishing, and only partially explored, but are reported by the Hudson Bay Company's officers to be fine rivers, with good pools, abounding with salmon and sea trout.

The first twelve rivers on the above list can be reached by a coasting steamer from Quebec, or by a mail carrying schooner leaving Gaspé the 1st and 15th of every month; the others are accessible only by a yacht or hired coasting schooner, obtainable at Quebec at $6 per day, including crew, who find themselves in provisions.

STUD FOX-TERRIER

Champion Raby Tyrant,

(K.C.S.B. 11,179.)

Pupped October, 1880. Weight 16½ pounds.

Raby Tyrant is a white dog, with an even marked rich black and tan head. He is a thoroughly game and stylish terrier, possessing a beautifully shaped long punishing head, with perfect drop ears, small eye, rare neck and shoulders, deep chest, well ribbed and muscular quarters, short, straight legs, excellent feet, great bone and substance, with an exceptionally hard and dense coat.

Raby Tyrant is without doubt one of the most successful terriers of the present day. He has been exhibited 67 times, 33 different judges having adjudicated upon him, and has won 47. First 10 cups and specials; 12 second and 2 third prizes. His breeding is undeniable, combining as he does the choicest and most valuable blood that can be obtained. At the stud Raby Tyrant is proving himself eminently successful.

Fee, $15.00.

JOHN E. THAYER, Hillside Kennels, Lancaster, Mass.

THE MASSACHUSETTS MUDDLE.

THE Massachusetts Fish and Game Protective Association is not warm in its support of the mass of incongruities and absurdities which the Committee on Agriculture has offered the Legislature for indorsement. In fact, that society is doing its best to have the bill changed, at least enough to make it a sensible one, and the probable result will be that no bill at all will be passed this year. The friends of fish and game protection in Massachusetts are becoming more than ever convinced of the utter inefficiency of the Committee on Agriculture, composed, as it generally is, of good enough farmers or theoretical agriculturists, to comprehend and intelligently handle the precarious interests of game birds, greatly depleted and fast going to extermination. This one point is always topmost: "We want our boys to have all the partridges"—just when the boys choose, and against the city sportsman, they mean. This celebrated committee, which usually roosts on Beacon Hill from the first of January till the weather gets absolutely too hot—and it can stand considerable heat—is responsible for the most of the defeat which true game protection has suffered in Massachusetts for a couple of years at least. An effort will be made next year to have a special committee appointed to look after an interest of so much importance. In no other way can Massachusetts hope for any advance in the fostering of her game supply.

FOREST FIRE LAW.

THE Province of New Brunswick has a new forest fire law, which is in many respects similar to the provisions respecting fire in the forestry law recently enacted in this State. Certain sections of the New Brunswick statute are specially directed against the practices of careless campers and sportsmen, to whose thoughtless unconcern so many destructive conflagrations have been due. It is directed that every person who, between May 1 and Dec. 1, may start a fire in or near the forest, for the purpose of cooking or obtaining warmth, shall: *First*, select a locality in which there is the smallest quantity of vegetable matter, dead wood, branches, brushwood, dry leaves or resinous trees. *Second*, clear the place in which he is about to light the fire, by removing all vegetable matter, dead trees, branches, brushwood and dry leaves from the soil within a radius of five feet from the fire. *Third*, exercise and observe every reasonable care and precaution to prevent such fire from spreading, and carefully extinguish the same before quitting the place.

It is further provided that any person who shall throw or drop any burning match, ashes of a pipe, lighted cigar or any other burning substance, or who shall discharge any fire-arm within any forest or wood-lot, or other place where there is vegetable matter, shall be subject to the penalties imposed by this act if he negligently omit wholly to extinguish before leaving the spot, the fire of such match, ashes of a pipe, cigar, wadding of the fire-arm, or other burning substance.

And that the idiot who starts a forest fire may not have the excuse to plead that he did not know that there was any law away off there in the woods, the further provision is laid down that every person who may be in charge of a party requiring camp-fires for cooking or other purposes in the forest shall provide himself with a copy of the law and read and explain it to his companions.

This is excellent law for New Brunswick, and it is excellent law for every State and Territory in the Union.

HE IS EVERYWHERE.—It matters little toward which of the thirty-two points of the compass your way is turned, you are sure to encounter the fellow who masquerades in the guise of a sportsman, and in that guise acquits himself worthy of a carnivorous brute. In the recesses of the forest he plies his murderous work, and the fair streams are polluted by the stain of his butchery. Here are two recent instances that have come to our notice. In the Indian River country, last winter, a party of three Englishmen, rigged out in corduroys and baggy trousers, kept up a perpetual fusilade with their 8-bore guns at every living thing that came in their way. The gulls, the white herons, even the buzzards fell victims to these men. They had an Arkansas record of 500 ducks shot and left to rot, and by the time their Florida trip was over they had in that State a record which equalled the other. The Wisconsin summer sky looks down on deeds of this nature quite as aggravated as this Florida case. Last summer Lake Gogebic was a virgin lake, teeming with black bass, and by reason of well directed effort on the part of railroad managers, large numbers of fishermen were attracted thither. Men from Chicago and Milwaukee going in the guise of anglers, hastened to the new grounds, and in numerous instances left the dead fish in heaps on the shore, to poison the air and offend the nostrils and the souls of decent men. Why is it that such things are tolerated? Why is not public spirit so strong on this subject that the low minded creatures whose instincts lead them to commit such slaughter should be deterred from it by the very fear of being branded with shame by that public sentiment? One reason, perhaps, is because sportsmen do not do enough missionary work, each one in his own neighborhood.

ADIRONDACK FORESTRY COMMISSION.—The Governor's appointment of Messrs. Dowd, James and Basselin as Forestry Commissioners for the State of New York appears to have been most unfortunate. The first two gentlemen are well-known public-spirited citizens, who have been friends of the forestry movement, and had they time to give to the work their places could not be better filled. It is understood, however, that neither Mr. James nor Mr. Dowd can give to the Adirondack work the necessary time, and so as a matter of fact the working member of the commission, if it remains as at present, will be Mr. Basselin. Mr. Basselin is a lumberman. He is said to have represented the lumbermen and to have acted as their principal agent in the Albany lobby that has fought so persistently to defeat forest legislation. Such a man is surely not fit to be entrusted with the office which has been given to him. The success of this new movement will depend upon the wisdom, faithfulness and honesty of purpose of the Commissioners. New York can hardly afford to entrust the work to other than those whose attitude toward forest preservation is known to be right.

CANOEING is one of the growing recreations, if any inference is to be drawn from the rapidly multiplying literature devoted to it. Within as many months the publishers of this journal have issued three books on canoeing; first Mr. Stephens's "Canoe and Boat Building," then Dr. Neidé's "Cruise of the Aurora," and now comes Mr. Vaux's "Canoe Handling."

THE HOTEL MAN comes in for frequent mention in the correspondence sent to this journal by the sportsman tourist. Sometimes the over praise given to a landlord is blue-penciled by the manuscript reader, and sometimes the mention of the host is permitted to appear. The rule governing this is not very well defined. It is to be taken for granted that sportsmen wish to know what sort of accommodations are to be had at the various places of resort. This is an important consideration, and when a writer refers to such matters for the evident purpose of conveying this desired information to his readers, the communication is generally printed in full. On the other hand, there are very many individuals, not much used to traveling, who, when they are well-treated at a hotel (as the landlord is presumed to be paid to treat them) are quite overwhelmed with gratitude therefor, and try to discharge a portion of their supposed debt by singing out the host's praises in the FOREST AND STREAM. Such correspondents sometimes complain because their letters are trimmed, but we cannot believe that aside from the correspondent and the landlord any one else misses the expunged sentences. The sportsman who finds nothing more interesting than his hotel experience to write about cannot be said to have an ideal outing.

THE BROOKLYN GUN CLUB has just taken out incorporation papers, the charter members being Messrs. H. F. Aten, J. L. Hill, G. Walter, J. W. Douglass, P. J. McDermott, I. C. Monroe, J. McKewen, J. L. Logan and G. J. Seabury. The club has secured a lease of 6,000 acres, on which it has been preserving the game with encouraging success. During the past season it has put out fifty-nine dozen of quail, making a total of one hundred and sixty dozen which it has brought from the South to Long Island. Three pairs of blue quail from Texas have been liberated on the club's preserve, and are reported to be doing finely. An effort will be made to introduce the Scotch grouse. The Brooklyn Gun Club is one of the few organizations in this vicinity that practice game protection as well as they preach it. They have set to work in a sensible way to replenish the Long Island game lands, and their present success promises well for the future.

A FISHWAY FOR SHAD.—For the past ten years our fish-culturists have been looking for evidence that shad have passed over any of the numerous models of fishways which have been built on our rivers. Other fish have gone over most of them, but the wary shad has declined to even enter their passages. In another column we quote from a letter from Mr. C. J. Huske, Superintendent of Fisheries for South Carolina, in which he says he has been told by good authority that shad have passed the fishway on the Saluda River. If this proves to be true, as there seems to be no doubt, it will give an impetus to fishway building all over the country, for many have been waiting to find a form of fishway which shad would enter, hence the passage of shad over a fishway is an event worthy of especial notice.

THE RECEPTION held Monday last at the American Museum of Natural History at Central Park, was an interesting and enjoyable occasion. One of the most instructive of the recent additions to the collections is the Jessup collection of woods. This embraces most of the species of trees occurring in the United States, and is designed to illustrate the forest wealth of this country. The specimens of the woods are polished on a portion of their surface. Accompanying these are a series of life-size water colors, sketches of foliage, flowers and fruit. An herbarium accompanies the collection, which is for the present on exhibition on the first floor, the hall of mammals.

AMICABLY ADJUSTED.—We are much pleased to be able to state that Major Joseph Verity and Mr. J. P. Squibob, who have been glaring at each other across a thousand miles of this fair land, have come to an amicable adjustment of their little differences. Each of these old gentlemen is a bit choleric, but neither one of them is vindictive nor long permits the clouds of uncharitableness to overshadow the calm serenity of a green old age. So they have patched up their differences, and in future, like the lion and the lamb of inspired vision, will lie together in sweet unison.

THE DEER HOUNDING BILL has not been heard from since it was a second time passed by both houses at Albany and sent to the Governor. Why does not Governor Hill put his signature to it and have the credit of doing so?

The Sportsman Tourist.

SANTA BARBARA IN SPRING.

THE smooth bay spreads in front its level floor,
Walled by the distant islands' rugged chain.
No southern storms beat on this guarded shore,
But placid rollers break with low refrain.

Seaward, where wide-winged pelicans flap by,
Some forager now leaves the laboring line,
Drops plummet-like, splashing the spray on high,
And pulls his wriggling booty from the brine.

Landward, a hawk, sailing in mounting rings,
Watches the banded wildfowl cleave the breeze.
Hark! to the whirr of his down-rushing wings,
And the scared croakings of the scattered geese.

Along the lowlands spread the fruitful farms;
And canyons, whose steep sides are hung with bloom,
Stretch to the lofty hills their branching arms,
Where cool brooks gurgle in the shady gloom.

The Spanish mason's ponderous old-time walls
Still on the ridge hold their commanding place,
The square-built towers and colonnaded halls
Crowning the landscape with a massive grace.

Above, a flock of doves in doubtful flight
Wheel till their white wings flash; then, stooping low,
Fluttering uncertain, daintily they light,
Flecking the russet roof with spots of snow.

Here grow the fig and olive. Here the vine
Throws on the sunny slopes its verdant cloak.
Here tower the plumed shafts of tropic pine,
Here spread the dark-leaved groves of sturdy oak.

The flowering flax gleams blue as mountain lakes,
Tall wheat and barley crowd the fertile fields.
Impartial nature no distinction makes,
Fruits of all zones her equal bounty yields.

Now the in-drifting fog-bank gently trails
Along the circling hills its fleecy flow.
Then, feathering out its foam of creamy veils,
Wraps in their folds the peaceful plain below.

Blurred by the gathering mist, the paling light
Fades into darkening gray. The evening bell
Tells that calm day has passed to quiet night,
And all is silent save the ocean's swell.

H. G. Dulog.

LOST IN THE DEAD CREEK COUNTRY.

TO become lost, or at least bewildered, is something that is almost certain to occur sooner or later to the man who spends much time in the pursuit of large game in a heavily-timbered country, and to extricate oneself is sometimes quite a problem, and one not always attended with the most delightful of memories.

The summer of 1881 was an exceedingly wet one in the Adirondacks, especially during the month of August, and day after day we looked up at leaden skies, or if we caught a glimpse of blue, the driving clouds soon obscured it, and daily we had from one to five thunder storms, with wind squalls and disheartening downpours between times. Everything was soaked, and our spirits would have been sadly dampened too, but that Tom had a fund of jokes, to say nothing of considerable ability on the mouth organ, which was a source of constant amusement to us, while his guide, ordinarily quiet, when once started could tell any number of stories and chose a variety of subjects that was sometimes bewildering. As for my guide and myself, we had spent so many months in the woods together, that we had come to regard rains, storms and hunter's luck as something to be expected in a long campaign. When Willard's tongue tired from story telling, and ours from laughing, we had a well-thumbed and greasy pack of cards to fall back on, and there were some wonderful hands shown down on the blanket in our tent as we passed the time with casino, old sledge and penny ante, with beans for chips.

We had camped on a little knoll on the windfall near Dead Creek, something like a mile or more from where the creek emptied into the Grass River, and were about four miles from Cranberry Lake.

It was but a short distance to a log cabin where a guide and his family lived, from whom we were able to obtain fresh bread, raspberry pies, and the greatest of all luxuries in the woods, fresh milk, while their home was often a retreat when the driving rain pelted through our tent despite the fly, and drove us soaked and disgusted to seek a warm corner back of their stove to dry out, while songs and music on the organ from Tom, adventures, stories, and hunters' experiences from the rest passed round the circle, and our discomforts were forgotten as we laughed and joked till dry and warm.

The constant thunder seemed to have driven the trout to the deepest holes, and it was only by the most persistent fishing that we obtained enough for one meal per day, and all our efforts to obtain venison amounted to *nil*. Except hounding and trapping, every means had been tried. We had watched, still-hunted and floated, and had tried several times to drive by hand, but all without success. Finally, after working faithfully for nearly two weeks, we tried the dogs, and Tom's performance on that occasion is worthy to be chronicled among the Fireside Flickerings.

The spot we selected for running was down the Grass River, encamping at the Deer Lick Rapids, so called from a large spring that boils up near them, making a large pool fully twenty feet across and forming a natural deer lick, as the ground about it was trampled down until it was hard as a floor, yet there was no perceptible taste to the water different from any other spring.

The greatest runway on the drive was about three-quarters of a mile below the rapids, where the river was quite wide and deep, with a large rock rising out of the river in the middle and offering a superb watch, and to this station Tom was assigned, he being the novice and of course anxious to kill his first deer, and although he had never shot at one, we had every confidence in his judgment and in his being proof against buck fever, as his nerves had been well tried at the trap and in the field. Willard took the rapids to watch, while I chose a runway in the woods. George took Tom and the two hounds in the boat and started down the river, and as they started off could hear him cautioning Tom about sitting still and keeping quiet while watching, as a cliff off to the right was a regular echo sounder.

Willard and I took our stations and listened for the welcome sound that should tell us the game was afoot. An hour passed, and I could hear one of the hounds in full cry, apparently heading directly for Tom's watch. Straight toward him the game seemed to go, and I expected every moment to hear him shoot; but suddenly the chase turned and headed up toward me, then took another runway and swung round a hill off a hundred yards to my left, until it died away in the distance toward Cranberry Lake. After waiting another hour and hearing nothing, I returned to camp, and a few minutes later saw Tom and George coming up the river. The expression on Tom's face was one of sublime content, but George's face was a study. He had gone down the river about a mile below Tom, and waiting until he had found a big track, had let one of the dogs go, and the deer had apparently gone direct toward Tom, and he too expected to hear his shot, but no shot sounded; and he also heard the chase go out of hearing, after which he let the other dog go on another track, but the deer ran off toward Chimoux Pond instead of toward the river; so retracing his steps to his boat he pulled up the river, wondering what could have turned the deer from Tom. Rounding a bend he suddenly pricked up his ears. Could he believe them! Was some wildwood nymph trying to beguile him, or was that the Lurlei, transported from her rock in the Rhine to the Grass, and bringing him to his doom by the witching melody. The illusion was almost complete; the rock was there, the melody was there, but the fell enchantment resolved itself into a very red-faced and thoroughly baked young man dressed in gray, lying on his back, with his hat protecting his face from the sun, his heels in the air, and most complacently playing the waltz from Boccaccio with a supreme air of contempt for such worldly matters as deer or dogs. He blandly informed George that he heard the dog bark, and heard something smashing away in the bushes, but he hadn't seen any deer and didn't believe there were any around there; and he further said he had kept very quiet, only amusing himself by playing on his harmonica to pass away the time and save himself from thinking that he was the victim of some modern form of inquisition, in which the rock represented the broiler and he the victim over the coals. When a few days later he learned that the hound George put out first had driven a big four-pronged buck into the lake, and that a fishing party had killed it, he came to the conclusion that while his harmonica had achieved signal success in attracting and charming one kind of dear on the trip, it was a sad failure on the other variety.

George and I floated on the river that night, but the rain still pursued us, having cleared off beautifully while running the deer, only to return with persistent force as night approached. As a result not a step was heard, and as soon as it was light we all returned to our Dead Creek Camp the next morning.

The day following our return it was arranged that Tom and Willard should go to an oat patch belonging to a farmer a mile or so away, and while one should watch that the other should guard a deer lick in the edge of the timber, George would try the Wolf Ridge and Sampson Pond ground and attempt to still-hunt a deer, while I was given a course, after crossing the windfall that would take me to a burning where there was a fair chance of getting a shot, as there had been no hunting done there in about a year, partly on account of its being a hard place to reach, and partly because being near a swamp it was said to rival the Mud Lake country for mosquitos and punkies during the warm season. We had an early breakfast, and I ate so heartily that it did not seem to me hunger could be known again that day, so the usual lunch was neglected, and I prepared myself in light marching order for the tramp and hunt. I knew I was bound to get wet any way, and one might as well carry a tin pan as a rubber coat through the busnes if still-hunting; accordingly a light suit of old clothes was donned that would dry quickly in case the sun should deign to shine. When nearly ready to start a heavy rain storm swept down the windfall, and lasting nearly two hours delayed our start, so that it was nearly 9 o'clock when I headed for the blasted pine across the windfall, from which George had directed me to set my compass and take my course. The brakes were waist high, and in five minutes my suit was soaking wet; but that had been expected. Crossing the creek on an old log, I stopped for a moment to watch the movements of some mergansers, that, all unconscious of my presence, were feeding and preening their feathers but a few rods away. Clapping my hands and whistling I sent them all scurrying off, and how they did make the water fly as they tore it up with feet and wings to get away as fast as possible.

When nearly across the windfall and about three-quarters of a mile from camp, I came to a spot where the brakes were all broken down for a space ten or twelve feet long and five or six feet wide.

I could not quite understand the manner in which it was trampled down and torn up, until some hornets buzzing angrily over the ruins of their nest explained the cause. "Br'er bar" had been there, and since the rain, too, for where the trail led off the water had been shaken from the ferns, and those broken down had not begun to straighten up.

This looked like an unexpected piece of luck, and throwing in a cartridge the trail was carefully followed up, and after a little the fresh sign was found, showing that he was but a short distance ahead. The hornet stings must have bothered him, for twice before reaching the line of timber were spots rolled down and brakes torn up, and on almost the first tree were some black hairs, showing he had rubbed his sides to get rid of the stings. The timber began on a hardwood ridge and the trail was rather hard to follow; but a disturbed bed of leaves, a bit of moss knocked from a rock as he scrambled up, and now and then an oozy spot where the rains had formed a pool and where he had taken another roll, all helped, and after following the top of the ridge for about a quarter of a mile he turned down into a swamp and there the trail was perfectly plain, for aside from the broken twigs from the tamaracks, the ground was so soft that he sunk in a couple of inches, while with my shoes I went him two better in following. As soon as the soft ground was reached I was able to form some idea of his size, for until then I had not seen the exact print of the paws, and I was somewhat disappointed to find that the bear could not be much more than a yearling, judging from the size of the track.

Crossing the swamp, the bear ascended a high hill, with rocks, fallen timber, high witch hopple and many gullies and ravines, making the pursuit a terribly laborious one; but pushing cautiously ahead, I reached the edge of a narrow gully, some ten feet deep, thickly skirted with bushes, and a tree that had fallen across with the butt broken off and lodged on a rock opposite showed plain marks of the passage of the bear. Almost out of breath, I sat down on the log to rest, when to my surprise I heard a great commotion on the opposite side of the gully, and could see the old stub left standing after the fall of the tree violently shaken; and by the sound of the scratching at the rotten wood I knew that my game was very near me and must be tearing the stub to pieces in search of pismires, of which bruin appeared to be very fond. Cocking the rifle and taking it in my left hand, I cautiously crept up the log, and was certain I would have a "dead open and shut" on that bear, for being above him I could command a view in every direction as soon as the rock on which the butt rested could be reached, and there would be no bushes to cut off my view, as would be the case if I had been on the same level. The bear was entirely unconscious of danger and scratched away, now and then making a sort of sucking noise, as though he were licking something. The log trembled under me, but inch by inch I drew near to the rock, and my heart was beginning to thump with expectation, when, with a smash and a crash the log parted under me, and without any warning I found myself amid a mass of rotten wood at the bottom of the ravine. The gun went off with the fall, and when I could collect myself the only sounds of the bear were some rapidly vanishing "whoof-whoofs" and the crashing of sticks as he tore away, evidently as much astonished and demoralized as was his pursuer.

As soon as possible the trail was taken up, but my trousers were torn, the buttons on my vest were ripped off, and my head ached, while a bleeding nose completed the ruin.

Now and then taking a look at the compass, the pursuit was continued through a tract of country where there was not a sign of man, neither blaze nor trail showing that it had ever been traversed.

About 5 o'clock in the afternoon the trail was very fresh, and in a burning that had become overgrown with red raspberry bushes, the waving tops showed the presence of the bear, but it was impossible to get a glimpse of him. Finally I mounted an old log and yelled and whistled, but the bear refused to sit up to investigate, so, tired and mad, I made a rush in the direction he seemed traveling, and with a snort that I could plainly hear, away he went faster than ever, and as he disappeared a perfect deluge of rain began to fall. Tired, hungry, bruised and lame, it occurred to me that camp was a good place to head for.

Consulting the compass, the direction it told me to go seemed directly away from camp, but comparing it with one on my watch-guard and finding they agreed, I knew that they were right, and that my bump of location was muddled. Sitting down under the protecting limbs of a huge pine, I carefully thought out my exact course, and having been told to follow my compass, for that would never lie, while one's faculties, when a trifle bewildered, were almost certain to, I went by that. After resting I began my homeward tramp and soon came to a ridge, on the opposite side of which was a heavy tamarack swamp, and across this rose another ridge which looked to me exactly like the first one I had descended when beginning the pursuit in the morning.

I flattered myself that the windfall would be just beyond and that an hour more would bring me to camp, but the swamp crossed and the ridge surmounted, another swamp stretched below me with still another ridge beyond. The lightning fairly hissed through the air, the thunder roared and the torrents drenched me, while the windfall was still beyond the ridge ahead. Darkness began to fall before the second growth of hardwood was reached, and when still another swamp loomed up below me, my heart sank, but I plunged ahead, sometimes knee deep in mud and mire, and on and on over three more "hogbacks" and three more swamps, lighting matches to get my course from the compass, then stumbling, blundering on, my only light the flashing gleams from the skies. I determined to reach the windfall before stopping to rest, and when after 9 o'clock my trembling limbs bore me to the top of a hill and the windfall was in sight below me I gave a cheer of delight. The sound of my own voice gave me encouragement and I began to look about for a place to camp. A flash of lightning showed two pines ahead, and a fringe of bushes near them gave hopes of water, and when the spot was reached I found myself on the banks of Dead Creek and knew that camp could be easily found in the morning, for the creek was the only stream running through the windfall, and by following it down I was bound to get there some time, but whether I was within a mile of camp or ten miles I had not the faintest idea.

After quenching my thirst I built up a rousing fire and then gathered several armsful of the ferns, after which I stripped off my outer clothing and hung it to dry before the fire, as the rain had ceased by the time my fire was built, although the thunder still rolled and rumbled. While my clothes were drying I made up a bed of the ferns and as soon as thoroughly warmed, donned my suit, and flanking my bed with lines of fire, lay down, and in a few moments was sleeping the sleep of the just. The last thing I did was to fire my rifle after wiping it out with a piece of my hunting shirt for a swab, for considerable water had run down the barrel and I did not want my pet to become rusted. I was awakened before my fire had died down, by the snorting of a deer that had evidently come to the creek to drink and had winded me. As I sat up and tried to look into the darkness to catch a glimpse of the deer, far away up the windfall came the sound of three shots in quick succession; a few moments more and three more; a pause, and then three more, and I knew that the boys were shooting for me, and no time was wasted in replying. The shots continued but each time sounded nearer, as from time to time I answered. In about two hours I could hear the "hello!" of George, and a little later he appeared on the opposite bank with a lantern and overjoyed to find me alive and well, for he had imagined every form of disaster had occurred to me.

After quite a tramp down the creek I crossed the creek on a log, and in two hours was safe in camp, receiving the congratulations of Tom and Willard, who had become very much alarmed about me.

While changing my clothes they prepared a tremendous meal for me, during the discussion of which I gave them an outline of my experience, and then just as the first glimmer of the coming day began to appear in the east I sought my bed of boughs, and when I awoke from the long dreamless sleep the stars of night were twinkling above, our season of rain was over and my experience as a "lost hunter" was something of the past, to dream of by fireside and to relate when the story passes from lip to lip in camp.

Onondaga.

FROM CHOLERA TO COLORADO.

MANY of your readers have doubtless before now become alarmed at ravages of cholera in the various European cities during the past year, and many feel certain of its reaching the American seaport towns at the beginning of warm weather. To such as well as sportsmen tourists I wish to point out a paradise full of all the essentials that go to make up pleasure and contribute to robust health.

Come West; visit the Rockies; not to "grow up," but to grow fat and robust by basking in their sunshine and climbing high peaks, through deep gorges, and lure the artful trout from his shaded nook or perchance send a bullet after a leaping deer or growling grizzly. Millions of people in the East have no conception of the greatness of America. They have lived in the East; and when recreation or travel has become a necessity, they have gone to Europe because it was fashionable, neglecting their own country. Now that cholera has invaded Europe, every mail brings hundreds of letters to Colorado making inquiries about the great West. All contain the same query, "Where and how can we spend the heated term in the West?" Having received many such letters myself, I will try to give an answer to all.

Leave the East June 1. Come West to Kansas City over any of the numerous trunk lines. Long before you reach Kansas City you will be astonished at the great expanse of fine and fully developed farming country. But your astonishment will be increased when you are told that the great West begins at Kansas City. Here you take the Atchison, Topeka and Santa Fe Railroad, destined for Silver City, New Mexico. Here you will find good hotel accommodation, and living can be made as comfortable as in your own home. Here we have the very best mountain climate in the world. Within easy reach one may find elk, deer and wild turkeys in plenty, while the mountain streams abound in large trout, many of them weighing as high as three pounds. By going far into the mountains you can find bear, "provided you have lost any." You can camp out or live at hotels, and travel nearly in all directions from the various railroad stations by stage lines, nearly all of which have very comfortable vehicles.

After you have had your fill of game and trout, take in the various wonders of this ancient territory. Vast, boldly outlined, filled with strange sights and peculiar people, it appeals strongly to the imagination. There are signs of gradual development. The long neglected fields are being tilled. American houses stand beside the old adobe. The tame Indians mingle with the white strangers, who have come to enlighten their country. The old is not yet swept away, but remains at various places to lend enchantment to the new processes. Visit the city of Santa Fe, also the various Pueblos, Zuni and Navajo Indian villages. Here you will find curiosities such as cannot be equaled in all Europe. If you have any ailment, try the various hot springs along the road, and be certain to make a stop at the Las Vegas Springs. In this way you have spent the month of June and part of July. Return to La Junta and come to the Rockies in Colorado. Visit the city of Denver, the wonder of the plains, a city of 80,000 people, with its fine business blocks, fine hotels, and a grand opera house, not equalled in America. By this time the fashionable season will be at its height at Manitou, the Saratoga of the West. Tarry only a few days and take the Denver & Rio Grande Railroad, through the Royal Gorge to Salida, where you will find a good hotel, balmy air, cold nights, streams filled with small trout. Continue over Marshall Pass on rail 10,500 feet high. Soon after you come to the Gunnison River, when you can stop at any station and find fair accommodation or good camping grounds, and all the large trout you wish to catch, with game of all kinds. You can camp at any altitude that you may wish, have heavy frost every night in July and August, or not, and not move more than a mile. Cimmaron Station, at the west end of the famous Black Cañon, is probably the best station on the road for comfort, trout, game of all kinds and wild scenery. Montrose and Delta, towns still further west, offer all necessary inducements to the lover of rod and gun. Several fine lakes situated near these towns, reached by stage, contain more trout than the writer dare tell. Here you will find where the wild geese and ducks hatch and rear their young. If you like, go on to Salt Lake City, which contains many strange sights. Take a bath in the Great Salt Lake. Return to Colorado by Oct. 1, and take a month's hunting trip into one of the parks. Follow this advice and cholera cannot catch you this season.

Q. VAN HUMMELL, M.D.

DENVER, Col.

Natural History.

HYDROIDS.

"Involved in sea-wrack, here we find a race
Which science, doubting, knows not where to place;
On shell or rock is dropped the embryo seed,
And quickly vegetates a vital breed."

SO wrote the poet Crabbe, a hundred years ago, referring to that curious race of beings which the naturalists of his time, not knowing whether they were plants or animals, and finding in them the characters of both, ingeniously called zoophytes, a word which means animal-plants. But they are now well known to belong exclusively to the animal kingdom and so, while the strains of Crabbe are undoubtedly poetic, they are far from being scientifically accurate, for the "vital breed" of which he speaks does not "vegetate" but grows and lives according to the laws of animal nature. However, the error into which he fell is very commonly made nowadays. Visitors at the seaside, to whom these animals are among the most common objects of interest, almost invariably look upon them as a kind of seaweed. The names by which they are commonly known, sea mosses and sea firs, testify to the mistaken view generally taken of them. In the nomenclature of science they are called hydroid zoophytes or simply hydroids. They are very abundant everywhere on the sea shore, being attached, near low tide mark, to common seaweed, rocks, the timber of wharves, the bottoms of boats, floating driftwood, etc.

These little creatures are among the most wonderful forms of all living things, and well repay a brief study from any one. Their symmetry of form and delicacy of structure enlist the interest of the most casual observer, and when their habits are studied and some knowledge of their wonderful life history gained, they can hardly fail to awaken the deepest interest, even in the most unenthusiastic. Let us take for a brief examination one of the most common forms, a campanularian hydroid. It looks very much indeed like a plant. There is a central stem or trunk which gives off branches at regular intervals and which is immovably attached at its base to a rock or seaweed just as a plant is rooted to the ground. The ends of the branches are expanded into forms not at all unlike buds and flowers. A little closer examination, however, will disclose some features that make it apparent that the object of study, if a plant, has some very marked peculiarities. If, for example, the vessel in which it is contained (it has to be examined in sea water) be given a slight jar, what appear like the petals of the flowers will be quickly drawn in, just as if the flower had suddenly transformed itself into a bud. In a short time, if left perfectly quiet, it will assume its former shape.

Looking at a hydroid with a hand magnifying glass, one can readily make out that the central stem and its branches are hollow, and that their cavities are continuous. At the ends of the branches these cavities are open, and these openings form the mouths of the animal. Each mouth is surrounded by a crown of tentacles, and each crown of tentacles provided with a cup formed by an expansion of the

outer layer of the branch, into which the tentacles can be drawn. The cup, with its expanded tentacles, forms what we have compared to a flower. Now, as these tentacles are capable of being extended to a considerable length, and of moving about freely in the water, and as the mouth of the animal is situated at their base, it is quite evident what the function of this flower-like organ is, viz., to capture food for the animal and receive it into its body. Hence, to each of these organs the name nutritive zooid has been given, and as we have seen that their cavities are continuous with that of the main stem, it is plain that what is food for one zooid is food for the whole community. Under the microscope it can be seen that the cavities are filled with a thickish fluid, and that by the action of vibrating cilia the fluid is in constant motion. In this way nutritive matter is conveyed to all parts of the body.

If a hydroid be examined in summer, very likely there will be found near the base of the tentacles a new set of buds, somewhat spherical in shape and unprovided with a mouth and tentacles. The office of these new buds is to reproduce the species, and they are therefore called reproductive zooids. The changes through which they pass in their development are among the most remarkable exhibited by living things. For, after a time, an embryo hydroid is set free, and strange to say, is a creature altogether different from the parent which produced it. It is, in fact, nothing less than what is familiarly known to seaside visitors as a jelly fish. These curious umbrella shaped animals are known to many by their power of stinging pretty severely when taken hold of by the hand. They may be seen most abundantly on a quiet evening, gaily swimming about on the surface of the water, propelling themselves along by alternately opening and shutting their umbrella-like bodies. After these jelly fishes, or medusæ, as they are called, have thus led an "independent and locomotive existence" for a longer or shorter period, they themselves produce embryos. They, too, are free swimming bodies at first, but after enjoying their independence for a time, they fix themselves to some rock or weed and develop into the plant-like hydroids from which the medusæ were derived. We have in these changes an example of a principle which operates in many of the lower forms of life, both plant and animal, and which is called "alternation of generations."

We have thus seen that a hydroid may be made up of two kinds of zooids, nutritive and reproductive. In some species there is yet a third kind called protective zooids. They consist of a single unbranched trunk which is usually in the form of a spiral. They have no mouth and no tentacles, but their free ends have a ring of knob-like projections which are loaded with "lasso cells." These lasso or thread cells have in them coiled, barbed filaments, and the animal has the power of suddenly throwing them out for the destruction of the enemies of the community, and probably also for the capture of its prey. It is by the use of the same organs that jelly fishes sting. Being thus provided with instruments of defense and offense, it is readily seen why the protective zooids were so called. Unlike the nutritive, the protective zooids are not attached to the trunk of the main "person" of the community. There is, however, vital communication between the two by means of the substance to which the bases of their trunks are attached, this substance being an excretion made by the animal itself. And so it is seen that the three kinds of zooids constitute together but a single individual.

One of the most interesting species of hydroids is that called *Hydractinia*. It consists of a single, rather short, unbranched trunk, bearing on its free end a mouth and crown of tentacles. Curiously enough the little creature always selects as its place of attachment a shell tenanted by a hermit

crab. The latter animal, as is well known, appropriates for its use the cast-off shell of some mollusk, carrying it about just as its original possessor did when alive, and drawing itself completely within it when danger threatens. Now, just as if the shell had not already been of sufficient usefulness in serving as a place of refuge for two different orders of animals, it is taken possession of by yet a third, the *Hydractinia*. No reason has ever been suggested for the creatures selecting this curious place of abode, except that it is thus afforded, by the movements of the crab, better opportunities for capturing food.

One of the most beautiful species of hydroids is the *Coryomorpha*. It lives at the bottom of the sea and only where the water is of considerable depth. It is therefore rarely seen by ordinary observers, but can easily be obtained by dredging, the animals attaching themselves in large numbers to the meshes of the net. It is one of the largest species, being about four inches in length. It consists of a single unbranched stalk, white below and striped with pink above, and ending in a pear-shaped head furnished with two sets of tentacles, the shorter of which form a circle immediately around the mouth. Attached by thread-like roots at the bottom of the sea, it spends its life swaying about in the water on its long flexible trunk, and thrusting its arms to and fro in its endless search for food.

There are very many other species of these animals, but those we have described are among the most interesting, and are fairly representative of the whole group. No visitor at the seaside should fail to examine for himself these wonderful little creatures. They are found on all shores; most of the forms are easily obtained, and they are sufficiently large to be studied very well with a hand magnifying glass.

As it was for a long time a matter of doubt and dispute as to which of the two kingdoms, plants or animals, the hydroids belonged, it is interesting to consider on what grounds they were finally relegated to a place among the animals. The chief characters by which their true nature was determined were the possession of a body-cavity, in which their food was digested, and which therefore performs the office of a stomach, and the nature of the food itself. It was found that they lived altogether upon organic compounds, and as this is the most marked characteristic of animal nature it went very far toward settling the much disputed question. After all, their resemblance to plants is hardly more than a superficial one. The mere facts that they are plant-like in form, and that, like them, they are fixed immovably to one place, are of comparatively little concern when the more fundamental characters mentioned above are considered. S.

UNION COLLEGE.

FLOWERING TREES IN CENTRAL PARK.

WITH gradual advances, the season of flowers has become definitely established. The various species of trees flowering early in Central Park unite in attesting that a prolonged slumber among their kind is not detrimental to an awakening in high strength and vigor.

It is understood by experienced horticulturists that the *Magnolia conspicua* is subject to be cut off in youth and during its first year after transplanting through cold and variable winter seasons; but that this admired variety is hardy in our locality, after becoming firmly established, is evidenced by the present condition of our park specimens of this beautiful Chinese magnolia, known in its native soil as the yulan. This indeed has seemed "in haste to bloom," as one of its faithful admirers has represented. It is unfortunate for observers that it hastens equally to cease to bloom. One of its finest examples with us, a pyramid of large, snow-white, fragrant flowers, appearing in the Ramble before a green leaf gave hint of arrival, began to drop feather-veined petals to the earth, almost as soon as the solitary terminal flowers had been unfolded at the tips of its twigs in all directions. This multitude of great white cup-shaped flowers of the yulan, or lily magnolia, forms a charming as well as conspicuous herald of the flowering season.

Near the specimen mentioned and within sight of it is a single representative of the *Magnolia soulangeana*, a variety much esteemed by arboriculturists. This is a hardy and vigorous tree, distinguished by a purplish tinge within the cup of the flower and on the outward base of the petals. It is somewhat later than the *M. conspicua*, coming into full flower when the beauty of the other commences to wane. An attractive specimen of the kind is also seen off the lake road on the west side, nearly on a parallel with the Museum of Natural History.

These two Chinese varieties which have been successfully introduced into the park are followed closely by the American magnolias, more numerously represented, and which are commencing to open their buds in the vicinity of upper and lower lakes, on the Terrace, and in other places.

Among other early flowering species is the *Cercis canadensis*, or Judas tree, the latter name having followed from the modern opinion that this, instead of the elder tree as long believed, was the kind on which Judas hanged himself. This is a species hardly less distinct and striking in its floral display than that of the magnolia. A fine specimen is seen near Bridge No. 3, a short distance westward from the menagerie; others appear singly near the western wall not far from 100th street and elsewhere, while a rich mass of color is formed by a group of these trees in the horse shoe plot between the Terrace and Webster monument near the center drive, at about the range of Seventy-second street. A large magnolia is about flowering in the same locality, in showy contrast with the purple Judas tree. The latter also is without a visible green leaf. It is readily distinguished at a great distance by the pinkish purple color of its sessile, thickly clustered flowers. The species is native in North America, being found from Canada to the Southern States. Its most abundant growth is witnessed near the river margins, and it is stated that in the South the courses of streams may sometimes be traced by it when in flower. The species is familiar in English gardens, and in France it has been largely cultivated. Its buds are used for pickling, and otherwise for culinary purposes.

A species flowering in soft yellow all over Central Park is the Norway maple, of which the foliage, appearing at the same time, is similarly colored. The tree will be again of a fine yellow in decay. Its cordate leaves are smooth, their fine lobes being acuminated with a few coarse acute teeth; the flowers issuing in loose pannicles are hardly brighter than the tender early foliage. The whole mass is suggestive of a body of sunshine, the idea being aided by the profuse and even distribution of specimens. This variety parts less quickly with its flowers than the red maple (*Acer rubrum*) which a few days since was more highly conspicuous. The latter—called also soft maple, swamp maple and scarlet maple—recently in its bright crimson or scarlet flowers crowded in whorls on the purplish branches, is already past the height of its magnificence. The leaves succeeding the flowers are three to five-lobed with sinuses acute and varying greatly in form, being irregularly serrate and notched, with the middle one usually longest. From the leaves being

whitish underneath they form with the reddish twigs a piece of pleasing color even without flowers, and the foliage becomes bright crimson in early autumn.

A short distance from the Casino southward are seen some specimens of the weeping poplar with their very ornamental catkins. In other localities also throughout the park appear the flowers of poplars, with the red tinge of their anthers producing a considerable effect of color in the mass in cases where the catkins are numerous. This species might be more familiar than it is in New York, aside from the park, as it is known to be capable of thriving in towns in the closest situations.

The birch (*Betula*) is another of the species showing flowers in the form of catkins, in which the leaves simultaneously make their appearance. While very beautiful and picturesque, the common species (*Balba*) is found one of the hardiest and most useful trees in cultivation. The records of forestry represent it as forming gigantic forests from the Baltic to the Eastern sea, and forests in Italy up to 6,000 feet altitude, while in Greenland, although of diminished size, it is discovered as the only arboreal vegetation. It is traced in the United States from New Brunswick to Delaware. In middle regions the silver, white or common birch grows from fifty to sixty feet in height; its round, slender branches—which are proverbially connected with the discipline of the young—give it a trim and stately appearance. According to the best authorities, the birch is highly useful for skirting and protecting more tender subjects, and being specially desirable for clothing mountainous and exposed districts. It has also the advantage of growing quickly in bare places, although best adapted to moist situations. The leaves of this species, which are rapidly coming forward, are ovate, acute, somewhat deltoid. Their autumnal tints will be distinguished in rich yellow, scarlet or red.

Along water margins and elsewhere in Central Park are specimens of the different varieties of the willow or osier (*Salix*), of which the flexible branches and long pointed leaves are familiarly known, as well as the catkins issuing from single scales, which are two-flowered, the calyx of four little scales being inherent with the scales or bracts of the catkin. Among the island shores at the lower end of the park are also numerous alders, of which one variety of flowers began to appear in the latter part of last summer, being then perfectly formed, and thus remaining in long cylindrical pendulous catkins during the winter. These began to expand as early as April, being delayed like other floral growths about two weeks beyond the usual time of development. These are the sterile catkins, the fertile ones, produced only in spring, being of short, ovoid form somewhat resembling a fir cone, the flower cup being four-parted and showing four stamens.

The flowering of the elms—which is sometimes polygamous, showing at once sterile, fertile and perfect flowers—is quickly succeeded by the peculiar fruit called samara, containing a seed within a membranous envelope surrounded by a wing-like border. The samaræ or mature seeds fall to the earth as the leaves expand. The species is not here represented by extraordinary dimensions, the celebrated giants being found in the New England States, of which some have been reported as measuring upward of twenty-five feet in circumference. The various forms of the tree are classified as the Etruscan vase, the plume, and the roundhead, which shows a hemispherical top. The cherry trees have also shown a profusion of white flowers at 105th street near the western limits, and visible from the roadway, as also in the neighborhood of the greenhouses and in different places. On Sunday last thousands of dogwood flowers displayed their loveliness to visitors at the East Drive and adjacent walks, with a few specimens to be seen elsewhere in their dim tinges of salmon and red enlivening the creamy tone of the heart-shaped petals.

THE PILEATED WOODPECKER.—The pileated woodpecker (*Hylotomus pileatus*) is quite often seen in this State. Here it is commonly called a woodcock or cock of the woods, while some assert that it is "the real English woodcock." This bird is one of the handsomest of the woodpecker family, the ivory-billed woodpecker (*Campephilus principalis*) alone excelling it in beauty. Its plumage is glossy black above, and it has a large flaming scarlet crest which stands erect on its head; underneath the wings some white feathers are seen when it is flying. Its long, strong, wedge shape beak is dull black; its feet are also black. Its whole length is about twelve to fifteen inches. It is somewhat shy and difficult to approach within close gunshot, although they often alight on trees quite near by when one is standing still. They make a shrill, cackling noise, somewhat resembling the bluejay. When on hollow, dead trees, they make a tattoo that can be heard half a mile. They are rarely seen on the ground, and never search in the earth for food like the golden winged woodpecker (*Colaptes auratus*). I have only seen one of these birds in middle and northern Wisconsin, and none in Michigan. They used to be quite common in Illinois. In all my rambles, during several years' residence in Florida, I have never come across an ivory-billed woodpecker. I very much desire to know more of this rare bird, and I would ask any one who reads this article who happens to have seen and killed them, or watched their nests, to give a description of same. I wish those who have seen them would state the fact in a short item in these columns, so that we may know where they are to be found, and in what State they predominate.—RED WING (Glencoe, Fla.). [A correspondent informs us that an ivory-billed woodpecker was killed at Lake Ohame, Fla., the past winter.]

HABITS OF THE PRAIRIE DOG.—I have read with interest the many letters of your correspondents about the habits of the prairie dog in regard to his drinking water. Now I should like to add my mite. I know nothing whatever about the animals in their wild state, but have been watching the small village in the Philadelphia Zoological Garden a long time. They are always supplied with water there, and last week, while I was looking at them, I saw two drinking at once, and on speaking to the keeper about it, he said that he also had seen them drinking, though very seldom. This is conclusive to my mind that they do drink water, and I suppose in their natural state they find some means of procuring it if it be a necessity with them.—H. H. M. (Philadelphia, May 12).

WHITE PELICAN ON LONG ISLAND.—An adult female *Pelecanus erythrorhynchus* was killed May 11, at Roslyn, L. I. It was seen flying about for some time by two men who were gunning, and when at length it alighted in the marsh, they approached it by way of two different creeks. When the bird rose it flew within shot of William H. Setuk, who killed it.

HOW MANY DISASTERS.—I must tell you about our bad luck with the birds this spring. There are a good many cherry, apple and pear trees around the house, and grape vines too. These are the homes of robins, bluebirds, sparrows, wrens, kingbirds, yellow-breasted flycatchers, orioles, yellow warblers and catbirds. Every year, and with wonderful regularity, they return to their accustomed haunts. Last year I put up a new box for the bluebirds and one for the wrens; both were occupied. The old bluebirds and their brood have been about, at odd times, all winter. This spring I noticed a pair of them as usual, but they seemed to have weakened on their house in the pear tree, and to have a fancy for the vicinity of the "Hotel Brahma," as we call the new chicken house. One day the female disappeared. Her mate remained near by, but seemed uneasy and disconsolate. We solved the mystery when we took the stove pipe down, for in it was the little mother, starved to death. She had mistaken the hood at the top for a new and possibly improved style of dwelling, and once in could not get out and so perished miserably. The widower has not re-wived, though we are in hopes that he will return to some first love and go to housekeeping in the old spot. On the 27th of April, ten days before the usual time, a wren appeared. He did not occupy his last year's quarters, he did not even inspect them, but took up his abode in a neighboring garden, and scarcely even makes a call on us. Yesterday I noticed that the roof of his old home had curled up with the weather, and climbed the tree to nail it down, when lo, the second mystery was ravelled. There, in the nest that he and Jenny Wren had built last year, were the shrivelled and wasted forms of their little family, three in number, lying on their backs with feet extended, side by side. No wonder he moved on the 1st of May. I would have done the same. One more disaster and I have finished. A pair of cowbirds have been making themselves quite sociable with us. They are not very pretty as you know, but they are harmless and useful. The female sat on a butternut tree the other day in the midst of a snarl of branches, and in a thoughtless moment, "just for fun," I fired a bullet breech cap in her direction, meaning only to startle her and not expecting to come within a foot of her. She was just thirty-six yards off. Did I hit her? Well, I would give a dollar if I hadn't.—J. L. K. (Perth Amboy, N. J., May 9).

Game Bag and Gun.

A HUNTER'S CAMP ON THE ILLINOIS.

SOME time ago I sent to the FOREST AND STREAM an account of a camping expedition on the Illinois River, in the fall of '83. Most of the same company pitched their tents there in November, 1884, above Sharp's Landing and within a stone's throw of the river on the right bank. We missed the Senator, the Mate and the Bantling, but in their places came Frank, a dominie who seemed to take naturally to rubber boots and a "shake down" of dry leaves, and Roll, whom we will surname the Baron, as he had evidently been reading "Munchausen" just before he left home.

Frank and the Parson were the last to arrive at camp as night came down, and they blessed the Deacon, whose good cooking had just been put on the table and surrounded by the boys. They had rowed up the river a couple of miles against the sluggish current, from the landing. The water, unruffled save where the feeding fish leaped up and showed their shining sides, reflected every leaf and twig of the overhanging elms and willows. Nature's color box must have been emptied to have stained the trees so richly. All sounds were magnified, a distant train rumbled like an avalanche, the voices of children laughing a mile below, a gun fired, probably on the distant Sangamon, a dog barking on the bluffs, sounded as though they might be just around the next clump of willows. The evening sun shone through a thin haze that made it look red and near.

Appetites were sharp under the trees that night, and every day afterward for that matter. Not a drop of rain fell on the camp nor threatened it, and though a little cool at 5 o'clock in the morning, the outdoor dining room was used clear through the week.

With the first faint light of another day the eager hunters were up and off. Tom and the Parson pulled a boat over to Big Lake, and Isaac took possession of another that had been hauled over the night before. The ducks streamed over the lake by thousands, but not within gunshot. In vain were decoys put out temptingly; the birds would not decoy. The boys who crossed the river and tramped through the tall grass of the "open" places were better rewarded, bringing back a dozen mallards.

By this time the Deacon had the inevitable by-laws ready. Hours for meals were clearly set down, with the usual penalty that for every tardiness each hunter was to forfeit one duck to the cook. This is his favorite penalty, and several other offenses were threatened with the same dire punishment. Nor did the good Deacon propose to tolerate profanity or ill temper. The one involved the transgressor in potato-paring, and the other in fire-building. One fellow, who had just been trying to rake his face dry with a rusty-looking towel, wanted to add to the by-laws that towels should not be used after they could stand alone. As a penalty for breaking all the by-laws, a man was to have the tip of his ear shot off. This regulation was suggested by the fate of an old sow, who, with her following of a dozen pigs, kept cruising about the tents until some one's gun went off, and then she went off, but left an ear behind her as a keepsake for the boys. This plan for getting rid of the swine worked better than the Baron's, who baited a big fish-hook with a biscuit for them. Some way or other they did not find the biscuit.

The Parson and Tom went back to the lake, and had little better luck than in the morning. Clouds of mallards and bluebills rose out of range from among the "yawker" nuts upon which they were feeding. But it is one thing to see ducks, and another thing to get a chance to shoot at them. The mud hens were innumerable. As they ran along the water for a rod or two, spatting the surface with their swiftly-moving feet to give themselves a "rise," they made a terrible clatter and commotion. Tom managed to restrain himself from shooting but a single time, though that was enough to diminish the multitude by one, not an easy thing to do always, for though the bird looks as large as a good-sized duck, its body is really small. But the Deacon outdid the crowd on the mud hen business. An hour's hunting at a pull usually satisfied this philosophical student of human nature. At the end of the hour he was generally quite content, no matter what his luck, to return to camp, and fill out the day in devising some new convenience or viand for the nimrods. Remember, he was no hired cook, but filled that office because he loves camp life and his fellow men. Lots of the milk of human kindness has the Deacon.

But to return to his mud hen which is getting out of sight, which it did most effectually, as the sequel will show. Tramping along the shores of Big Lake, he discovered what he thought to be a duck, but which was really a mud hen. He blazed away and the bird keeled over, but only to revive and start for the tall weeds which fringed the lake a few rods from shore. He couldn't bear the thought of losing that, his first and only bird, so in he dashed, regardless of the cold bath, and the game was soon his. That was glory enough for one day, and he went to camp. John was there when the Deacon arrived, and he told of his proud entry. With a gleam of triumph in his eye he put the trophy of his marksmanship on the ground, and both were looking at it. It began to draw itself together. Suddenly it stood up. The Deacon grabbed wildly as the bird started. Away they both went, and if ever a mud hen made tall tracks for deep water that one did, and it got there.

Did you ever sleep in a "sardine" bed? that is, with half a dozen men or so in a row? Good enough in cold weather, but on a warm night, whew! It came near being purgatory one night. John on one side and Frank on the other, were anxious for me not to get cold, and I didn't. But on the whole, our nights averaged more sleep to the man, I'll venture, than if we had been at home on spring mattrasses.

The next day Tom and the Parson stubbornly stuck to the lake, and were still unlucky. The Parson make a good sink-box by taking an empty coal oil barrel, and staking it down in about three feet of water and at the edge of some thick grass. Four stout stakes with crotches at the top, were used to hold it down. The only trouble with it was, it seemed too far away from the ducks. Tom's live ducks had been brought out to reinforce the wooden decoys. An old hen mallard was tied in the grass where she could not see the others, and she kept up an incessant quacking. But it did no good. The birds would not decoy. Just at dusk they came plumping in from every quarter, and then the guns grew warm. A dozen ducks were soon tumbled upon the water, but only half of them could be found in the dark.

The rest of the boys came back, each with a string of ducks. Steve declared he would have had another bird, but just as he was about to shoot it, an enormous mosquito, which had seized his ear, jerked his head around so as to make him miss his mark. Frank insisted that he, too, would have brought in one duck more, but just as he was about to shoot it, he discovered it was not a duck, but a gallinipper. The boys may have been telling yarns, I can't say. The mosquitoes were quite large this last fall. The Notary and Isaac came back as usual with a moderately good string of birds. The regularity of the thing soon began to make the sapling, where they hung their game, bend with a new kind of fruit.

The next morning all crossed to the tall grass. All the rest of the shooting was done here. The grass reached sometimes to the waist, sometimes to the shoulders. It grew where, in spring, there are shallow lakes; and there was in November, though there is not in midsummer, six inches or a foot of water. Here the mallards were lying, alone or in pairs. It was slavish work to walk them up, but if a man had wind and muscle enough to stick to it, he could, in a day, get many fine shots, the huge birds rising at thirty or forty yards and going away across the top of the grass.

Some of us concluded that luck, as well as good shooting and staying powers as a walker, helped John to make the best score in the camp. Four of us one afternoon walked abreast through the elbow brush and grass. The first bird that rose must have been almost walked over by Frank and the Baron. It rose when we had passed on out of range; and then "Kismet"—it was fate—it circled back to the right of our line, and came square to John. Of course it tumbled at his feet. In an hour he had all he wanted to carry. The Baron declared that John shot some birds so high that they had time to spoil before they struck the ground, and added his favorite exclamation, "Or I'm a liar." Of course no one denied it—that is that the ducks were killed high.

By this time some of the boys were getting sore arms. Heavy loading made their guns set hard, and they began to wear what some one dubbed "bustles"—a padding of newspaper tied just where the rebounding stock struck the arm; not a bad idea, by the way, if your gun should some time take a kicking spell.

Part of the last evening was spent in listening to a sermon from Frank. This was a new way perhaps to close up a hunting expedition, but the boys insisted on it, and, seated on a camp stool, Frank talked to us in a brotherly way that did us all good. Steve, Isaac and the Notary had dropped down the river in the afternoon, and the rest followed the next morning. The hunt was over. We would hear no more the Baron's "Bet your neck," John's familiar "Now listen to me," nor the Notary's hearty laugh, unless perchance a passing year should bring us all together again. For this we went home heartily wishing. RICHARD GEAR HOBBS.

QUINCY, Ill.

THAT MAINE VENISON.

Editor Forest and Stream:

I see in last issue of FOREST AND STREAM you call attention to the report of 2,700 pounds steaks of venison, hindquarters, having been hauled into Kingfield for shipment during the month of April. I must say, if this is correct, it is a disgrace to Maine, but I think there must be another side to this story. Protection has enemies, and some where we least expect. There have been a number of communications during the last six months, purporting to be from friends—some from Massachusetts, I think—which have shown our border protection, or properly, our game wardens, in bad light; in short, the object seemed to be to find fault. Some things, I feel, were not properly represented. I know the lumbermen are not all poachers, especially those that operate, but that there is a class of law-breakers throughout the whole State that nothing save the full enforcement of the law can prevent from destroying all our fish and game I know too well, but is faultfinding with a few officials to correct this wrong? Our Commissioners are doing their best to save our game this spring, and, as a rule, throughout the State the laws have been well enforced. Yet many deer have been stolen, for it has been an unusually hard spring on account of the long time the crust continued, and the large number of idle men. In Washington county the wardens have been active since January, and have saved the game; and now the prospects for all sorts of game is better than for years; but the wardens were backed by the citizens, and all criticism of the ways and means used does not come from the friends of protection, but from its enemies.

If Washington county had depended upon officials alone and had not taken interest in protection, it would not now dare to boast that it is the best deer park in New England, if not in the United States, although small.

I would have the citizens of Franklin county form a fish and game association at Farmington, and have it work under or with the direction of the Commissioners. Skowhegan or Waterville would be another point where an association could do good work. I know the Commissioners would aid in such a move.

I see no difference in nationalities as to their poaching proclivities. Our appropriation should be large enough to have a good police around the whole border, but as it is our efficient wardens can do a great deal to preserve our privileges. If we know laws are broken, we should inform at once the proper officers or else be silent and remain recreant to our duty and enemies to law. There is no such thing as neutrality to protection, for we are either for or against, say what you please. It has ever been a great help to us in Maine that you have given us a chance in your paper to discuss this subject of game protection. I do not wish you to think in this hasty communication that I am finding fault, but I do wish to ventilate this whole subject of game protection in Oxford, Franklin, and all counties upon the border. I know our Commissioners are not parties to rottenness. OLD TUG.

MACHIAS, Me., May 11.

[If we correctly interpret the above, the writer means to hint that the report of the venison case came from some of the enemies of Maine game protection. This is quite far from the fact. Our information that the 2,700 pounds of venison had been hauled into Kingfield came from a source which we cannot for a moment question. The venison was there; that is a fact that can in no way be disputed. The record of the weighing can doubtless be had from the customs official.]

AN UNVARNISHED TALE.

OUR party usually consists of from four to six persons who have had a deer hunt annually for the past fifteen years, sometimes camping, but of late boarding in some private family. Three of our former number have passed over the river and we miss them, for better hunters are not to be found. We have our party kept up by the addition of new members. Mr. P. of Penn Yan, N. Y., has been one of the party for more than fifteen years, and has not failed to put in an appearance at the appointed time each season. We made arrangements to leave Palo, Mich., Nov. 10. Our party consisted of four, P., the Doctor, Cob, and myself. Our arms were two repeating rifles .44-cal., one double shotgun with auxiliary barrel .38-cal., and a Baker three-barrel, 10-bore shot, rifle .44-cal. We arrived at Baldwin and found P. and Caster with the team, ready for a ride of seven miles over a rough road and the night so dark that if the horses had not been white we would have been unable to have seen them. Mr. Caster being familiar with the road, we arrived safely about midnight.

Tuesday, Nov. 11.—As we had hunted on this ground more or less for a number of years, each one took his own course, with a view to looking over the ground and to see what the prospects were for deer. Comparing notes in the evening we found that not one of the party had seen a deer. The weather was warm, leaves dry, and the hunting noisy, and it continued so for nearly two weeks.

12th.—Cob brought with him an old dog for the purpose of trailing deer, wounded or otherwise. This morning Cob took his dog, P. and myself going with him. Cob led the dog and carried a bell. The dog was trailing two deer. P. and I were keeping near, but somewhat in advance of the bell. About 11 o'clock we raised the deer, and P. got in some three or four shots as they were running through the oak grubs. On examination we found blood and that the two deer had gone into a narrow strip of thick oak and pine bushes, a clearing being on each side and a road on one end. I ran around to the road and took a position where I could command a view of the brush bordering on the road. P. took a position in the field on the west side. Cob followed the track with the dog. I had been at my stand but a few minutes before the wounded deer came in sight, within range, and I made my first shot, scored a miss, but got a second, which took effect in the shoulder. The deer now ran across the field where P. and Cob were at this time, and now the shooting match commenced, which resulted in bringing to bag our first deer, after twenty-six shots. On this and on another occasion I was using a .38-cal. repeater, very kindly furnished me by Mr. Caster. I went to the house and reported progress. Mr. Caster took his team and brought in the deer, and from now on we had venison to eat. This was a forked-horned buck and fat. The other deer passed out on the east side and escaped. In the afternoon P. and Cob trailed a fawn and wounded it in the hind foot, and after a long tramp failed to get it. Doc hunted by himself, but failed to kill, although he had some shots.

13th.—Cob took his dog and trailed the fawn they left the previous evening. He soon raised it and shot it. Second deer. No others reported to day.

14th.—I was standing on a runway this morning, when a fawn chased by a small dog belonging to a resident here, ran past me within six rods, and I scored a clean miss. And right then and there I thought of my own gun and the ammunition that was not within my reach. A nice deer lost by some one's carelessness. I think my box came this evening, and from this time I used my own gun. The week closed without bagging another deer, although the party got in a good amount of running shots among the oak grubs.

16th.—Sunday was a day of rest, and occupied chiefly in reading.

17th.—I think that this day Cob shot a forked-horned buck. Some day before this, three of the party were hunting in company, when P. got a running shot at a deer which ran to the Doctor who shot at it, then it went away. The Doctor claimed it was crippled. Cob started this forked-horned buck near the same place, and found when he got it that one foreleg was broken, and we concluded that this was the deer that P. and the Doctor had shot at. This evening we had an addition of two to our party, Harv and Bill of Muskegon. Harv had been one of our party in a number of hunts in former years, and for getting shots and missing deer he will hold his own with any of the party. Bill was a new man in the party, young, large, excitable and full of hunt; so much so, that he was sure to be in advance of any of the party when hunting in company with them. They were armed with Kennedy rifles, 44-caliber.

18th.—We started out this morning six strong, and went to hunting grounds about four miles northeast, where we had killed many a deer on former occasions. Within a few years there had been three logging roads built, on which are used locomotives, and large tracts of pine have been cut and removed, and fire has run through the choppings, leaving the ground almost destitute of any cover for deer, yet the deer feed on the grass and other green things that grow very quick after a burning. We usually find an abundance of tracks on these choppings where the deer have been during the night, and occasionally find a deer there in day time, but they generally go to the thickets and lie down during the day. Cob, with dog and bell, started through the chopping, the rest of the party, some on each side of him, keeping within hearing of the bell. It was not long before Harv saw a large buck some two hundred yards distant in the slashing, and commenced shooting, the deer at the same time coming nearer to him. But just at this time a fawn that had been started came near running over Harv, which took his attention for the moment. Without going into details, I will say that he pumped his magazine empty, and both deer escaped without a scratch—thirteen shots.

19th.—Cob made three shots at a very large buck. One of his cartridges missed fire and he tried it the second time, and it failed again; he then threw it out, but as the deer was doing his level best in getting through the brush, Cob laid the blame all on the bad cartridge for his not getting that buck. Some of us were not so fortunate as to have misfires to help us out when we did some poor shooting.

20th.—Hunted with a bell, and took a big tramp. A number of deer were seen, but all at long ranges, except a fawn which ran the gauntlet between three of the party, each making two shots at it. I never felt more as though I would like to be somewhere else than when that shooting was going on. It appeared to me that they were shooting right toward me, and I was not far off. I caught a glimpse of the deer as it passed me, and it was going for all it was worth, and so I let it go and did not shoot. Perhaps I ought to make some apology for the Doctor, Cob and Harv for their bad shooting at this time. Well, in the first place, the deer was being chased by that little dog that I referred to on another occasion; and secondly, the deer was in the midst of them without any warning, the bushes being quite thick, and the dog gave no tongue. We feel disposed under such circumstances to let them down easy, for we know how it is ourselves. After this we proceeded, and came to where another party were hunting with dogs. A boy with a Zulu had broken the leg of a doe with buckshot, and the party were after it with a dog, when it came within range of P., who shot it. They paid us $1 25 and took the deer, and were well pleased. Thus ended this day's hunt.

21st.—The weather continued dry, and still-hunting was a dry business, so we took two small dogs to start deer out of the thickets. I took my stand where I was when I missed the fawn with the repeating rifle, but misjudged her position, for I only got a quantity of hair and a small piece of skin. The party now got together and went in the direction taken by the doe, and soon started three deer, a doe and two fawns. The Doctor and Cob had gone to some runways about a mile distant. I with some others of the party were following through with the dogs when we heard the shooting begin. Cob saw the deer coming, and as they were going to pass below him he had to run about fifteen rods to the brink of the hill so as to see them as they passed, but being young and a good runner he got there and put in about seven shots, and the Doctor, being further on, got in two shots. Cob had laid out one of the fawns, but the Doctor failed to stop the other fawn. Cob when running to get where he could see the deer sprained one of his ankles, which accident came near spoiling the rest of his hunt. After hanging up the fawn, P., Harv and I went to some stands a mile or more distant and waited for the rest of the party to drive through with the dogs. They soon started the doe, which soon came in sight, and P. got in three or four shots. Harv being some eighty rods in advance, got in four or five shots. I had taken a position across a valley about sixty rods in advance of P., and saw the deer as soon as P., but at his first shot the deer turned to pass out of the valley between us. I ran to get a view of the valley, but his second turned her, and she passed directly in front of where I had been standing. I got back in time to see Harv make his shots, and to see the deer run some eight rods with flag hoisted and making good time. As soon as we came to Harv, he said he had shot the deer through, and that she had lain down within a few rods of where he had shot her. We took the trail and found some blood, only occasionally a drop. Something very singular happened. After following some distance, P. picked up a piece of fat some three inches or more across each way, and as we followed on we found a number of smaller pieces. I don't recollect of seeing anything of the kind before, although I have hunted for more than forty years. As the trailing was difficult, Harv went to the house and got Cob's dog. We waited until he came, and then started on the trail, and raised the deer within a mile and shot her, and on examination found she had been shot through the paunch, and that there was protruding from the ball hole quite an amount of fat. This finished this day's sport.

22d.—P. and Cob shot a deer which, after being wounded, ran on to a pond that was frozen over, but the ice would not bear a man. In the evening Mr. Caster took his team and boat and some of the party went and brought the deer home.

23d.—Sunday. During the past night it rained, and today the weather changed, grew cold, and snowed some.

24th.—Fair tracking snow this morning. The Doctor killed a small buck to-day. Have had a number of shots today at long range, but failed to kill. Cob got some hair from a buck. Just before dusk the Doctor got a shot at a large buck at long range, and shot him through rather too high. Bill followed the track and found him lying down, and found he was bleeding some, but he got away, Bill shooting as he ran. The doctor had started for home and was in a road when the buck crossed near him, when he put in a couple of shots. It was now getting dusk and they came in. The Doctor did at times the thing that he did not wish to do, and this was what was the matter to-day. When he intended to shoot buckshot he was sure to shoot the rifle, and that was his excuse for not killing the buck when he crossed the road.

25th.—It snowed during the night. The Doctor and Bill went for the wounded deer but were unable to track him. This was one of those unlucky days when, with a good snow, we failed to get a deer.

26th.—The Doctor and Cob still-hunted—Cob got two fawns. The Doctor found the buck he had wounded dead, and he brought home the skin. P., Harv, Bill and I concluded to try the bell again to-day. I took the bell, and soon found a track which I followed a long distance without starting it, but started four others which ran past Bill, who got in about eight shots, wounding two slightly. I then took their tracks and followed till near night, but we failed to get any of them. Deer act very strangely at times, and these were not an exception. I followed them to within about four rods of a large tent and stable where there was a party camped, and one person in the tent and five deer hanging in front of the tent, and it appeared from the tracks that the deer had stood and took a view of all the surroundings, and then walked away without being frightened in the least, while four of us had been doing our best and failed to get a shot after Bill's first shooting.

27th.—All of us started in company this morning and found two deer not far away. Harv got the first shot and wounded one, and now four of the party commenced pumping their magazine guns, and kept it up as long as there was a deer in sight. One was killed; the other got away without being hit. After hanging up the one, P., Cob and I went for the one that ran away, and after following it a long distance and starting it a number of times without seeing it, and finding it was coming back to near the place we started it, P. and Cob proposed to go and get on some runways, while I followed the deer through. After eating my lunch, being very cold, I put on my mittens and started off, without any idea of getting a shot myself but hoping that P. or Cob would stop it on the runway. After following about a half mile I came within about forty feet of it, lying just on the opposite side of a log from me, and looking directly in the opposite direction from where I stood. I got that mitten off pretty quick and shot it before it got up. This was my first deer. Bill shot a fine doe, making three for this day's hunt.

28th.—We started out this morning and soon found the track of a buck which had gone into a piece of dry timber and thick undergrowth and lain down. P. was on the track, Harv was on one side and I was on the other. P. started the buck, and he came sneaking along, jumping very low, with tail down. When passing me within a few rods, I gave him a charge of buckshot, which brought him down without more shooting. This was the only large buck killed during our hunt that was got in good condition, the Doctor being unfortunate in losing the one he shot.

29th.—To-day we gathered in and skinned out our venison, packed our boxes with about eighty pounds each of the best of the meat, which we took home and divided with our friends.

30th.—Mr. Caster took us to Baldwin, where we took the early train, arriving at Palo in the evening, having spent three weeks very pleasantly, feeling that our hunt was a success, not in slaughtering deer, but in the sport and recreation that the true sportsman only knows how to enjoy. I have made this hunting story too long, and if it needs an apology, all I have to say is, that I will not be likely to tell many more, as I have passed my sixty-ninth birthday. If my health permits, I hope to take another hunt next fall. If this goes into the waste basket, I have enjoyed thinking over the hunt and the evenings enjoyed in telling over the incidents connected with each day's sport.

STILL-HUNTER.

PALO, Ionia County, Mich.

OUR PANTHER.

IT is now about a month since, in writing from New Orleans to the Northern papers I represent, I related my first experience as a huntress; experience which had but lately come to me out in Western Louisiana. Other papers took up the item, copying and recopying, until my friends began to write me, inquiring what it all meant. "You ninety-pound disciple of Eli Perkins," says one, "do you think anybody will believe all that? *You* out hunting!" "I know your constitutional terror of firearms," writes another, "you quake at the sound of the shot in the hem of your riding habit." And so they have all beset me, with an effect, to say the least, discouraging on a young writer. I would, therefore, be glad of an opportunity to narrate, in prosaic and unemotional sentences, the actual facts concerning the panther that we *did* shoot.

We were part of a happy party of excursionists (chiefly from the North) who had left New Orleans early on Ash Wednesday for a fortnight in the western portion of the State. We were chaperoned by an estimable Louisiana millionaire, his brother-in law and sister. We numbered over thirty, only three being ladies. We had all sorts of objects in view. We wanted a change of scene; also a good time; also to pluck oranges with our own hands and shy them at the pigs; also to witness the wonderful marsh-reclaiming operations on a certain million-acre tract of land; also to do some fishing; also some hunting; also to take "a day off." Nearly all the gentlemen were provided with guns, and we were so fortunate as to have with us the champion shot of Louisiana, Mr. Granville Shaw. We took this route: Left New Orleans at 8 A. M. by Air Line to Lake Charles, a pretty town 218 miles directly west. At Lake Charles, on the lake of same name, boats awaited us, which were specially victualled, cabined-off and provided with colored servants. Nothing had been left undone for our extreme comfort and happiness. And I am sure none of the company will ever forget those happy, adventurous days. When our fleet had circled about a bit in the lake, we started southward through the Calcasieu River into Lake Calcasieu. Here we loitered several days and watched the immense pumps, engines, plows, ditchers and drainers at work making fine land out of desolate swamps. Then we at last proceeded on to the Gulf. Meantime our gentlemen had had some trifling shots by the way. Plenty of ducks, blackbirds and even alligators had presented themselves. But shooting in earnest was deferred until we should have passed up the Sabine and anchored at Orange. This we did safely after an uneventful thirty-six hours space on the Gulf. Our hunters were now all ready and anxious to proceed to business. Such of them as I am at liberty to mention are: J. B. Watkins, of New Orleans; Prof. Thompson, of Lake Charles; Granville Shaw, of Abbeville; Dr. McCoy, of Kansas City; Duval Sweeney, of San Francisco, Thos. Rees, of Springfield; Major Foley, of Cincinnati; E. D. Calkins, of the Burlington *Hawkeye*; W. A. Croffut, of the New York *World*, and Hon. E. Moody Boynton, of Boston. Besides myself, there were two ladies (one a chaperone) whom I may only mention as Mrs. F. and Miss G. In attire we strove to approach as nearly as possible the regulation outfit, at the same time endeavoring not to lose sight of the picturesque. Rubber jackets and boot-leggins for the men, while we poor women did the best we could in our plainest dresses, skirts looped high, stout boots, gossamer waterproofs and "lone-fisherman" head-gear. It seemed a pity that we could not be photographed as we looked that cloudy morning; we thirteen gunners.

We had purposed penetrating the forests north and east of

Orange City, but a change of programme was now suggested by two mercurial and sanguine members of the company (any one acquainted with Messrs. Croffut and Boynton will readily comprehend the allusion). These gentlemen proposed to investigate the country midway between the Sabine and Lake Calcasieu, where, they had it upon excellent authority, we should find bigger game than duck. Their persuasive and magnetic utterance had its effect. Within an hour we had engaged horses and wagons, piled in blankets, tents, a supply of food, and, lastly, ourselves. Whoop! Off for the wilderness, on a grand cross-country drive. The air was delicious, the riding easy, save in one or two instances. I think we struck one rut. I have a distinct recollection of turning a somersault in the air and landing with some force among a lot of reeds and palms, from which the gentlemen finally extricated me with tender compassion and politely suppressed merriment. I was only scratched a little.

It was long past 4 o'clock when we halted to locate our camp, in good clear space, having only an occasional live-oak. We were all tired, and after our camp supper were glad to crawl into our two tents—a small and a large one—and sleep serenely. The weather of the next day was highly propitious. Breakfast consumed, we set forth in twos, each lady appropriating a gentleman; six gentlemen doomed to walk with those of their own sex, and the thirteenth leading the way with evident spirit. We were all good walkers, and not one complaint was heard when we began the entrance of a deep wood, where the cypress stumps made footsteps rather uncertain. I think my only regret was that I had to carry a pistol for my own use, and risk the chance of borrowing a gun from one of the men, if I really couldn't do without killing a duck or two.

We had wandered for an half hour in this forest, when some one cried out sharply: "Oh, look quick!" I turned; it was Miss G.'s voice. She was very pale, and her gaze was lifted to the lower branch of a massive live-oak a few yards ahead. I put on my glasses quickly. Now a murmur ran from lip to lip, and yet the men seemed paralyzed by the sight. It was beautiful and strangely fascinating. A creature larger than a large-sized dog, yellow-coated, sleek, supple, fiery-eyed and at liberty. It awed one; it shamed one to think of destroying such a magnificent living shape. And then there was the quick sound of raising guns. Mr. Boynton and Granville Shaw were in the lead, the first-named dangerously near the beast, which now showed signs of intense anger. Every one seemed to take aim save the poetic Mr. Croffut, who stood next me and appeared powerless. "I can't," he whispered hoarsely, "I can't kill anything so beautiful."

"Give me your gun," I cried, snatching it from him.

And to this minute I believe I might have covered myself with glory, but the poetic gentleman interposed with another dramatic and imploring whisper: "For heaven's sake, don't!"

Of course I didn't. One doesn't like to be made feel a murderess. Bang! It was Boynton's gun. Then a wild cry from all. The beast had suddenly leaped from the tree down upon the Boston gentleman. Another stunning sound! Then the smoke rolled away. Man and beast lay prone among the harsh undergrowth, beast atop; but a hopeful voice reassured us:

"I am all right, but he's awful heavy; please get him off me."

Granville Shaw's cool head and steady arm had saved all. The panther, for such it was, was quite dead. It was truly a strange experience. I have given it here as prosaically as possible, and with strict regard for the truth. But I shall always maintain—and feel a little regretful thereat—that but for the poetic sentiments of the New York journalist, whose gun I had snatched, *I* might have been the one to shoot the panther.

LILY CURRY.

PHILADELPHIA, May 16.—Shore birds are on in force, and the passing flights on the New Jersey coast are now being well saluted on their way north. Few flocks stop to feed, but every southerly wind forces them to keep close to the bay side of the beaches within sight of the decoys and within hearing of the gunners' whistle. The grounds near to Cape May Court House, N. J., have been visited this week by a number of Philadelphia sportsmen with only moderate success. A party of three, just returned from Ocean City, on Sinnepuxent Sound, killed over 200 in two days, mostly brown larks and willets. The birds "went a begging" when they reached Philadelphia, and none but the unsophisticated could abide their sedgy flavor, which is more noticeable in the spring than in the autumn, when it is bad enough.—HOMO.

THE WOODCHUCK AS A TREE CLIMBER.—Chester County, Pa., May 13.—This morning while walking in the meadow back of my boarding place, I heard the farm dog barking loudly a little distance ahead behind a knoll, the note indicating that he had treed something. I hunted him up and found him at the foot of a large chestnut tree, to the bare body of which, at a height of about twelve feet, clung a large woodchuck or ground hog. There was no limb near the animal nor below it, the trunk being smooth from the ground to the fork (some distance above the spot where the frightened creature had flattened itself against the bark), and here the tree was easily eighteen inches in diameter. The trunk was perfectly straight and perpendicular. He sleeps in the valley.—S.

COLIN INSTEAD OF QUAIL.—A North Carolina correspondent again calls attention to the fact that the bird which in this country is called variously quail, partridge and Bob White, is properly the colin. The Michigan Sportsmen's Association, it will be remembered, some years ago made an effort to reform this nomenclature, but the term colin was not taken to very kindly, and we doubt if it ever will be.

A JOKE WITH A GREAT FUTURE.—Long after many other kinds of wild animals have been exterminated, Ephraim will hold his own in the fastnesses of the wilderness, and long after the pelt of the last grizzly shall have been done up into a rug, that fine old joke about "not having lost any bear" will do duty as a choice specimen of indigenous American humor.

CONNECTICUT GAME LAWS remain unchanged.

"SUN" CHOLERA CURE.—Take equal parts of tincture of cayenne, tincture of opium, tincture of rhubarb, essence of peppermint, and spirits of camphor. Mix well. Dose fifteen to thirty drops in a wineglass of water, according to age and violence of the attack. Repeat every fifteen or twenty minutes until relief is obtained.

Camp Fire Flickerings.

"That reminds me."

152.

THE FOREST AND STREAM is like a trick at euchre, if you don't take it you never can get the fun back. I would not have lost the last number, which contained a narrative of "A Long Shot at a Swan," for a great deal. It was intensely exciting, especially that part which introduces "the small boy." So accurately does "Amateur" describe the loading of his gun, its weight, the charge of ducking and system of wadding, that it induced me to anticipate as I progressed that he had finally rammed the "small boy" into the shell, and that the trumpeter had come fluttering down with the youngster bestride of its back. Laugh not—there is nothing original in the idea to one who has seen the statuette of Leda and the feathered Jupiter in the Accademia della Belle Arti, at Venice. I feel grateful to "Amateur," for he reminds me of a still more remarkable shot than the one which he recounts, which I made myself. It was in the good old days of the muzzleloader, long before chokebores became the most powerful of all game preservers. It was the custom of those times for thorough sportsmen to stick a tallow dip in the muzzles of each barrel and let them burn down while holding his fowling piece in a perpendicular position. This prevented the outside of the gun from rusting and greased the way for the deadly charge. I had been shooting and had exhausted all my shot at an endless flight of ducks, "and the old gun was shooting as slick as grease."

Presently I observed a "whiteness" of swan feeding far up in the mackerel sky. Knowing that I had no lead in my gun I naturally concluded that the birds must be fishy. Still they were provokingly in shot, certainly not more than a mile and a half off. I had two clay pipes in my pocket. I broke the bowls off, dropped a stem down each barrel, and instantly fired. The well greased stems no sooner had issued from the gun than the air rushing through their apertures began sounding sweet and mellow notes, singularly like those uttered by extremely young cygnets. This attracted the attention of the swans who answered, and two large male birds left the flock and began descending with terrible velocity. They had almost reached the ascending pipe stems when they discovered their mistake and hastened to retrace their flight. Then came a most exciting and exhilarating race to contemplate, between the two swans and the two stems, both giving forth strange sounds. At first the birds were ahead, but finally the pipe stems overtook them and entered the thorax of the swans, thereby producing an escape of air and thus depriving the fair birds from uttering those sweet songs with which they are said to celebrate their death.

JOSEPHUS.

KENNEBUNK PORT, Me.

Sea and River Fishing.

EARLY AND LATE FISHING.

THE early bird catches the first worm, and the early angler generally catches his first trout with a worm. But the early anglers are none the less anxious for the ice to go out of their favorite waters. The weather is cold and the season is very backward. One week ago nearly fifteen inches of snow fell in Bangor, Me., and the lumber regions beyond, and eight to ten inches in the Moosehead Lake region. Further west, in the section of the Androscoggins, but little snow fell, but the weather has been cold ever since, and some nights ice has formed nearly an inch thick. Hence but slow progress has been made toward the clearing of the old ice from the celebrated Maine trout waters. The ice cleared from Moosehead last year about the 8th of May; from Richardson on the 11th; from Mooselucmaguntic and Rangeley, one day later. Capt. Fred C. Barker, whose experience dates back fifteen or twenty years, writes that the ice should leave Mooselucmaguntic by the 12th, but since that letter was written the weather has been cold and it is probable that these lines will reach the eye of the reader before the Androscoggins are clear of ice.

It is possible that somebody may think I attach too much importance to this ice question, but they should look at it from a Boston standpoint. More than one hundred merchants, tradesmen and men in the professions are deeply interested. Part of them have special arrangements for getting the news of the clearing of the Maine lakes by telegraph. They vie with each other in being the first to announce it. The fever is on them, and nothing will cure it but the annual spring trip to the Maine lakes. They will many of them go early, because they cannot wait. The fever runs too high. Some of us talk patience, and picture the miseries of cold winds and woods full of snow, but the ardent ones—the early fishermen—retort upon us with the horrors of black flies and mosquitoes and mosquitoes and black flies. We preach moderation and the beauties of nature in the late spring time; the evil of taking hundreds of small trout with a worm, as against the ecstacy—the skill—of taking a few noble fish with a fly. Again they retort with "black flies and mosquitoes and mosquitoes and black flies."

Well, a man who is afraid of a mosquito and is not master of a hundred black flies should not go a-fishing. It is mean to rush off the moment that the ice is out and destroy the trout by thousands just as soon as they catch the daylight after their six-months' confinement. The fish are hungry then, and it is as much sport to take a lordly trout then as it is to "hook up a sucker" in August. But just here let me explain how one may actually endure the woods, even in black fly time—from the middle of June generally, till about the middle of July. In the first place put on a handkerchief. Not one sportsman in a dozen knows how this is done. Even "Nessmuk" has not described the process on the blade of his hatchet. Tie a good-sized handkerchief around your neck, not by the opposite corners, but by the corners at one side. It will now hang down your back in the form of cape. Take hold of the two corners at the other side and bring it up over your head. Tie these corners together in a knot just above your forehead. If you have drawn the last knots down tight, your head, neck and ears around to your very eyes, will be completely protected. By the way, this form of handkerchief hood makes an excellent sleeping cap when camping out.

Now put on your hat. Well, but the front of your face is exposed. Use the Oil of Joy. We gave it this name ten years ago, when on a June trip to Molechunkamunk, because the only joy we felt was when it was fresh on our faces and hands. The mosquitoes and flies were thicker than—the workmen at the Upper Dam; tough Canadian Frenchmen were driven "to smudge" by them. Relief from misery would have been a better name. Take one part of Carolina tar—not coal tar—three parts of sweet or olive oil, and shake them well together. Enough essence of pennyroyal should also be put in to give the mixture a strong perfume, like the Carolina forest in spring time and the pennyroyal sheep pasture in August. This constitutes the Oil of Joy. Use it, like royal incense, on your face and hands freely. It will need renewing once every hour, when the sun is hot and the flies are particularly bad. Watch the result. The flies come up like a swarm of bees, within two feet of you. They can go no further. The tar and pennyroyal are too much for them. They form a complete halo around your head. Crazy flies outside, next the Oil of Joy, inside the fisherman!

Bah! You hold up your hands in holy horror. The nasty stuff on my face! Never! Not quite so fast. It acts exactly like a soft tar soap. It actually makes a good lather when you come to wash up. Even ladies have found it to protect the skin from tan and sunburn.

SPECIAL.

MAY 19.—The ice is out of the Maine trout lakes, and the sportsmen with rod and reel are on the wing. Three or four Boston parties started on Friday and Saturday, and another party of six will go on the 23d. Besides these, all the New England towns are represented. The wonder is that there is room for so many of the disciples of the gentle Izaak, and even a few trout for all, in the wilds of Maine. Truly some movement should be made for the perpetuation of so much health-giving recreation. The Maine woods and waters ought to be preserved forever from the vandalism which has so nearly depleted the Adirondacks.

A FISHING TRIP TO LEWIS POND.

THERE is a town in Northern Vermont near the New Hampshire line that until within a few years had never been lotted and was an unbroken wilderness. The former owner having died, commissioners were appointed to survey and lot it, and they spent several weeks during the latter part of the summer in the work.

From their account of the wonderful quantities of fish and game to be found there, Will C. and myself made arrangements for a trip to Lewis Pond, a body of water lying somewhere in the limits of the town. I saw one of the commissioners and got directions to enable us to find it without employing a guide. He told me to go to North Stratford on the G. T. R. R., take a team to the "Stone Dam," on the Nulhegan River, and take an old logging road to the mouth of the "Black Branch," thence about six miles to the Lewis town line and follow that until we found a "spotted" tree marked "three miles," where was a spotted line leading at right angles to the left that would take us directly to the pond. I didn't think to inquire the distance from the "three-mile tree" to the pond, but we found out all about that later.

One afternoon about the middle of August, we packed our outfit, taking but a small quantity of provisions, for we intended to live principally on trout, and we didn't want to carry any more than was absolutely necessary, for it was a long tramp. If we had known how long, perhaps this would never have been written. We took the evening train from Lancaster to Groveton Junction, changed cars for North Stratford, where we arrived at 8:30 o'clock P. M. The moon was at its full, and it was almost as light as day, so we concluded to take a team to the Stone Dam, four miles, and camp, thus giving us so much of a start on to-morrow, instead of staying at the Willard House over night. We hired a team and driver of "Heme" Folsom, and in about half an hour were landed safely at the dam with our luggage at just 9:30 o'clock. The evening was so light and pleasant, that we shouldered our traps and started up the road which followed up the Nulhegan River. It was pretty good traveling, and we soon came to where the Black Branch emptied into the river. We left the river and followed up the branch for perhaps an hour, when coming to thicker woods it became harder walking, so we found a dry knoll and built a fire, and concluded to wait till morning before going further. Toasting a liberal slice of bacon on a forked stick, we made a hearty meal on that and a slice of bread and a dipper of water from a small stream that noisily came tumbling down a hill within a short distance of our camp-fire. We didn't sleep much that night, for we had no shelter except that afforded by the trees, and our fire got low before morning, when it came on foggy and quite chilly.

We ate breakfast as soon as it began to be daylight, shouldered our knapsacks and were off. In a short time our legs were wet to our knees, for the old road was grown up with bushes that were dripping with water.

We passed two or three sets of old logging camps, and around one we saw where a bear had trampled down and wallowed in the raspberry bushes that grew with the greatest luxuriance, and probably eaten his fill of the luscious fruit. I have several times come quite close to them while they were busily engaged in berrying before they saw me, when with a sudden "woof" they would turn, and smashing through the bushes, be off without waiting to make a close acquaintance. They are still quite plenty in the backwoods in this vicinity, and when wild fruits and mast are scarce in the woods do considerable damage to fields of late corn and oats, and by killing sheep. Last fall bear steak was for sale in Lancaster village several times, and I know one man who trapped ten and killed eight of them last season, before the middle of September, when he moved his traps to another locality, but as I didn't see him after that I don't know how many more he caught.

After awhile the fog cleared away and we came to an old dam, partly burned away on one side, leaving a fine pool and eddy with a large flake of foam circling 'round on its surface, and as it had quite a fishy look I thought we would try it. We put together our rods, and while Will put on a bait hook and impaled a big grasshopper that he had caught coming along I had looped on a leader and with a Montreal for a trial fly, made a cast, dropped it on the ball of foam and no sooner had I drawn across, and it struck the water than with a sudden flash a tail came out of the water and I had him hooked. Will dropped his 'hopper on the foam, and it had hardly sunk below it when he had a strike, and lifted out a trout that would weigh over a pound. Meanwhile mine had begun to circulate around, and was trying his best to tangle my leader around the timbers of the old dam, and I trying my best to keep him in the open water. Soon he seemed to think I was getting the best of it, when he made a sudden dash down stream, and as the current was very strong he made the reel buzz right merrily. As I gave him more line and moved down the stream I kept him in toward the nearer shore and turning him into shallow water, inside a large rock, he gave a flop and broke away. I dropped my

rod and went for him and grabbed him in both hands, but he went through them like a flash, when I dropped on him bodily. That changed the affair considerably, for he couldn't get away with so much on his back, not very much; and I carefully reached under me and got him by the gills and I had him. "Who's got the biggest one?" said Will, and we compared them together and they were perfect mates, weighfully a pound each. We tried the eddy again, but not another did we find, so we started again with renewed courage, for now we could have trout for dinner. We did not try the stream again, but judged it might be very good fishing earlier in the season, but the old logs and obstructions having been removed to facilitate driving logs, thus destroying their favorite hiding places, and the trout had probably gone further up stream to seek cooler water.

We found the "three-mile tree" all right, and found a newly spotted line leading from it at right angles to the left, and we thought we were almost to our destination. We found a cool, shady place, built a small fire, cooked and ate our dinner, and our two trout were all we could eat at one meal. It was a very hot, still day, the sun coming down in the old cuttings with almost furnace heat, so we lay down under the trees and waited for the shadows to lengthen. Our route now lay through the unbroken forest, so after resting a couple of hours we started off on the line that had been "blazed" but a short time before, so we had no trouble in following it; and we didn't hurry, for all we cared for was to get to the pond in time for the evening fishing.

After we had gone, as we thought, about a mile, we came to a blazed tree marked "200 rods." Could it be possible we had come only that distance? A mile is a long ways in the woods, and the marking was probably correct, so it still lacked considerably of being a mile from the "three-mile tree." We now came to a bog of several acres in extent, covered with thick moss and short, stunted spruce bushes, the blazing being on the low bushes of not more than two inches in diameter. We sank half way to our knees in the moss but didn't break through into the mud, but we were soon across and into an almost impenetrable growth of firs and spruce, but they had to swamp a path for the chainmen, so we found no trouble in getting through. Soon another tree marked "400 rods," but no signs of the pond.

"How much further do you suppose it is?" said Will. "Oh! I don't know; but we are probably most there." "Well, I hope so, for it is awful warm, and I feel as though I had walked about far enough for this kind of weather." We now came up on higher ground with a larger growth, mixed with birch and maple, with now and then a white pine towering far above all the others. It was so thick overhead that we were entirely in the shade and the traveling much easier than in the swamp, and crossing a low ridge we came to a large clear stream that we supposed was the "Black Branch." I made a bridge by falling a small tree across and we were soon on the other side. I saw two or three trout dart under the bank as I crossed, but as we were anxious to reach the pond we did not stop to catch any. We had not gone but a short distance further, when we came to another blazed tree marked 600 rods. "There ain't so much signs of a pond as there was an hour ago," said Bill, throwing down his pack, "and I don't believe we are on the right line." But I was positive we were following our directions, so I persuaded him to go ahead, and we passed trees marked 800 rods, 1,000 rods and 1,200 rods. This began to get monotonous, and it looked as though we should have to camp on the line, when Bill suggested that "probably somebody had cut off the end of that line." After discussing the matter awhile, we said we would run it into the pond or the ground if it took us all the rest of the week. Off we were with renewed vigor, for it was the pond before dark or no trout for supper.

We soon crossed quite a large stream that we afterward learned was the Logger Branch, and the outlet of Lewis Pond. While standing a few moments at the side of the stream, I saw a mink coming up the stream, and keeping perfectly still he came along and jumped over my feet, and continued on his way without noticing us at all. The line took a diagonal course along the side of a small mountain, where we saw plenty of deer sign, their paths running in all directions where they had come to the stream to drink.

Another blazed tree marked 1,400 rods, and after traveling awhile longer we saw water glistening through the trees, and soon came out on the shore of the pond where we found a tree marked "1,512 rods from the 3-mile tree." It was nearly sunset, and we said if we ever started to find another unknown pond, we would inquire the distance so as to have some idea of how far we should have to walk. Lewis Pond is very pleasantly located, surrounded with hills, and contains 125 acres. The water is very clear, the shallow water covered with lily pads, and its shores are a favorite stamping ground for deer. Its waters contain only trout; they were formerly very plenty and of very large size, specimens having been taken weighing nearly five pounds. I saw where the inlet had been staked across, and in spawning time, as I was afterward informed by one of the party, they caught by staking the inlet and driving the fish down from the spawning holes above, when they threw out with their hands more trout than four of them could carry away, some of them weighing more than four pounds!

We crossed on a raft to the camping ground, where we found a good bark camp and wood enough cut for the night. We didn't have time to do any fishing that night, and after eating supper we very soon went to sleep and did not wake till broad daylight. I took my fly-rod and went out to get a mess of trout for breakfast, and Will said he would do the cooking and try them later. They were rising in all directions on the pond, but after fishing about two hours, came in with only one fish that would weigh perhaps half a pound. We didn't have a very heavy trout breakfast, but noted the flavor of that one as first-class. After breakfast we fished till nearly noon, and I tried nearly every fly in my book, and Will used angle-worms, and we didn't catch a fish. They were rising all the forenoon among the pads, and we judged from appearances that some of them were large ones; but after fishing the best I knew how, was unable to get a rise. After eating our dinner of bread and pork, we lay back in camp and concluded that they would probably bite better toward evening. We started out again about 3 o'clock. There was a slight ripple in the open water beyond the lily pads, but it was one of the hottest August days, with a hazy, smoky atmosphere, and if we had caught any in the forenoon we shouldn't have tried them again till about sundown, but we were getting trout hungry and were bound to have some for supper. We fished faithfully till long after sunset, when we had to come in without a fish.

This was a new experience; plenty of trout all around us, and we couldn't catch one. Will was usually a very successful fisherman, and I supposed I could catch trout anywhere where there was any. This was a damper. Couldn't catch trout enough to eat. What would the boys say? Only one trout in all day's fishing. That meant short rations soon.

The night was almost as light as day, and we could hear the trout jumping all the evening, and one big fellow within five or six rods of the shore would rise every few minutes, and Joe could hear others in different directions, and they appeared to be feeding all night. We fished the next day without getting another one; that evening tried them again with the same result. After fishing until 10 o'clock the next morning without getting another fish, we went ashore feeling that those trout were "too many" for us. After eating nearly all our provisions for dinner, we saw, as Bill said, something had "got to be did." After talking over the matter, we concluded to strike for the headwaters of the Black Branch and fish that down to the line on which we came in. So we packed our knapsacks and crossed the pond to the "1512" rod tree, and left the pond, having caught but one trout while there. We followed back on the line for about a mile and struck across the Logger Branch to our left and over a ridge of high land, and across a level tract of land perhaps a mile wide, and struck the stream above the falls, and found it nearly as large as where we had crossed it on the line coming in, but here it was a quick, rapid stream. We put our tackle together and began fishing, and found the water literally alive with trout of a fair size, and a fly could hardly touch the water before it would be taken, and at 5 o'clock we had a sixteen-pound basket nearly full, so we stopped fishing and built up a fire and began to fry trout. Just how many we ate that night I shall not tell, but Will said after breakfast the next morning that "something must have carried off a lot of them during the night." We ate all our bread for supper, so we had only trout and pork for breakfast. We camped that night by the side of the brook and built our fire by the side of a large birch tree. We slept well, with no covering over us and nothing but the trees for a shelter.

We were astir quite early, and leaving our axe for the next comer, we began fishing again, saving only the largest ones, and soon came to the falls. Here the water tumbles down between two hills for perhaps half a mile, and every few rods we came to a large pool containing from half a dozen to perhaps twenty trout. We would only take two or three of the largest and move on to the next one. After we came to the level land below the falls the trout were larger, and soon we had all we wanted to take home with us. It was a beautiful stream, and probably had not been fished before that season up so far as we were. We caught several that would weigh three-quarters of a pound each, and I presume if we had fished further down stream we should have got some still larger.

After catching enough more for dinner, we followed down till we struck the line where it crossed the stream, and followed it back to the "three-mile tree," and we ate our dinner of trout at the old dam, where we caught the two big ones when we came in.

When we arrived at North Stratford that afternoon and showed the agent our catch, he said it was the best he had seen that season. We took the mixed train to Groveton Junction, where we had to wait for the train on the Boston & Lowell road till evening, when we arrived at Lancaster at 8 o'clock P. M., feeling perfectly satisfied with our catch after all.

What the reason was that we only caught one trout at the pond I cannot tell. I used the same flies that I have been successful with at other ponds. I never went fishing to a pond where there were trout before or since but what I could catch enough to eat, although I have noticed it is a poor time to fish for trout during the full moon in August. Can some old fisherman tell the reason?

I have always intended to try that pond again; but the fishing times have come and gone, and I have never returned to cast a fly upon the waters of Lewis Pond. But if nothing hinders I mean to take a week's provisions and visit it again this summer if I can find some one who is not afraid of the tramp.

My companion on that trip was one of the most skillful bait-fishermen that I ever went fishing with, a good tramper, and we never failed in the many excursions that we made together of having a pleasant time, if we did not bring home a great many fish. He has since passed over to the "other side," with the "boatman pale," and perhaps sometime we may again, with other disciples of the Great Master, who said, "cast your nets on the other side," fish fairer streams, flowing through far more beautiful meadows than any we have ever seen in our pleasantest dreams. S. J. G.

LANCASTER, N. H.

RAGGED LAKE CLUB.

SOME of your readers will be glad to know that the ice has disappeared from the lakes in the North Woods, and that the trout are on deck again and as beautiful as ever; they can scarcely wait for the June and July days to come that will bring the city man to them with his fancy rod and flies.

A party of four, including Hon. James Geddes, Fred Frazer, F. P. Denison and H. S. Holden, came to Ragged Lake to look over the club's possessions, which we have an interest in, and found everything had wintered well under the care of Adam, our resident director. The first day's fishing was done along the margin of the ice, but last Thursday the wind broke up this legacy of winter, and since then we have good fishing all over the lake.

The mountains and forest have very little beauty in them at this season of the year, the dense foliage that in the summer time looks so cool and inviting is not here now, and one can not help regretting the absence of it, not because the shade is needed to keep cool, but because all the dead timber that lies in a tangled mass in the woods is visible. The charm of the woods is broken, but within a month from this date all this will be changed, the trees and underbrush will renew their age and put on their green leaves, making fairyland of what now looks desolate. TROUT.

RAGGED LAKE, Adirondacks, May 13.

"FISHING WITH THE FLY."—A second edition of this readable book, by Messrs. Orvis and Cheney, has appeared. The first edition bore the imprint of Mr. C. F. Orvis, 1883, and the second is published by H. B. Nims & Co., Troy, N. Y., 1885. Two additional chapters appear, "Fly-Fishing for Trout in the Rangeley Region," by Henry P. Wells, and "Fly-Fishing on the Nipigon," by Henry H. Vail. The plates of flies are the same, and as we have said before, are both elegant and truthful.

KALAMAZOO TROUT.—Kalamazoo, Mich., May 11.—May 1 found the streams about this city teeming with fishers for trout, though few were posted as to the best streams. A few of us were, however, and among those whose catch is worth mentioning is that of Doctor Gibbs and the gentleman accompanying him. They caught about seventy, a number of them weighing over a pound. My party caught about fifty; several weighed over a pound, while another friend of mine caught one weighing 2½ pounds. I make mention of this as illustrative of the good work done in this State by the Fish Commissioners. It is but five years since the first were put in our streams. Now the fishing is superior by far to that of Northern Michigan. Much unlawful fishing is done, for the detection of which our gun club offers a suitable reward, and we mean to put them through when we do catch one.—G. H. W.

CHAZY LAKE, P. O. Dannemora, N. Y., May 11.—This lake is the least known of any in the Adirondacks, but should be the best known, as it has the finest speckled and lake trout fishing. About a dozen fishermen have got their support and that of their families from this lake; for that reason they do not want sportsmen here. There is a small hotel, with accommodations for twenty-five. Until last summer the proprietor of this house has been in league with the fishermen, has bought and sold their trout, and allowed them to use night lines and nets. Last season the fish were protected on the spawning beds, and will be protected from night lines and nets this season.—M. A. C.

MONSON, Me., May 9.—The ice is not yet out of Lake Hebron and the other lakes and ponds in this region, although in the former the water is open near the shores and a very few trout are beginning to show themselves in these openings. A Swede laborer on the 6th inst. caught a "squaretail" that weighed four pounds, near a place known as the "Cove Dump." From present appearances nearly all of these ponds will be free from ice within the next week. Spring fishing will open in earnest on or about the 30th of this month. Gentlemen from Lynn, Mass., are making arrangements to erect a club house the coming season at Bear Pond.—ANGLER.

FASTENING DROPPERS.—*Editor Forest and Stream:* Will you be so good as to allow me, through your columns, to thank your correspondents who so kindly answered my queries about leaders, mode of attaching flies, etc. I appreciate their kindness, and am their debtor. Permit me to say, however, that they all omitted to describe the manner of fastening to the leader the large flies that are tied with a loop instead of the ordinary snell. This is easily done in the case of the tail fly, but how about the droppers?—M.

PHILADELPHIA, May 16.—Striped bass, weighing from a half to one pound in weight are taken in numbers at most all the wharves extending into the Delaware River below Philadelphia. The villainous sturgeon roe is the favorite bait, and it seems that this and shad roe are the only lures that will tempt the rockfish to take hold.—HOMO.

LITTLE ROCK, Ark., May 16.—Fishing is reported good in all the lakes around here, and in such streams as are not too high. Fly-fishing reported good in Bearskin Lake. Parties returning from Rosebaum Lake report goggle-eyes large and biting freely.—CASUAL.

EX-PRESIDENT ARTHUR, Ex-Secretary Lincoln, Mr. J. B. Battle, of Cleveland, O., and others, were at Pelee Island, Lake Erie, last Monday, bass fishing.

Fishculture.

PROFITS OF FISHCULTURE ABROAD.

A LARGE class of poorly-informed laymen and a few journalists are still only too ready to sneer at fishculture and denounce it as a humbug and failure. They regard it as a business to be engaged in only by the man of leisure and wealth who may have a few thousands of dollars per annum to dissipate in it as a means of amusement, or as satisfying a whim, which might as well be gratified perhaps in the possession of highly-bred running horses or hunting dogs. The same kind of criticism, often partially justified at the outset by the fact that many failures were encountered by the inexperienced, was aimed at bee-culture in its early days, when Langstroth and Quimby in this country began to apply the results of the labors of Dzierzon, Siebold, Huschka and others, to place apiculture upon a scientific basis. Now that bee-keeping has become a success as practiced under the guidance of well-determined scientific principles, which are to be mastered in the same way that any other sort of technical knowledge is to be acquired and applied, we hear nothing more of bee-keeping as a humbug, because at last it has been recognized that it can be followed as a business provided he who pursues it has ordinary business qualifications and the adequate skill, as well as practical and scientific knowledge. Bee-keeping has now become a profitable business, and I know of no more humane achievement of science than that of the abolition of the "sulphur match" formerly thought to be necessary in order to obtain the golden sweets which the industrious insects had so laboriously gathered, their only reward for which was cruel death at the hands of man.

So too in fish breeding, especially in the case of those species of Salmonoids and Cyprinoids which lend themselves readily to the purposes of domestication. Ages of careful selection have enabled the Japanese to produce the most grotesque modifications of the feral form of the goldfish, just as pigeon and fowl fanciers have bred choice strains of birds true to a feather by care in selection so as to reproduce at will those characteristics of form and markings most prized by the connoisseur. Of such achievements we may expect even greater results in the future, but while the production of new races has gone on in order to minister to a taste for the beautiful and the novel, no less remarkable progress has been made in an exact knowledge of the conditions necessary in order to successfully breed and rear fishes for profit as an article of food.

On the continent of Europe where every available field for profitable effort is occupied as soon as it is explored and tested, the cultivation of fishes for market is pursued on a large scale for profit alone, not simply by the wealthy nobles, but by commoners, who may be wholesale dealers in market towns. Enterprising wholesale fish dealers, such as Mr. G. Ebrecht, of Geestemünde, Germany, have found it profitable to invest capital to the amount of $50,000, mainly in trout culture, as a business venture. This gentleman's trout cultural establishment, now said to be the largest in Europe, was designed, built, organized and operated for the last four years by Mr. Josef Swetitsch, an Illyrian German by birth, who has recently arrived in this country seeking employment in a similar capacity. This gentleman is as yet unable to speak

English; fortunately the writer has been enabled to discuss with him in his mother tongue quite fully his methods and designs, which show him to be not only an able fishculturist, but also a competent draughtsman and engineer.

Mr. Swetitsch, now residing temporarily in Hoboken, N. J., has related to the writer his interesting and important experiences in organizing and equipping two establishments for Count Moritz Palfy, and another for Count Stefan Keglowitz, both in Hungary. Count Palfy, from whom Mr. S. bears the most flattering testimonials, has the most extensive establishment in Hungary. Mr. Swetitsch also organized and built an establishment for Mr. Frederick Busse, in North Germany, but the establishment of Mr. Ebrecht, at Scharnstedt, is by far the most interesting, from the circumstance that the proprietor contracted with Mr. Swetitsch to build and equip his establishment with the guarantee that it should yield ten per centum per annum upon the capital invested. Not only was this accomplished, but was even exceeded, under conditions admitted not to have been the best possible for trout culture. The designer of this establishment informs me that trout can be raised at a cost of about twenty-three cents per pound, if sent to market dead; they are sold in Germany at sixty cents per pound; sent alive they bring a much higher price, viz., $2 per pound.

The establishment at Scharnstedt is arranged with a suite of 124 ponds. The aggregate length of the series is 1,000 meters and its width 100 meters. Springs feed the ponds; some additional water is also obtained from two pumps operated by windmills. The temperature of the water is 47 degrees F. in winter and 56 degrees F. in summer. Each pond may be emptied independently of every other by means of an ingeniously contrived system of piping and sluice-ways. The work is supervised with the greatest thoroughness by experts, and the eggs and fry are counted and registered in books kept for that purpose. At every transfer of the young fish, as they grow larger, an account is kept, and a record made so that the loss from mortality is known with the greatest exactitude at every stage of the growth of the fishes. It is then so arranged that with increasing age and size the growing fish are given more and more room in proportion to their dimensions as they are transferred from pond to pond in the great series. In the last of the series, or in those remotest from the hatchery, are found the full-grown, marketable fish.

It is obvious from what has been said above that the work at Scharnstedt is not an experiment but a commercial success, and that the work is conducted upon scientific as well as business principles, which are applicable the world over. The transportation of the living fish to the markets is also accomplished in an ingenious and simple way, which would be well worthy of more extensive imitation in this country, and would doubtless be the means of affording both the culturists and dealers increased profits, as has been found to be the case in New York.

The foregoing notes are not intended to convey the impression that American methods have not been successful; on the contrary, it is merely the intention to again point out to the skeptical that such a thing as fisheulture as a business enterprise is feasible, and, be it remembered, with species the culture of which has not yielded the largest measure of success to those who have undertaken their culture in this country.

The successes of such American fishculturists as Garlick, Ainsworth, the Clarks, Stone, Atkins, Mather and Green, are too well known to need comment from one who does not pretend to skill in this direction. It is only Mr. Swetitsch's presence among us, and the interesting data and attested records which he brings with him that leads me to assume the role of apologist for an industry which should have long since engaged more capital than it now employs. I am informed that the quintessence of fisheulture consists in permitting the competent superintendent or *Fischmeister* to have absolute and unrestrained control of all the details of pond construction and their subsequent management if financial success is to be expected. That the *Salvelinus fontinalis* or American brook trout grows faster than the *S. fario* of Europe is an interesting fact, and one which is very significant in this connection.

JOHN A. RYDER.

WASHINGTON, May 15, 1885.

THE NORTH CAROLINA OYSTER INDUSTRY.

[Concluded from page 293.]

Supposing then that the State recognizes the principle and does its part, what is the next step to be taken in order to increase the supply? Naturally, under the new order of things, this is a problem to be solved by each individual oyster culturist for himself. But some general directions and advice can be given. First let us look over the natural conditions under which oysters live. Let us understand something about the animal we propose rearing.

In the American oyster the sexes are separated; that is, the animals are male and female. During the spring and summer months the generative organs, the "spermanis" in the male and the "ovaries" in the female, become distended and filled up with ripe generative fluids, known as "spermatizoa" in the former and "ova" in latter. As these two fluids ripen they are expelled into the water by the animals; but each individual performs his function without reference to any other in the community, and it may, and possibly does happen, that one sex may expel all its fluid some time before the other. After the expulsion, should the male fluid meet with the eggs of the female, it immediately attacks them, the eggs are fertilized and the life of the oyster may be said to begin. But this contact of eggs and male cells must occur very soon after the fluids have been expelled from the parent oysters, for the lifetime of the spermatizoa is limited to a few hours, and that of ova or eggs to a few minutes after exposure to the water. Here enters the first evil influence. Though the female oyster expels from 10,000,000 to 60,000,000 eggs, yet several days are consumed before the act of expulsion is complete, and it can readily be seen that a large number of these millions of eggs may fail to meet the male fluid at the proper moment, and for want of fertilization, will be destroyed. Indeed, from this and other causes, it is estimated that fully 15,000,000 eggs perish for one that survives. After the egg, a mere speck, 1-500th of an inch in diameter and invisible to the naked eye, has met the male fluid and been fertilized, it sinks to the bottom and begins its development; in from ten to twenty hours it is supplied with swimming powers and begins an exceedingly rapid, erratic motion through the water. This swimming period varies in duration from one to several days, but as the development of the little animal is continuous, and as the frail embryo of the shell continually grows and becomes heavier, the power of movement gradually diminishes and the buoyancy of the animal decreases. Finally it sinks to the bottom, or fastens to some object in the water, and becomes fixed forever; just where or how this fixation occurs we are as yet unable to say. Probably no very great period elapses after the fertilization of the egg before it becomes fastened, but as during this period the animal is moving about, more or less, in the water, exposed to tides, currents, winds and waves, it is evident that the longer the interval between the expulsion of the eggs from the body of the parent and the time of fixation, the greater the chance of the dispersion of the young brood. The free-swimming period, as it is called, is the one most full of hazard to the young. A change of a few degrees of temperature will kill them, and a slight variation in the density of the water will have a like effect; fishes, crabs, shellfish, and in fact nearly all marine animals, consciously or unconsciously, devour enormous numbers of them; they are so small that an ordinary drop of sea water can hold one hundred in active motion, and a quart of water left stagnant in some hole on a beach may easily contain embryo oysters exceeding in number the population of the State. If the swimming embryo has survived all the dangers it encounters while at large in the water, it still may be unfortunate in finding a final resting place. It will fasten itself to many objects, but three conditions are absolutely necessary.

The object must be moderately rough, moderately hard and exceedingly clean. Obviously these conditions do not exist in mud, sand or grass, and hence mud, sand and grass hold no oysters. But where shells, stones, branches of trees, piles of wharves and bridges, and innumerable other objects that are hard and rough, are exposed in the water near an oyster-bed, provided they are clean, the young oysters will settle and fasten to them in large numbers. Once fastened, the valves of the shell, indeed the whole oyster, begins to grow at an enormous rate, and in a year will have advanced an inch or two in diameter. This growth, though continuous, gradually diminishes from year to year, but is sufficiently rapid to make the Virginia oyster marketable in from three to four years, when it is, on an average, from three to four inches in length. Though the growth during the first year is so rapid, yet the shells are very thin and delicate and easily destroyed by the many enemies that prey upon the oyster. Therefore this first year of existence is a precarious one, and more than 50 per cent. of the young oysters perish in passing through it. The mortality during the second and third years is about 30 per cent.

Having followed the individual oyster from the egg to maturity it now remains to show the manner of life of a community known as an oyster bed. The original formation of the bed must have occurred somewhat in this way: The embryo oysters, drifting about during the swimming period, came in contact with some suitable substance, such as a heap of stones or shells, lying at the bottom of the river or estuary, and fastened themselves to such portions as had been swept clean by the current. Year after year these oysters grew and sent forth "spat" or young, which became attached to the shells of the parents; thus the community increased steadily in numbers, and as they increased they attracted enemies, and many were devoured; many others perished for want of room for development, and the empty shells were probably swept by the current some little distance beyond the borders of the bed, thus affording new material for the annual brood to settle upon. Thus the bed was slowly extended, accidental circumstances occasionally assisting or retarding the growth until at last all the available ground was covered, that is, soft, muddy, or sandy bottoms, very shoal water, grass or weeds were reached, where oysters could not live, and necessarily all further expansion ceased. Future growth was not of area but of numbers, and generation after generation would be deposited upon one another until the strata of oysters became too thick to permit the further existence of the first generation. When this occurred the bed may be said to have reached its limit of natural increase.

While this growth in area and numbers is going on, the community has to battle with numerous enemies and destructive influences. Freshets may bring down heavy deposits of mud or vegetable matter, which by covering the oysters and shells not only destroys the living animals by smothering them, but prevents the attachment of the young brood. Severe winters may pile great masses of ice on the beds and destroy every oyster in shoal water. A very cold or very warm spring and summer may so interfere with the formation and emission of the generative fluids that the spawning season will be a complete failure. Heavy rains and continued freshets may not only have a like influence, but may also cause the destruction of large numbers of marketable oysters by forcing them to consume a large quantity of fresh water. Heavy gales may sweep sand, mud or vegetable material over the beds, thus destroying mature oysters and preventing the advent of the young brood. All these are accidents that may and do occur at any time, but whose presence or absence cannot be safely predicted.

But besides such disadvantages, the community has constantly to struggle with the elements that make the oyster their natural food. These are too numerous to mention in detail, but comprise several fishes. Nearly all the carnivorous, gasteropods or sea snails, and many species of crabs and star fishes.

Besides the direct depredations of active enemies, the oyster has to contend in the struggle for existence with innumerable marine animals that seek the same food and live under the same conditions. Among these are nearly all the large bivalve mollusks, such as clams, mussels, etc., and many gasteropods and crustaceans that are not in other ways harmful. It, therefore, can readily be seen that in so closely settled a community of various species of animals a very exact balance is maintained. The conditions necessary to life, such as the amount of food, are constant. Only so many lives can be supported, and evidently, if the number of one species diminishes, the number of other species will tend to increase. That is, if the number of oysters diminishes, the mussels, clams and other shellfish will become more numerous, and the places of the defunct oysters will be occupied by other animals. This is a principle of considerable importance and deserves consideration in any scheme looking to the recuperation of an oyster-bed.

Now, how are we to utilize this knowledge of the animal, its habits, its manner of life? If we intend establishing an artificial oyster bed, we know that we must first stock our ground with a considerable number of mature oysters. We also know that this ground must be suitable, first, for the mature oysters; second, for the young brood. In other words, we must render our ground hard enough to keep the old oyster from sinking and being smothered, clean enough to insure the attachment of the spat, and sufficiently prolific of food to support the colony. The proper conditions of water have also to be considered. Generally speaking, a moderately hard bottom, consisting of clay, with a light covering of mud or sand, is preferable; but almost any bottom hard enough to support the oyster will answer. The character of the current must also be considered. It must be swift and strong enough to convey the minute forms of life which compose the food of the oyster; swift and strong enough also to carry off any sediment likely to be deposited. Yet not so swift nor so strong that the animals will be moved by it. It is also necessary that the area should be protected from the effect of a heavy sea, such as are raised by gales of wind. This is a very important point.

Having selected the ground, the oyster culturist has two methods of procedure open to him. He can obtain small seed oysters, six months old, and spread them out over his ground to grow to a remarkable size. That process is a very simple one and requires but little elaboration or care. But evidently it is directly dependent for its original supply upon some other area; and in attempting to largely increase the production in North Carolina waters it would be wise to depend upon the already producing beds as little as possible, for they have little to spare even now. The second method is to take advantage of our knowledge of the habits of the oyster, especially the young or spat, and attempt to raise more than nature unassisted can accomplish. As this method is probably new to you in North Carolina, I will briefly describe the operation as practiced in the North. A tract of bottom having been suitably prepared by covering it with a layer of sand, gravel, shells, or other substances which will support the oysters, a number of large, spawn-bearing animals are spread over the ground during the spring months. In the summer, just before the spawning season begins, a large quantity of shells are scattered over this same tract. It is particularly necessary that these shells should be clean and free from slime or mud.

From what I have told you of the habits of the young or spat you will readily foresee the object of this operation. The young, when about to attach, find conveniently located a large number of clean, suitable material, and naturally a much larger attachment occurs than would be the case if natural conditions alone were maintained. In fact, so great is the attachment at times, that the oyster farmer is compelled to go over his ground before the end of the first year, and several times subsequently, thinning out his crop and transplanting his stock to areas less thickly populated, where they will have more room for development. Nor is his labor ended then; each successive season before his harvest can be reaped brings him accessions to his crop; the transplanting, therefore, must be continuous. But what I wish you to particularly observe is, that he has taken a barren area of bottom and has turned it into an oyster bed. He has increased the supply to an extent out of all proportion to his original draft upon it. That is exactly what you want here—your need is, that your 3,000 acres should be increased to 300,000 acres; that your product should be not 170,000 bushels, but 17,000,000 bushels.

It is evident, however, that this work of cultivating some 300,000 acres of bottom cannot be undertaken by the State. It would involve an annual expense of about $3,000,000, and no State could spend or would be justified in spending such a sum. Equally evident is it that private individuals will not pay any such enormous capital into a business which, in addition to all other risks, permits the profit to be reaped by the general public.

If, then, the 300,000 acres are to be added to the present domain and the present product increased to ten and twenty million bushels, only private persons will do it, and private persons will not sow a crop which they have no certainty of harvesting. What must be kept steadily in mind is the result to be obtained. In other words, how to get 300,000 acres under cultivation; how to produce 17,000,000 bushels per annum.

I do not mean to say that this is an easy thing to do or that it can be accomplished in a day. But it can be done. Indeed it will be done if you are but wise. Not so very wise either; but just a little bit wiser than the Maryland and Virginia people. It will not do to overlook the many obstacles that are to be encountered. It will not do to overestimate the value of your natural advantages. Candidly speaking they are not, at present, very great. Your waters do not, generally, produce the highest grade of oyster. You have a warm climate which renders transportation difficult and hazardous. You have no great market in close proximity to the oyster ground. You are remote from the great oyster-consuming centers. You have not an abundant supply of labor and such as you do possess is not of the best quality. You have no readily reached machine shops for the repair of engines and apparatus. Nor have you close at hand sufficient supplies of coal and stores. But you have one thing which just now is worth all the rest. You have the opportunity.

If you but take advantage of it, you will have done much to bring about the desired end. Unable to compete with Chesapeake in natural conditions—unable to compete with Maryland and Virginia in the commercial advantages at present offered by the two States, you can at least compete with them in the liberality and wisdom of your laws. While they are waiting to be taught by bitter experience that the Chesapeake fishery cannot be an exception from the operation of the general law, you may take time by the forelock, and adopt the principle which the history of all oyster fisheries shows to be essential to success, and which Maryland and Virginia wilfully ignored. That principle may be concisely put. It is well-known to all political economists as the very key-stone of all progress and material success. It is the principle of ownerships in severalty as opposed to ownerships in common. That principle once recognized in relation to oyster ground and all possible development will follow. That principle ignored, and not only will there be no development, but certain destruction of existing beds will most certainly ensue. The elaboration of the principle so as to meet the practical requirements of this particular locality, I will not here and at this time attempt. But I would earnestly impress upon you, and I hope you will as earnestly impress it upon others, my conviction that a great opportunity now offers for North Carolina to obtain an advantageous position in the oyster industry of the country; and that the only possible manner in which this opportunity can be fully utilized for the benefit of the State is by liberal encouragement to private enterprise to enter this field.

The Kennel.

FIXTURES.

BENCH SHOWS.

May 19, 20, 21 and 22.—Show of the Philadelphia Kennel Club. F. A. Diffenderfer, Superintendent, Philadelphia, Pa.

June 2, 3, 4 and 5.—First Annual Dog Show of the Illinois Kennel Club. John H. Naylor, Secretary, 3,182 Archer avenue, Chicago, Ill.

FIELD TRIALS.

Nov. 16, 1885.—Seventh Annual Field Trials of the Eastern Field Trials Club, High Point, N. C. Entries for Derby close May 1. W. A. Coster, Secretary, Flatbush, L. I.

Dec. 7.—Seventh Annual Field Trials of the National Field Trials Club, Grand Junction, Tenn. Entries for Derby close April 1. B. M. Stephenson, La Grange, Tenn., Secretary.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **2386.**

THE W. K. C. SHOW.

Editor Forest and Stream:

Now that the W. K. C. show is over and gone, I feel like saying that it was by all odds the most enjoyable I ever attended. It was especially interesting as a study of dogs. To see the same swarm of setters, pointers, collies, mastiffs, etc., over and over again, is surely no chance for study, and the novelties at New York were decidedly interesting; for instance, that pair of braques. I do not believe that the breed has ever been shown here before. I suppose pointer fanciers thought them worthless brutes; so they may be for all I know of pointers, but they looked as though they were an ancient race from which the pointer may have been evolved, and I thought that I could see where and how an admixture of foxhound and terrier blood could produce our pointer from these braques.

Then the bloodhounds were a revelation to me. I have always wondered where our native "Virginian" hound could have gotton his head, ears and general type, so different from the English hound. After seeing these bloodhounds, that conundrum is easily guessed. That "Russian" collie of Mayor Grace's was another curiosity. He looked like a pure bred dog of a strain distantly related to our present collie, perhaps starting with the same root, but bred in a different direction; he could hardly be a mongrel, he had that indescribable look of "well bred," although I do not take much stock in the "Russian" business; that looks like some sailor's yarn. Who owned that beautiful brindle gray dog midway between a mastiff and a boarhound with uncropped ears? He was being led around by a keeper every time I saw him, and he had no number on. I suppose he was a mongrel, but as fine a set of legs and as powerful symmetrical a body I do not think I ever saw on a dog; he was just what Capt. Graham is hunting for in the "Irish wolfhound," able to catch a wolf, and to smash him when caught. That mastiff puppy Duke was a puzzle to me; his pedigree does not give any recent importations, but where did he get his compact frame, excellent head, pale brown mask and ears (and alas, his straight hocks) from, but from the Crown Prince litter?

This brings me to my hobby. The mastiffs there were a revelation to the American fancier of the absurd degree to which head has been carried in England, and the mischief that is sure to follow elevating any one point to a supreme importance. I didn't see one of the crack dogs there that was good on its legs; not one that walked as though hind legs were anything but disagreeable incumbrances, merely tolerated as unavoidable evils—as for springing on a man, they could not have jumped over a walking stick.

It is funny how all the carefully prepared standards and elaborate scales, with the solemn deliverances of the most distinguished breeders, are but empty words when brought face to face with fashion. As an instance, no dog (or bitch) at New York would stand a ghost of a chance with Ilford Cromwell if judged strictly under either of the scales or standards, that of Mr. Wynn or that of the Old English Mastiff Club, for Cromwell is fairly good in every point. Yet there were four animals there that would take much higher rank in England simply because they are much more pronounced in head. The standards and scales are meant to portray a perfect dog, yet "A," very good all over, will be beaten by "B," who has wretched hindlegs, a miserable, shambling, rickety gait, with no power or poise, because "B" excels in head; and after all, the difference between the two dogs may not be more than five per cent. even in head. But this five per cent. in head overlies weakness of body, legs or feet, that amount to real disqualification for a mastiff's use.

Then I thought the management of the show was better than I had ever seen. There was nothing new that I know of, but the old style was thoroughly well done. I never saw foul smells as quickly suppressed, and the attendants seemed to know that the orders of the superintendent were given to be obeyed, and not the usual practice, say "yes, sir," and do nothing. The "disappointed exhibitor" was rather more virulent than usual, and the amount of knowledge I got concerning various breeds that I never paid any attention to before, was enough to set me up as a canine Solomon. Unfortunately I have forgotten it all, and I fear I must remain a know nothing for another while. W. WADE.

HULTON, Pa., May 9.

IRISH SETTERS AT NEW YORK.

Editor Forest and Stream:

I was considerably interested in the perusal of Mr. James Mortimer's letter, in reference to Mr. Charles Mason, and contained in your last issue of the FOREST AND STREAM. I had the pleasure of becoming acquainted with Mr. Mortimer at the recent New York bench show, and was exceedingly well pleased with him, from his gentlemanly and courteous manners, and his efforts throughout the whole show to please and satisfy the exhibitors, and with his general supervision and management throughout of the whole affair, a better than which I have never seen since my first bench show debut at New York in 1877, and up to the present time, although a participant and exhibitor every year (since the one above referred to). Mr. Mason has been quite an enigma to me as well as to many others with whom I have conversed in regard to him. A man who never appears to be satisfied with results but is always finding fault. No judge (be he one of his own countrymen or an American) seems capable of pleasing him, but each in his turn must take a back-handed hack from his axe at his will and pleasure. An exhibitor at a number of bench shows, but, as a rule, I believe, an unsuccessful competitor, he evidently takes grim satisfaction in perpetuating his dislike to every one in the shape of a bench show judge. A man who seems to have made a specialty of pointers and one or two of the non-sporting breeds of dogs, he passes judgment and attempts to criticise certain breeds and specialties which are apparently as foreign to him as success has been, both in pleasing the dog sporting fraternity as well as in winning on stock of his own which could not bear competition. A man who never can see a dog so perfect save his own but what he will find blemishes and defects that no one but himself can discover, evidently the result of egotism and a distorted vision; one who will pronounce as a flat head on an Irish setter a cranium that is unusually fine and most beautifully rounded and perfect, with ears that are hung well back and low; eyes called too light, because they are not black but a rich mahogany brown; the muzzle wedge-shaped, because not freighted with lips like those of a hound; a superb neck called short by him, because heavily and beautifully coated with hair, instead of being deprived of that latter ornamentation, or in other words having a scarcity of it, whereby the neck would appear leaner, longer and more lanky, in which three combined latter conditions the required length would be found much more in harmony with his majesty's (Mason's) taste. He also finds the coat not flat enough to please him, simply because it is heavy, as nature and the best English and American authorities require for the Irish dog, in order that he may the better withstand the heavy brush and briers, which no dog is better fitted and adapted for than the Irish setter. And again, and a feeling of pity comes over me for the man, as I listen to him and to what appears more like the talk of a seven-year-old child than of a man who is fully grown, but evidently not mentally matured on some subjects in which he professes to be *au fait*. He says the coat is too dark. Well, I admit that the dog in question has a very rich, dark and glossy coat, darker than the great majority of Irish dogs have; but that is just what every breeder and exhibitor of the Irish setter dog is aiming and working for, and has been for years—notwithstanding what the owners of the light-coated ones may say to the contrary—viz., to get the natural rich dark coat. The Rev. Mr. Macdona, one of the best judges of the Irish dog, or indeed of any other, that ever came from England to judge at a bench show in this country, said of Rory O'More, in giving him the first prize at New York in 1877, "He is one of the finest, handsomest and richest-coated dogs that I ever saw." Stonehenge says that an Irish setter dog should be generally of a rich dark red in color. It would be well for Mr. Mason to study up on the subject. I understand that his specialty has been principally that of pointers, and it seems to be a very difficult matter for him to lose sight of the fact that an Irish dog should not be both coated and built exactly—nose, head, neck, body, tail and limbs—like the dog of his most ardent admiration (the pointer). But it will be a long cold day when Mr. Mason can form a club of one member, and that member himself, and establish a standard of his own for the Irish setter, different from the one now apparently recognized by both English and American authorities. Mr. Tracey, who judged the Irish classes at New York, is pronounced by Mason himself as a true artist. He further says that he shows wonderful skill in transferring to canvas life-like pictures of the dogs he portrays. He further says, using the conjunction, but, "in passing judgment upon a group of animals, we fear that his artist's eye is prone to dwell upon the lines and curves of beauty rather than upon the oftentimes less pleasing outlines that denote greater worth" (see FOREST AND STREAM, May 7). Mr. Tracey's selection as a judge of Irish setters by the W. K. C. (at the recent New York show), was made, I believe, at the suggestion of a gentleman, who is a noted breeder of Irish setters, and one who has done much toward helping to elevate the standard of that breed and to help bring them to their present state of perfection, a man with whom I have frequently come into competition, but a gentleman toward whom I entertain only the most friendly feelings. I think that the selection was a most excellent one, not alone because I was fortunate enough to win in my class, and also to receive the club medal on my five Irish setters, but for the simple reason that I consider that no one should be better calculated to pass upon the merits and demerits of a subject than that person who has made the subject in question one of special study for many years, and one who has attained a most enviable name and a national reputation, where time alone and the most careful observation and the closest scrutiny and skill were required. Mr. Tracey has been a frequent attendant at both our field trials and bench shows, whither he has gone for the further purpose of still better perfecting himself in his noble work as an artist. No man should be better able to detect either the beauties or defects of a dog in detail than such a person. Mr. Mason speaks of Mr. Tracey's apparent inability to judge of animals in groups. That is just where Mr. Tracey showed his thorough adaptation for the position of judge. Mason would judge them in their stalls. No good judge living can decide correctly as to the respective merits of as fine a lot of dogs as were exhibited in that open class of Irish setters at New York without having them together and comparing them point by point, in order to reach the end desired, and to establish the maximum of excellence, and which is to possess the greater number of points out of the hundred. No, it will not answer in this country any more than it will in Europe, for Mr. Mason or any other man to criticise or condemn an Irish dog, or in fact any other dog of a different kind and of other breeding (unlike a pointer) simply because he is not built and coated like a pointer from the point of his nose to the tip of his tail, limbs and ears included. The people who know his peculiarities, as also this to be his standard of criticism, will soon tire of reading his comments, which may be well deemed as worthless. The FOREST AND STREAM has a large circulation, and much good or ill—socially as well as pecuniarily—may inure to some one whose stock may be misrepresented (wittingly or unwittingly) through its columns. Some one, and many persons in fact, must be disappointed in not sometimes or always getting awards at our bench shows. I have been successful many times in winning prizes, and have been unfortunate in losing, yet I have tried to take the bitter with the sweet, and have universally sympathized with the judge in the performance of his arduous and oftentimes unappreciated and thankless duties. So I think that it is the critic's duty as well to show that leniency which common courtesy demands of him, and instead of placing too much stress on the importance of being continually adverse to the judge in his decisions, he should display less pedantry, exhibit more charity, and study up on subjects that are and have been for years the specialties of others, and a knowledge of the fine points, the details of which (embracing all the beauties and defects) are as foreign to him (the critic) as a knowledge of the subject on which he descants. W. N. CALLENDER.

[We publish the above communication in full, though it is not quite clear to us what Mr. Callender is driving at. He appears to have some personal grievance against Mr. C. H. Mason, and proceeds to draw an imaginative picture of that gentleman as a child might conjure up the dreaded form of a bogie. Mr. Callender is also disgruntled at the FOREST AND STREAM's comments on his dogs, which comments, by an hypothesis entirely unsupported by the facts in the case, he assumes to have been written by Mr. Mason. On the contrary, they were our own comments, and were in line with what we had previously written of this dog, Rory O'More II. We said of his class at the New York show last year, "Irish setter puppies are notoriously uncertain, as they often change in form and color. Rory O'More II., who was first in the dog class, was rightly placed. He is grand in color, and if he matures well he will be heard from again." We next saw him at New Haven, where he won he., with Elcho, Jr., first, Bruce second, and Blarney vhc. reserve. We then said of him, "A nice dog, well worth the three letters." At New York both Bruce and Blarney were shown, the latter in improved condition, while Rory was not quite up to his New Haven form. We carefully examined him and our rough notes made with the dog under our eyes read as follows: "409 has not improved, neck large and short; good shoulders, forelegs and feet, fair chest, muzzle not square enough; he is a bit under size; coat too wavy and dark, light eye, English type, head too flat on top, straight in stifle, does not move well; vhc." Mr. Callender's chief concern appears to be a fear that our comments may hurt the sale of his "stock," the development of the Irish setter being to him of less importance than the profits accruing from breeding. Mr. Callender exhibits his dogs for advertising purposes, and resents anything that detracts from the advertising value of a prize wrongly given to one of his exhibits. The week of the show, after his dog had been awarded this prize, Mr. Callender gave himself the trouble to call at this office to ask that as he had long been an advertiser in the FOREST AND STREAM, our comments on his "stock" should be toned down. In other words, Mr. Callender, having bought so many inches of space in our advertising columns, assumed thereby to control the editorial opinion of his merchantable "stock." He at the same time stated, in support of this brilliant notion, that he had seen one C. B. Whitford in order to secure, on the same plea of advertising, a like favor from the paper represented by that individual, and had been assured by Whitford that his paper always had been considerate of his (Callender's) stock, and would be so now. At present Mr. Callender appears to be dissatisfied with the result of his call at this office, but we trust that he may sometime see and appreciate how really ludicrous it all was—funnier even than his column diatribe against Mr. Mason for the offending criticisms that that gentleman never (if ever) saw until they were printed.]

"WILDFOWLER."

Editor Forest and Stream:

I think Mr. Kent had better see the post-office and ask how it is that letters addressed to him are not delivered. I sent you one already marked "dead." I expect I shall have to send you another shortly, for one was written to him on Feb. 25, as follows:

To Mr. Charles Kent, Monticello Kennels, New York:

Dear Sir—I have the beagle hero ready and am arranging for his sailing by next New York steamer. His name is Victor, formerly Pleader. He was given by Philip Egerton, Esq., to the Chester Beagles on February, 1883.

PEDIGREE OF VICTOR, LATE PLEADER.

Sire, Stormer (late J. Houghton's).		Dam, Mischief (late J. Houghton's).	
Counsel.	Sportsman (J. Houghton's).	Countess (Major Torrens's).	Changeable.

I will write you date of sailing as soon as arranged. I am sorry I have kept you waiting so long, but good looking pedigree beagles are very hard to get, and though I advertised for the last seven or eight months I could not get one until now fit to send away.

As he makes no reference to that letter, I expect to receive it back also marked "dead."

Therein, however, you will observe the pedigree which Kent says he never saw. And now a concluding word to Kent: I advertised for a dog for him for seven or eight months, and he is perfectly well aware of that. The first beagle I sent him (which he hints was never sent) was bought by me from Mr. Fauntleroy (the Crystal Palace judge, from whom he could readily inquire), and the dog slipped his collar at Liverpool street station. (From Mr. Fauntleroy and from Baines, the kennel official at Liverpool street station, he could also inquire.)

As to freight, I had arranged to pay here to the shipping agents, therefore Mr. Kent could have claimed the dog without any charge. I shall not notice his letters any further now, as they breathe a spirit of blackguardism and antagonism in which I cannot follow him. L. CLEMENT.

LONDON, Eng., April 25.

LONDON, E.C., May 4.—I have just received a letter from Mr. Fantleroy concerning the beagle for Mr. Kent. I inclose you a copy for publication.—L. CLEMENT. "Dear Sir—I certify that I sold you on Aug. 27, 1884, a very handsome beagle dog, Songster, which dog slipped his collar at Liverpool Street Station, London. I called there about another dog, and saw Songster's collar upon Barnes, the kennelman's, table. He then told me about it. I made every inquiry about this dog, went to Leadenhall Market and the Dogs' Home, but up to the present time I have heard no tidings of him. Yours faithfully, C. FANTLEROY (London, May 2, 1885)."

THE WESTERN FIELD TRIAL ASSOCIATION.

THE meeting for the purpose of organizing a Western Field Trial Association was held at the office of J. A. Bolen, on Missouri avenue, last evening. Considerable interest has been developed in this enterprise throughout Missouri, Kansas, Nebraska, Iowa and more distant points, and something like forty names have been received of persons desiring to become members. The meeting was held on an unfortunate evening for securing the attendance of outside members, and owing to the meeting not having been advertised, there were not many of the sportsmen of this city present. There is no question, however, of the enterprise receiving the cordial support of the sportsmen of this section. Those present were H. P. Dillon and A. C. Waddell, of Topeka; N. B. Nesbit and J. Hayward, Jr., of St. Joseph; D. Underwood, J. A. Bolen, N. B. Childs, A. A. Whipple, W. A. Alderson, Louis Kuntz and F. N. Wood, of Kansas City. Hon. N. B. Childs was called to the chair, and A. A. Whipple was elected temporary secretary. On motion of Mr. Haywood, the constitution and by-laws of the National Field Trials Association were adopted, subject to revision by a committee appointed by the chair, consisting of N. B. Nesbit, J. A. Bolen, H. P. Dillon, W. A. Alderson and A. A. Whipple. The election of permanent officers resulted in the choice of E. C. Sterling, of St. Louis, for President; J. A. Bolen, of Kansas City, First Vice-President; A. P. Dillon, of Topeka, Second Vice-President; A. A. Whipple, of Kansas City, Secretary and Treasurer. It was decided that the trials be run on quails at some point in Kansas, beginning on Nov. 9. The date for the close of the entries was not agreed upon. The committee will meet and perfect the organization at some time in the near future. A. A. WHIPPLE, Secretary.

KANSAS CITY, May 11.

THE NATIONAL DERBY.

Editor Forest and Stream:

I send complete list of Derby entries for N. F. T. Club, 1885. All were whelped in 1884. The bitch, Sue Gladstone, was entered by W. B. Gates as Jessie Gladstone, and afterward changed.

SETTERS

JOE NOBLE (Memphis and Avent Kennel)—Black, white and tan, Feb. 27 (Count Noble—Countess A.).

SUE GLADSTONE (Memphis and Avent Kennel)—Black, white and tan, April 10 (Gladstone Sue).

CANADA PEG (Memphis and Avent Kennel)—Black, white and tan, May 2 (Cambridge—Marchioness Peg).

GLAD (Memphis and Avent Kennel)—Black, white and tan, July 8 (Gladstone—Bessie A.).

MINNIE S. (Will Davidson)—Black, white and tan, July (Dashing Berwyn—Romp).

GATHLIT (J. S. Hudson)—Black, white and tan, June 20 (Gath—Lit).

BELLA (W. B. Stafford)—Black, white and tan, July (Gladstone—Coomassie).

CAD (E. S. Wanmaker)—blue belton, April 25 (Tom—Maiden).

NETTLE (Dr. Otto Mobes)—Blue belton, March 23 (Don Gladstone—Lady Elgin).

JACKSON (J. A. Ellison)—Orange and white, May (Baden Baden— ——).

CRESS (F. D. Stone)—Black and white, May 12 (Gladstone—Zell).

BEAUTY GLADSTONE (L. S. Colyar)—White, black and tan, Aug. 21 (Gladstone's Boy—Dora Royal).

LOTTA (Boyd Ewing)—Black and white, May 12 (Gladstone—Zell).

FASHION (G. R. Stevens)—Orange and white, May 23 (Gath—Gem).

COUNT RUSH (H. Pape)—Blue belton, May 15 (Count Noble—Lady May).

BOB BOWLES (Wm. Bowles, Jr.)—Black, white and tan, June 14 (Paul Gladstone—Bo-Peep).

TARQUIN (W. B. Gates)—Black, white and tan, June 14 (Paul Gladstone—Bo-Peep).

NORTIER (W. B. Gates)—Black, white and tan, June 14 (Paul Gladstone—Bo-Peep).

LOGAN (J. M. Avent)—Orange and white, June (Lightning—Kate).

NANNIE GLADSTONE (P. H. & D. Bryson)—Lemon belton, April 10 (Gladstone—Sue).

NELLY BLY (Edward Dexter)—Black, white and tan, Nov. 3 (Count Noble—Nelly).

PEGJIM (N. Rowe)—Blue belton, May 2 (Cambridge—Marchioness Peg).

PEGBID (N. Rowe)—Blue belton, May 2 (Cambridge—Marchioness Peg).

PEG III. (N. Rowe)—Blue belton, May 2 (Cambridge—Marchioness Peg).

PEGPEEP (N. Rowe)—Blue belton, May 2 (Cambridge—Marchioness Peg).

PEGFLY (N. Rowe)—Black, white and tan, May 2 (Cambridge—Marchioness Peg).

DORA BERWYN (J. N. Maclin)—Black, white and tan, April 12 (Dashing Berwyn—Juno A.).

GATH'S MARK (J. N. Maclin)—Black, white and tan, May 23 (Gath—Gem).

TOPAZ (J. W. Murnan)—Orange and white, May 23 (Gath—Gem).

NANNIE S. (Dr. G. G. Ware)—Black and white, April 12 (Dashing Berwyn—Juno A.).

MINNIE (Dr. G. G. Ware)—Black and white, June (Ben Hill—Leona).

MAGGIE GLADSTONE (A. P. Gillian)—Black, white and tan, April 26 (Gladstone—Lavalette).

GUY GLADSTONE (C. Tucker)—Black, white and tan, April 26 (Gladstone—Lavalette).

LADY DONCASTER (C. Tucker)—Black, white and tan, May 1 (Doncaster—Bessie Brown).

CLARA G. (B. F. Wilson)—Lemon and white, Jan. 8 (Count Noble—Dashing Romp).

SAM STERRETT (S. S. McCuen)—Black, white and tan, April 26 (Gladstone—Lavalette).

CARLOTTA (W. H. Parsons)—Black, white and tan, Jan. 1 (Lightning—Dora Royal).

TOM HENDRICKS (W. H. Parsons)—White, liver and tan, Aug. 21 (Gladstone's Boy—Dora Royal).

DIMPLE (J. W. Renfroe)—Black, white and tan, Aug. 21 (Gladstone's Boy—Dora Royal).

DAN GLADSTONE (P. H. & D. Bryson)—Black, white and tan, Nov. 15 (Gladstone—Sue).

DIDO'S DAUGHTER (Gen. W. B. Shattuc)—Black, white and tan, Aug. 9 (Cambridge—Dido II.).

DIDO'S PET (Gen. W. B. Shattuc)—Black, white and tan, Aug. 9 (Cambridge—Dido II.).

POLKA DOT (Gen. W. B. Shattuc)—Black, white and tan, Aug. 9 (Cambridge—Dido II.).

NOBLE C. (W. J. Cannon)—Black, white and tan, April 22 (Count Rapier—Belle of Hatchie).

BOB GATES (B. M. Stephenson)—Black, white and tan, April 23 (Count Rapier—Belle of Hatchie).

DRAKE (W. H. Venable)—White, liver and tan, Jan. 1 (Lightning—Dora Royal).

LEAP YEAR (J. W. Renfroe)—Black, white and tan, Jan. 1 (Lightning—Dora Royal).

BON SELENE (J. W. Renfroe)—Black, white and tan, Jan. 1 (Lightning—Dora Royal).

CYCLONE (W. I. Heyward)—Black, white, and tan, Jan. 1 (Lightning—Dora Royal.

RENFROE (Paul Jones)—Black, white and tan, Aug. 21 (Gladstone's Boy—Dora Royal).

MAUD D. (Dr. K. D. Davis)—Black, white and tan, Jan. 1 (Lightning—Dora Royal).

PENDENNIS (Charles Heath)—Black and white, Jan. 1 (Blue Drake—Diana II.).

DIANA III. (Charles Heath)—Black and white, Jan. 1 (Blue Drake—Diana II.).

GROUSE III. (W. T. Mitchell)—Red, Feb. 27 (Grouse II.—Colleen Rhue).

BENDEMIR (Dr. E. A. Wood)—Black and white, August (Count Noble—Lassie).

SACHEM (S. S. Brown)—Black and white, August (Count Noble—Lassie).

GATH'S HOPE (R. M. Dudley)—Lemon and white, May 23 (Gath—Gem).

DAISY (G. R. Stevens)—Black, white and tan, May 23 (Gath—Gem).

COUNT SOLA (T. J. Laudrum)—Blue belton, April (Count Noble—Countess Mollie).

ALAMO H. (T. W. House)—Black, white and tan, July 24 (American Dan—Countess House).

TRIZ H. (Z. T. Hogan)—Black, white and tan, July 24 (American Dan—Countess House).

FLIRT H. (J. H. B. House)—Black, white and tan, July 24 (American Dan—Countess House).

CLEO (H D Nicholls)—Black, white and tan, April 25 (Gladstone—Lavalette).

POINTERS.

EARL (F. R. Hitchcock)—Lemon and white, May 22 (Bang Bang—Graceful).

DUKE OF BERGEN (Ramapo Kennel)—Liver and white, June 6 (Bang Bang—Fan Fan).

BOB V. (H. M. Short)—Liver and white, March 11 (Vandevort's Don—Luck).

MALITE (J. W. Munson)—Liver and white, May 6 (Meteor—Dell.

METEORITE (J. W. Munson)—Liver and white, July 19 (Meteor—Vanity).

DRESS (E. S. Wanmaker)—Liver and white, July 16 (Donald—Darkness).

KING SHOT (Chas. Whealen)—Liver and white, July 24 (Meteor—Diana).

BANG JOE (Chas. Whealen)—White and black, July 11 (Bang Bang—Josie).

PAP SMIZER (Gus Sander)—Liver and white, July 24 (Meteor—Diana).

RUMPTY (Gus Sander)—Liver and white, July 24 (Meteor—Diana).

HALF AND HALF (Edward Dexter)—Liver and white, Jan. 27 (Priam—Malt).

METEOR'S MAID (E. F. Stoddard)—Liver and white, April 1 (Meteor—Trinket).

TRINKET II. (E. F. Stoddard)—Liver and white, April 1 (Meteor—Trinket).

B. M. STEPHENSON, Secretary.

LA GRANGE, Tenn.

THE PACIFIC COAST DERBY.

THE entries for the third annual Derby of the Pacific Coast Field Trials Club closed May 1, with seventeen nominations. Following is the list:

HAROLD (Post & Watson)—Orange belton English setter dog, May 24 (Gath—Gem).

COUNT ROUGE (Post & Watson)—Irish and Gordon setter dog. Nov. 30 (Rouge—Dido).

AILEEN ROUGE (Post & Watson)—Irish and Gordon setter bitch, Nov. 30 (Rouge—Dido).

CZAR (A. G. Platt)—Lemon belton English setter dog, July 19 (Regent—Madge).

CLEO (Samuel Allen)—Black and white English setter bitch, Oct. 24 (Grouse—Nell).

SUE (Samuel Allen)—Black and white English setter bitch, Aug. 24 (Grouse— ———).

TAFT (W. W. Van Arsdale)—Orange and white English and Gordon setter dog, May 26 (Dorr—Daisy).

LEO ROUGE (H. Wachhorst)—Irish and Gordon setter dog, April 9 (Rouge—Dido).

BARON ROUGE (John T. Baker)—Irish Gordon setter dog, April 9 (Rouge—Dido).

CARL II. (J. H. Burnham)—Orange and white English setter dog, Aug. 2 (Carl—Topsey).

TOPSEY'S LASS (Geo. W. Ellery)—English setter bitch, Aug. 2 (Carl—Topsey).

FROST (H. C. Brown)—Black and white English setter bitch, age not given (Rowdy—Nellie).

SPOT (N. E. White)—English setter dog, age and color not given (Rowdy—Nellie).

VICTOR II. (G. W. Bassford)—Lemon and white pointer dog, June 14 (Glen—Josie Bow).

SOLANO B. (Henry A. Bassford)—Liver and white pointer dog, June 14 (Glen—Josie Bow).

TOM PINCH (J. M. Barney)—Lemon and white pointer dog, April 25 (Tom—Beulah).

DAN (E. L. Craig)—Liver and white pointer dog, March 18 (Stud—Flight).

THE TORONTO DOG SHOW.

[From a Special Correspondent.]

THE show here has been the best in quality ever given in the Dominion, and the affair has passed off with much credit. Owing to the distressing news from the Northwest the city has been in poor humor for supporting very heartily any form of public entertainment, and for that reason the attendance has not been nearly so good as the merits of the show called for, and the managers are probably something out of pocket. Great credit should be given to the secretary, Mr. W. S Jackson, who by his courteous and efficient efforts won golden opinions from all with whom he had to deal. One of the "unaccountable misses" of the show was the blunder of somebody by which Mr. John E. Thayer's dogs, which were here, had not been properly entered. It is understood that the entry blanks were sent by Mr. Thayer, but were not received. The dogs were benched and awarded prizes, and the managers waited until the last day for the necessary entries to turn up. But they failed to come, and accordingly all of Mr. Thayer's dogs were disqualified, and the other winners in their classes advanced in their places.

A meeting of gentlemen was held Friday evening to consider the formation of a Canadian Kennel Club to take the place recently filled by the Dominion of Canada Kennel Club. A committee was appointed to issue circulars to be sent to owners and admirers of dogs throughout the Dominion, requesting them to guarantee an annual subscription of not more than $5. The committee consists of Messrs. J. F. Kirk, W. S. Jackson, J. Massey, Baldwin, Malloch and Scully, of Toronto; Messrs. Tinsley, Hamilton and Kelly, of Woodstock.

ENGLISH SETTERS—(MR. DAVIDSON).

Cambridge, Paris and Rockingham were the three exhibits in the challenge class, and Mr. Davidson was not long in selecting Rockingham for the blue ribbon. This dog looks better every time he is shown, and if his owner would give him more work he would look even better still. We have already pointed out his many good points and his few defects. Cambridge disappointed us much, and the puffing he has had from certain quarters was never merited. He is found wanting in merit at both ends, and although his breeding is good, he is not the sort of dog that is likely to sire good-looking stock. Paris, shown in wretched condition, is a much better looking dog than his kennel companion. He is eleven years old, but looks a younger dog than Cambridge. Our note book says: "Heavy in head, throaty and light in stifles, good legs, feet and bone." This dog should get good stock from weedy bitches. In the corresponding bitch class Messrs. Smith showed one that is much more to our liking, and it was early apparent that she was too much for her two opponents, Liddersdale and Blue Belle. She is a grand bitch, stands on capital legs and feet, good bone and back—every inch a setter. Her head is a bit doggy, not fine enough for a bitch, and she was shown a trifle short of coat and feather. Liddersdale is a good bitch, deficient in stop, chest and forelegs. Blue Belle is also a nice bitch, faulty in muzzle and a trifle slack behind the shoulder. First in the open dog class went to Bristol, a dog possessing many good points. He was all out of condition, is a bit heavy in head, throaty and curly on the quarter, and looks light of loin in his present condition. In bone, legs and feet he will do. Second prize went to Prince Phœbus, whose faults are found in head, eyes and forelegs. Paris III. came next and was well shown. He is heavier than he should be in head, flat in feet, throaty, and does not carry his ears so well as we would like to see them. Dashing Storm, vhc., possesses many good points. His worst faults are in head, ears and neck. Cambridge II. inherits the rather sour face of his sire, and is faulty at the shoulders. He was looking well. Dan Gladstone, vhc., like every other dog, has his faults, and it is in head, ears, tail, shoulders and hindlegs, where he might be improved. Delham, c., is full at the brow and light of middle, and was not in good shape, being much too soft. Among the bitches Genevieve was our choice for first, and so thought the judge. Her coat is her worst fault. It is much too hard, and she lacks a bit in head, bone, feet and shoulders. Countess Dash made a good second. She is a bit faulty at both ends, and not heavy enough in bone; legs and feet good. Lady Princess was close up. She is heavy in head, her ears are not very well hung and the pads of her feet are thin; tail well carried, but too long. Among the dog puppies Jupiter outscored his opponents. He is a bit faulty at both ends, but is good in chest, legs and feet. Rosedale, faulty in ears and long in tail, was the runner up, with Sport, strong in head and faulty in eye and loin, next. Diana was very properly placed first in the bitch class. Her faults are in head, eyes, shoulders and tail. Mr. Davidson is the best judge of English setters we have, but we cannot indorse the decision which gave second to Hastey. She is shallow in chest, faulty in loin, and neither her head nor tail is good, whereas her feet are hopeless and her forelegs crooked. Forest Fern, vhc., is a better bitch, but not a good one. She is a bit long cast, weak behind, and is faulty in eyes and neck. Hamilton is plain in head. The awards (with the exception alluded to) were well made, and if English setters were always judged as they were at this show, improvement in the appearance of our dogs would be the happy result.

IRISH SETTERS—(MR. DAVIDSON).

Chief, looking well, represented the champions. His color is superb. Comet, placed first in the open dog class, lacks Irish character and has a very poor head. Chief, Jr., that took second, is a much better dog. His faults are in head and loin. Sam, placed third, has a very sour head and a long tail. He was in good condition. This was a poor class, and the bitches, with the exception of the winner, were no better. The recipient of premier honors is a bit flat in skull, lacks in stop, and is too round in barrel. In coat and color she is good. Meg is faulty in head, neck and color. Dan, placed first in the puppy class, is faulty in head and color, and so is the Dan that took second.

BLACK AND TAN SETTERS—(MR. DAVIDSON).

Argus scored in the challenge class, but being disqualified, Lottie was advanced to the position vacated by him. She is faulty in head and color, but has a nice flat coat and was shown in excellent condition. The winner in the open dog class is a fairly good specimen, faulty in head and shoulders. Jason is heavy in ears, a bit throaty and faulty in tail. Sep, third prize, is too much like an Irish water spaniel, both in head and tail. Sandy, vhc., is tucked up and has white feet. The winner in the bitch class is faulty in coat and shoulders, and Fairy Queen, placed second, lacks in head and eyes, but has good bone and feet. There was little to choose between them. Only one puppy, and he is not a future winner. We thought these classes very well handled.

POINTERS—(MR. DAVIDSON).

Beaufort was alone in the champion or challenge class, and was looking well. Mr. Davidson pronounced him the grandest large pointer he has ever seen. Beaufort's brother, Bradford—a fair good dog—came to the front in the open dog class, and Shot made a creditable second, but he lacks the true pointer character of the winner. Snipe, third prize, is faulty in head, tail and chest. Majesty, vhc., looks the workman he undoubtedly is. He is faulty in loin, tail, head and shoulders. Sport, hc., is too weedy, and is not very good in head. There were only two bitches and the same number of puppies. We failed to find a good one among them. They were well judged.

SPANIELS—(DR. NIVEN).

The Irishmen proved a poor class, and Rocky, faulty in head, ears and tail, was placed at the head of affairs. Why the judge gave a second to Torey, faulty in head, ears, tail and coat, we cannot say, neither do we know why he disqualified Fly for being "faked" and then gave her the hc. card. A dog that cannot take a first for being "faked," most certainly should not be given a card. The Clumber Judy is not first-class. Bob, Jr., is well-known. Lad o' Devon, in the class for field spaniel dogs, black or liver, must have had a hard time to beat Raven. He is leggy, faulty in eyes, color and coat; his ears are set on too high, and he is light of bone. Raven is faulty in head and is light of body. Beau II. was equal to anything in the class, but his head and forelegs are not of the right stamp. The winner in the corresponding bitch class is leggy and faulty in head, and Strathaven lacks in head, ears, tail and shoulders. In the class for dogs and bitches under 28lbs. of any other color, Sappho, just a fair bitch, won, and Jumbo, faulty in legs and feet, was the next on the list. Shina had things all to herself in the lightweight challenge class, and we were glad to see this grand little bitch has recovered from a severe attack of distemper. She was not looking her best, but is good enough in her present condition to beat any bitch we know of. In the open dog class, Rex and Black Graf are poor speciments. One of them is curly and faulty in head. The other, curly, leggy and light of bone. Belle scored in the bitch class, but we preferred her kennel companion (Juno W., vhc.,) for the place. The good and bad points of these bitches have frequently been alluded to of late. Woodland Queen, second prize, was deserving of third place. Woodstock Gipsey has a very poor head, but her coat is straight. Gipsey is leggy and faulty in head. We would have given first to Juno W., second to Belle, and third to Woodland Queen. In the class for dogs under 28lbs. weight, any other color, Dart, the winner, is leggy, faulty in head and crooked in forelegs. Sport, Jr., second prize, is leggy and light of middle. Drum, third prize, is deficient in coat, head, neck and length of legs. Sport, Jr., was our choice for first. Dr. Niven went all astray in the corresponding class for bitches, and missed the best one of the lot, Lady Mack is her name, and she is too short in back and too dark of color. Woodstock Ruby, first prize, should have been second. She is faulty in color, back, and in carriage of ears, she is also underhung and stands too high on the legs. Rosedale Dot was in her proper place, third. She is short in back, leggy and faulty in head. Georgetown Ruby, second prize, has a wretched head, and should not have been in the race. Belle was the best of the puppies, but it was a fearful blunder giving second to Dash. He is neither black nor liver, and his head alone is sufficient to keep him back. Queen, vhc., is a much better specimen, and so is Princess Tiney, unnoticed. We never have seen Dr. Niven make so many mistakes as he did upon this occasion, and are at a loss to know how to account for them.

FOXHOUNDS—(MR. DAVIDSON).

There were thirteen entries in this class, but we failed to find a really good specimen of the breed. Roxey, first prize, was the best of them, but he is light of bone and faulty in feet, besides being deficient in loin and hindlegs. Ruler, second prize, is better in legs and feet, but is faulty between the couplings and light in second thighs. Many of the dogs exhibited in the class have the feet turned out. The toes should be turned in somewhat. This is an indication of speed, and any man who has ridden to hounds knows that the fastest dogs "toe in" a trifle.

HARRIERS—(MR. DAVIDSON).

This has always been a poor class, and Ontario proved no exception to the rule. Leader, faulty in shoulders, feet and strength of limbs, was well placed first. Driver, second prize, is a "yellow dog" but not a harrier, and Mr. Davidson was generous in not withholding second money for want of merit.

BEAGLES—(MR. DAVIDSON).

This was a good class, and Mr. Dan O'Shea was well to the front with Rattler and Music. Ringwood, hc., is long cast and short of ears. Bee, vhc., is long cast, short of ears and wide in front. Stump, vhc., is too wide in front and has faulty shoulders and ears. Stormer is light of bone, long cast and thin in tail, ears not well carried. They were correctly placed.

DEERHOUNDS—(MR. DAVIDSON).

Mr. Thayer took first, vhc. and hc with his well-known Lance, Lorna and Bran, but they were ruled out, and Wyvi's, the second prize winner, was promoted to first place. She is faulty in head, shoulders, legs, feet and coat.

GREYHOUNDS—(MR. DAVIDSON).

Friday Night and Memnon were the pick of these classes. Misterton, in the challenge class, is plain in head and heavy in ears. The winner in the open dog class is light of bone and faulty in feet. He has a fair good head, good chest, loin and stifles; a racer, but not a stayer. Jolly Boy, second prize, is faulty in head, loin and tail. Ben, third prize, should be kept at home. He is all out of shape and shows age. First in the bitch class went to a racy-looking little bitch. She is a bit too light all over. Fern, second prize, is faulty in head, eyes and ears. Silver, vhc., has "prick ears." Among the puppies we fancied Hawthorne Belle for first. She shows more quality and less lumber than the winner, and is better in head, eyes and ears.

FOX-TERRIERS—(MR. BARLOW).

These classes were carefully judged and little fault can be found with the awards. Raby Tyrant had an easy win in the challenge class for dogs, but had to give way to Vakeel, who broke one of his forelegs en route to the show. Scarsdale was absent. Village Belle took Richmond Olive's place in the bitch class. She is light of bone and faulty in skull. Tip is faulty in legs, feet, shoulders and coat. Mr. Thayer was again the winner in the open dog class with Surprise, but Venator came out best at the end and took the blue ribbon. He is faulty in head, shoulders and ears. Enhurst Reveller, second prize, is faulty in shoulders, light of bone and leggy. The first prize bitch is light of bone and leggy. Daisy, second prize, is faulty in head and is too long cast. Boston Flirt, third prize, is short in head, wide in front and light of bone. The wire-haired class was not good, at the same time it was above the average. Bristles, faulty in head and light of middle, but good in legs, feet and bone, was just about the best. Jasper, second prize, is faulty in head and ears, and is too leggy and long cast. His color, too, is against him. Venom, hc., is faulty in head, coat and mouth. There were eleven entries in the puppy class. The winners were the best of the lot and we did not see anything that is likely to leave a mark at future dog shows.

MASTIFFS—(MR. BARLOW).

Nevison scored an easy win over Nelson. The latter is too long in the face but is of good size. Miss Nevison, winner of first in the bitch class, is a well grown youngster, good in legs, feet, bone and color, but too long from eyes to nose. Norah, placed second, is faulty in head and ears.

ST. BERNARDS—(MR. BARLOW).

The dog class was a good one, and brought out Otho, Priam and First Choice. The latter compensated his owner for the New York defeat. He is a promising young dog, and Martin had him in tip-top condition. Had he more bone and a better tail, he would be a very difficult dog to beat. Otho has not improved, and was not in good condition. His grand front makes for him many friends. Priam's fault is behind, and his color is not as desirable as that of First Choice. Daphne, in the bitch class, is a good, lengthy bitch, and should throw something good to Otho. Orta is a fair puppy.

NEWFOUNDLANDS—(MR. BARLOW).

This was a good class, and Mr. Barlow was not long in sifting the wheat from the chaff. Boxer, faulty in ears, eyes and tail, beat Bruno, faulty in coat and tail. The others in the class are all to curly in coat.

COLLIES—(MR. DAVIDSON).

Mr. Rothera had the challenge class all to himself, and Laddie beat Argyle in the open dog class. The former shows some collie character, but his ears are much too heavy, and his head and tail are faulty. In frill and mane he is very good, and his legs, feet and back will pass inspection. Argyle, better in head, ears and tail, was our choice for first. The others were well placed. In the bitch class, Jean, faulty in head, eyes and coat, was placed second to a fair good bitch that might be improved at both ends. There was really only one smooth-coated specimen among the seven entries, and she has far too much hair on her brush. The puppies were better. Laddie, the winner, is a fair good specimen, a bit behind the standard at both ends.

BULLDOGS—(MR. BARLOW).

With Tippoo, Rhodora and Romulus out of the way, Bill had no trouble in securing the blue ribbon. Guillermo is faulty in head and body.

BULL-TERRIERS—(MR. BARLOW).

Dutch, Jr. repeated his New York victory. He is a good little dog, and but for the patch on his body would be a very difficult one to get rid of in any company. He might be better below the eyes, but he has a rattling good body, capital legs and feet, and an almost perfect tail. One of the best dogs that was ever exhibited in England was a patched dog, and he won all before him. Yes, it may be many a long day before there will be another Young Victor. Gypsey, placed second, is a fairly good bitch, but not the winner's equal in any respect, and her ears have not been well "cropped." Dick, third prize, is bull in head and tail.

BEDLINGTON TERRIERS—(MR. BARLOW).

Thanks to Mr. Jackson, these classes were the best we have seen. Elswick Jock took first, and is by no means a bad one. His head and tail are not quite to our liking, and he stands a bit too low on the legs. Blucher, placed second, has a good head to recommend him. The winner in the bitch class is better than any of the dogs and is a nice specimen. Her worst fault is from the eyes to nose. She was not looking her best, as she was nursing a promising litter by Elswick Jock. The puppies were not good, and if Ananias had been on hand, he would have scored an easy victory.

YORKSHIRES AND SKYES—(MR. BARLOW).

Dandy was points the best Yorkshire in the show. He would do with more coat and he lacks in color of tan. Prince, in the

Skye class, was away ahead of the others. He carries his tail too gaily. Kitty is faulty in head, ears and tail. Skye, rather soft in coat, was almost if not quite as good.

BLACK AND TAN TERRIERS—(MR. BARLOW).

Bessy beat Teaser, which was no reason why a gentleman who was faithfully discharging his duties should be insulted. A man that has had experience either as exhibitor, owner or breeder, can see other dogs equally as well as his own, but inexperienced persons cannot. Mr. Heasley removed his dog from the show and the club decided to refuse his entries at any future show which may be held under its auspices. Bessy is better both in head and color than Teaser, and these are important points in a black and tan. Teaser is better in shoulders and a trifle better in body. We did not see the dogs out together, but are inclined to think Mr. Barlow arrived at a correct decision.

OTHER TERRIERS—(MR. BARLOW).

There was nothing really first-class and in the smooth-coated toy class we thought the second prize winner the better of the two. There was the usual conglomeration of Irish, Scotch, die-hards, etc.

PUGS—(MR. BARLOW).

Bradford Ruby was away in front of the class. This dog has been banged about so much of late no wonder he looks light. From New York he was sent to Cincinnati, and from there to this show. That is hard work for any dog, especially when the effects of a rough passage across the Atlantic have not been overcome. We cannot indorse Mr. Dalziel's opinion that Ruby is flat-sided. He is a grand little dog, and when he puts in an appearance in good condition it will take a clinker to beat him. Flossy was away behind her kennel companion, and Smut is properly named, as he is much too smutty in color.

TOY SPANIELS—(MR. BARLOW).

The class was divided for King Charles and Prince Charles spaniels. Among the black and tans, Toronto Charlie was well placed first, and is a fairly good specimen. Another Toronto Charlie took vhc., but he is not so good in head as the winner. Among the black, white and tans, Napoleon III. and Gipsey Queen were points in front of Romeo and Juliet. They are better in head, ears, eyes and body.

MISCELLANEOUS CLASSES—(MESSRS. DAVIDSON, BARLOW AND NIVEN).

Patrick, a dachshund, and Hornet II., a white English terrier, were the pick of these classes. The former is faulty in forearms and is tight in skin. Hornet is not good in head. Druid, the bloodhound, lacks in head and size.

Following are the

AWARDS.

ENGLISH SETTERS.—CHALLENGE CLASS—*Dogs*: Frank Windholz's Rockingham (Belthus—Bess). *Bitches*: L. H. and M. A. Smith's Belle (Dime—Princess Blanche).—OPEN—*Dogs*: 1st, L. H. and M. A. Smith's Bristol (Paris—Coomussie); 2d, T. G. Davey's Prince Phœbus (Tam O'Shanter—Prue); 3d, F. G. Hughes's Paris III. (Paris II.—Lady Princess). Very high com., Mrs. R. W. Boyle's Dashing Storm (Royal Sultan—Reign); A. Wyness, Jr.'s Cambridge II. (Cambridge—Belle). High com., T. G. Davey's Dan Gladstone (Gladstone—Juno). *Bitches*: 1st, T. G. Davey's Genevieve (London—Dawn); 2d, O. Totten's Countess Dash (A.K.R. 420); 3d, O. Totten's Lady Princess (A.K.R. 2278). PUPPIES—*Dogs*: 1st, T. G. Davey's Jupiter (Prince Phœbus—Gypsey); 2d, O. Totten's Rosedale (A.K.R. 2289). Very high com., John Ayre's Sport. *Bitches*: 1st, George Schofield's Diana (Knight of Snowden—Ailsa); 2d, Dan O'Shea's Hastey (Albin—Countess Dash). Very high com., Thos. Hutchinson's Lady Hamilton (Tom—Netty Lee); T. G. Davey's Forest Fern (Princess Royal—Forest Ruby).

IRISH SETTERS.—CHALLENGE CLASS—Max Wenzel's Chief (A.K.R. 231).—OPEN—*Dogs*: 1st, Robert Douglass's Comet; 2d, Max Wenzel's Chief, Jr. (Chief—Doe); 3d, Sam Staneland's Sam (Bang—Spot). High com., Alex Purse's Grouse (Dick—Belle). *Bitches*: 1st, Max Wenzel's Yoube (Echo—Rose); 2d, Thos. Thompson's Meg (Sport—Bang); 3d, Jas. Kennedy's Kate (Dick—Alice). *Puppies*: 1st, Jas. Kennedy's Dan (Drake—Kate); 2d, Jas. Stewart's Don (Sam—Belle).

BLACK AND TAN SETTERS.—CHALLENGE CLASS—F. W. J. Ball's Lottie (Bran—Charmer).—OPEN—*Dogs*: 1st, E. Tinsley's Brant (Blossom—Milly); 2d, R. V. Somerville's Jason (Argus—Medea); 3d, S. Goulden's Lep (Grouse—Maude). Very high com., J. W. Dick's Sandy (Bob—Bloom). *Bitches*: 1st, P. D. Hart's Gyp (Jack—Gyp); 2d, Jas. Cox's Fairy Queen (Pride of Canada—Flirt); 3d, withheld. *Puppies*: 1st, E. Tinsley's Young Blossom (Brant—Sheila).

POINTERS.—CHALLENGE CLASS—Charles H. Mason's Beaufort (A.K.R. 694).—OPEN—*Dogs*: 1st, Charles H. Mason's Bradford (champion Bow—Beulah); 2d, W. J. Dandy's Shot; 3d, A. E. Roe's Snipe. Very high com., T. G. Davey's Majesty (Faust—Musette). High com., J. S. O. Carter's Sport. *Bitches*: 1st, Cooper & Donuelly's Duck; 2d, Mr. Mason's Fanchette. *Puppies*: 1st, W. J. Dandy's Jack; 2d, C. H. Mason's Beau (Beaufort—Grace).

IRISH WATER SPANIELS.—1st, H. E. Kersteman's Rocky; 2d, J. Fitzgerald's Tory (Tory—Belle). High com., J. W. Hutor's Fly (Jack—Duck).

CLUMBER SPANIELS.—1st, C. E. Robinson's Judy.

FIELD SPANIELS.—CHAMPION—J. Luckwell's Bob, Jr. (Bob III.—Black Bess).—OPEN—LIVER OR BLACK—*Dogs*: 1st, J. W. Kelly's Lad o' Devon (Toronto Beau—Toronto Jet); 2d, G. C. Thompson's Raven; 3d, J. Wilson and R. Tinning's Beau II. (Beau—Creole). *Bitches*: 1st, I. A. Roche's Fan II. (Toronto Beau—Gip II.); 2d, J. Wilson and R. Tinning's Strathaven (Beau—Creole).—OTHER THAN LIVER OR BLACK—1st, A. Pearce's Sappho (Rollo—Ouida); 2d, James Gower's Jumbo.

COCKER SPANIELS.—CHALLENGE CLASS—J. P. Willey's Shina (A.K.R. 1484).—BLACK—OPEN—*Dogs*: 1st, withheld; 2d, Andrew Laidlaw's Rex (Doctor—Dolly); 3d, H. Fullgood's Black Graf (A.K.R. 646). *Bitches*: 1st, Andrew Laidlaw's Belle (champion Silk—Woodstock Flirt); 2d, James Luckwell's Woodland Queen (Tippoo—Woodstock Queen); 3d, J. W. Kelly's Woodstock Gipsey (Rollo—Woodstock Judy). Very high com., Andrew Laidlaw's Juno W., (Obo II.—Darkie). High com., H. G. Charlesworth's Gipsy.—OTHER THAN BLACK—*Dogs*: 1st, Andrew Laidlaw's Dart; 2d, F. E. Curtis's Sport, Jr. (Sport—Bess); 3d, Geo. H. McFarlane's Drum (Rambler—Bright Eyes). *Bitches*: 1st, J. W. Kelly's Woodstock Ruby (Brahmin—Bijou); 2d, J. C. McIlay's Georgetown Ruby (Captain—Diamond); 3d, Henry Fulford's Rosedale Dot (Beau—Bonny Kate).—FIELD OR COCKER SPANIELS—*Puppies*: 1st, A. Laidlaw's Belle (champion Silk—Woodstock Flirt); 2d, W. J. Harrington's Dash. Very high com., Anthony W. Croft's Queen (imported sire—Nellie). High com., Bernard Saunders, Jr.'s Chum. Com., E. T. Carter's no name (Raven—Roxie).

FOXHOUNDS—1st, Dan O'Shea's Roxey (Ringwood—Roxey); 2d, J. Beauchamps's Ruler (——— —Bailey's Juno); 3d, Arthur Jackson's Bounce (Old Bounce— ———). Very high com., W. Evans's Jewel (Trooper—Princess); same owner's Driver (Foreman—Kate); Arthur Jackson's Bugle (Old Bounce— ———). High com., H. G. Jackson's Music (Freeman—Music). Com., W. H. Rackham's Fowler (Rock—Music) and A. Andrew's Lucy.

HARRIERS,—1st, Alex Stiner's Leader; 2d, Dan O'Shea's Driver (Tomboy—Gypsey). Very high com., Fred Habart's Roger (Rattler—Echo); Fred Habart's Range (Bugler—Music). High com., Fred Habart's Belle (Range—Jessie).

PHILADELPHIA KENNEL CLUB.

THE Philadelphia bench show opened Tuesday and will close this evening. The quality of dogs exhibited is of a high character and the display of English setters is especially noticeable for numbers and merit. The judging was all completed on the first day and a catalogue with the printed awards was issued yesterday. The attendance was good. Owing to insufficient ventilation the dogs have suffered some from the heat. Following is a full list of

AWARDS.

ITALIAN GREYHOUNDS.—CHAMPION.—1st, Miss E. M. Van Buren's Fanny.—OPEN—1st, Mrs. E. W. Jay's Beauty; 2d, A. L. Belleville's Tiney. Very high com., Mrs. A. M. Kramer's Romeo.

POODLES.—1st, Dr. Presby's Jack; 2d, I. W. Clark's Sabot (Puff—Jet II.). Very high com., I. W. Clark's Jet II. (Brussels—Loiotte).

MISCELLANEOUS OR FOREIGN.—OVER 25LBS.—1st, Associated Fanciers' Big Kate; 2d, G. Kerr's Don; 3d, J. A. E. Walk's Charlie.—UNDER 25LBS.—1st, J. Parker's Noble (Prince—Victoria); 2d, C. H. Mason's Napoleon, Prince Charles spaniel (Black—Rose); 3d, J. R. Gildersleve's Nellie (Dan—Nellie).

MEXICAN HAIRLESS DOGS.—1st, Mrs. H. T. Foote's Me Too; 2d, A. B. Palmer's Mede.

SPECIAL PRIZE LIST.

Best mastiff in open class, Winlawn Kennels' Prussian Princess.
Best mastiff bitch, Winlawn Kennels' Prussian Princess.
Best mastiff dog, C. H. Mason's Nevison.
Best rough-coated St. Bernard dog, J. W. Burgess's First Choice.
Best smooth-coated St. Bernard dog, Millbrook Kennels' Verone.
Best smooth-coated St. Bernard bitch, Millbrook Kennels' Wanda.
Best Newfoundland, Samuel S. McClure's Miro.
Best kennel of collies, five or more, Kilmarnock Kennel.
Best collie dog, J. D. Shortwell's Ben Nevis.
Best collie bitch, Kilmarnock Kennels' Winnie.
Best cocker spaniel, W. O. Partridge's Helen.
Best Clumber spaniel, M. Richardson's New Castle.
Best greyhound, H. W. Smith's Memnon.
Best deerhound, John E. Thayer's Bravo.
Best pug owned in Philadelphia, Mrs. Edwin A. Pue's George.
Best pug bitch, A. H. Moore's Miss Kitty.
Best pug puppy, Mrs. Edwin A. Pue's Sarah.
Best English setter dog that has been placed in field trials, Memphis & Avent Kennels' Paul Gladstone.
Best bitch, B. Ridgeway's Leda.
Best English setter dog and one of his get, Rancocas Kennels' Dashing Monarch with Plantagenet.
Best kennel of five English setters, Blackstone Kennel.
Best English setter, Memphis & Avent Kennels' Paul Gladstone.
Best Irish setter in open classes, Max Wenzel's Chief.
Best bitch, M. Richardson's Hazel.
Best Irish setter, Dr. Wm. Jarvis's Elcho, Jr.
Best pointer dog in open class, C. H. Mason's Beaufort.
Best kennel of five pointers, Clifton Kennel.
Best kennel of three pointers, Clifton Kennel.
Best beagle over 12 inches, D. O'Shea's Rattler III.
Best beagle, A. C. Krueger's (three) Bannerman.
Best pair imported beagles under 2yrs., O. H. McClure's Blue Boy and Blue Maid.
Best beagle bitch under 12 inches owned by a member of the A. E. B. Club, O. H. McClure's Blue Maid.
Best Gordon setter, J. E. Thayer's Argus.
Best in open class, E. Mahar's Royal Duke.
Best pack foxhounds, Chichester Club (Leiper, Bolter, Pilot, Hunter Ringwood, Lillie, Jenny, Boxer, Tiny, Flash).
Second best, Rockland Hunt.
Best couple, Chichester Club's Boxer and Tiny.
Best bulldog, J. E. Thayer's Romulus.
Best bull bitch, J. E. Thayer's Bellisima.
Best bull-terrier, R. H. Dudgeon's Dutch, Jr.
Best black and tan terrier, Geo. D. Woodill's Queen.
Best fox terrier dog in open class, Clovernook Kennels' Spice.
Best fox terrier puppy, John E. Thayer's Di.
Best black and tan terrier over 7lbs. sired by Duke, Mrs. W. H. Ashburner's Dot.
Best Skye terrier, W. P. Sanderson's Jim.
Best Skye terrier owned by member of club, W. P. Sanderson's Jim.

A COMEDY OF ERRORS.—*Editor Forest and Stream:* In answer to the protest made against my St. Bernard dog St. Elmo, by James Watson, I will state the circumstances of the case. During my absence in Canada in July, 1881, I had in my employ one Chas. Williams, that was recommended to me in Boston, who turned out to be untrustworthy, by giving the services of my champion dog Turco to a bitch in Boston without my knowledge or consent, but it leaked out through a confederate of his. I came to the Boston show in May of 1882 and saw the St. Bernard pup Snip entered there, better known as St. Elmo, and was told by Williams's confederate that that was the pup by Turco. He took first prize in puppy class, P. D. Bardman's Naino took first prize in the open class. The printer made a mistake in the age of Snip, as he was only nine months old instead of a year and nine months. They gave the name of his dam but not of his sire, for reasons better known to themselves. I then bought him and when I saw him I knew he was a pup of Turco's. I entered him at the Washington bench show in February, 1883, as "St. Elmo, formerly Snip, age eighteen months." There was a mistake made by the clerk both in age of dog and name of dam; it should have been Turco ex Fannie Showdrift, and not Lady Snowdrift. Her name was Fannie Snowdrift, but for short they called her Fan. Mrs. Foster entered him in her name at the New York bench show in the same year as "St. Elmo, formerly Snip," instead of Turco, ours. Mrs. Foster made a mistake and put down Bruno, as that was a favorite St. Bernard pet of hers, also mistake in the age. At New Haven this year, he was entered as four years and not as three, that was the printer's mistake, because I entered at the New York dog show this year as four years and two months old, full pedigree, because I have seen other exhibitors do the same thing. As for Dr. Sawtelle identiying my dog in Washington, why he was there for everybody to see. Dr. Sawtelle, like James Watson, remembers that he entered his bitch Sappho imported, but she was raised in Boston. She was bred between the Alpine spaniel and the Newfoundland. He bought her for thirty-five dollars. Afterward he had the services of Mr. Pope's dog Bayard Jr., afterward known as Fritz Emmet's dog. I was connected with the first dog show that was held in America, when Francis Butler and myself were selected by gentlemen to act as judges. Our motto was to give the prizes to the dog and not to the man.—D. P. FOSTER.

BROCK—DIANA II.—Newark, N. J.—*Editor Forest and Stream:* Mr. Leach's reply evidently means no race. It was his assertion that Brock could defeat Diana II., which I was not willing to accept as a fact until he had done so. Mr. Leach then suggested that I send a challenge to him through the FOREST AND STREAM, which when accepted would be binding upon both parties. His excuses are no doubt satisfactory to him, but rather poor to me. He knew before offering to make the race that all my dogs are given the benefit of the open season South, and as a rule are not kept in the hands of an amateur. He also saw Diana II. handled by her trainer, and should have known about what she was capable of doing. If the services of Mr. Lewis cannot be obtained, there are probably other handlers that could bring out Brock's good qualities equally well, as there would be about two months to prepare him. If after the six days' race is decided Mr. Leach is desirous of running a two or three days' race for a dinner, I will agree to run it.—CHAS. HEATH.

HAZE.—*Editor Forest and Stream:* Can any one give me the pedigree of the liver and white (slightly ticked) pointer bitch Haze? [N. B.—She is called the above name, but whether it is an abreviation of Hazel or should be spelled Hayes, I do not know.] She was brought to this section from New York a year or two ago by a Mr. Townsend. Is about five years old, I think. Any information will be gladly received and paid for by her present owner.—C. H. COE (Glencoe, Volusia County, Fla.).

SUGGESTION TO CATALOGUE MAKERS.—*Editor Forest and Stream:* Why do not the committeemen who have charge of our bench show catalogues put the pedigree of the entry immediately after the name, instead of interjecting between them the age, color, etc.? That would make the information more intelligible, and to my notion that is the natural and sensible sequence to be guided by. A very simple alteration in the entry blank would accomplish this change.—HECTOMBORUS.

WHO CAN BEAT IT?—*Editor Forest and Stream:* Thomas's Pearl, a Laverack setter bitch from the Rock family, and owned by A. C. Ware, Hartford, Conn., has just had her third litter by Nemo, an inbred Elcho. The first, twelve dogs, four bitches; second, eight dogs and six bitches; the third, eight dogs and seven bitches, making forty-five for the three litters. Who can beat it?—(Hartford, Conn., May 7).

AMERICAN KENNEL CLUB.—A meeting of the A. K. C. was held at Philadelphia, Tuesday. The old officers were re-elected with the exception that E. S. Osborn, of New Haven, was elected secretary in place of E. S. Porter, and E. Comfort, treasurer in place of G. N. Appold. A full report of the meeting will be given in our next issue.

A REPORT OF THE WARWICK SHOW which has been in type for two weeks, is again necessarily deferred.

INCORRECT PEDIGREES.—Ellicott City, Md., May 8.—*Editor Forest and Stream:* In the *American Kennel Register* of February, No. 2105 reads thus: "Clover Blossom, by Catesby (Belgrave Joe ex Plot) out of Puzzle;" No. 2106 reads: "Clover Fidget, by Belgrave Toney (Belgrave Joe ex Tingle) out of Tricksey." So far, so good. In the New York show catalogue appears the following: "No. 597, class 74, Clover Blossom, by Dynamite Joe ex Puzzle; No. 598, Clover Fidget, by Belgrave Tony (late Catesby) ex Tricksey." Now what I want to know is, how many names and how many parents has Catesby. Is he Proteus, or is he Dynamite Joe or Belgrave Tony? Is his dam's name Tingle or Plot? And what is the rule regarding incorrect entries? An answer through your columns will greatly oblige—FOX-TERRIER.

MINSTREL WHELPS.—Philadelphia, May 9.—*Editor Forest and Stream:* I wish to apologize for not correcting the mistake in the date which appeared in my advertisement in your issue of May 23, as I noticed it and corrected it, in writing to all parties who made inquiries concerning the dog. Minstrel arrived here in February, 1884, and was mated to Nellie (then the property of Mr. J. Satterthwaite, Jenkintown, Pa.) the following April. The advertisement should have read, "whelped June 18," instead of "Jan. 18." The mistake was caused, I suppose, by my not writing the date as distinctly as I should have written it.—THOMAS ALLEN.

CINCINNATI SHOW.—New York, May 15.—*Editor Forest and Stream:* In your report of Cincinnati show, you give in prize list of St. Bernard smooth-coated bitches, withheld. Please note Mill Brook Kennels' Wanda took first in smooth-coated bitches. Kindly correct same and oblige, MILL BROOK KENNELS. [Our prize list was taken from a catalogue marked by Mr. Dalziel, who neglected to mark the award to Wanda.]

NEW ENGLAND KENNEL CLUB.—Boston, May 16.—*Editor Forest and Stream:* At the regular monthly meeting of the N. E. K. C., held May 14, Mr. Jean Grosvenor was elected secretary and Mr. W. O. Partridge treasurer, in place of J. A. Nickerson and L. T. Field, resigned.—JEAN GROSVENOR, Secretary.

GRAPHIC.—*Editor Forest and Stream:* A public notice that the Knickerbocker Kennel Club had purchased the pointer dog Graphic was made on the strength of Mr. E. C. Norrish accepting by cablegram their offer accompanied by draft, to purchase.—GEO. L. WILMS, Secretary.

GLADSTONEKOFF.—Mr. J. P. Barnard, Jr., Boston, Mass., has recently imported the celebrated bulldog Gladstonekoff. He is a brindle dog, five years old, and is by Gamester out of Miss Nipper. He has won many prizes in England, including champion prize at Crystal Palace.

Rifle and Trap Shooting.

RANGE AND GALLERY.

THE WIMBLEDON MEETING.—The preliminary prize list for the forthcoming meeting of the National Rifle Association at Wimbledon has just been issued, and shows several alterations and additions, of which those in the Queen's Prize contest are the most important. A sum of £2292 is added to the Queen's Prize list, thus bringing the total amount to be fired for in this, the most important shooting event of the year, to the substantial total of £1,960, divided into 260 prizes. It is in the conditions, however, that the change is most marked, as there are now to be three stages instead of two as formerly, and the final shooting for the possession of the most coveted honors will consequently become more interesting than before. Under the new arrangement the silver medal, silver badge, and £60 become the second prize in the contest, and the "Sixty" will all receive prizes according to their places in the three stages together. The Queen's prize list and conditions are as follows: First prize, Her Majesty the Queen's Prize, £250, and the gold medal and badge; 2d prize, the silver medal, badge and £80; 3d prize, the badge and £40; 4th prize, £30; 5th prize, £20. Then follow 10 prizes of £15, 30 of £12, 15 of £10, 100 of £4, 100 of £3, and 100 of £2. Conditions—First stage, 200, 500 and 600yds., 7 shots at each. The first 300 in the first stage will be entitled to fire in the second stage, and the next 60 below the 300 will receive prizes of £2 each. Second stage, 500yds, 10 shots, and 600yds., 15 shots. The places of the 300 competitors will be decided by their aggregate scores in the first and second shots. The first 60 will be entitled to shoot in the third stage, and the remaining 240 will receive the 240 prizes next below the first 60 in the prize list. Third stage, to be fired in the order laid down for the second stage. Distances, 800 and 900yds., 15 shots at each distance. The places of the 60 competitors will be decided by their aggregate scores in the three stages.

SPRINGFIELD, Mass.—The Rod and Gun Rifle Club held their weekly shoot May 16, at their Lake Lookout range. They also shot their telegraphic match with the Pittsburgh (Pa.) Rifle Club, which ended in favor of the Rod and Gun Club by 3 points—802 to 859—the last match with the Pittsburgh club being won by the Rod and Gun Club by 1 point—800 to 799. The conditions of the match were 20 shots each, 200yds., off-hand, Mass. decimal target; highest count 10; the club to shoot as many members as it thinks proper, but the six best scores only to count; no re-entry. The following scores were made:

J De Clair	9	8	6	9	10	8	8	8	8	7
	9	6	7	9	6	8	10	8	9	8—161
T B Wilson	5	10	7	6	8	7	10	9	9	7
	8	7	8	8	5	9	7	8	6	9—153
F R Bull	10	8	3	7	6	8	4	10	9	5
	7	7	8	8	8	7	9	7	4	8—143
E T Stephens	9	9	7	10	10	9	10	8	3	7
	7	6	7	8	4	7	1	9	4	6—141
W C Garner	6	9	5	8	9	8	3	7	7	5
	6	3	5	4	10	8	4	9	8	9—133
Z C Talbot	3	4	6	7	9	10	10	9	5	5
	5	5	10	10	4	4	5	4	10	6—131

The other members who shot were: J. Kimball 123, E. S. Field 121, L. H. Mayott 119, J. Allen 117, O. W. Horr 94. The first class badge was taken by Z. C. Talbot with the score of 110:

Z C Talbot	10	11	11	12	12	9	11	12	11	11—110

The second class badge was taken by E. S. Field; score, 96:

E S Field	10	10	7	9	10	9	11	10	8	11— 96

The City Guards had a team out who shot an individual match, Mass. target, Springfield military rifles. Government ammunition:

J S Whiting	11	8	10	10	12	8	8	9	10	—97
G Sterling	4	4	9	11	6	3	11	9	8	7—72
J C Morgan	8	10	5	5	9	5	8	7	10	4—71

The score of De Clair is the largest made in this city in a 20-shot string on the Mass. decimal target.—PINHEAD.

CLUB SCORES.—*Correspondents who favor us with scores are requested to send them in as soon as possible after the matches described. We go to press Wednesdays; and it is necessary that matter for publication should be in hand by Monday, or Tuesday at the latest.*

A SMALL ARM MUSEUM.—Capt. John Bliss, of Middleton, Conn., has a fine collection of old style pistols and arms. Among them are two brass-barreled flint lock pistols used in the revolution by the major of the Ipswich troop of Massachusetts. They are ornamented with filagree work in silver and have an ivory tip at the end of the muzzles. They are exactly like a pair of pistols used by Major Pitcairn at Bunker Hill, which are now at the Old South, Boston. With the Ipswich pistols are a pair of silver plated steel spurs and an odd one; also two huge brass silver plated buckles. These were used by the major of the troop. A pair of old pistols—London make, as all the best were in those days—with steel barrels and flint locks are also in the collection, as well as one having an octagonal barrel of steel, flint lock; and one with the same kind of barrel and a cap lock. When the late O. F. Winchester, of New Haven (founder of the Winchester Repeating Arms Company) first went into the manufacture of arms he was associated with the Volcanic Repeating Arms Company, of New Haven. Captain Bliss has one of the magazine

pistols made by the company, February 14, 1854. It is a strange looking thing with its magazine under the barrel, and its machinery for bringing the cartridge into place and removing the shell.

MANCHESTER, N. H., May 16.—The spring meeting of the Manchester Rifle Association closed this afternoon, although the first two days were unfavorable to good shooting, to-day was very favorable. A goodly attendance of out-of-town riflemen made the meeting the most interesting of any held in Manchester. The following are the scores of the prize winners:

A B Dodge	34	34	31—102	C Curtis	33 33 32—98
C D Palmer	34	34	31—102	E Partridge	33 32 32—97
G F Ellsworth	34	34	34—102	J M Frye	33 33 32—97
G A Leighton	34	34	34—102	E C Paul	33 32 32—97
A C White	34	33	34—101	G N Foster	33 31 32—96
J Lawrence	33	33	33— 99	F Austin	32 32 32—96
J B Fellows	33	33	33— 99	C W Lyman	32 32 32—96
O M Jewell	33	33	33— 99	R Reed	32 31 31—95
W Dennison	33	33	33— 99	J B Anthory	32 31 31—94
A Chestnut	33	33	33— 99	T Pinch	31 31 31—93
W Charles	33	33	33— 99	W Morris	31 31 31—93
E Munson	33	33	33— 99	F J Drake	31 31 30—92
M Wadleigh	33	32	33— 98		—RIFLE.

BOSTON, May 16.—There was only a fair attendance at Walnut Hill to-day, and high scores were made well nigh impossible by a very bad wind that was blowing from the direction of 8 o'clock. A team match was shot with Pittsfield, and the score sent by mail to be published later. The following are the best scores:

Creedmoor Match.

J Halsey	5555555454—48	A Keach, A	4545554554—46
R Reed	5445455455—46	C W Hodgden	4554454554—43

Decimal Match.

A M Jewell	10 8 10 10 9 6 7 8 9 8—85		
J Francis	8 9 6 7 9 9 6 8 7 10—79		

Victory Medal Match.

E F Richardson	5 7 7 8 7 9 8 10 10 7—79		
J Francis	9 6 5 9 9 6 6 10 10 7—77		
R Davis	5 5 7 9 10 10 7 7 6 7—73		

Rest Match.

S Wilder, A	10 9 10 10 10 10 9 10 9 9—96		
B G Warren F	10 9 7 10 10 9 8 10 10 9—91		
S Winchester, F	9 10 9 10 9 10 10 7 10 7—91		

300yds. Match.

B G Warren	5554545545—47	S Wilder	4455445554—45

The spring meeting of the Massachusetts Rifle Association will take place May 28, 29 and 30.

JAMESTOWN, N. Y., May 8.—The Jamestown Rifle Club telegraph match with Thomaston, Conn., 10 men on a side, 16 shots to each man, 200yds., Creedmoor target.

Ayres	4545555554447 55—70	Dowler	4555445454364—64
DeLisle	4544445554554—67	Fenner	5444445444445—63
Perry	5445544554554—67	Kapple	4345444455444—63
Moore	5544544454444—66	Ahlstrom	4443654444444—60
Burns	4445354554554—66	Warner	4444434544454—59—645

THE CANADIAN MILITIA ORGAN.—The militia forces of the Dominion of Canada, numbering some 37,000, of whom about 5,000 are on active service in the Northwest, have at present no organ of their own in which to keep constantly before the public, and before each other, their wants and aims. It has therefore been deemed advisable to establish at Ottawa, the headquarters of the militia force, a weekly periodical styled *The Canadian Militia Gazette*, in order that through its influence the several branches of the service may obtain at the hands of the Canadian public that consideration to which they are justly entitled. The new journal is a very creditable one, and its low subscription price of $1.50 per year ought to bring it within the reach of all.

GARDNER, Mass., May 13.—The new American decimal target was used at the last regular meet of the Gardner Rifle Club at Hackmatack range. Each man shot two strings with a possible total of 100. The shooting was off-hand, distance 200yds. The totals were as follows:

I N Dodge	88 90—178	H C Knowlton	74 80—154
G F Ellsworth	88 77—165	Geo Warfield	57 71—128
A Mathews	79 79—158	C Shumway	73 52—125

At rest—A. Williams....90 83—173.

HAVERHILL, Mass.—Rifle Club scores of May 16, Creedmoor target, 200yds., off-hand:

W W Orthen	5444454554—43	R Griffin	5344544444—41
E Brown	5444444445—42	J Busfield	4553444443—40
H Tuck	4445454444—42	C H Poor	4344343544—39
C Brown	5444443554—42		

WORCESTER, Mass., May 14.—The few men who went out to the Pine Grove Range, of the Worcester Rifle Association, report a good time in spite of the storm. The Massachusetts target was used. Out of a possible 120, the following is the score:

J N Morse, Jr	10 0 11 12 10 11 12 10 11 11—107
M G Fuller	10 10 11 11 11 12 12 9 12 8—106
S Clark	10 12 12 9 11 10 12 11 9 9—105
T Leighton	7 11 10 11 11 10 12 10 11 11—104

CLUB SCORES.—*Correspondents who favor us with scores are requested to send them in as soon as possible after the matches described. We go to press Wednesdays; and it is necessary that matter for publication should be in hand by Monday, or Tuesday at the latest.*

CREEDMOOR.—The fall meeting of the National Rifle Association of America will be held at Creedmoor, beginning Sept. 16. The following are some of the principal matches, showing an increase over last year's list: Judd match, 21 prizes; President's match, 41 prizes; Shorkley match, 800, 900 and 1,000yds, 12 prizes; continuous match, 200yds., re-entry, 39 prizes; governor's match, 500yds., re-entry, 18 prizes; marksmen's match, 200 and 500yds., re-entry, 32 prizes; team match, 200yds, teams of 4 men, 4 prizes; Wimbledon cup match, 4 prizes.

LAWRENCE, Mass.—The spring meeting of the Lawrence Rifle Club will take place at the range at South Lawrence, May 21, 22 and 23. The shooting commences at 9 A. M. each day, and closes at 5 P. M. Saturday. There is but one match, a Creedmoor match at 200yds., open to all. Any rifle within the rules, seven shots to a score, three scores to win. The list of prizes aggregates thirty-six in number and $332 in value.

THOMASTON, Conn., May 12.—*Editor Forest and Stream:* A mistake was made in the report sent you of the telegraph match of the Empire Rifle Club with the Lawrence, Mass and the Jamestown, N. Y. rifle clubs, which I wish to rectify. The score of F. Carr should be 344044434455554=58, making the total for the match 624, instead of 633, as reported.—FRED. A. PERKINS.

THE TRAP.

Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

THE SPRINGFIELD TOURNAMENT.

THE tournament of the National Gun Association at Springfield, O., extended from May 5 to May 9, and displayed some good shooting. The programme, with but few exceptions, was carried out with good management. Winners took the prizes in all cases with either perfect scores or very close bids to perfection. The handicapping gave rise to some discussion, and will need to be most carefully watched in the future. The record of the tournament in the order of matches stood as follows, 10-gauge guns being used, except where otherwise noted; distances in parenthesis:

MAY 5.

Match No. 1—7 clay-pigeons: Watkins (20yds.) 6, Stark (20) 5, Eugene Bogardus (18) 6, Teipel (20) 7, Chamberlin (19) 4, Perry [12-g.] (18) 5, Drake (18) 5, Allen (18) 6, George (18) 6, Sheldon (19) 5, Von Lengerke [12-g.] (18) 7, Whitney (20) 4, Wagner (18) 4, Powers (18) 6, Beecher (18) 3. Von Lengerke and Teipel divided first, Watkins second, Drake and Sheldon divided third.

Match No. 2.—7 clay-pigeons: Perry [12-g.] (18yds.) 7, Meaders (20) 5, Stice (20) 4, Allen (18) 3, Stark (20) 6, E. Bogardus (18) 4, Brewer (12 g.) (17) 4, Sheldon (19) 6, Von Lengerke [12-g.] (20) 6, Kelley (18) 3, Teipel (22) 6, Drake (18) 5, Whitney (20) 5, Folsom [12-g.] (19) 6, Wagner (18) 4, Watkins (21) 4, Powers (18) 5, George (18) 1, Chamberlin (19) 4, Beecher (16) 3, Lane (18) 3, McCartney (18) 4, Hinkle (18 4, Hazlett [12-g.] (16) 5. Perry first, Folsom and Stark second, Whitney, Meaders and Drake third, Stice fourth.

Match No. 3.—7 clay-pigeons: Meaders (22yds.) 6, Teipel (22) 6, Russell (18) 3, Stark (22) 5, Chamberlin (18) 6, Whitney (22) 6, Ackerman (18) 3, Kelly (19) 6, Wagener (18) 5, E. Bogardus (22) 7, Line (17) 2, Watkins (22) 4, L. V. Simmons (18) 4, Brewer (20) w, Von Lengerke [12-g.] (20) 4, Stice (22) 3, Perry [12-g.] (20) 4, Sheldon (21) 6. E. Bogardus first, Chamberlin, Meaders and Sheldon second, Stark third.

Match No. 4.—Five pair double clays:

Perry [12] (18)	10 11 11 11 11—9	Folsom [12] (19)	10 11 10 10 11—7
Stice (20)	11 10 11 11 01—8	Sheldon (19)	11 10 01 10 00—5
Watkins (20)	11 11 11 10 11—9	George (18)	10 00 00 01 01—3
Kelley (18)	11 00 00 11 11—6	Whitney (20)	10 11 11 11 11—9
Lane (18)	00 11 10 10 01—5	Meaders (20)	11 01 11 11 11—9
Von Lengerke (20)	11 01 01 10 10—6	Teipel (22)	10 10 11 10 11—7
Stark [12] (20)	10 10 10 10 10—5	Russell (18)	10 10 00 10 10—4
Drake (18)	11 01 11 01 10—7	Wagener (18)	10 10 10 11 11—7
Chamberlin (19)	00 11 01 11—7	E Bogardus (18)	11 11 11 01 10—8
Powers (18)	10 10 01 10 11—6		

Watkins first, Stice second, Drake third, Powers and Kelley fourth.

Match No. 5.—Teams of 2, 10 clays each: Meaders (20) and Watkins (20) 11, Powers (18) and Sheldon (19) 13, Perry (20) and Stark (21) 18, Wagener (18) and Whitney (21) 16, Lane (18) and McCartney (18) 12, Bogardus (19) and Von Lengerke (20) 18, Drake (18) and George (18) 10, Teipel (22) and Stice (21) 17, Hinkle (18) and Rice (18) 15, Kelley (18) and Russel (18) 12. Perry and Stark, and Bogardus and Von Lengerke first, Teipel and Stice second, Wagner and Whitney third, Hinkle and Rice fourth.

MAY 6, SECOND DAY.

Match No. 6.—7 clays each: Watkins (20) 5, Perry (18) 4, Allen (18) 11, Kelly (18) 5, Lane (18) 2, Loring (18) 6, Meaders (20) 7, Von Lengerke (18) 7, Wendt (18) 2, Sheldon (19) 7, Teipel (20) 7, Whitney (20) 6, Wayper (18) 6, Stark (20) 3, E. Bogardus (18) 6, Drake (18) 3, Stice (20) 6, Chamberlin (18) 4, Powers (18) 5, Capt. Bogardus (20) 5, George (18) 4. The first class divided, E. Bogardus and Stice second, Watkins third, George fourth.

Match No. 7—Six clay-pigeons each: Chamberlin (18yds.) 3, Pierson (18) 4, Brewer (19) 6, Watkins (20) 5, Perry (18) 6, Whitney (20) 4, Stark (20) 6, Wendt (18) 3, McCartney (18) 6, Lane (18) 4, Folsom (19) 5, Bull (16) 5, Ackerman (18) 5, Walker (16) 4, Powers (18) 4, Bailey (18) 4, Von Lengerke (18) 6, Hazlett (18) 5, Meaders (20) 4, Teipel (16) 6, Stice (20) 5, Kelley (18) 3, Wayper (18) 6. Perry and Von Lengerke first, Watkins and Folsom second, Meaders and Whitney third.

Match No. 8.—Ten single clays each: Stice (21yds.) 6, Meaders (22) 7, George (18) 6, Von Lengerke (20) 7, Sheldon (21) 8, E. Bogardus (20) 10, Brewer (19) 7, Whitney (20) 8, Perry (18) 10, Teipel (22) 9, Captain Bogardus (20) 7, Watkins (20) 9, Stark (20) 9, Wagener (18) 5, Kelley (18) 9, Drake (18) 6. E. Bogardus and Perry first, Stark and Drake second, Sheldon and Whitney third, Brewer fourth.

Match No. 9.—5 singles: Perry (20yds.) 3, Stice (20) 5, Sheldon (19) 4, Meaders (20) 4, Loring (18) 4, Bull (16) 4, Kelley (18) 2, Von Lengerke (20) 5, McCartney (18) 2, Hinkle (18) 4, Walker (18) 1, Whitney (20) 4. George (18) 4, Beecher (18) 0, Teipel (22) 5, Stark (22) 4, Cowers (28) 5, Watkins (20) 2, Chamberlin (19) 4, Brewer (20) 2, E Bogardus (20) 1, Drake (18) 2, Wayper (18) 4, Lane (18) 2, Wagner (18) 3. Teipel first, Whitney second, Perry third.

Match No. 10.—Freeze out: Teipel and Watkins divided on account of darkness.

MAY 7, THIRD DAY.

Match No. 11.—Seven single clays each: Brewer 3, Teipel 7, Messerly 2, Stice 5, Perry 7, George 5, Stark 6, Meaders 6, Watkins 5, Sheldon 4, E. Bogardus 6, Whitney 3, Wagener 2, Von Lengerke 5, Hinckle 3, Chamberlin 5, Drake 5, Kelley 3, Capt. Bogardus 5, Powers 2. Teipel and Perry first, Stark, Meaders and E. Bogardus second, George and Watkins third, Sheldon fourth.

Match No. 12.—Ten pigeons each: Watkins 10, Kirkpatrick 4, Sheldon 6, Teipel 10, Chamberlin 4, Perry 8, Sam Hazlett 7, Meaders 10, George 5, Wagener 6, Whitney 7, E. Bogardus 10, Brewer 9, Von Lengerke 7, Stice 10, Stark 8, Kelley 7, Wayper 0, McCartney 4, Lane 9. Watkins and E. Bogardus first, Brewer and Lane second, Perry and Stark third.

Match No. 13, 10 singles and 5 pair doubles, for diamond badge:

Watkins (20yds)	1111100111—8	11 10 10 10 10—6—14
Perry [12-g.] (18)	0111110111—8	11 11 10 10 00—6—14
E Bogardus (20)	1101101111—8	11 10 10 10 01—6—14
Chamberlin (18)	0011111001—6	01 01 11 01 10—6—12
Brewer (19)	1100111111—8	11 11 11 11 10—9—17
Sheldon (19)	1111111101—9	10 11 00 11 10—6—15
Whitney (20)	1110111111—9	11 11 11 11 00—8—17
Stice (20)	1011011111—8	11 10 10 11 10—7—15
Stark (20)	1011111000—6	10 10 10 10 11—6—12
Kelly (18)	0011111011—7	11 10 10 11 11—8—15
Meaders (20)	0101101101—6	00 11 10 00 10—4—10
Teipel (20)	1111110011—8	11 11 11 10 11—9—17

Tie—Brewer, 11111—5 11 11 (won); Teipel, 11111—5 10 10; Whitney, 01010—3.

Match No. 14.—5 singes: Stark, Whitney and Ackerman first, E. Bogardus and Stice second, Perry third. Score: Meaders (22) 1, Myers (18) 3, Russell (16) 5, E. Bogardus (22) 4, Sheldon (21) 5, Stice (21) 4, Chamberlin (18) 2, Watkins (22) 2, Simmons (18) 4, Ackerman (18) 5, Pierson (18) 0. Perry [12-g.] (20) 3, Wagener (18) 3, Whitney (22) 5, McCartney (18) 3, Lane (19) 2. Ralston (18) 4, Stark (22) 5, Kelly (21) 3, Wendt (18) 3, Kirkpatrick (16) 1, Drake (18) 5, George (18) 4, Von Lengerke (20) 5, Powers (19) 4, Wayper (18) 5, Teipel (22) 4, Walker (16) 1.

FOURTH DAY.

Match No. 15.—5 singles: Stice and Perry first, Wagener second, Meaders, Hazlett and Sheldon third. Score: Teipel (20yds.) 2, Stark (20) 4, Stice (20) 5, Meaders (20) 3. Watkins (20) 5, Perry (18) 5, Whitney (21) 5. Folsom (19) 4, Bull (16) 2, Chamberlin (19) 0, Hazlett (16) 3. Drake (18) 2, George (18) 1, Myers (16) 2, Wagener (18) 4, C. C. Lane (18) 0, Sheldon (19) 3, McCartney (18) 1. J. Wayper (18) 2, Hinckle (18) 1, Von Lengerke (18) 3, Kelley (18) 1.

Match No. 16.—6 singles: Stice and Whitney first, Meaders and Fisher second, McCartney third. Score: Stice (20) 6, Von Lengerke (18) 4, Ackerman (19) 4, Wendt (18) 1, Drake (18) 4, Kelley (18) 4, Messerly (18) 3, Fisher (18) 4, Perry (18) 5, Watkins (20) 3, Stark (20) 4, Whitney (20) 6, Meaders (20) 5, Wagener (18) 3, Lane (18) 3, McCartney (18) 4, Simmons (18) 0, Sheldon (19) 5, Powers (18) 4, Brewer (19) 3, Russell (16) 2, Bull (16) 3, Myers (18) 2, Allen (18) 2, Teipel (20) 4.

FIFTH DAY.

Match No. 17.—Five singles: Watkins, Perry and Stark first, Teipel, E. Bogardus and Whitney second, Meaders third. Score: Watkins (20yds.) 5, Teipel (22) 4, E. Bogardus (20) 4, Meaders (20) 3, Perry (19) 5, Stark (20) 5, Von Lengerke (18) 5, Chamberlin (18) 5, Whitney (20) 4, Stice (21) 4, Sheldon (20) 4, Ackerman (19) 2, Dr. Russell (16) 1, Wagoner (18) 1, Hinckle (18) 1, Kelley (18) 1, George (18) 3, Messerly (18) 4, Lane (18) 3, Brewer (19) 2, Drake (18) 2.

Match No. 18.—5 live pigeons: Watkins 2, Stice 1, Allen 3, Teipel 5, George 0, Chamberlin 4, Linneman 4 Teipel first, Linneman second.

Match No. 19.—10 live pigeons, teams of two: Perry [12-g.] (23) and Stice (25) 19, Stark (25) and Sheldon (25), 17.

Match No. 20.—Shot with one Spencer repeating shotgun; 10 singles 5 pair doubles: Kirkpatrick first, Strong second, Duffy and Hinckle third.

Duffy	0010110101—5	10 10 10 10 00—4— 9
Hinkle	1110101110—8	00 00 10 00 00—1— 9
Wilson	1100001000—3	10 10 11 00 10—5— 8

Crain	0000000000—0	10 01 10 10 00—4— 4
Rose	0101011110—6	10 10 11 00 00—4—10
L Rice	0101011000—4	10 00 00 00 10—2— 6
Warden	1110101100—6	01 10 00 10 01—4—10

A number of extra matches, sweepstakes and freeze-outs followed in doubles and singles, live and clay-pigeons, and some of them were well contested with good scores. The winners were Stice, Watkins, Teipel, Allen, Sheldon, E. Bogardus, Perry, Kelly, etc. In all, about thirty of these extra matches were shot. There were many incidents of the tournament which went to break up the monotony of the regular match work.

Gene Bogardus amused the crowd by shooting, with a Winchester rifle, half-dollars, nickels and coppers tossed into the air. One gentleman contributed a half-dollar coin of ancient date to be marked by the young marksman's bullet, but the coin was sent whizzing into returnless space, so to speak.

Messrs. Stark and Teipel gave an extra exhibition of practical hunting after two killdees that happened to alight on the grounds. Two shots by Teipel—lost birds.

Captain Bogardus matched himself to shoot 100 clay-pigeons in six minutes. He succeeded in breaking 109 in five minutes. The birds were tossed by hand.

There were important changes made in the rules at the business meeting. In the handicap for winners the maximum was fixed at 18yds. instead of 20, thus abolishing former rules for future tournaments. The handicap on guns remains essentially the same. Live bird rules were changed in shooting of ties to 31yds. for singles and 25 for doubles.

The match between Capt. Bogardus and Lineman was declared off. Bogardus and son were compelled to leave to fill an appointment in the West, and Lineman by some means missed train connections and did not arrive in time.

The Association met on the evening of the 7th, at the Arcade Hotel. President Russel in the chair, Messrs. A. H. Bogardus, Stice, Stark, Watkins, Von Lengerke, Kelley, Wendt, Meyers, Chamberlin, Teipel, E. Bogardus, Meaders, Whitney, Walker, Ralston, Ackerman, George, Bailey, Bloom, Hornberger, Sheldon, Powers, Wagener and Bishop present. Resolved: That first International Tournament be held at Boston, during the year 1886. Resolved: That a committee of three members be appointed to which all questions arising under the rules shall be referred. The chair announced the following as members of committee: Messrs A. H. Bogardus, Stark and Meaders. Resolved: That the maximum handicap for 8 gauge guns be 18yds., for 12 and 14 gauge guns, 8lbs. or under, 16yds., 10-gauge guns, 7lbs. or under, 14yds. In ties shooters go back 3yds., which shall be the limit. Resolved: That Rule 63 be amended to read as follows: "Ties on single birds shall be shot at 31yds. rise, or double birds 24yds. rise."

The following correspondence was read to the Association and determined its choice of Philadelphia as the place of the next meeting: "Philadelphia, April 29, 1885. At a meeting of the Central States Clay-Pigeon League this day, a resolution was unanimously adopted to invite the National Gun Association to hold an inter-state tournament in this city the coming summer or fall. The representatives of the following gun clubs were present, viz.: Girard, Orion, North End, South End, West Philadelphia, Item, Sportsmen's, Rose, Keystone, Quaker City, of Philadelphia, Pa.; Norristown, Eureka, Pa.; and Montgomery, of Norristown, Pa.; and the Camden, of Camden, N. J.; and signified their willingness to endeavor to assist to make it a success.—T. P. Greger, V.-P. and representative." In pursuance thereof the meeting resolved to hold the next tournament at Philadelphia, July 1, 2, 3 and 4. An executive committee for the same will be appointed by the 28th inst. All members residing in or near Philadelphia (as also those who join by said date) are requested to meet on said Thursday, May 28, at 8 P. M., at the Girard House, Philadelphia, for the purpose of appointing sub committees and arranging the details of the tournament—securing grounds.

STATEN ISLAND.—The Jersey City Heights Gun Club, on invitation from the Stapleton and Aquahonga G. C., of Staten Island, were present at a very enjoyable shoot on the 13th inst., at Foley's Grove. Col. Endicott, of the Aquahongas, and Mr. Cahill, of the Stapletons, met the Jerseys at the landing at Stapleton. Stages were in waiting and the party were conveyed to the club grounds of the Stapletons and the ranch of that prince of bonifaces, J. J. Foley. The club house is very advantageously situated in the edge of a fine grove. The Jerseys had a good time, and they unanimously pronounced the Islanders jolly hosts and triggermen the genuine sort. The following are some of the sweeps:

First sweep, 25yds. rise, 80yd. boundary, both barrels, 4 birds each:

Endicott	1111—4	Goggin	2112—4
Cummins	0112—3	Til-on	2111—4
Mager	2100—2	Wameke	2120—3
Cahill	1110—3	Polworth	1211—4

First and second divided, Mager taking third alone.

Second sweep, same as first:

Cummins	021—3	Endicott	101—2
Cahill	121—3	Polworth	111—3
Tilson	111—3	Mager	101—2
Warmeke	112—3		

Third sweep, same as before only J. C. H. Rules, second barrel count ½ bird:

Wameke	1211—3½	Cummin	1112—3½
Cahill	1101—3	Polworth	1121—3½
Endicott	2221—3½	Mager	0001—1

Divided. JACOBSTAFF.

CLUB SCORES.—*Correspondents who favor us with scores are requested to send them in as soon as possible after the matches described. We go to press Wednesdays; and it is necessary that matter for publication should be in hand by Monday, or Tuesday at the latest*

CANNON vs. CRACKNELL.—A very close match took place at Dexter on the 15th inst. between W. C. Cannon, the one-armed shooter of J. C. H. G. C., and Dr. Cracknell, of the N. J. G. C. The match, thirty birds each, 30yds. rise, 80yds. boundary, both barrels, was well contested, resulting in a tie, each killing 17 birds out of their thirty. The birds, furnished by A. Heritage, were a splendid lot. Al knows a good bird and where to find them. On the shoot-off, Cannon killed his three straight to Cracknell's one, thus winning the stake, and saving his friends, who backed him enthusiastically.—JACOBSTAFF.

J. C. H. G. C.—The regular shoot for the club badge of the J. C. H. G. C. took place on their grounds, Marion, on Thursday, the 14th inst., and resulted as follows, Holcomb and Bird tieing. Bird takes tne cup and the handicap for next shoot. Score:

Hughes, 27yds...	1 1 0 1 1 1 0—5	Baier, 25yds...	1 0 1 1 1 0 1—4
Holcomb, 27yds..	1 1 0 1 1 1 1—6	Berkery, 25yds.	½ 0 1 0 1 0 1—3½
Heritage, 26yds..	0 1 1 1 0 0 1—4	Toffy, 23yds...	1½ 1½ 0 0 1—4
Bird, 25yds.....	1 1 1 1 0 1 1—6	Still, 22yds....	1 0 1 1 1 1 0—5
Burdett, 25yds...	0 1½ 0 1½ 1—4	Maher, 23yds...	1 0 1 0½ 0 0 2½

JACOBSTAFF.

HARVARD SHOOTING CLUB.—The Shooting Club held a well-attended meeting on the afternoon of May 15, on the grounds of the Middlesex Sportsmen's Club at East Watertown. Weather conditions were excellent. It was the second in a series of three competitions in which the aggregates of the best two scores in the competitions will count for prizes. The best scores made were as follows: Match A, 10 clay-birds, 18yds. rise, 5 angles—First, W. H. Slocum, 9; second, W. L. Allen and F. S. Mead, 8 each; third, F. S. Palmer and X. Y. Z. Fredericksen, 7 each; fourth, F. B. Austin, P. Chase and F. S. Coolidge, 5 each. Match B, 5 pair double birds, 18yds. rise—First, W. H. Slocum, 8; second, J. D. Bradley and F. S. Mead, 5 each; third, F. S. Coolidge, J. C. Ayer and X. Y. Z. Fredericksen, 4 each. Practice match, 10 single birds, 18yds. rise, 5 angles—F. B. Austin 8, F. S. Mead, F. S. Coolidge and J. C. Ayer 7 each. Four prizes are to be awarded, a cup and three medals.

KNOXVILLE GUN CLUB, May 15.—National Flying Target Company's gold medal, shot at blackbirds, conditions, 15yds. rise, 5 traps, 25 birds: Dr. Deaderick 19, J. W. Slocum 17, J. C. Duncan 17, A. H. Hebbard 16, M. O. French 16, T. C. Eldridge 16, Jacques 16, J. M. Ross 15, E. W. Armstrong 15, C. C. Hebbard 15, Wm. Jenkins 14, Frank McClung 13, H. Washam 12, S. R. Dow 11, E. Post 11, Townsend 10, G. Woods 10, C. M. Woodbury 9, J. B. Kelly 9 Dr. Deaderick winner. The beautiful new gold medal given to the club by the National Flying Target Company was shot for to day, the first time. The new hubless blackbird was used, and for rapidity and evenness of flight gave universal satisfaction.—C. M. S.

BOGARDUS VS. MEADERS.—The match for the championship of the world between Capt. Meaders, of Nashville, and Capt. A. H. Bogardus, will come off the latter part of this or the first of next month, either in Chicago, Louisville or St. Louis. The cup won by Capt. Bogardus in England will be shot for. They will shoot at 100 birds, 50 single and 25 double, under the National Gun Association rules.

CLUB SCORES.—*Correspondents who favor us with scores are requested to send them in as soon as possible after the matches described. We go to press Wednesdays; and it is necessary that matter for publication should be in hand by Monday, or Tuesday at the latest.*

ALLENTOWN, N. Y., May 18.—The East Hill Gun Club organized April 29, and elected the following officers: President, Z. Stamm; Vice-President, S. H. Brown; Secretary, John Hutchinson; Corresponding Secretary, Z. Stamm; Treasurer, W. Curtin; Trustees, Z. Stamm, E. R. Curtin, John Fay. Saturday of each week the members practice shooting; regular monthly shoot the last Saturday of each month.

NEWARK, N. J., May 12.—The Nimrod Club held its first glass-ball match on Saturday, May 2. Members shot at 10 balls each for the club medal, which was won by W. J. Beatty, who broke 9 out of 10 balls. May 9 the club held its first rifle match this season for the club medal, 100yds., 10 shots each, Creedmoor target. On account of wind the scores were below the average. O. E. Bedford won, scoring 40 out of a possible 50. The club has a very pleasant room at No. 46 Bloomfield avenue, with rifle range of 70ft. The members are some 40. The officers are: Lewis Bush, President; S. A. Goldsmith, Vice-President; C. R. Brown, Secretary; W. J. Beatty, Financial Secretary; O. E. Bedford, Treasurer.

THE NIAGARA FALLS SHOOTING CLUB has elected officers for the ensuing year: President, Hiram E. Griffith; Vice-President, Geo. H. Salt; Secretary, Wm. Pool; Treasurer, John S. Pierce. Board of Direction—John Tierney, Andrew Murray, Antoine Biron, Henry C. Howard, Charles L. Krull. The following were chosen to attend the State Sportsmen's Association: Delegates—H. E. Griffith, Wm. Pool, J. S. Pierce, H. C. Howard and E. H. Smith. Alternates—S. T. Murray, G. H. Salt, H. F. Pierce, James Bampfield, H. Nielson.

SEND ten cents for handbook of The National Gun Association to F. C. Bishop, Secretary, Box 1292, Cincinnati, Ohio.

TESTIMONIALS:

"The very best and most complete rules."
April 3, 1885. (Signed) GANCHO.

"Very satisfactory comments from different parties"
April 13, 1885. (Signed) GLOAN.

"We want a national law and national officers to enforce it."
April 27, 1885. (Signed) ALMO.

"Fairly started and its future success depends entirely upon the manner in which the sportsmen throughout the country respond."
April 18, 1885. [*Adv.*] (Signed) C. M. STARK.

July 3 13—Newark Y. C., Annual Cruise
July 4—Larchmont Y. C., Annual Regatta.

THE CARE OF SAILS.

WE have many inquiries for a receipt for removing mildew from sails, but with the exception of the following, which is only a partial remedy in extreme cases, we know of none which we can recommend as being safe to use. Strong solutions of chlorine or other bleaching agents will rot the sails and are to be avoided. A sail may be cleaned by scrubbing with fresh water and brown soap, and after rinsing it is sprinkled with whiting wherever mildew is visible. The whiting is left on the sail until it is dry, when it is brushed off. We published some two years since a receipt for liming sails in order to clean and preserve them, as follows: One barrel of salt water, 3 pounds chloride of lime, 3 pounds of soda ash, 2 pounds of whiting, 2 quarts of salt. The sail is laid on a clean floor or beach and the mixture thrown on and well scrubbed in with brooms. The sail is then thoroughly washed with clean salt or fresh water to remove all injurious substances, and is turned over and the other side cleaned in a similar manner. It is then left on the sand until dry. When once thoroughly mildewed, canvas cannot be restored and the only safeguard is continual care, airing sails thoroughly, especially when new, and never furling them tightly and leaving them to dry when wet.

LAKE YACHT RACING ASSOCIATION.

THE second annual meeting of the Lake Yacht Racing Association was held on May 9 at the Queen's Hotel in Toronto, Mr. John Leys, the president of the Association, being in the chair. The delegates present were: Oswego Y. C., Com. J. T. Mott, Messrs. J. McMurrish and Higgins; Royal Canadian Y. C., Com. John Leys, Messrs. Beverly Jones and Robert Cochran; Bay of Quinte Y. C., Com. R. M. Roy and Mr. W. H. Biggar; Toronto Y. C., Com. McGaw, Messrs. Geo. E. Evans and Wm. Dickson. A letter from Major Fairclough of the Kingston Y. C., stating that the club wished to join the Association and would hold a regatta under its rules at some date not yet decided on. The secretary also read letters from the commodore and secretary of the Cleveland Y. C. inviting the Association to the meet at Ballast Island, and also a letter from the FOREST AND STREAM on the subject of lake yachting.

After a discussion it was decided not to send delegates to the Erie meet this year, but to devote the efforts to the thorough organization of the yachting of Lake Ontario. Some amendments were next made in the sailing rules and the secretary was instructed to have a new book printed. The following fixtures were decided on: Toronto July 30, with a cruise to Niagara and a hop at the Queen's Royal hotel on August 1. Oswego, August 4; Kingston, August 7, and Belleville, August 12.

After a vote of thanks to the secretary for his labors in behalf of the Association, the following officers were elected: President, Mr. John I. Mott; First Vice-President, Mr. W. H. Biggar; Second Vice-President, Mr. McGaw; Hon. Secretary and Treasurer, Mr. George E. Evans (re elected), after which an entertainment was served at the Queen's Hotel. Though invitations have been sent, both this year and last, to the Lake Erie clubs, they have shown no interest in the Association and have made no response, so that for a time at least, it is confined entirely to Lake Ontario.

THE SAIL AREA RULE AND FIXED BALLAST.

ABOUT a year since the Knickerbocker Y. C. of New York, resolved to try the new sail area and length rule in place of the length rule then in use by them; and after a thorough discussion of the subject, the rule was adopted. Though tried for one season only, it has thus far worked very well, the club having a number of cabin boats of various types, some of which would be shut out by a mean length or similar rule; but on the other hand, there are a number of open boats, of 23ft. and under, with large rigs, whose owners are opposed to the present rule. These latter have organized a strong opposition to it, and resolved to secure its abandonment in favor of some form of length rule more favorable to their special type of boat, and at the last meeting a resolution to change the rule was introduced; somewhat to the surprise of its friends it was badly defeated, a very large majority voting for the retention of the present rule. We can congratulate the club heartily in having sufficient foresight to enable them to look ahead and to stand by a rule that will aid their growth and prosperity, rather than to succumbing to the efforts of a few and going backward to a rule that would hinder and seriously injure the late rapid growth of the club fleet.

The whole drift of small yachting to-day is in the direction so long pointed out by the FOREST AND STREAM, toward safe and able cruising boats and to the extinction of the sandbagger; and the length and sail area rule is a most important factor in the encouragement of the former type. Already the club list includes a number of cutters and keel sloops, and not only are other new ones being constantly added, but the old boats of the club are adding outside ballast, cutter rig, and conforming to the new fashion. Whatever the difference in point of mere speed may ultimately prove to be when the keel fleet, now scarcely more than in its infancy, has reached a similar stage of development as the shoal draft contingent, no unprejudiced yachtsman can deny the many advantages enjoyed by the former on all points save that of merely floating in shoal water and being easily beached. Safety, comfort, ability, accommodation, are all on the side of the keel boat, and we may safely add speed also as at least equal. These are the boats directly encouraged by the length and sail area rule; and those who voted for it voted directly for them and their advantages.

It would be too much for any club to say that any certain class of boat should be extinguished and to legislate them out of existence; and the open boat sailors have, of course, rights of their own, but it is not only within the power, but it is the duty of every club and association to consider in what direction their best interests lie, what policy will most conduce to the future benefit of the club, and to act on the conclusions derived from such deliberation. In any case, it is likely that there will be some special craft that will suffer under any rule that may be chosen (of old the various length rules have practically excluded anything but wide and shoal boats without counters from our courses), but the unchanging law of the survival of the fittest must prevail, and the fairest rule possible being enforced, boats must adapt themselves to it or disappear. Should local circumstances, shoal water, landlocked lakes, etc., demand a certain peculiar type of boat, as happens on some of our shallow bays and on Lake Winderemere in England, the policy of the club would be to encourage, by suitable rules, the building of such boats, perhaps to the exclusion of really better craft, but no such considerations exist in the case of the Knickerbocker Y. C. The keel fleet, even in its present crude state, has proved itself well adapted to their wants, and with the same skill and ingenuity directed to keel boats as has in the past been expended on the sandbagger, we may count certainly on a boat that will be speedy, in addition to its other recognized advantages. The day of the sandbagger has passed away in New York waters, depth and fixed ballast have their recognized place, whether other considerations dictate a keel or board. The little yacht of moderate beam and considerable depth, is a fixed fact, virtually accepted by all; and the secondary questions of relative beam and length, depth, ballast, etc., may be left to experience and actual trial to settle.

In this connection we are glad to notice that the Brooklyn Y. C., on their reappearance on the harbor, have decided in favor of fixed ballast, limited crews, and amateur sailors, and have shaped their policy for the encouragement of the smaller boats. While still adhering to a length rule, they have been wise enough to recognize the demand, both of to-day and of the future, for small tonnage and Corinthian principles, and we hope some day to record them as following the example of the Knickerbocker Y. C. in the adoption of the same rule. The fields open to these two clubs are certainly large ones. With a good anchorage at Port Morris, good water in the Sound, and near to upper New York, the Knickerbocker club have every facility for a healthy and rapid growth, and with similar advantages in respect to Brooklyn, lower New York, and the harbor, the Brooklyn club are as well off in their location and may hope for equal prosperity.

CRUISE OF THE IOLANTHE.

HAVING been in port some time from a cruise to the Chemoix or Snow Islands in Lake Huron, that restlessness of one fond of cruising again got hold of me; so inviting a couple of friends whom I shall call Jim and Frank, we decided on a look at Grand Traverse Bay. Neither of them being yachtsmen, we took aboard a heavy-weight English "man-o'-war's-man" named Luke, who proved more of an adept heaving biscuits at meal time than as crew of a 5-ton cutter. Laying in a good stock of canned provisions, ice and bottled Milwaukee, the tail end of a three days' blow last August found our noble little ship climbing the big combers of Grand Traverse Bay, headed for Old Mission Point, distant about 35 miles. Starting about 3 P. M., we were anxious to make the Point before dark, because of the dangerous shoals thereabout. The wind being on our starboard beam, we gave her all lower sails and jammed her into the seas at a rate which would have been at least unpleasant to any boat but a well-built cutter. But therein lie the pleasures of cutter sailing. The absence of noundering beam, the ability by reason of a narrow, deep and heavy body to cleave the waves asunder and stick to the course as dictated by the tiller, instead of making a foot of leeway for every two of headway, to say nothing of the confidence such stability infuses into amateur yachtsmen like those aboard the Iolanthe.

Holding our course until well into the bay we squared away before the wind, up went the big spinnaker, and with main and topmast backstays set, fairly flew from one big wave to another. Everything in shipshape, the skipper then detailed the crew to their respective duties. Frank, being handy with the frying pan, was commissioned chief of the forecastle; Jim, a connoisseur with the corkscrew, had charge of the ice locker; while that relic of the English navy was assigned to various duties. The wind holding steady we concluded to set small topsail which was set flying without yard and works well before the wind. 6 P. M. found us abreast of the point, and at 6:50 we were off Old Mission resort. Jim got out his shotgun and as the anchor found the bottom fired both barrels in place of the cannon we didn't have. The gun had some Kankakee duck loads in and as a consequence he had to resign the corkscrew championship. Hardly had the sails been furled and things slicked, ere we had visitors; two gentlemen from shore. Wishing to be hospitable Jim was doing the corkscrew act in the cabin, when they introduced themselves as the Rev. —— of Chicago, and Rev. Dr. ——, of Minnesota; he tried to stop the pop, but alas, too late. But imagine his pleasure on hearing the reverend gentlemen remark it sounded good. That settled it and the beer too. A day pleasantly passed and we weighed anchor and started for Traverse City, distant about 40 miles. Again a fair wind favored us, and after spending a few hours there pleasantly we headed for New Mission Point. There we found some Cincinnati people erecting a fine summer hotel. The harbor is very fine, characteristic of the bay harbors. In making our way out we encountered some heavy swells. Frank was making apple sauce on the oil stove by a combination of props and other adjustments for keeping a big pan on a little stove top. He had given me instructions to notify him when we put about, but having a poor memory I shoved her about without the timely warning, and such a clatter of tinware and disconnected sentences as issued from the forecastle as he tried to catch the apple sauce in his hands was never heard before.

We laid our course for Charlevoix, bearing N.N.E. 40 miles, and had a little contest with a lumber schooner in sailing by the wind, at which we soon showed our superiority, for these lake craft are mostly shallow centerboard boats which make more leeway than headway in a sea. It is curious to listen to these lake sailors comment on a cutter—a type of boat they are entirely ignorant about, both as regards construction and sailing, as well as ability—the general verdict being, "She's got too much ballast." But a number in the Traverse region know of a certain little 28ft. boat which has given them to go often be relished. Night coming on and the wind going down found us about 10 miles from land, pitching in a head sea, which soon had its effects on the new hands and made more room at the mess table for the skipper. The table being suspended from the cabin top and bunkers used as seats, it made in a sea a kind of "catch as catch can" business of it, and a hand was as likely to come in contact with a bean can as the teacup. Supper over and the cockpit cushions laid out, we stretched ourselves on them; the long-stemmed pipe in good working order soon made us forget the fitful wind and uncomfortable pitching. Relieving each other during the night the morning found us off Charlevoix, when the fresh breeze of the morning soon carried us in.

I hope to attend the Put-in-Bay meet next July and would like to cruise down with other Lake Michigan or Huron yachts which might be going to attend, just for company's sake. Any reading this and wishing to join us may address as below. G. H. WINANS.

KALAMAZOO, Mich., May 11.

THE YAWL FREDA ON THE LAKES.

Editor Forest and Stream:

Have been putting in a lazy morning, but very enjoyable one, with a pipe and lot of back numbers of FOREST AND STREAM, which I had not had time to digest before. Notably I enjoyed the discussion between Mr. Kunhardt and his opponents, heavy vs. light displacement, and I remembered that I had promised to send you an account of the performances of the Freda, whose lines I sent him over a year ago, and whose points he was kind enough to discuss at length in two letters to me. Well, he was nearly right on every point. Freda did not turn out very fast, she was too much of a medium for that, and she was a little bit tender, which failing I expect to correct in her this season by putting more and heavier ballast inside, lead or iron instead of stone; but for her purpose, as a knock-about, handy cruising boat to be lived in comfortably, she was, for her size, almost perfection, and as a sea boat I never sailed her equal. Her dimensions are 30ft. over all, 20ft. waterline, 6ft. beam and 4½ft. draft, with a good deal of Mamie's cross-section; her displacement is about 4 tons, and her sail plan a schooner yawl, with mizzen out of the cabin and cockpit and well out of the way, but not sufficiently far aft to render an outrigger necessary, the sheet working on a traveler on the taff rail, and the whole sail readily accessible without danger of being pitched overboard. With jib and mizzen she handled beautifully, and after having tried almost every fore and aft rig under the sun I consider this the handiest I have seen.

Let me narrate one little episode in her career last summer. Weighed and stood out of one of the harbors of Lake Superior about dusk of a gloomy and threatening evening, with a light breeze, which failed altogether on reaching the open, and left us wallowing in a high, lazy swell. Getting tired of this and sleepy, we paddled and drifted into a little cove and let go, all turning in, 7 A. M.—Boat straining at the cable and a fierce nor'easter blowing straight into the cove, whose horns were only a few feet apart and to windward of our anchor; no room to work in, too deep to pole, and we must, if possible, get to our destination at once. Mizzen was hoisted, and jib run out to bowsprit end and sheet made fast; two hands at the cable brought it in hand over hand, and with the slight headway thus given she obeyed her helm and canted off toward the shorter horn of the cove. Directly mizzen drew, jib went up like a shot, and without any hesitating, paying off, so backing up she walked out of that cove with the steady, unwavering motion that only weight and depth can give, and the skipper went a mighty sigh of relief as he cleared the point by a few inches and the first comber outside sent a little drizzle of spray over the weather bulwarks. Will some of your skimming-dish men inform me where a sloop would have been had she tried such an experiment with a centerboard drawing at least two feet more than we were and three reefs in the mainsail. The draft of a centerboard at anchor is her draft with board up and is light enough for anything, but if you want to beat through a shallow channel, the cutter has the least draft, especially when she heels over.

Another point in which my boat excels is in beating into the narrow fiords of this wild northern coast of Superior against the furious gusts which so often tear out of them in constantly varying directions. With great care and a watchful hand at the helm, and another at the foresheet, we got in, time and again, with the light drafts, for the water was always smooth; but it was slow, anxious work, and we never attempted it except in daylight. With the Freda it was merely a little exciting, nothing more, and we watched her rail and a foot of her deck disappear with the most perfect complacency, and the dead certainty of her coming up smiling again a second or two afterward; and when the puff had passed and a dead calm succeeded, how she would head reach and get comfortably round on the other tack with ample steerage way still on before the next one struck her. I have said she was not particularly fast; she has never been tried much alongside of other boats, but for a 4½ tonner she made one or two remarkable runs, when hard pressed—on one occasion, 5 miles in 31 minutes with an off shore gale, and on another, between 80 and 90 miles in 13 hours, part of the time closehauled under mainsail alone, and a short choppy sea. Freda has beam enough even for room inside. Her great fault is, as it is Mamie's, that her bilge is too high, and her narrow keel does not allow her to place her ballast without reducing headroom in cabin. A shorter boat with the same beam carried lower down to give same displacement, would no doubt be more roomy. I doubt much if she would be as quiet and easy in the short, high head seas she had so often to tussle with, or so fast in running down wind. As to buoyancy and dryness, I have never seen her ship a sea and never expect to, though I hope to sail her more and further than I have yet done. H. K. M.

OTTAWA, May 8, 1885.

THE NICE REGATTA.

THE annual regatta was held at Nice this year on April 7, 8 and 9, French, English and Italian vessels taking part, but no American yachts being present. The usual winter fleet of cruisers was present as spectators, the only English yachts entering being the Sleuthhound, cutter, 40 tons, Cythera, yawl, 317 tons, Atalanta, yawl, 84 tons, and Zingara, steam yacht, 542 tons. Sleuthhound is a modern lead mine similar to Annasona, whose return home after starting for the Mediterranean a year since gave grounds here for some unfavorable comments on the seagoing powers of modern cutters. Sleuthhound, a boat of the same type, this year made the same trip, and has besides proved successful in the races. Cythera is the yawl which we mentioned some time since as bound for America. She will probably go from Nice to Canada and visit us this summer. The first day of the races was calm, with a violent squall which caught many of the yachts with their kites aloft, compelling them to withdraw.

The first race was for the Grand Prize of Nice, open to any rig of 30 tons or over: 1st prize, 4,000 francs and gold medal; 2d prize, 2,000 francs and silver medal, with 1,000 francs for the first yacht of French construction. The course was triangular, three rounds, a total distance of 25 miles. The starters were Sleuthhound, Cythera, Mageli and Atalanta. The first was the only one to complete the course, her time being 5h. 58m. The second race was for yachts of 5 to 15 tons, for the Baie des Anges prize, the entries being: Phare, 8 tons; Amit, 5 tons, a boat 36ft. ×5ft. 9in., with large lead keel; Mascotte, 10; Paul et Leon; Flamberge, 9; Myosotis, 5; Bondinella, 13, and Mandolin. The squall struck the fleet, carrying away the mast of the leading yacht, Phare, the deep draft Amit going on easily and winning first prize, with Mascotte, Bondinelle and Flamberge in order for the other three prizes.

Nine yachts started for the prize of the Maritime Alps, 2 to 5 tons, Papillon, Louise, Union, Sirena, Nike, Goeland, Adreina, Lei and Gerfaut. The winners were Sirena, Louise and Gerfout. Of the thirteen starters for the prize of the Littoral, only four finished the first round, and one, the Petcheli, went over the entire course. On the second day, Wednesday, the steam yacht races were held. The yachts were in two classes, 30 tons and over, and under 30 tons. In the first class were the Zingara, 542 tons, Sir D. Currie; Eros, 357 tons, Baron A. de Rothschild; Korrigan, 90 tons, Count de Montaiqu; and Gabrielle, Mr. Sieber. Korrigan won, Zingara not starting. In the small class but two yachts entered, Eclair, Mr. Verany, and Rollo, Mr. Blount, the former winning.

On Thursday the Prize of Honor was sailed for, besides four prizes offered by the Yacht Club of France for French yachts. Eighteen yachts started, both races being sailed together. The wind was southerly and light, though during the race there was enough of it to take out Sleuthhound's topmast. A number of the yachts withdrew, the Sleuthhound finally coming in first, winning the first Prize of Honor, with Rigoletto second, Henriette third and Miss Mary fourth. The Yacht Club of France prizes went to Rigoletto, Henriette, Miss Mary and Ville de Marseilles. Henriette also took the prize of 1,000 francs for the first yacht of French construction, though on what grounds it is difficult to understand, as she was built by Camper & Nicholson, of Gosport, England, from the designs of Mr. G. L. Watson.

QUAKER CITY Y. C.—*Editor Forest and Stream:* The dates of the fixtures of the Quaker City Y. C. are: Opening review and harbor cruise, May 23. Annual spring regatta, June 8. Review and harbor cruise, June 21. Corinthian cruise and regatta, July 3, 4 and 5. Review and harbor cruise, Aug. 2. Annual cruise in Chesapeake and Delaware bays, Aug. 15 to 30. Review and cup races, Sept. 13. Closing review and cruise, Sept. 17. Mr. Arthur Colburn, of this city, was elected a member of the club, and his yacht, Venizia, was enrolled in the fleet. She was formerly the Henry Butler, of Providence, R. I., and is a centerboard sloop, length over all, 54ft. 3in.; load water line, 50ft. 3in.; beam extreme, 18ft. 4in.; depth, 5ft. 7½in. Her internal arrangements have been altered to suit the owner's ideas, her long cabin giving ample room for modern fixtures. The finish is very handsome, and in good taste. One is surprised on going below deck to see how space has been utilized without conflicting with the harmonious make up. She is furnished with a cuddy forward, the major part box reaching well aft, and blending with the middship section about ¼ of the length from the stern. She is stylish, head well up, sheer line graceful and easy, save in the after body, quarters full, and transom low. The sudden rounding of the lines gives her a cut-off appearance. She will probably be lengthened aft above water. The Sunbeam, in the same class, was launched on the 14th, having undergone a thorough rejuvenation, and iron bolted to keel. Minerva, same class, sprung her mast on trial trip, and a new one, a trifle longer, has been stepped. She has new sails throughout, and I hope she will not fail to sustain the old reputation. The M. S. Thomas, third class, has been fitted with new sails, somewhat larger than the old, and on her trial trip behaved admirably. The Naima, of Trenton, same class, beaten by the Thomas by eight seconds over the thirty-mile course, has been lengthened aft above water and now approaches the Thomas's length on deck; both boats are in fighting trim. The Consort, the only yacht in the squadron, I am sorry to say, handled by the owners, is in good form and is likely to have a walk-over in her class (second). The Nepenthe, first class, will join the club as soon as the new rules of measurement become a law. She is seagoing and is also navigated by her owners. Rocking chairs on deck when underway are not suggestive of sailormen. James Collins has just finished two open yachts for your correspondent; they are deeper with less beam, and will carry more dead weight than former productions. They are big, deadrise to the half floor and are built for rough water. —R. G. W.

BROOKLYN Y. C.—After being absent from the water for half a dozen years the Brooklyn Y. C. will make its appearance this season under new auspices. A club house and anchorage has been secured at Grassy Bay, and the club will be headquarters in addition to the promotion of the interests of the smaller boats. On June 11 the first regatta will be sailed, the classification being as follows: A, catboats less than 20ft.; B, catboats 20ft. and longer; C, open sloops less than 25ft.; D, open sloops 25ft. and over: C1, cabin sloops under 25ft., C2, cabin sloops 25 to 30ft.; C3, cabin sloops 30 to 35ft.; C4, cabin sloops 35 to 45ft. The sailing length includes waterline length plus ¼ of overhang, the Herreshoff tables being used in computing time. Shifting ballast is forbidden, and only one man for every five feet of deck length is allowed, professionals being excluded. On Decoration Day the club will open their season with a sail on the Lower Bay. The officers for 1885 are: Commodore, Franklin Beames; Vice-Commodore, J. B. Trilokin; Rear Commodore, C. H. Oliver; President, S. M. Whitesell; Secretary, Wm. M. Moorehouse; Treasurer, Thomas R. Brown; Regatta Committee, John M. Sawyer, W. S. Livermore and T. M. Breckenbridge. New York certainly is suffering from no dearth of yacht clubs, large and small, but if the Brooklyn Y. C. follow out their present programme they may find a place of their own and gather a large fleet of small boats under their flag. Of the large clubs the interests of the Atlantic Y. C. lie mainly in the larger boats, and though their location is convenient for Brooklyn men, the club offers few inducements to the handlers of small craft. The Seawanhaka C. Y. C. have always been active in the encouragement of the smaller yachts, but without marked success of late years, and the larger boats are the most important. The New Jersey and Jersey City clubs provide for the Corinthian, but they are far from Brooklyn and even from some parts of New York city, and with disadvantages in the way of anchorages or courses. As long as the interests of the smaller yachts and of amateur sailors are kept in view, without any efforts to attract the big yachts to the ultimate exclusion of the little fellows, or to compete with their neighbors at Bay Ridge or Tompkinsville, the Brooklyn Y. C. can hope for a full share of prosperity and we wish them all success in their new effort.

SOUTH CAROLINA Y. C.—This club have lately added three new yachts by McGiehan, of Pamrapo, to their fleet. One 16ft. 2in. long, for Mr. H. M. Bowden; one 16ft., for Mr. John Watkinson, Jr., and one of 19ft. 9in., for Com. Pembroke Jones. The annual regatta will be sailed on July 4 over an eight-mile course on Wright's Sound. The Charleston and Savannah clubs have been invited to enter also in a sail on the Cape Fear River next month. The club allow only ama-

teur sailors in their races. The following officers were lately elected: Commodore, Pembroke Jones; Fleet Captain, Norwood Giles; Flag Captain, W. L. Smith; Purser, M. G. Willard; Governing Board, H. M. Bowden, W. L. Paisley, G. H. Smith; Marshal, H. McL. Green.

SHORT BRANCH BOAT CLUB.—A race was sailed on Saturday, May 16, from Frank Bates's to buoy 17, off Robbins Reef, thence to buoy 18 and home, two rounds, making 10 miles. Six boats, all cat-rigged, started as follows: Little Saunders, J. McMahon, 11:15 A. M.; Dore, A. Turner, 11:15:20; O. K., Wm. Traine, 11:16:10; Mary M., Jas. Merriman, 11:17; Josie, W. Dixon, 11:17:10; Annie B., C. Van Buskirk, 11:17:20. The wind was fresh from southeast, and soon pushed Mary M. into first place before buoy 17 was turned, which position she held all the distance, winning by 40 seconds in 2h. 18min. 56sec. Dore was second, Little Saunders third and Annie B. fourth.

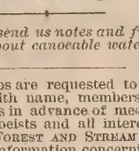
SMALL BOATS AT WINTHROP.—On Saturday, May 16, the first race of the season for catboats under 17ft., was sailed over a triangular course, from Hutchins's pier, thence around the middle ground buoy, Jeffries Point buoy, and back to the start, a distance of 7½ miles. Six boats entered, mostly new ones built this winter. Their names were Mischief, D. Belcher; Cadet, Dunham & Belcher; Dot, S. A. Freeman; Flirt, J. A. Hildreth; Edith, Henry Turner; Thera, H. Hutchinson. Mischief, 16ft. 2in. long, designed and built by her owner, won the race in 1 hour 36 minutes, being 28 seconds ahead of Cadet. Another race will be sailed shortly.

LARCHMONT Y. C.—The following programme for the season has been arranged by the club: Pennant regattas, June 6 and Sept. 5; annual regatta, July 4. The club is in a prosperous condition with a large membership and fleet, and good entries are promised in all the races. The small keel cabin class will be well represented this year by the Aneto, yawl; Gannet, sloop; the former Mignonette, now Nora, and a fourth boat, all of similar size and fairly matched, all being cruisers, but they will take part in the races and make good sport in their class.

JERSEY CITY Y. C.—The opening day of the season will be on May 30, when the members and guests will assemble at the club house at the foot of Jersey avenue at 9 A. M. The signal to sail will be given at 10 A. M. from the flagship. The rendezvous will be in Gravesend Bay.

A PILOT BOAT AND A WHALE.—On May 12, when cruising off Nantucket, the pilot boat Alex. M. Lawrence, No. 4, ran violently into a whale, throwing the boat on her beam ends, but doing no serious injury to her. How the whale fared is not stated.

PHOTOGRAPHS OF GENESTA.—The Canton Paint and Oil Co., whose advertisement appears in another column, are sending out handsome little photographs of Genesta to all who write for them.



Canoeing.

CANOEISTS *are invited to send us notes and full reports of cruises club meets, information about canoeable waters, and other communications of interest.*

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signals, etc. of their clubs, and also notices in advance of meetings and races, and reports of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, traps, and information concerning their local waters. Drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

May 23—K. C. C. Spring Regatta.
May 29, 30—Pittsburgh C. C., Camp on Monongahela.
May 29, 30—Hudson River Meet.
May 30 to June 1—Connecticut River Meet.
June 24—Vesper Boat Club, Annual Regatta.
June 25—Jersey City Y. C., Regatta. Special Class for Canoes.
June 27—Eastern Meet, Merrimac River.
July 18, 28—Western Meet, Ballast Island, Lake Erie.
July 24 to Aug. 8—A. C. A. Meet, Grindstone Island.

AMERICAN CANOE ASSOCIATION.

SECRETARY—C. A. Neidé, Schuylerville, N. Y. Candidates for membership must forward their names, with $2 for initiation fee and first year's dues, to the secretary, who will present the names to the executive committee. Money should be sent by *registered letter* or money order.

THE A. C. A. PRIZE FLAGS.

THE regatta committee thank the undermentioned members and friends for kind promises of prizes received since the last acknowledgment:

Mr. S. C. Titus, Deseronto C. C., one flag.
Miss Mary Burnet, Peterboro, one flag.
Miss Sophie Burnet, Peterboro, one flag.
Mr. S. D. Kendall, Tarpon Springs, Fla., one flag for cruising rig race instead of for longest independent cruise as previously announced.
Mrs. E. B. Edwards, Peterboro, one flag.
Mrs. R. B. Lundy, Peterboro, one flag.
Miss Hall, Peterboro, one flag.

Thirty-one flags are now promised; forty-five are required.

Offers of special prizes are received from Mr. Hugh Neilson, a pin, and Mr. John Clindinning, Toronto, spoon-blade paddle.

Special prizes will be considered and races arranged (according to the suggestions of the donors) by the committee at the meet.

MAY 18, 1885. ROBERT W. GIBSON, Chairman Reg. Com.

PADDLES AND ROCKERED KEELS.

Editor Forest and Stream:

In your canoeing columns I notice that there is still a difference of opinion as to which is best and most powerful, the single or double paddle. I have used both, and think I can say I am unprejudiced, though the use of the single paddle has become to me, after years of constant use, as natural as the use of a knife and fork at table or my legs in walking. I think "Single or Blade" puts this side of the question very well; but I can't quite go as far as he does, for paddling end on and generally straight ahead, the double blade is more powerful. I think simply that there is none of the stroke lost in shifting behind as a rudder to correct the deflection of the canoe's head, and it is especially more effective in such canoes as are coming into general use, taking a crew of one in the center or near it, and with a straight keel. But I quite agree with "Single Blade" that no one who has wielded the double, and has only cruised in such boats, can have the slightest idea of how one of our rockered-bottomed keelless canoes, such for instance as the Ontario Company are building in such numbers, can be maneuvered by a skillful hand, kneeling a little aft of the center, with a single-bladed paddle. She can be made to waltz, go sideways, backward, forward or diagonally without shifting sides, or even, if necessary, without lifting the paddle from the water.

No one who has run rapids only in the way I see so often described in the logs you publish, with a hard bump and a scrape almost as a matter of course, can have the slightest idea of the perfection to which the art is brought in the backwoods of Canada, or of the wild waters these craft are every day brought through without danger to vessel or crew. A scratch on the smooth varnished bottom is frowned at. A bump or break needs the most elaborate explanation, and an upset is a disgrace, pardonable only among young and green hands. But to have perfect control of himself and his vessel, the canoeist must of necessity kneel, and here with many is the rub, this being a position which is only comfortable after long practice. The Esquimau wants to be able to paddle through rough seas and open water. He sits low in his craft and in the center, and uses the double paddle and a decked canoe. The North American Indian cruises through narrow streams and swift, difficult water. He generally builds a canoe with considerable sheer, always with a rockered bottom, and without the slightest approach to a keel, and although I have seen them use oars in rapids, I have never once seen the double paddle. This, I think, shows that centuries of experience have enabled these people to come to precisely the same conclusion as myself.

A word more on this subject of rockered keels. Why is it that every one of the otherwise beautiful boats which are built in the States and which you sometimes illustrate—Snake, Dot, Stella Maris, Sunbeam—have always a straight keel, or at least keelson? They are little, if any easier to build, as I know from personal experience. They are very much harder to turn; are heavier in proportion to their floating capacity, and the little that is saved in draft by carrying the V frames at bow and stern down to a point instead of rounding off is not appreciable. Is it to give a deep rudder a protection? A skeleton frame would do that, or is it to prevent their wobbling under the alternate strokes of the double paddle? The Esquimau does not seem to find this sufficient reason, for he does rocker his keel. It gives them more lateral resistance for sailing, but in larger sailing craft your columns prove that this is generally effected by carrying the keel down amidships and rounding up the ends. If any, the light draft is what is aimed at, but I am certain this is only apparent in most cases.

A canoe in river work generally grounds in going over sharp, steep pitches, the bow and center get over and the former becomes immersed in the level water below and immediately rises, bringing down the stern with a crash on the crest of the obstruction making the fall. If the water is so shallow as not to allow the stern to go down sufficiently, the bow sometimes finds bottom as well and the canoe remains supported by both ends, and in all probability turns over and dumps its crew. This operation I have seen described and pictured more than once. To sum up, the finest sea boats in the world have plenty of sheer and rockered keels. The best and most weatherly sailing craft go in for the same thing, and the boats which have been for centuries considered best in rapid waters are all cambered (I am speaking of small boats). The only small craft which have been long studied and which still stick to straight keels are the row-boats built for going with tolerable directness and as speedily as possible in smooth water, and very few canoes are built for that purpose. H. K. M.

OTTAWA, Canada, May 8.

[Many of the earlier decked canoes were built with a decided rocker and we know of no reason for the abandonment of the custom, as the canoe is better for it. We should prefer a rocker at least 2in. in 5ft., as shown in the design of a cruising canoe published last November in the FOREST AND STREAM, as the boat turns much more easily and yet will paddle a straight course.]

THE NEWBURGH MEET.

Editor Forest and Stream:

Will you kindly mention in your next issue that clubs and individuals intending to participate in the Decoration Day meet at Plum Point, will confer a favor, as well as facilitate matters with our committee, if they will notify of their intention, together with a memoranda of the probable number of men and canoes, what tent space is needed, and their expected time of arrival, and by what route. The Mohicans, of Albany; Shatemucs, of Sing Sing; and the Brooklyn club have already handed in their "notice," and we are waiting now to hear the voices of New York, Kit Kat, Knickerbocker, Bayonne, Rondout, Amsterdam, and other knights of the paddle. I would also add that if either clubs or individuals desire to contribute prizes of any kind, notification of the fact will be appreciated by the committee. Address as regarding these matters as below.

HENRY A. HARRISON,
Purser Newburgh Canoe and Boating Association,
Lock box 512, Newburgh, N. Y.

NEWBURGH, May 16, 1885.

OUTFITS FOR CAMPING AND EXPLORING.

WE extract from a valuable paper on the subject of exploration and outfits, by Major-General the Hon. W. Fielding, published the *Journal of the Society of Arts*, some directions which are of special value to canoeists as well as to all campers. Though some of the suggestions do not apply to travel by water, they are of sufficient value to warrant their reproduction, as they may be of value to the other readers of FOREST AND STREAM:

Stores.—These must be sub-divided under the headings of (*a*), provisions for the mouth; (*b*), materials for obtaining food, or for offense and defense; (*c*), materials for facilitating the locomotion.

In the choice of provisions, care must be taken to select such articles as are wholesome, nourishing, small in bulk and not liable to deteriorate by keeping. There must also be variety, so as to promote health, and a proper proportion of such articles of consumption as would diminish the risk of scurvy. Of meat the best sort is preserved meat in tins. There is very little to choose between that preserved in Australia and that preserved in America, north and south. The tins should not be too large, and they should be rectangular and not cylindrical in shape. Essence of beef (Brand's or Liebig's, in tins or in skins) is a most valuable form of meat. Flour and oatmeal should be packed in block tin boxes of various sizes, containing from 1lb. to 4lbs. each. Sugar should be cane sugar, powdered and packed in ¼lb. rectangular canisters. Tea—the best for the purpose is Goundry's compressed tea, manufactured in tablets of ¼lb. in weight, and subdivided like chocolate tablets, into eight portions, one of which is ample for tea for three or four people. Being wrapped in lead paper, it stands any climate, and I have known it to keep good for five years. Salt should be kept in stone or thick glass jars, with screw or cork-lined stoppers. Lard should always be taken, and should be kept in stone jars, capable of being rendered air-tight. There is an excellent form of compressed and dried vegetable tablet manufactured in France; and there is also a preparation of dried potato, in powder. No expedition should be without these to keep off scurvy, that terrible scourge and bugbear of all explorers. Ginger, peppers, red and black, should be carried in thick glass pickle bottles, with air-tight glass stoppers, edged with cork. Brandy for medicinal purposes should be carried in small wooden kegs, covered with thick felt, and with a locked covering to their bungs. A provision of lime juice should be similarly carried in kegs of different sizes. There should be several spare kegs of the same description, kept constantly filled with fresh water. In addition to this provision of water, each animal should have a canvas water-bag slung by a strap round his neck. These bags keep the water cool, and each should have the neck of an old soda water bottle sewn into the orifice used for filling it; the vessel can thus be easily used, without detaching it from the animal carrying it. Water-bags on the same principle, only much larger, are made of well-seasoned leather, and are slung by straps and iron rings on to a pack saddle. At first the water has a nasty flavor; but the bags soon cease to affect the taste of the water, and are indispensable on long waterless marches in a hot climate.

While on the subject of water, it may, perhaps, not be out of place to impress upon you the necessity in observing the greatest care in the selection, and, generally speaking, the after treatment of water. As a general rule, the only water which can be drunk with safety, without fear of evil consequences, is that which springs directly out of the ground, from rocks, or which is obtained from a permanent running stream, the bed of which is not muddy, and on the banks of which there is not an exuberant vegetation. Even in the case of water issuing from rocks, care must be taken to avoid water issuing from copper or lead-bearing rocks. In these cases a small quantity of sulphuric acid would at once detect the presence of the mineral in dangerous quantities, as the water would become discolored.

In most countries subject to drought, the water requires special treatment; mechanical filters are not practicable, or even safe. I have come across it as thick as pea soup, and sometimes covered with a growth of green or red weeds. In such cases, the first operation is that of skimming with a skimmer made out of a forked stick, with a pocket handkerchief or other piece of linen stretched tightly between the forks. This done, scatter a pinch of powdered alum into the vessel in which you have collected the skimmed water; this will cause a great deal of the matter in suspension to precipitate. Then pour the water slowly into a filter filled with the charcoal of your last night's camp fire, mixed with any sand or fine gravel which may be obtainable, and which you have previously washed. It must then be boiled, and skimmed while simmering, and only when no more scum arises on the water is it really fit or safe to use. It is a good plan always to fill the kettle—or, still better, the cooking pot—with water the last thing at night, and put it at the edge of the camp fire to simmer (not to boil) and always to fill up the water kegs and bottles from what is left over from each morning's cooking. It is also a good rule never to drink plain cold water in the tropics. Each man should carry in his pocket half a handful of oatmeal, and put a pinch into his pannikin of water when he fills it for drinking.

I once traveled 1,400 miles across a portion of the center of Australia, and began my journey after a drought which had then lasted eighteen months, and which only broke up the day I reached the sea coast. It was only by the strict enforcement of these precautions that (under Providence) I never had a case of illness from fever or from dysentery. Personally I always carried in my pocket a few "thirst lozenges," which are, I believe, nothing except a compressed form of Lamplough's Pyretic Saline.

Before closing the enumeration of the *provisions de bouche*, it is well to add a list of the medicines and surgical instruments necessary to every expedition. Rhubarb, essence of ginger, about 100 pills of colocynth and henbane, about double the quantity quinine pills, made up in small doses of three grains each, some opium pills, a couple of bottles of Dover's powders, four bottles of sweet spirits of nitre, about 100 pills of podophyllin in small doses, camphor and chlorodyne. Two lancets, two abscess knives, two catheters, two enemas, some surgical needles and some silver wire thread for sewing wounds, a silver probe and two pair of artery forceps, a syringe with various nozzles for various uses. Sticking plaster of various sorts, and some prepared lint and medicated wool, and some vaseline, carbolic acid and carbolic soap. All the medicines should be in glass-stoppered bottles, the stoppers having been lubricated with pure glycerine previous to insertion. The medicines, etc., should be divided into at least three portions, so that each wagon, or each detached party, should have a complete set of everything. There is no greater mistake than to have everything in one medicine chest. All boxes should be avoided, as in a very damp or a very dry climate boxes are apt to come to pieces with the rough handling that every package gets at the hands of those who often have to do the packing and unpacking of animals two or three times each day.

Clothing.—Take as little as possible when starting from England, as you can get most articles necessary for explorers at the place from which the wagons would make their start. Of personal attire, the following are those which I consider sufficient for most expeditions: Four shirts made of gray flannel, with two buttons on each wristband, to admit of them being worn loose or tight. Four long merino drawers, double seated and double down the inside of the thighs. Four pair of thick knitted woolen long stockings. Two cholera belts, one of knitted worsted, the other of flannel about a quarter of a yard wide and three yards in length, to be wound round the body or fastened with a safety brooch. Six silk pocket handkerchiefs (white) and of the thickest and best quality. They are useful sometimes when traveling in the very early morning, to serve as a curtain against the sun's rays, which often at that hour strike with great force on the nape or side of the neck under the hat. A Norfolk jacket of good woolen serge or light tweed, made double-breasted, so as to be worn either open with the lappels buttoned back, or buttoned across double over the chest and stomach. It should be made like a garment known by miners as a jumper, not cut in at the waist, but kept in at the waist by a belt. This belt should be made of two pieces of soft leather, about 2½in. wide, and stitched together at the edges so as to admit of dollars or other coins being kept in the belt and slipped in at either end, and prevented from falling out by a flap and button at each end.

If a sword has to be carried, it is best carried fastened on to the side of the cantle of the saddle by a round strap and button of leather. If a revolver has to be worn, it is best carried in a frog supported by a webbing belt over the right shoulder, which should be kept in its place by the waistbelt.

The best hats are of gray felt, of a helmet shape, with means for ventilation round the edge and at the top. They should be provided with a chin strap, to be worn when riding fast or against a strong wind. The best boots are those known as the Palisser boot. They reach nearly to the knee, and are laced up for about six inches from below the instep, so that the boot can be always easily got on and off while remaining watertight. I prefer those made of porpoise hide to any other, as they are lighter and more supple in wear.

Dogskin driving gloves should always be taken, as their use prevents sun boils, blisters and many sores arising from thorns, etc., on a journey. Breeches should be made very loose, except just below the knee, where they should be fastened with a buckle and strap, or tied with thongs of porpoise hide. A hunting whip with a hammer handle and a long brown leather lash is always useful, and is a necessity where there are many spare horses to be driven along with the party.

Camp Necessaries.—India rubber buckets, two to each wagon, should always be carried, to be used for watering the horses while in harness. Palkee hammocks, made of waterproofed canvas, are the best and most portable form of bedstead, and it is always unadvisable to sleep on the level of the ground. The blankets should be loosely sewn together round three sides so as to form bags. This plan saves many a sleepless night. Moreover, it keeps snakes from getting in between the blankets. A waterproof sheet, with eyes round the edges, is most useful, as when thrown over the ridge pole of the hammock it can be lashed to the sides of the hammock, and serve as a complete shelter even in the heaviest storms of rain and wind. A light folding chair, or if this be too large, a beach seat with a back, is a great luxury, and is almost a necessity in wet ground.

We have now to consider the selection of such materials as are necessary to procure supplies of fresh provisions to protect life. First and foremost are guns. These should be breechloaders of the simplest possible construction, and of 10 bore. Each gun should be provided with 20 steel cartridges. These are really indestructible and are very easily reloaded and recapped; and having a female screw turned for a distance of an inch inside the cartridge, there is no difficulty in making the wads to keep in position.

For ammunition, shot of all sizes should be taken, the larger slugs for use against man or large animals. Powder should be carried in two small copper magazines, each containing about 7lbs of powder in half-pound canisters, fitting into the outer cylindrical copper case. These canisters should have screw tops with leather washers to them. The canisters should always be kept full so long as there is any powder in them. When a canister cannot be filled with powder, it should be filled up with cotton, wool, rags, or even crumpled up soft paper. It must be remembered that any expedition is liable to be reduced to pack animals only, and then the attrition is so great that everything which can rub, soon gets rubbed to the finest dust.

When it is known that there are rivers or lakes, it is well worth while to take a casting net, or even a small seine net of strong tanned twine. A large provision of hooks and fishing lines of all sizes should always be taken, as they are not only useful in the obtaining of a change of diet, but are very valuable as an article of barter with natives.

For personal defense the best weapon is the largest sized Colt's revolver, with a stock which can be used at the shoulder, and is detachable. When on horseback it is best carried in a bucket, like our cavalry carry their carbines. A good one shoots with wonderful accuracy up to 100yds. A hunting knife, of a pattern of my own, I have found the best, as it is light, and yet strong enough to cut away a fairly large branch. The sheath is of bamboo, and there is room in it for a knife and fork of steel, flat, with wooden handles screwed on each side of the shaft. The blade of the hunting knife is made light by having two deep grooves cut out of the thickness near the center of the blade, so that, while the blade is made lighter, it is also thereby rendered much stiffer.

As a rule, from ten to fifteen miles may be considered an average march in a new country, in which there are no physical difficulties. I have, however, more than once, only been able to progress two miles in the day; while in order to reach water I once had to make, in three successive days, marches of forty-one, forty and forty-three miles. These were, however, made with pack animals, and without wagons. Before concluding this paper, it may be interesting to most of you to hear a few remarks on the manner in which exploration for water is generally conducted. Experience, and even common sense, tells us that in a hot or a dry climate, animals and birds are but very seldom found far from water towards sunset, and that at sunrise they generally leave the vicinity of water on their search after food. Observations as to the direction of the flight of birds, and especially of all the parrot tribe and the carrion birds, will generally lead to the discovery of water.

In almost every country there are some descriptions of shrubs and trees which will not grow except in the vicinity of water; and even where this water may not be obtainable on the surface, it can, under such conditions, be found by sinking in suitable spots in the beds of the streams where those shrubs or trees are found. I once traveled for three days down the bed of a river which was quite dry, and yet by sinking from six to ten feet in the bed, a sufficient supply was obtained. It seems to be a provision of nature that in very hot and dry countries the streams almost invariably run for considerable distances under ground. With a very rudimentary knowledge of geology, and by the observance of the natural signs of water peculiar to each country, travelers may, and do, often find water where an unobservant man might die of thirst.

"CANOE HANDLING."

THE literature of canoeing, both English and American, is already quite extensive, covering all phases of the sport, but it is inaccessible to the general canoeist, being scattered through many books, papers and magazines, and even if attainable, there is much that is useless as well as out of date, and that would mislead any but an expert. None of the books specially devoted to canoeing have answered that purpose, dealing either with some special feature, as building, or being mere accounts of cruises, and of little use to the novice, or in fact, to the more experienced canoeist. In "Woodcraft" and "Canoe Building," the Forest and Stream Publishing Company have given to canoeists two valuable aids in certain departments of canoeing, and to them they have just added, in "Canoe Handling," a book that will be as indispensable to the general canoeist, either old hand or novice, as the first two have already become to the specialists.

Those who have seen the skipper of the Dot unpack his canoe, and have examined the vast number of useful and fancy articles that he has contrived to carry in a very limited space, will not be surprised at the amount of really practical info mation that Mr. Vaux has compactly stowed between the covers of his book: information of equal value to the historian of canoeing, the novice, the paddler, the sailor, and to all who have any interest in boats propelled by paddles. The widely different meanings attached to the word canoe in various localities makes a definition or description of all canoes a very difficult matter, but the author has gone at once to the beginning, and after a few words descriptive of modern canoeing, what the sport is and for whom it is best fitted, he starts with the most primitive types, the Indian birch and the Esquimau kayak, showing the essential features of the canoe; and thence traces the development of the Rob Roy, the Nautilus and the many later models, making clear incidentally the differences of build and model so perplexing to the beginner, and also the many advantages of the canoe over

other boats. The complicated question of types and models is dealt with in a very simple and satisfactory manner, all canoes being placed under one of five classes according to the purpose for which they are used, paddling only, paddling and sailing, sailing only, etc.; a scheme at once easily understood and comprehensive enough to include all possible models or sizes, and avoiding the rapidly increasing complication that comes from the addition of new models. If canoeists and builders will henceforth follow the system, it will save a great deal of trouble and misunderstanding.

After making clear what a canoe is, and in what different forms it is found, the author takes as an example a representative sailing and paddling canoe, the class most in use by canoeists, and describes in detail every part, giving a technical definition as well as such a simple explanation as will be clear to the merest tyro in canoe handling or building, illustrating all with diagrams. In being once understood what a canoe is, the reader is introduced to the simplest form of the craft, the paddling canoe; he is shown the various parts and their uses, and is aided in selecting a canoe according to the purpose for which he intends to use her. Being provided with a suitable boat, he is shown how to handle her on shore, how to launch her, and is invited to step aboard, a paddle is placed in his hand, and in company with the Dot he starts on a trial trip. All the details of paddling are explained to him as they are met with; steering, passing vessels, landing, boarding the canoe from the water, the varieties of single and double paddles and their uses, and the accessories, such as seats and backboards. When familiar with this, a small sail is given to him, and as the boat runs before the wind its use and also the simpler points of sailing are explained and fully illustrated.

When it is once made plain what a sail really is, the question of rig is taken up, the different sails and their details are carefully described so as to teach each man to select the best for his special purpose, and when this is understood, the sheet is hauled in, the two canoes come on the wind, and the art of close-hauled sailing is fully explained. When once conversant with the main points of sailing the canoeist is introduced to such additions as are indispensable in a sailing canoe, rudder, foot gear, centerboard, etc., including a detailed description of the various reefing gears now so much in demand; after which, being fully equipped for sailing or racing, he is taken for a sail on rough water, to windward and all points, until he can hand, reef and steer, and do everything, as a sailor should, "shipshape and Bristol fashion."

Mr Vaux has probably had a longer experience than any other canoeist in initiating novices and in training them in the actual use of a canoe, and he has taken the same course on paper that has proved so successful afloat, going from the simpler points to the more intricate ones, making each clearly understood in its proper order. What he says is specially valuable to the younger canoeist, but there is also much that can be learned by those of greater experience, while all are sure to be deeply interested from the manner in which the subject is treated. The latter portion of the book will, however, be more valuable to the older canoeists and racing men, who have so often wondered why they had such a good view of the stern of the Dot in racing, as the author deals at length with paddling and sailing races, giving to all his long and valuable experience. In the appendix are given the rules of the American Canoe Association with the programme of the coming meet; a draft of a club constitution, house rules, and similar details of value to club members, or to those about to organize clubs.

Mr. Vaux's book marks an era in canoeing, as in place of much random advice and unreliable information that has long been showered on canoeists through various mediums, it gives to them in a thoroughly practical shape the information they demand, and although the author disclaims in the preface any intention of teaching a man to sail or paddle by mere reading, he has come as near to it as is possible, and deserves the thanks of all canoeists for the manner in which he has accomplished a difficult task. The illustrations throughout the work, which add greatly to the clearness of the description, are mostly by the author, and the entire book will add to his widely known reputation as the first among American canoeists.

JERSEY CITY Y. C. CANOE RACES.—The Jersey City Y. C. will offer a prize for canoes on the occasion of their regatta on June 25. Entries must be made by June 6. We are glad to see that our yachtsmen are recognizing and encouraging the hardy sailors of these small craft, as canoe sailing is a capital training school for young yachtsmen. The practical details of sailing and rigging are taken hold of by the wielders of the paddle in a real businesslike way that puts to shame some of the larger clubs. The canoeist follows the sport from pure love of it, and should he some day graduate into a larger craft, he is ready to work in earnest, and makes the most valuable kind of recruit that a yacht club can gain. The three clubs now about New York number some fine craft in their fleet, and we hope they will show an appreciation of the action of the J. C. Y. C., by turning out in full force on June 25. Entries should be made to the regatta committee, Messrs. Geo. Hawes, T. E. Burley and T. S. Metler, 94 Montgomery street, Jersey City.

PHILADELPHIA C. C.—The first spring review of the fleet was held on Saturday, May 9, on the Delaware, just beyond the club's quarters at Cooper's Point, Camden, N. J. Nine canoes followed Commodore Faulkner in the Whitecap from the slip to the appointed position. The paddlers, under command of Frank Thibault, canoe Imp, included Wm. Sharpe, canoe Crescent; Frederick Thibault, canoe Elf; T. D. Finletter, canoe Spurt; Geo. K. Fischer, canoe Iota. The sailing canoes were the Vic, C. H. Hagert; Sonyea, Vice-Commodore S. J. Creswell, Sr.; Midge, J. C. Harrison, and Lalage, Purser T. S. Wescott, in command. After proceeding a short distance, the canoes formed in single column and passed in a circle around the commodo e's canoe, saluting as they passed to port. Three sailing and four paddling canoes of the fleet were not launched on this occasion, not yet being ready for service. The commodore had been watching with his weather eye a dark cloud that was rapidly rising out of the west, and like the prudent mariner that he is, gave signal for return. The paddlers reached the house in good season, but the sailors, who had to beat down against wind and tide, caught the hurricane in mid stream, having kept every inch of canvas spread till the last moment. They were driven ashore under bare poles, reaching land in the condition known to the initiated as "fisherman's luck." The club now possesses two Rushton canoes, a Peterboro open, three Racines and nine or ten very well-made canvas boats, with sixteen active and ten associate members. Among this number we can muster ten A. C. A. members. A delegation of five or six may be expected at the Thousand Islands this summer.—WESTCOTT, Purser.

VESPER BOAT CLUB.—A meeting was held on May 13, at which the committee on the site for the Eastern meet reported in favor of Winn's Bluff, on the east bank of the Merrimac, one and a half miles above Woodlawn, and the date was fixed for June 27. It was also decided to hold the annual regatta on June 24, with races for single and tandem canoes as well as rowing boats. Invitations will be sent to all New England canoeists to attend the meet on June 27.

HUB C. C.—This club held its annual meeting on May 6, when the following officers were elected for the ensuing year: Chas. F. Dodge, Captain; F. A. Walter, Mate and B. R. Clarke, Purser. The club is now one year old and numbers seventeen members with fourteen canoes, ranging from a small paddling canoe to a Mersey of 4ft. beam.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

ASHBURNHAM.—The eggs sent were identified as those of the land tortoise or box turtle.

C. P. B., Lynn, Mass.—Will you please inform me if trout are ever caught in white or clear water brooks? I have noticed that they were not, and have heard anglers say you must have dark waters for trout. Ans. Trout are taken in the clearest water as well as in dark streams.

C. Z. & Co., Glens Falls.—Will you inform us the proper method to construct a fishway over a dam six feet high with a stream two feet wide and six inches deep running over it? Ans. To plan a fishway requires special knowledge, without which the work is apt to be a failure. Write to the McDonald Fishway Company, Washington, D. C., for particulars and estimates.

TOM ALLEY, Boston, Mass.—My pointer bitch was bred to a pointer dog May 4 and 6. On May 10 she was lined by a collie. What will be the result, and is it likely to injure her for future breeding? Ans. It is impossible to foretell the result. As cases of superfœtation are not uncommon, this may prove to be one. Some writers contend that the offspring of a bitch is often "influenced" by the sire of a previous litter. We have known of many cases similar to the above, and have carefully watched for the appearance of this influence in subsequent litters, but have never been able to find the slightest evidence that such is the fact.

Forest and Stream Publishing Co.

The "Mayer" Minnow Casting and Trolling Rod.

This rod is made from specifications furnished by Professor Alfred M. Mayer, who with this rod and an Imbrie Black Bass Reel won first prize for black bass casting at the tournament of the National Rod and Reel Association, Oct. 23, 1884.

Its proportions were reached after a long series of experiments, the object of which was to obtain a round section bamboo rod of about 9 ounces that would feel light in the hand, be so well balanced not to throw off a delicately mouthed minnow in making long casts, and finally after striking the bass would have enough spring and flexibility to afford the angler the same pleasure as that given him when playing a bass on a fly rod.

The rod has two tips, one 6 inches shorter than the other; the shorter tip is used for trolling and in casting when wading.

This rod has been thoroughly tested in both lakes and quick water, and anglers who have used it are unqualified in praises of its staunchness and the delicacy of its action.

Our rods have taken the highest prize at every tournament in which they have been used.

ABBEY & IMBRIE,

"FOREST AND STREAM SERIES."

DEER HUNTING.

BY JUDGE JOHN DEAN CATON.

BY and by it will be time to hunt antelope and deer. It is always time to read about them. Judge Caton's book on the antelope, elk, deer, moose and caribou of America discusses in a readable way the life history of these animals and the methods of their capture. It is the work of an enthusiastic sportsman who has had a wide experience and has devoted the leisure of years to studying these interesting game animals. The volume is very fully illustrated, and is a perfect storehouse of information and entertainment. The first edition was sold by the Boston publishers at $4. Price $2.50.

WOODCRAFT.

BY "NESSMUK."

A COMPACT pocket handbook of condensed, boiled-down, concise, clear, comprehensive, sensible, practical camp gumption. "Nessmuk" has been "in the woods" in Michigan, New York, Pennsylvania, and South America, and this is a book for outers, wherever they kindle their camp-fire. The author believes in "smoothing it." He has learned how; now he tells others. It is much easier to learn from "Nessmuk" than from Dame Experience. We should not be surprised if "Woodcraft" completely revolutionized the methods of camping out. If you are going to the woods, read "Woodcraft" before you go. It may add to your trip a hundred fold. Price $1.00.

DOG TRAINING.

BY S. T. HAMMOND.

HE was a promising puppy, and when you turned him over to the breaker to be educated, you thought he was bound to make "the best dog in the world." And you'll not soon forget how disappointed and disgusted you were when the dog, the breaker and the big bill—all three turned up together, and you saw that the animal's spirit was broken and it would take a steam calliope to make him mind. Now, this could not have happened if you had been wise enough to buy a copy of Hammond's book, and in your odd leisure moments *train* the dog yourself instead of having him *broken* by some one else. We are selling edition after edition of this book, and it is revolutionizing the system of preparing dogs for work in the field. Price $1.00.

SHORE BIRDS.

A PAMPHLET for those who "gun" along the shore. Tells of: I. Haunts and Habits—Where the bay birds live and what they do at home. II. Range and Migration—Where they go to breed and where to spend the winter. III. A Morning Without the Birds—An episode of shore shooting. IV. Nomenclature—A list of our American species of *Limicolæ*, with a description of each species. V. Localities—Where to go to shoot them. VI. Blinds and Decoys—How to shoot them after you have reached the grounds. 45 pp., paper. Price 15 cents.

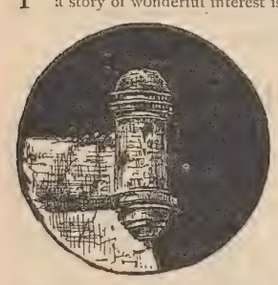
ANGLING TALKS.

BY GEORGE DAWSON.

AS a political writer of conceded power, Mr. Dawson wielded a trenchant pen; when he turned from the conflict of parties to the praise of the favorite pastime of "simple wise men," his essays, limpid as the crystal streams, are aglow with the soft summer sunlight and melodious with the songs of birds. When angling was the theme, he wrote from a full heart and in closest sympathy with the scenes and pursuits described. These "Talks" are brimful of manly, wholesome sentiment; there is in them all not a particle of cant. Their sincerity and overflowing spirit at once win the reader, and he perforce shares the author's enthusiasm. The effect is magical, like that of the mimic players in Xenophon's *Memorabilia:* he who reads, if he be an angler, must go a-fishing; and if he be not, straightway then must he become one.—*Extract from Publishers' Preface.* Cloth, price 50 cents.

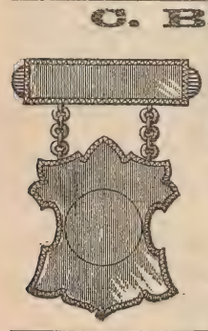
CANOE "AURORA."

BY DR. C. A. NEIDÉ.



A CHARMINGLY written and always entertaining account of a canoe cruise from Lake George, New York, down the Ohio and Mississippi Rivers to the Gulf of Mexico, by the Secretary of the American Canoe Association. To read the cruise of the "Aurora" is the next best thing to having made it; and the reading is decidedly more pleasant than would have been participation in some of the misadventures related. 216 pp., cloth. Price $1.00.

Reads like a romance from beginning to end.—SPRINGFIELD REPUBLICAN.



Old Saint Augustine.

BY CHARLES B. REYNOLDS (FOREST AND STREAM).

THE famous Florida town's three centuries have been crowded with romantic incidents; and a story of wonderful interest is this, with its Huguenots and Spaniards, Franciscan Fathers, English Sea Kings, Boucaniers, Minorcans, Liberty Boys, and Seminoles. It is told vividly, in the briefest possible compass, with strict historical accuracy, and with an enthusiasm that is manifest from the very first page to the last. Among the illustrations are copies of some of the very rare drawings by Jacques Le Moyne, the French artist, who so narrowly escaped massacre by the Spaniards in Florida, three hundred years ago. Another very rare engraving is the plan of the city in British times. The *artotypes* (or photographs in permanent ink) are among the most beautiful book illustrations of the day. They are made from negatives taken expressly for "Old St. Augustine," and are: Fort Marion (four views), the Matanzas Fort, the City Gateway, the Cathedral, the old Palm-tree, Garden Overlooking Plaza, and two very characteristic St. Augustine Houses. Cloth, pp. 144, 8vo. Price, $1.50. **Forest and Stream Publishing Co.**

HINDS'

BLACK-FLY

CREAM,

For Repelling

Flies, Mosquitoes, Midges and other Insects, and protecting the Skin from Sunburn, Irritation and Infection.

No Tar. No Stain.

GLENS FALLS, Vt., June 15, 1884.

Mr. A. S. Hinds, Portland, Me.:

DEAR SIR—I have not sooner acknowledged the receipt of box of "Black-Fly Cream," as I desired to first test it; this I have now done on two fishing trips where I found the Mosquitoes, Black Flies, Punkies and Moose or Deer Flies in great abundance. Although all these rests swarmed about me, I found the *Cream a perfect preventive* against their bites when it was applied to face, hands, ears and neck. For many years I have sought after *the* insect repellent, and have tried all manner of compounds, but yours is the most thorough, at the same time cleanly and not disagreeable.

Yours truly, A. NELSON CHENEY.

Price, 25 Cents, Postpaid.

Hornbeam Rods

A SPECIALTY.

W. HUNTINGTON,

WILTON, CONN.,

Makes a specialty of the manufacture of FINE HAND-MADE RODS of Hornbeam for fly fishing. Every fly-fisher should have one of these rods, for whatever preference he may have these are the only thoroughly reliable rods, secure against breakage and capable of real hard usage. With one of these rods a sportsman may venture into the woods for a season and take no other rod, and be fairly sure of returning with it in a serviceable condition. As made from wood of my own cutting and seasoning, they are powerful, easy in action and full of endurance. For circular send to WALLACE HUNTINGTON as above

---

For Sale.

SALMON FISHING

IN CANADA.

Fly-Fishing for Salmon, Grilse and Sea Trout to let in rivers discharging into the Gulf of St. Lawrence, during 1885 season, from about 10th June to 1st September. Rents from $50 to $1,000 per river.

The undersigned will receive offers for the Fly-Fishing in the following rivers, situated in the Seigniory of Mingan, on the north shore of the St. Lawrence, from the mouths of said rivers to a distance of six miles inland in a direct line.

	Rents.
Manitou	o—Great falls near the sea; untried.
Sheldrake	$100—Good pools, with salmon; untried.
Thunder River	o—Good pools, with salmon; untried.
Magpie	$125—Good pool; falls near the sea.
St. John	Reserved—Large river; good pools.
Mingan & Manitou	$750—Large rivers; good pools; plenty salmon. Rented.
Romaine	$1,000—Large river; splendid pools; large salmon.
Corneil	$125—Small river; good pools; plenty salmon.
Pashasheeboo	o—Small river; untried.
Nabisippi	$100—Good pools; plenty salmon; untried.
Aguanus	$150—Fine river; good pools; plenty salmon; untried.
Natashquan	$1,000—Large river; splendid pools; plenty salmon. Rented.
Kegashka	$100—Fair sized river; plenty salmon; untried.
Musquarro	o—Great fall near the sea.
Little Musquarro	o—Small river; plenty salmon
Washeecostai	$250—Fine river; fine pools; plenty salmon.

Olomansheebo, Coacoacho, Etamamu, Netagamu, Mecattina, Ha! Ha! St. Augustine, Esquimaux, Blanc Sablon, Each $50.

These rivers so far as known have never been tried with fly-fishing, and only partially explored, but are reported by the Hudson Bay Company's officers to be fine rivers, with good pools, abounding with salmon and sea trout.

The first twelve rivers on the above list can be reached by a coasting steamer from Quebec, or by a mail carrying schooner leaving Gaspé the 1st and 15th of every month; the others are accessible only by a yacht or hired coasting schooner, obtainable at Quebec at $6 per day, including crew, who find themselves in provisions.

STUD FOX-TERRIER

Champion Raby Tyrant,

(K.C.S.B. 11,179.)

Pupped October, 1880. Weight 16½ pounds.

Raby Tyrant is a white dog, with an even marked rich black and tan head. He is a thoroughly game and stylish terrier, possessing a beautifully shaped long punishing head, with perfect drop ears, small eye, rare neck and shoulders, deep chest, well ribbed and muscular quarters, short, straight legs, excellent feet, great bone and substance, with an exceptionally hard and dense coat.

Raby Tyrant is without doubt one of the most successful terriers of the present day. He has been exhibited 67 times, 33 different judges having adjudicated upon him, and has won 47, First 10 cups and specials; 12 second and 2 third prizes. His breeding is undeniable, combining as he does the choicest and most valuable blood that can be obtained. At the stud Raby Tyrant is proving himself eminently successful.

Fee, $15.00.

JOHN E. THAYER, Hillside Kennels, Lancaster, Mass.

PUBLISHERS' DEPARTMENT.

A NEW PARK SUPERINTENDENT.

THE change has been made. R. E. Carpenter, recently the Superintendent of the Yellowstone National Park, has been removed. A little more than a month ago we called attention to the fact that this individual was inefficient, and that in more ways than one he had proved himself unfaithful as a public servant. We pointed out to the Secretary of the Interior that he was thus in no respect a proper person to longer occupy the responsible position which he then held, and urged his prompt removal from office.

The charges which we brought forward were not made hastily, nor on insufficient information, and, knowing that they were true, we felt the utmost confidence that they would be carefully looked into by Mr. Lamar. It is characteristic of the present administration that it moves deliberately. Its actions are well considered beforehand, and so few mistakes are made. We were, therefore, quite willing to await with patience Mr. Lamar's decision, which, in fact, has come rather more speedily than we had expected. We have reason to know that the Secretary of the Interior takes a deep and intelligent interest in the National Park, and we believe that he may be counted on as one of the staunchest friends of the reservation.

Carpenter's removal is the direct result of the ventilation of his acts by the FOREST AND STREAM. We said last spring that "the new Superintendent of the Park will have an opportunity during the season that is coming to show what stuff he is made of. He may be sure that his actions will be scrutinized closely. If he does his duty he will be applauded, but if he fails it will soon be known." The promise to watch his actions we have fulfilled, and the result of this observation has been the publication of Carpenter's shortcomings, and his consequent removal from his position. He proved an utter failure as Superintendent. Would it not have been better policy for him to have tried to do his duty? He has been but six months in office, and is now turned out. He has demonstrated his unfitness for his position and has no one but himself to thank for his removal.

Mr. D. W. Wear, the newly appointed Superintendent, is a native of Missouri. Our representative who inquired about him from Senator Vest, quotes that gentleman as saying: "Colonel Wear is about forty years old, active, intelligent and honest. He commanded a regiment in the Union Army during the war, and was a gallant officer. He is now a State Senator from the city of St. Louis. He is an earnest sportsman and in every respect a gentleman. His appointment means a new and better era in the history of the Yellowstone Park." We are glad to hear so good an account of the new Superintendent. He enters upon his office at a time when he can do much for the Park, or by neglecting it can do a great deal of harm. It will not be difficult for him if he is a man of the right stamp to gain the respect and hearty support of that portion of the public who are interested in the Park. We hope that he will take this course. We need a good Superintendent. Another bad one would be a great disappointment.

SKINNING THE ST. REGIS COUNTRY.

THE lumberman has invaded the St. Regis country in the Adirondacks and his axe is converting that famous realm of forest and spring and stream, and game and fish into a scarred and barren wilderness of desolation. One lumbering concern now owns the entire district extending from near Meacham and St. Regis lakes on the east almost to the Raquette River on the west, and from St. Regis Falls on the north to McDonald Pond on the southern line beyond the west branch of the St. Regis—a territory about thirty-five miles square. This district they are systematically skinning. Not only is all the soft timber, as pine and spruce, cut off, but all the hard wood is taken too. Mills have been erected for the manufacture of wooden ware, hoe handles, fork handles, and numerous other implements. During the past winter many thousands of cords of firewood have been cut off. Some of this is burned in the company's engines, and the rest goes to supply the Ogdensburgh & Lake Champlain Railroad. Everything is cut off, big and little, old trees and shrubs. The skinners are doing their work thoroughly; they are making a clean sweep. When they have finished, when the game preserves have all been destroyed, the springs and brooks dried up, the river flow lessened, they will leave the bare ground and the rocks and go off to lay waste some other fair forest land.

It would not be sensible to blame the lumbermen and the hoe handle manufacturers, who have wrought this havoc. Sentiment and a regard for public welfare usually go to the wall when they run counter to personal aggrandizement. The promoters of this St. Regis lumbering concern's work of devastation doubtless saw lots of money in the enterprise. So long as they can fill their own pockets by skinning the Adirondacks, they are oblivious of the rights of the community. They do their work of destruction with a good conscience, and sleep soundly at night, unvexed by even a thought of the outrages they have perpetrated in the North Woods.

The parties to blame for such a great public loss as this forest destruction are the men who have been sent to Albany from year to year by the people to care for their interests there. The senators and the assemblymen of the State of New York, who have been so intent on plunder and boodle and all sorts of black and white and checquered jobbery, that they have devoted their attention and the people's time to filling their own pockets, and who, in this disgraceful hustling for spoils, have been blind to the forestry needs of the hour—these are men who have richly earned and ought to bear the responsibility for Adirondack ruin. They can plead no excuse. Year after year, for more than a decade, this question of Adirondack forest preservation has been broached, and at session after session it has been thrust aside because there was "nothing in it" for "the boys."

A change has come. It could not help but come. The scales are falling from the eyes of the people, and the sentiment of the public on this subject is growing so strong that the Albany spoils hunters dared not longer ignore the question. How much of a change it will prove remains to be seen. If the movement can be kept out of the control of the interested parties who are openly and covertly doing their best to get it into their own hands, there will be no possibility in the future of such an outrage as that of the St. Regis.

OUT-DOOR CLUBS.—Hartford has a Camera Club, whose members go out in company to take pictures. The Y. M. C. A. of New York has an Outing Club, whose members go in company for rambles in the country.

GAME LAW CHANGES.—Will correspondents favor us with a memorandum of whatever changes may have been made in their State and local game laws.

THE SITUATION IN MASSACHUSETTS is told by a correspondent whose communication is published elsewhere. The game Association, whose headquarters are at Boston, have not the unity of action, the strength of solid combination, and the money backing, which are so potential in shaping legislation at the Hub. The dealers have a strong lobby. They work hard because their immediate profits are at stake. They succeed every year in bamboozling the Legislature into perpetuating a law which, so far as it permits the sale of game long after the open season for its capture has expired, is a standing disgrace to Massachusetts. The marketmen's crafty agents by their lying misrepresentations also succeed in making the country members believe that the Association members are a crowd of dudes who are wholly selfish in their efforts to have right game and fish laws on the statute books. It is exceedingly unfortunate that the petty jealousy and prejudice, which have always existed between dwellers in the town and dwellers in the country, should be used, as in this case, to defeat the common good of all. The Old Bay State, mother of so many scholars and statesmen whose worth has adorned the nation, ought to have a game law equally just to all, whether for most of the year brick walls form their horizon, or whether they dwell where the eye may rest on far-stretching fields of living green and rolling hills purple in the decline of day.

DECORATION DAY.—Next Saturday will be observed as the anniversary of the day set apart for honoring those who died in the Civil War. There will be parades and orations and the decking of graves with the flowers of spring—a ceremony ever beautiful and touching. By some of the veterans of the war there has been of late an expression of regret that this day should have become so much of a holiday, given up to games, pleasure excursions, and other forms of popular amusement, which bid fair to sink the prominence of the other observances. This feeling is very natural. The memorial purposes of the day should not be forgotten nor neglected. But it is only human nature—as demonstrated by the history of all holy days which have become holidays—that the pleasures of the day should gradually usurp the position at first accorded to its solemnities. But however great this change in mode of celebration may be, there is little reason to fear that the true purpose of Decoration Day will be forgotten; and while it is a vain effort to attempt to prescribe how the holiday shall be spent, it is enough that each man so conduct himself that by his conduct and bearing and influence as a citizen, he is worthy of the country for whose integrity these soldiers gave their lives.

MR. WHITNEY, OF PENNSYLVANIA (we do not know his address any more definitely), will be interested in that clause of the new law of this State which declares it a misdemeanor to retain trout of less than six inches in length. We are led to think so because we are told that Mr. Whitney has every summer for some years dispatched from the Adirondacks to his home in Pennsylvania his annual firkin of fingerlings. When it comes to filling a firkin full of fingerlings weighing seven pennyweights each, we are at a loss which the more to admire, the fingerlinger's diligence in yanking them out or his patience in cleaning them. There are lots of men who do this sort of business. Some have big firkins and others have bigger firkins; and some have short fingerlings and others have shorter fingerlings. Never judge a man's brains by the hat he wears, nor seek to gauge the small-fry expert by the size of his firkin, but rather by the want of size of the by-and-by-would-be-fish that are in it.

THE FORESTRY COMMISSION.—It is to be hoped that Messrs. James and Dowd will accept their appointments as Forestry Commissioners of the State of New York, at least for the present and until the Senate convenes again. That will prove a check to any improper appointments, which might be made should they refuse to serve. It is highly desirable that a forest warden should be appointed at once, that the practical work may be begun this year. The State can afford to try no experiments with inexperienced officials, provided experts can be found. There are men in this State to-day who have had practical experience in forestry work abroad, and to such a man the management of the Adirondack forestry undertaking should be intrusted. This is the part of economy.

THE DEER HOUNDING BILL.—The deer hounding bill, twice passed and sent to the Governor, has not yet been signed.

The Sportsman Tourist.

THE BUCKTAIL IN FLORIDA.

VI.

LET me commence this letter by answering several inquiries (by letter) concerning the double-bitted pocket axe, an article of much value to any hunter, camper-out or canoeist, but hard to obtain in anything like perfection. First as to dimensions:

Entire length	11¾ inches.
Width of blade at eye	2 inches.
Width at cutting edge, corner to corner	2⅝ inches.
Length of blade, center to center of cutting edge	5¾ inches.
Weight when ready for use	18 ounces.

I have written to several axe-making companies with a view to having such hatchets made in quantity, that I might supply them to the hundreds who would be glad to get them at any reasonable price, but I have found none who cared to undertake the job. There is, however, an old hunter, angler and mechanical genius away up on the headwaters of Pine Creek who makes all my hatchets, fish spears and grains, and he does it well. I presume if one should send him an order with about two dollars cash for a double-bitted hatchet and mention me, he would, if not too badly driven with hunting and fishing, turn out something that would do to keep, and one such hatchet would last a lifetime. His address is, Gabe McKinney, Pike Mills, Potter county, Pa. And I will write him to-morrow, putting him up to make pocket axes.

Also, I want another pair of grains. For he made me the lightest and best grains just before I started on this trip that I ever handled, which the same went off down the bayou this very week, sticking in an immense sheepshead that I struck at the Springs. And you may take my word for it, there is sport to be had on this coast throwing the grains, equal, in my opinion, to the best fly-fishing. But tastes differ. I should say, however, that a tarpon of 100 pounds with the grains in him, flying for his life at the end of 200 feet of line backed by a small pine log by way of steadier, and to mark his course, would afford as exciting sport as an eight-ounce speckled minnow at the end of a light leader backed by a four-ounce rod; for the silver king is a handsomer, stronger, quicker fish, and a harder fighter than the lordliest salmon that ever ran up from the sea.

The silver king does not take kindly to the lures of the angler. He has no need. His favorite food, the mullet, is never far to seek, and his great speed enables him to follow up a school quite at his leisure, snapping up a mullet as often as he likes. And yet he will take the hook when properly baited and handled. When he finds himself hooked the fun commences. He makes a lightning-like, straight-away dash for open water, springing high in air every few yards, glistening, glittering in the sunlight like a streak of burnished silver, and bound to free himself from the hooks though he tears his under jaw to shreds, as he sometimes does. Said an old Florida fisherman to me a few days ago: "I have fished this coast for twenty-five years, and never caught but one tarpon with hook and line. I was fishing for sharks with a powerful double hook, and he got it deep down, in his gills, and he tore them all to pieces tryin' to get away. I have harpooned a good many, mostly with a lilly iron, which is the sure way to kill them."

I have not tried my hand on the silver king as yet. But the season for him is just on, and I have a strong pair of grains sharpened and bent on purposely for him. Also a train of hooks on a line that would hold a wild hog, and I humbly hope to have some hefty sport before the season is over, for I have spent seven weeks of the off season in the camp where I now write, and it is time to swing the double blade for the new grounds.

Not that there is any lack of interest in the region, or that I have cruised it out (it would take a year to do that). But "Tarpon" and I have two new canoes *en route* that we wish to try along the coast among the keys and up some of the rivers. Notably the Weikawatchee and the Cootie (Pithlochascottee of the maps). The Weikawatchee is a deep, clear stream, only twelve miles in length, born of an immense crystal spring and full grown at its birth. It abounds in large black bass (called trout here) and is not deficient in other fish or alligators. It was a noted place during the Seminole war, and there are many interesting points connected with its history.

Then, if plans do not "gang agley," we have a cruise of 200 miles down the coast to make in "Tarpon's" yawl-rigged sharpie, 33 feet long and able for outside work. She has a comfortable cabin and plenty of room to stow our canoes, with which we propose to do that mythical and mysterious region put down on the maps as the Ten Thousand Islands, and lied about in the loosest manner by the natives, who will tell you they "have no use for such a dogoned mudhole." And when you mention wildfowl and fish, they will say, "A man can fill his boat with fish and birds quicker than he can work his way in and out of that hole for three miles, and do it outside in safe, pleasant cruising, too. Stranger, it's a place no white man wants to go projec'in' around in. There's 'gators among them islands more'n eighteen foot long, and they ain't used to being shot at, and would just as soon charge on your boat as not; and if you get in there and had your boat wrecked, you might as well be a cat without claws. As to mosquitoes and big gnats, they'll just eat a man alive." That is about the way an old sponger put it up to me, and he added that the "islands" were about fifty miles across, and no man had ever fairly gone through them—unless he were an Indian. All of which gave an added interest to the projected cruise, but was not all true.

The unsurveyed and unmapped portion of the Ten Thousand Islands is about thirty miles long in a S. W. by N. E. direction, and about eighteen miles wide. The Indians cross it in two days, and, as they take no water, it is evident that fresh water is to be found among the islands. Whether a boat 33 feet long can be worked through is a question. But she can be worked in a far as she will go, and she can come out where she went in. Cruising and "projec'in'" among the islands can be done with the canoe.

I dare say all romance and mystery connected with the region will fade to a muddy, marshy, uninteresting reality when tested by a little sound horse sense, as it did with Ponce de Leon, who once sought his fountain of perpetual youth in that very bay, which still bears his name. Still, it is new ground, and cannot fail to contain much that is novel and interesting. At any rate it will be a capital place to test the efficacy of the fly-medicine. And "that reminds me."

A correspondent of FOREST AND STREAM, whose signature I forget, some time ago criticised the recipe for fly medicine in "Woodcraft," on the ground that oil of pennyroyal, being volatile, would not evaporate when simmered with oil of tar and castor oil. In the first place, there is no oil of tar in the recipe, but simply pure pine tar of the North Carolina stamp; secondly, the evaporation theory is quite correct from a scientific standpoint. Practically, I made just twelve ounces of the medicine last spring according to the recipe, and it did not shrink perceptibly in simmering. I gave some away, used a little in cruising on the Tiadatton, and have used more this spring. It is the only dope I have yet tried that just fills the bill, and I have tried several kinds. Most of them, when freshly applied, are good as against mosquitoes, black flies and red bugs (or mooquims). But the punkie dope is the only thing that beats the multitudinous sand fly, and he is the worst of all.

Just now and here we are suffering from a six weeks' drouth, and the hot white sand is dry for a foot in depth; and the sand flies are numerous almost past belief. I have a notion that, if I were to measure accurately a peck of this sand and let it stand in the sun for an hour or so till the sand flies could escape, it would fall short about three pints. When I attempt to write by candle light they get into the ink on my pen, blot the paper, and swarm out my light. Kerosene light is worse. I was trying to write this morning at 2 A. M., thinking to get the cool of the day; but they swarmed me out. And now (10 A. M.) the air looks sort o' fuzzy with them. I am going to suspend literary effort until a smart rain drowns them partially out; and meanwhile turn my attention to the new canoe, weighing, as Rushton writes me, "a little less than ten pounds." How is that for a clinker built cedar to cruise the Gulf Coast?

IN CAMP, May 13. NESSMUK.

THE ADIRONDACKS.

Editor Forest and Stream:

By far the best and most feasible route by which to enter this health-giving resort is as follows; it is easy and quick, with good boats, good guides, good roads, good hotels, good accommodations, good fishing and hunting. This section has been comparatively unexplored by sportsman, and, as in St. Lawrence county, hounding at all seasons of the year is prohibited. Deer are plenty, while in other sections, by reason of hounding, venison has become scarce and hard to get.

Leave New York on the evening train via N. Y. C. & H. R. R. R. to Rome, thence via R. W. & O. R. R. to Potsdam, at which place you will arrive about 12 M. the next day. Leave Potsdam by stage or livery conveyance. Passing over a good road twenty-one miles, three and a half hours' ride brings you to Munger's hotel, called Forest House, which, by the way, is a first-class woods hotel. This house is located at the foot of the "Bog," where you are to all intents and purposes essentially in the woods, and can go into camp anywhere along the banks of the Bog. This is a bog only in name. In fact, it is as fine a stretch of still water as can be found within the North Woods. At Munger's one can procure good boats and guides; and, as you are at the foot of navigation on the Raquette River, you can reach any point by boat, or if you desire, by stage, in the Adirondack Wilderness.

Six miles by water or seven miles by land brings you to the head of the Bog, where a good hotel is kept by Geo. G. Orton, called Jordan House. Mr. Orton also keeps boats, guides and teams, which can be had at reasonable rates, and holds himself in readiness to transport you to any point you may desire to reach. Six miles further (via stage or Orton's teams) brings you to John Sevey's, a good, old-fashioned farmhouse hotel with the very best kind of good, old-fashioned folks inside of it. John knows the woods like a book, and is every inch a gentleman and sportsman, and can take you where the deer feed and the trout do congregate. Four miles further on you arrive at Childwald, a small hamlet named after its founder, Mr. Addison Childs. Two miles further brings one to Massiwepi Lake or Gale's Pond View House, one of the best, if not the very best location for hunting and fishing that can be found in the State of New York, and when you consider that this point can be reached in forty-eight hours from New York city via routes as above described, we think that we are fully warranted in saying that this is the shortest, easiest, and beyond all odds, the best route to the Adirondacks. From Gale's one may swing to the right via Cat Pond, Massiwepi Lake (which, by the way, is one of the finest little lakes in the Wilderness) down the outlet of that lake to Grass River, up this river to Burnt Bridge, Dog, Lily Pad ponds and Silver Lake, all first-class points for hunting and fishing. Or should you desire to push on up the Raquettee to Tupper's Lake, one and one-half miles over a good road to the left brings you to Gale's Landing on the Raquette River, where you can take boats up or down, as you like. If up, six hours' time will land you at Tupper's Lake or Mark Moodus's hotel. But as this locality has almost a national reputation, it needs no commendation from me, but should you conclude to go down stream, as you undoubtedly will if you desire good hunting, as the grounds below are unequalled for sporting, you can paddle your canoe over alternate rapids and still water back to the place of starting, to wit, head of the Bog.

Having arrived at the Jordan House again, if you are in for a tramp and do not mind roughing it a little, you can swing to the right, taking in Church, Blue, Beaver, Clear, Wolf, Lem, Crooked, Sampson and Three Brothers ponds, with the last branch of Grass River, also Dead Creek, a small tributary of that river, all of which are equalled by few and excelled by none for fishing and hunting grounds. Or should you desire to look in at one of the finest and best arranged camps that can be found anywhere in the Adirondacks, a drive of six miles over a fair woods road due east brings you to Jordan Lake, as fine a little lake as the sun shines on, located on the bank of which stands the famous Webb Vanderbilt camp, or the camp of the "Kildare Club," and should you be so fortunate as to find any of that gentlemanly club present, you will be entertained in right royal style.

In and about this locality one may spend a month and have new fields every day. The small streams in this section are well stocked with trout, and if you desire you can visit Rock, Deer, Willis, Windfall, Mountain, Big Wolf, Little Wolf and McDonald ponds, together with the west branch of St. Regis River, all of which furnish comparatively an undisturbed home for trout and venison. Should any of your readers desire further information, I will be only too glad to furnish such information as may be required by applying personally or addressing, MARTIN V. B. IVES.

POTSDAM, N. Y.

Editor Forest and Stream:

In the FOREST AND STREAM from time to time during the past six years I have recommended its readers to that portion of the Adirondacks bordering on the headwaters of the three branches of the St. Regis River, in the vicinity of Blue Mountains, as a locality where good sport could still be had with both rod and gun. But I can no longer so recommend it. A large portion of these waters, including the Sixteen-mile Level on which I have camped for the past seven seasons, has been nearly if not quite ruined for hunting and fishing during the past year by the lumbermen. In August last the lumbermen cut down and cleared away from both banks of the level, its whole length, all trees and shrubbery growing or standing within fifteen or twenty yards of the water, and cleared the stream of all obstacles in the shape of running logs and timber. There were waiting, as I am informed, 400,000 logs, scattered along the [illegible] level, ready to be run down at the breaking [illegible] of the ice.

During the past three years no less than five large saw mills have been erected on the middle branch [illegible] Sixteen-mile Level, and during the coming [illegible] a large mill will be built at its head, to which [illegible] railroad (now running within five miles of its foot, is to be extended). Several large mills will also be built on the East Branch during the summer. Work on them has already commenced. The point at the head of the level, where the railroad will terminate for the present, is only eight miles west of the outlet of St. Regis Lake, on the shores of which Paul [illegible]'s hotel stands. A wagon road between these two [illegible]s already been surveyed and marked out and work on it will commence as soon as the frost gets out of the ground.

With all these things going on in this region, and with from two to three hundred workmen scattered along the river banks, and as many more on the line of the railroad, the prospect for sportsmen and anglers cannot be very encouraging in this part of the Wilderness. Without doubt the whole of this district will soon be ruined for sport with rod and gun. The time is not far distant when the whole Adirondack region, with the exception perhaps of those tracts bought up by the wealthy game clubs and private individuals for game preserves, will be like the St. Regis and many other districts in them, ruined for the sportsman and angler. But for those who visit the Wilderness merely for recreation, or those who seek the woods and mountains in the hopes of regaining or improving their health, the above statements will not be unwelcome news. The railroad when it is completed will enable them to reach the heart of the Wilderness with but only eight or ten miles of travel by stage or wagon, or to reach within that distance by rail a point from which they can travel by water or boat through the greater portion of the Adironduck region.

ADIRON ONDACK.

NOTES OF A SOUTHERN PILGRIMAGE.

THE FOREST AND STREAM abounds in descriptions of Southern grounds and sport. Naturally one of its readers, on turning his face toward the Great Gulf, would be alert for signs of successful sport in the land of mild winters. In the States through which I passed on the way to and from New Orleans, the streams seemed too muddy for any game fish save the ubiquitous black bass. Perhaps in summer these yellow streams change their complexion. The pine forests of Central and Southern Alabama look as if they might harbor plenty of game. A citizen of a way-side station told me on the depot platform that he reckoned a man might get a deer every day in the woods if he had a dog. And if hounding would be justifiable anywhere from a sportsman's standpoint, it would be among these pines, where every little distance there is a swamp thicket to block up the way of the hunter. Few wagon roads cross the railroad, showing that there are wide ranges of uninhabited country.

A visit to the market in Mobile, and the French market in New Orleans, showed the splendid variety of fish from which the epicure may choose his brain food, and in whose capture the angler may tax his skill. Chief in size and most striking in appearance is the "red snapper." This fish looks a royal fellow—a king both for the hook and the pan. His dainty white flesh is much finer in grain than that of other fish of equal size.

I had expected to see plenty of wildfowl in the salt marshes east of New Orleans, but there was nothing to be seen, save a few teal and coots. The latter (*Fulica americana*) were numerous in the markets. In Illinois they are not considered fit for food, but since coming home I have had one cooked for the purpose of testing the flavor of the flesh, and found it passable, equal to several of the kinds of duck commonly eaten.

As our train swept through the marshes east of New Orleans an exciting race took place. A small hawk, swift of wing, kept abreast of the train watching for the small birds that were startled from their coverts by the noise. Every now and then the hawk would dart away in pursuit of one of these, and failing to take it, back he would come to skim along the surface of the water in the wide ditch beside the track. For at least a dozen miles he continued the chase, the passengers watching him with no little interest.

At the Exposition more display of stuffed birds and animals is made than at the Centennial Exposition. The finest of these of course are from the Smithsonian Institution. Notable among them is a white heron trying to pull an arrow from its breast, a fight between two hawks, frogs in the following characters: The dancers, the drum major, the shoemaker, a bridal couple, the duel, an old smoker and a bootblack. One huge case holds fine specimens of all the game birds of the United States. Everywhere in the great Government building are magnificent specimens of water, woods and field fauna.

From Nevada there is a huge piece of bark stuck full of acorns by woodpeckers—stores laid up for winter. Just the points of the acorns show, holes having been bored to receive them.

In the Texas display I saw two stags' heads with antlers interlocked, to which was attached the following very interesting description: "This curiosity, altogether unique, is a pair of stags' heads, with one horn of each antler so entwined and interlocked that the united strength of two men cannot pull them asunder. The capture of this trophy was made about six years ago by Mr. Willis Blue, who, in Richland Creek bottom, coming upon the place where the encounter had occurred between the two bucks, followed the trail caused by one dragging the body of his dead enemy to where the town of Kerens now stands, a distance of fifteen miles, and finding the victor still alive, dispatched him with a hunting knife. Both stags were full grown, their antlers indicating them to be at least five years old, of equal size, and the battle must have been a long and terrible one, as both were in a badly lacerated condition, and the victory of the stronger a worse fate than that of his dead antagonist. Deer are still plentiful in Richland and Trinity bottoms, in Navarro county." RICHARD GEAR HOBBS.

Natural History.

THE BIRDS OF MICHIGAN.

BY DR. MORRIS GIBBS.

(*Continued.*)

36. *Helminthophaga leucobronchialis* Brewster. — White-throated warbler.

Only one specimen has been secured in this State. On May 25, 1879, while collecting with W. A. Gunn, Esq., in a partially cleared tract overgrown with brambles, bushes and weeds, we observed a small bird which was at first taken for the female of the goldenwing, but which, on being secured, proved to be a new species to us. The bird was a male, and was taken in Ottawa county, about 43° north latitude.

Supposing that a new bird had been discovered, and having looked over every available work in vain for a proper description, the bird was named *H. gunni*, in honor of the possessor by myself. At that time I had not seen the plate and description presented in an early issue of the "Nuttall Ornithological Bulletin," which was the first information offered to the public regarding this species. Corrections quickly followed through the "Bulletin" and other papers.

So far as observed, the white-throated warbler which Mr. Gunn shot was similar in its movements to the goldenwing. It kept in the low bushes or upon the ground, and did not sing or even utter a call note. The locality was the edge of a pinery, and the dead trunks of the trees were scattered about, with the stumps and briers forming a labyrinth of brambles, bushes, weeds and dead trees, in many places almost impenetrable.

37. *Helminthophaga ruficapilla* (Wils.) Baird.—Nashville warbler.

Arrives in early seasons by May 3, but in late seasons the birds are not seen until May 9. The average arrival may be placed at May 5 or 6. The birds linger with us some seasons until the last of the month, although the large majority of those seen pass along in a leisurely way without stopping. It may prove that the species remains during summer, as I have met with many birds in the last week in May occupying a large tract of swampy land covered with tamaracks. The Nashville has never, as yet, been known to nest with us. I have one data as late as June 17, which indicates a summer residence; but if the birds do remain, they are so rare as to be but seldom seen, and nothing has been offered on this point absolutely conclusive. The rufous-crowned warbler is especially fond of sections of country where tamaracks are plentiful, and I have more often found them in such localities than any other. The birds are vivacious, active and very pleasing, and from their cheerful disposition and small size are particularly noticeable to the collector, or, I should say, the ornithologist.

The song of the little fellow is very pleasing, and may be described by the syllables *Ca-twee, ca-twee, ca-twee, ca-twee, twee-twee-twee-twee-twee,* or often *Ca-weet, ca-weet, ca-weet, tweetle teetle-teetle.* The notes are loud and clear, the latter ones becoming rapid and sharper. The singer enters into his song with great animation, and, throwing his head back as he sits perched on a twig, is evidently entirely lost in his ditty. At the time of his singing he may be approached within a few rods, but upon his observing the collector he immediately drops into the bush or flies to the dense top of a neighboring tamarack. The song is harmonious and is readily remembered by a practiced ear.

The birds are much more common some seasons than others, and this peculiarity is common to many members of the family, and is observed in many parts of the State. Mr. Trombley, of Monroe county, writes me that the Nashville is rare now, although quite common several years ago during spring migrations. The species is found with us again in July, sometimes by the 20th, and from this date to Sept. 1. The birds may be taken in their accustomed haunts. Later than this I know nothing of them, but one Michigan collector writes me that he has secured specimens from Oct. 10 to 15. Not reported from the Upper Peninsula as yet, but known to nearly all collectors in the State.

38. *Helminthophaga celata* (Say) Baird.—Orange-crowned warbler.

Embraced by Boies in his list of birds of Southern Michigan, 1875; and by Covert and Steere. Not mentioned by any of the earlier lists and known to but few collectors. A straggler, or more properly a rare migrant. Dr. Atkins, of Ingham county, about 43° north lat., writes me that the first he observed was on Sept. 11, 1880, and the last was taken Oct. 1 of the same year. Three were shot in all. I have never met with it.

39. *Helminthophaga peregrina* (Wils.) Baird.—Tennessee warbler.

This is one of the last birds of the family to reach us in spring, and in fact is one of our latest migrants, very few species arriving later. The birds undoubtedly appear by May 15, but as yet the earliest record in my notes is May 18, and he rarely if ever arrives before the elm trees are in full foliage. The birds remain generally in the tops of the trees, selecting the densest foliaged trees, usually the elms. In this position they are rarely seen, and the collector often seeks in vain for a shot at the olive green birds while they are chirping in the trees above him by the score. By watching he can see a specimen fly out from the treetop for a second and return almost instantly, or the bird may dash into the next tree, but at this season—late May—a series of specimens is difficult to procure. When they descend to the bushes, which occasionally occurs, or more often to the apple trees, is the time to shoot them.

I do not think this species nests in the State. In all parts of Michigan that I have visited it is completely a migrant. The birds appear again in late August on their southern journey, and are found in scattered flocks until Oct. 10, or even later. The song, which I have only heard in the spring, is a sharp chatter, difficult to describe. They also have a soft call note.

40. *Parula americana* (Linn.) Bp.—Blue yellow-backed warbler.

Occasionally seen as early as April 22, but usually appears about May 1. This season it arrived April 28. Some years the birds are quite late and do not appear until May 11. These records apply more particularly to Kalamazoo county, where I have spent more time collecting than in other parts of the State. A calculation may easily be made, however, from observations in any part of the State as to time of arrival in other localities; but the rule is not always reliable, for I have often observed birds in one section from fifty to one hundred miles north of my home, while the same species were not observed in the neighborhood of my home for several days later. The species passes leisurely through the southern counties on their way to the north, and are often found south of 43° as late as May 25. Few remain south of 43° during the summer, but as we go north the species is found more common, and becomes an abundant summer resident in limited sections. This bird is known to nearly all collectors and is embraced in nearly every list. It is not as yet recorded as a bird of the Upper Peninsula, but has undoubtedly been overlooked there. It appears in the advance guard of warblers usually, and is frequently gone before the Tennessee and other late arrivals have appeared. I have met with it in several different counties in various parts of the State, and considered it a well-distributed species in Michigan.

While with us, the blue yellowback is quite musical, and the variety of notes is greater than is generally acknowledged. Few writers have carefully studied the songs of our birds, and many have written that certain species now well-known to sing with great spirit are devoid of musical ability. Wilson says that this bird "has a few, feeble, chirruping notes scarcely loud enough to be heard at the foot of the tree." On the contrary, the diminutive songster has at least two distinct songs which are quite penetrating when we consider the size of the singer. I have often heard the chirping notes of the yellowback, referred to by Wilson—the call notes we may term them; notes which are common to many species of warblers of the various genera, and so similar in many instances that it takes a practiced ear—much better than I possess—to distinguish the birds in the foliage. But the songs of the warblers can all be determined by cultivation of the ear.

The principal song of *Parula* is *Zuee-zuee-zuee-dee-dee-deeee,* uttered in a steady even strain, as he searches among the branches. It is occasionally modified to *Zuee-dee zuee-zuee-dee-dee* or even *zuee-zuee* and rarely *dee-dee,* as if in finishing the song which has been interrupted. These notes are very deceptive and often appear to come from over our heads when in reality the singer is in the top of a tall tree ten or fifteen rods away. After the foliage has appeared it is often extremely difficult to secure a specimen because of our inability to locate the singer. There is another song which is not heard so often as the last, and which I do not feel satisfied in describing as I am not sufficiently familiar with the notes as yet. It is more variable and nicely modulated.

The yellowback is more partial to tall trees in timber lands, but is often found in oak woods, and frequently among the bushes near streams. In early morning, when the birds are in delightful chorus and frequenting the small streams which flow through the forest, the subject of this sketch may be found bathing in the edges of the rivulets. Now dashing the water about with their tiny wings and fluttering over the surface of some little side pool, again shaking themselves and skipping from twig to twig among the low bushes or hopping upon the ground, these little gems give evidence of the life and happiness which abounds within the sylvan glades away from the haunts of man.

I consider this bird a common one, but it is not regularly abundant in its migrations, and I have frequently collected an entire season without meeting with a specimen. One collector in the extreme southeastern part of the State informs me that the birds are not nearly so common with him as they were twenty years ago. It has never been found nesting in Kalamazoo county, but a female containing an egg ready for the shell was shot by Mr. Syke June 5, 1880. A. H. Boies in his list of the birds of Southern Michigan, embraces this species as a southern sojourner. Nests in Washtenaw county according to A. B. Covert. It was first embraced in a list by Professor Sager in 1839.

Of its nesting habits I know nothing. The blue yellowbacks depart for the south in late September.

41. *Perissoglossa tigrina* (Gml.) Brd.—Cape May warbler.

A peculiarly variable species in its migrations, occasionally appearing quite common, and again extremely rare. The birds are probably more common each season than is generally supposed, but are not observed from the fact that they pass by us so rapidly. I have met with the Cape May about half the years that I have collected, and am satisfied that the species migrates more rapidly than any other bird in the family of which I have any knowledge. The birds may be found quite abundant in the morning, and not another seen during the day or season. Again I have seen them in tamarack swamps in considerable numbers as night was coming on, while in the morning not one could be found in their usual haunts. The birds may be found in the budding fruit trees, deep beech and maple woods, low elm wood or pine lands during the vernal journey, while in the fall they appear more partial to the tamarack swamps, in which they are also found in spring.

The Cape May is an exceedingly active bird, and gleans among the foliage in a very lively manner. Few species cover as much ground as he. He is ever on the move and skipping from twig to twig in an exceedingly restless manner; dashing out from the treetop, seizing an insect with a loud snap of his bill, and returning to his perch in a flash. Running along a small limb and clinging to the bark of the trunk, flitting from tree to tree, and rarely descending to a bush the little meteor appears ever on the move, and is seldom shot while quietly sitting on a twig. A flock will appear in the treetops and pass by so rapidly that few specimens are taken unless the collector hurries after them and shoots at every opportunity. While with us the birds are not musical, and I have only heard the single, rather loud chirp or call note. I do not think that this species remains in our State during the summer, and judge that all go to the north to nest. They return to the south in late August, and are not so anxious to reach their winter home as they were in the spring to find their northern haunts, remaining with us frequently until late September. The Cape May appears first in our southern counties from May 10 to 15, and is seen some years as late as May 20. After this date the birds are rarely seen excepting in more northern parts, until the fall migration. We may mention this species as an irregular straggling transient.

PRESENT DISTRIBUTION OF THE AMERICAN BISON.—Cimarron Kan., May 21.—*Editor Forest and Stream:* I send you by mail the Garden City *Sentinel* with item in regard to buffalo. There are a few (perhaps 200) buffalo southwest of here, south of the Cimarron River about sixty miles. They were driven from the head of the South Beaver and the country between there and the head of Palo Duro, South Beaver is in the neutral strip, Palo Duro is in Texas, about sixty miles apart. There are about 1,000 there, in bunches of five and ten, and very wild. Their range proper begins 125 miles southwest of Cimarron. I am going to them on Oct. 15. The newspaper slip reads: "Hon. C. J. Jones returned from his buffalo hunt last week, and, as a matter of course, was successful. If never before, he has well merited the title of 'Buffalo' Jones on this trip, which extended as far as New Mexico, and resulted in the capture of fourteen of the quadrupeds. He brought with him eleven calves, which he means to raise. We have always contended that Kansas, and especially this part of Kansas, takes the lead; now she can boast of a real buffalo ranch. While John Robinson, Barrett & Co., and other shows, ignore our city this season, we have the drop on our neighboring cities in the fact that we now have one of our own."—W. J. D.

SPRING NOTES—Of the birds expected to date, we find most of the different ones represented. Song sparrows and bluebirds have young. Among the shore birds we find bee-tleheads (*S. helvetica*), chicken birds (*S. interpres*), winter yellowlegs, ringnecks (*A. semipalmata*) and the peeps. Of the wood birds I have seen and heard of redpoll and pine creeping warblers, yellow-rumped warblers, black and white creepers, chestnut-sided, Wilson's, black cap, black and yellow, Blackburnian, yellow, Maryland yellow-throated, and redstarts, all of the warbler family; also tanagers, thrushes, and one yellow-breasted chat. Some humming birds along, and orioles (*I. baltimore*) are numerous. Cherry birds are uncommon. One tern (*S. caspia*), female, was recently shot near here.—X. Y. Z. (Salem, Mass., May 25).

THE DEADLY BLACKSNAKES.—Everybody knows that the blacksnake is not a poisonous reptile. Few know, however, how destructive they are among birds and young animals, such as squirrels, rabbits, etc. Last year I killed one which had just swallowed two old birds and their five young ones. Yesterday Mr. J. W. Gow shot a large blacksnake which had climbed a large oak. Noticing a bunch about the center of the snake's body, he cut him open, and there was a half grown gray squirrel which his blacksnakeship had just swallowed. Kill the blacksnakes, boys.—A. E. M. (Steubenville, O.).

PILEATED WOODPECKER.—In the month of November I met with this bird in the dense woods near Ocean City, Md., where its peculiar clacking cry was heard at frequent intervals, although the bird itself was rarely seen on account of its wariness. I do not know that it breeds in the above locality, the natives (who know it by the terms wheeler and woodcock) being unable to furnish any information on the subject. The specimen secured was extremely tenacious of life, clinging to the dead limb, until repeated shots dislodged it.—WILMOT (New York, May 25).

Game Bag and Gun.

THE BOSTON DUMPING GROUND.

Editor Forest and Stream:

For several years the friends to game protection have been endeavoring to obtain more stringent game laws, or those that could be more easily enforced. A petition or bill emanating from the Massachusetts Fish and Game Protective Association, after much delib ration, is presented to the Legislature, which is referred to the Committee on Agriculture. A day is appointed for a hearing; the friends and opponents of the movement appear and give in their testimony, which sometimes takes a very wide range. The petitioners, very few of them sportsmen, are somewhat scattered, differ widely as to the best means for protecting our birds, have only a general interest, and do not largely attend the meetings. On the other side—the opposition side—is a large, well-organized set of men, mostly game dealers from Faneuil Hall Market and its environs, who are easily rallied, organized and drilled to act as a unit, ready to resort to almost any device to counteract and overthrow the designs of the protectionists. Some of the testimony is very curious, and their specious arguments are well calculated to deceive the committee. Here is a specimen. Fearing the influence of the petitioners, and the justness of their cause, like cunning unscrupulous lawyers, they must attempt, by some means, to break down the testimony of their adversaries. They represent the Association to be awealthy, aristocratic, selfish set of fellows, who want the laws so framed that they can go out when they please, and get all the game, to the exclusion of the country boys upon whose land it was grown. Was ever anything more monstrous, wicked or untrue? And yet these damaging stories, whereby the people are prejudiced against the Association and its efforts in favor of game protection, are widely circulated, and seem to so stir the country members, that when they arrive at the State House, they bring their prejudices with them. In vain do we plead for the birds. In vain do we urge the necessity for a uniform close time for market and field. In vain do we prove by the most incontrovertible evidence the imminent danger of the destruction of several species of game birds, and the wanton destruction, for millinery and other purposes, of our most useful insectivorous and song birds. In vain do we pray for immediate action in behalf of agriculture and the welfare and happiness of our people. To all this, and more, the committee turned a deaf ear, while it seems to listen with pleasure to the siren song of the game dealer, wherein he sets forth his grievances, which in the main are, that any change in the game laws "will ruin our business." And so these tender-hearted gentlemen usually report, "The petitioners have leave to withdraw," and the slaughter goes on.

So thoroughly is the committee impressed with the importance of the game business, so inextricably are they in the hands of the game dealers, that no law can be wrenched from them to give the least satisfaction to the petitioners or protection to the birds.

The dealers go so far as to testify that Western game can be kept in good condition in refrigerators all summer; that it is good, wholesome food, a million of people in this State want it, and that they should have the privilege of selling it all the year round! They failed, however, to inform the committee how long their business would last if all the States were to adopt the same rule. Now, it so happens that the Western States, becoming alarmed by the rapid waste and destruction of their game, have with great unanimity passed stringent laws to prevent shipping out of those States any grouse, quail or deer after the month of January. The Eastern States—with the single exception of Massachusetts, where the game dealers rule the Legislature—have with commendable promptness passed corresponding laws to aid and sustain the other States. But here we are placed in an awkward and unfriendly attitude by having laws passed which controvene and nullify those of the West. In the

natural course of things this must engender some bitterness against us, which, if persisted in, will in the end do great damage to our commerce with those States. Yes, we say to the merchants of Boston, your best interests require you to look well to it and see that the West is fairly dealt with in this matter. We shall find in the end that covering up others' wrongs, aiding them in shipping goods contrary to law, is bad policy and will not pay. This trite maxim, "Honesty is the best policy," is as true now as ever, and never appears more lovely or in brighter colors than in our business intercourse with our sister States. And why should the fair escutcheon of Massachusetts—God bless her—be blotted and stained by this unfriendly act? Why should Boston have the stigma of being the "dumping ground" for all the prohibited and proscribed game of the country? Simply this, to gratify the avarice, the cupidity of a handful of game dealers! This is all there is to it in a nutshell, magnify, distort, or diminish it as we may, and we appeal to the committee, we appeal to the Legislature, we appeal to the people of this ancient Commonwealth to redress these wrongs.

It is said that about three hundred thousand dollars worth of game comes to this market annually, a large portion of which we presume to be the off-scourings and scrapings of the other markets after sales are prohibited there. What is this paltry sum compared with the loss of the good will, the friendship, and to some extent, in other branches, the trade, the commerce of those large, powerful, wealthy and growing States? Suppose we lose this year one-half—$150,000—of that trade? Would not $150,000 worth of game left on the prairies or in forest wilds to breed, bring us four times that amount, or $600,000 worth, next year? Any yet there is not a game dealer in Boston that will allow that he can see through this. He mourns the loss of the small profit on this year's business, and sees not the large profits of the next. At the "hearing" they allowed that they received large quantities of game from New York and elsewhere, after the close of the open season there, much of which is unsold on the first of May—the commencement of the close season here—and they appealed to the generosity of the committee to allow them to put it into the freezing houses to be kept till the next season. Does any one suppose that that game would be found there on the 15th day of October? Or does any one presume that any game dealer would at that time take those old birds out of his refrigerator and undertake to sell them in competition with nice fresh-killed young birds? And moreover, we have always understood that game and poultry, after being in refrigerator all summer, is tough, has lost flavor, and is no longer considered a luxury; nor do we believe the people want it, especially in these cholera times. Why, then, is it necessary to keep our markets open till May? New York and other cities close theirs in January. Why could not ours be closed at that time? Are our game dealers willing to admit that they are less intelligent or enterprising than their neighbors? From what we have seen of them we do not credit it. Setting aside all sympathy for the birds, we think it to be for the interest of the game dealer as well as for the trapper and consumer to close our markets for game in January. Suppose at that time or on the first of May, the dealers have on hand 10,000 quail. Would it not be better that those 10,000 quail had been left in the fields as breeding stock, rather than be thrown into freezing houses to lie as idle capital till the next October? Ten thousand quail—5,000 pair—would on an average produce 10 young birds to the pair, or 50,000 young fat birds ready for sale on or after the 15th day of October.

It has been demonstrated beyond a peradventure that where an open market exists, game laws cannot be enforced. There are unscrupulous persons in every community who will shoot or trap birds at any time, even down into the breeding season, so long as they can sell them for a big price, and the meanest poacher or pot-hunter will not kill birds that he cannot sell. It is more difficult to enforce the laws against trappers than gunners. If a man goes out with dog and gun, out of season, in open fields and blazes away, he will be heard, watched and ordered off or prosecuted. But the same individual may quietly bait the birds, entrap them, pack in a box or barrel, mark "eggs," "poultry" or what not, shove them into a refrigerator car, and as the game wardens have no authority to "break and enter," they arrive in good order at the "dumping ground" in Boston, where—we blush to say it—they are gladly received. These birds are regarded as a source of revenue by the landowners, who at a proper time intend to gather and sell them. They have fed and cared for them, and they reckon them in some sense as their own. We can faintly imagine with what indignation the owner denounces the poacher when he discovers that his game has all been trapped and sent to market. Here is an absolute wrong, a species of robbery perpetrated on an honest farmer, and we think the anathemas he pronounces against the game dealer who has encouraged the poacher to commit the offense, are right and proper and well deserved. The dealers admitted at the hearing that they were receiving game all the time down to the 1st of May. Of course they must know—it does not admit of a shadow of doubt—that this game was killed and shipped contrary to the laws of the State from whence it came. The dealers have all the way resisted with vigor that part of our statute that makes possession *prima facie* evidence of guilt. It might compel them to show their hands and prove where the birds came from, and to escape from this dilemma they testified that "they could not always tell where the birds came from!" We do not say that the dealers want this clause stricken out, so that they can at any time receive and sell birds that are killed here. We only say they have squirmed more about this than any other part of the bill. We could not, however, repress the desire to ask some business man if he supposed it was a common occurrence among the dealers after having received and sold an invoice of game, and made up "sales" of the same, they did not know where or to whom to remit the "net proceeds." It was argued with much force and small effect by the protectionists that where Western birds were sold down so late as the 1st of May, Eastern birds of the same species would be liable to get mixed and sold with them, and although the statute prohibits the sale of the latter at that date, yet so difficult a matter is it to prove the one from the other, that no one will undertake to enforce the law.

We have seen haunch upon haunch, carcass upon carcass of venison in March or April around the market, a target for every dog, and we could not help thinking how much more profitable it would be for dealer and consumer if these deer were capering about to increase and multiply in the wilds of Michigan. The dealers claimed that they could not get game here till it was frozen by cold weather, and offer this as an excuse for keeping the market open later. Still as we have said, they do get the game through to New York and other places, dispose of it, and close the market in January. Are there not hundreds of tons of poultry, beef, mutton, and other meats, brought to this city every year in good condition that were never frozen? And this we take to be another "little dodge" of the dealers.

It was represented by the opponents to game protection that sportsmen belonging to the various clubs or associations through the country were in the habit of going out early in the season, shooting and wasting the game or sending it to market, much to the injury of the farmer upon whose corn it has been fattened. That some individual member of a club may have committed such impropriety we do not deny. But we do deny that the wanton waste or destruction of game is sanctioned or approved by any respectable game association in this country. Nor is a "sportsman's club" necessarily a "game protective association." The name itself indicates a very different purpose from game slaughter. How many western grouse that have been shot does any one suppose ever come to this market? For years we have been in the way of buying grouse for our table, but we do not remember ever seeing one that had been shot, nor among the thousands that we have seen about the market, not one killed in this way. They are choked, strangled, or otherwise killed in hand. And further, we are told by the dealers themselves that shot birds are not wanted for the freezing houses. They do not keep well, lose flavor rapidly, and are always rejected if observed. We do not like the epithet "poacher." It seems belittling when applied to a man. But if a man wants a more agreeable cognomen he must not poach. If a man does not wish to be called a "thief" he must not steal. Worcester defines "poach" "to carry off game privately in a bag." And this is just what the fellows under notice do. One prominent witness before the committee has had for many years the reputation of being a notorious poacher, and shooting and selling in this market woodcock out of season. He was challenged on this point and stoutly denied ever violating any game law—in *sotto voce* —"which I consider reasonable." The committee smiled and the "hearing" went on. We cite this case simply to illustrate the sentiments of a poacher.

There is another set of men—men of wealth, but not of the purest morality—who feel that they can and must have what they want, regardless of law and the rights of others, which class we regard as more reprehensible and dangerous than the poacher. We mean the class of men who demand woodcock and other game out of season. It is a low, contemptible thing for a rich man to tamper with a game dealer or poacher, and attempt to seduce him into the service of pandering to his appetites. We all know how easy it is to obtain woodcock on the first or any other day of July—a month before the open season—or any other inhibited day. Go to a certain dealer in Faneui Hall Market, name the day and the number of birds you want, and they are sure to come, not from the freezing house, but from a neighboring covert. The procurer drops a line to his pal, the poacher, the game is delivered on time and served at the hotel as "chicken gulls," "squab owls," etc., and no doubt relished by the meanest of the trio, the tempter gourmand.

Deer are about the only animals in the commonwealth that are recognized as of much value, and they are confined to a narrow strip of land of little worth on Cape Cod, where they are very wisely left to the care and keeping of the good people of that locality. These beautiful creatures are regarded by the local inhabitants as a sort of pet, and are cared for with the same solicitude they would care for other pets. The territory is also esteemed as a sort of deer park where they can remain unmolested, and they feel sad when a stranger enters and carries one off. Yet so restless and malicious are certain outsiders on seeing how much these animals are prized that they petitioned the Legislature for leave to invade the territory with dogs and guns to destroy this last remnant of the friends and companions of Carver and Brewster, and Bradford and the rest. We pray this privilege may never be granted, but that these noble animals may be preserved from generation to generation so long as water runs and forests are green, as sacred memorials of by-gone ages.

If we have the feeling of envy to one person more than another, it is to that fortunate rural resident whose soul is from day to day stirred by the matin and vesper song of birds. When we are sad and weary, they come to refresh and cheer us. The farmer, too, listens with pleasure to their merry notes as he watches them searching up and down every limb of the fruit and ornamental trees, destroying thousands of noxious insects that would mar their beauty or deprive him of their richest fruits. Of all the beautiful and useful of the feathered tribes that visit us, we regard the golden robin as standing at the head of the honored list. It is he alone that will attack and destroy the tent caterpillar and his nest, and no fruit grower could make a better investment than to buy a lot of these birds, if he could protect them from the skin-hunters, and let them loose upon his premises. If a butcher bird comes on to my premises and slaughters my pets, the birds, I can rid myself of him by a charge of No. 8 shot. But if a butcher boy comes on to my inclosure and murders my musical companions, it is quite different. My breechloader has no terrors for him. When I threaten him with prosecution, he replies, as nervously as a game dealer, "You will ruin my business. I get ten cents a piece for these birds, and make good wages at it." "'The wages of sin is death'—to the birds," I whisper, and turn from the gory sight away. This is not an isolated case, but one of common occurrence. We are informed that persons in the Connecticut Valley make a regular business of it during the spring or breeding months. It is stated on the very best authority—FOREST AND STREAM—that last year in one locality on Long Island 30,000 skins passed through the hands of a single dealer, most of which were cut up for millinery purposes. From another locality on the same island a dealer in four months bought from the local gunners 70,000 birds. From Cobb's Island comes an immense number of gulls and terns. "An enterprising woman from New York has contracted with a Paris millinery firm to deliver during the summer 40,000 or more skins of birds at forty cents a piece." People have no idea of the monstrous waste of bird-life that is going on, nor do they put forth any effort to stop it. We have tried in vain to rouse the farmers to the importance of the subject, but they do not seem to appreciate our efforts. The M. F. and G. P. A. is about the only one that has moved in the matter, and they are indebted to that association for what protection the birds have.

There is, however, a proper time to gather the products of the field, the growth of fruit and the natural increase of beast and bird. There may be an honest difference of opinion as to the best time to gather certain crops or secure the year's growth of fish, fowl or fruit, but that they should be gathered some time no one will deny. If a man should kill all his hens in the spring he would hardly expect fresh eggs in summer or chickens in autumn. It would be unwise for the owner of a cattle ranch to kill all his cows and breeding stock for the sake of exhibiting large profits on the present year's business. The full fat steers might, with propriety, be sent to market as the natural growth and increase of the season. The farmer who should cut his grass when half grown, or gather his fruit when half ripe, should be restrained by law from waste and want. And so of game. The poacher who shoots woodcock in April or May (and it is done) deserves a permanent home in a penitentiary. But in October when the birds are full-plumed, methinks there is not in the whole realm of field sports more satisfactory or exhilarating exercise.

It is in the hope of restraining the improvident, the short-sighted, the unwise destroyer, as well as to conserve and perpetuate the bounties and blessings of an all-wise providence that further legislation is prayed for.

A MEMBER OF M. F. AND G. P. A.

NEW YORK TRESPASS LAW.

FOLLOWING is the full text of the new law: SECTION 1. Section 16 of chapter five hundred and thirty-four of the laws of eighteen hundred and seventy-nine, entitled: "An act for the preservation of moose, wild deer, birds, fish and other game," is hereby amended so as to read as follows: SEC. 16. Any person who shall knowingly trespass upon inclosed or cultivated lands, for the purpose of shooting or hunting any game protected by this act, or shall take any fish from private ponds or private streams not stocked in whole or part by the State, or after public notice has been given by the owner or occupant thereof, or person, association or corporation hiring or leasing the exclusive right to shoot or hunt thereon or fish therein from the owner or occupant, as provided in the following section, shall be liable to such owner or occupant, "or person, association or corporation," in addition to the actual damages sustained, exemplary damages to an amount not exceeding twenty-five nor less than fifteen dollars.

SEC. 2. Section seventeen of said act is hereby amended so as to read as follows: SEC. 17. The notice referred to in the preceding section shall be given by erecting and maintaining sign-boards, at least one foot square, upon at least every fifty acres of land upon or near the lot lines thereof, or upon or near the shores or banks of any lake, stream or pond, in at least two conspicuous places on premises, or by the personal service upon any person of a written or printed notice containing a brief description of the premises, the name of the owner or person in possession thereof, and such notice to have appended thereto the name of the owner or occupant, or person, association or corporation having the exclusive right to shoot or hunt thereon or fish therein. Any person who shall tear down or in any way deface or injure any such sign-board shall be guilty of a misdemeanor, and in addition thereto shall be liable to a penalty of twenty-five dollars.

SEC. 3. Nothing in this act contained shall be construed as authorizing the leasing of any of the lands or waters belonging to the State, to any person, association or corporation for a fish or game preserve, except for fish-hatching purposes. SEC. 4. This act shall take effect immediately.

CALIFORNIA GAME AND SPORTSMEN.

LIKE those of all communities who wholly or partially respect game protective laws and the desires of the forest denizens to multiply their species, the sportsmen of California are just now having a dull season. There is no gunning of any kind—always excepting the deer slaughtering that goes on at all seasons in certain mountain localities, and such as is done at the trap.

The last season was not what we call a good one out here, at least so far as waterfowl were concerned. Less ducks and geese came down from the North than for many winters past; so few, in fact, that not a complaint was heard even from those chronic growlers, the wheat growers. Quails were plentiful enough, but as usual they were not at all accommodating, preferring to stay generally where the cover was thickest. Occasionally they may be found, however, in fairly open ground in the lower foothills, and then they furnish excellent sport to that comparatively small class of sportsmen who prefer hunting them to shooting ducks on the marshes. There are few parts of this State in which tolerably good duck shooting may not be had, and it would seem as if the majority of shooters had become wedded to that branch of sport. I suppose the reason is that it requires a little more exertion to get to the quail grounds, and the expenditure of more muscle in tramping constantly over the hills than to get out to the nearest slough and squat on a stool, there to wait for the game to come to you. I verily believe there are scores of old gunners right here that never shot at a quail, but they are always ready to go for ducks.

And this reminds me of a little incident that occurred last fall. A friend of mine, who is an ardent lover of field sport, and who never shoots ducks, had a very promising setter with him one day, and meeting a duck-shooting sportsman began expatiating on the good qualities of his dog. "I've got a dog that can beat him for coin," remarked the other, "for he's got away with everything he has tackled." "All right," replied the field-trial man, "I'll run you a three days' race on the best quail ground to be found within twenty miles." "Quails be blowed!" exclaimed the disgusted marsh-tramp, "I work my dog on ducks! That's the kind of field trial I mean." And yet you'll find that man sitting regularly on that empty powder keg in a certain gun store and talking dog and gun with the same crowd, night after night, the year through.

As further evidence of the benighted condition of some would-be sportsmen's minds, here is another incident: A well-to-do business man purchased a nice Irish setter puppy, and when it was eight or nine months old he gave it into the hands of a hunter to break. The latter took the hard-headed Fenian out and labored with him faithfully. Meeting the owner one day, he related to him how well the pup was showing up. After listening for some time to a recital of the manner in which the youngster acted among the quails, the owner seemed to become impatient and did not enthuse. Finally he interrupted the handler with the query: "Yaas, but how ish he on rabbids?" "Oh! he's all right now on that score," replied the breaker, "I gave him a little dose of shot once, and now he would walk over a hare or rabbit and not notice it." "Vat you say? he no dake nodis ofe der rabbids! Mein Gott, I vanted him broke for a rabbid dog!"

I have frequently seen it stated in letters written from along the southern coast of California that the black brant is never found in the interior, and at but few points on the coast between Alaska and San Diego. This is a great mis

take. All through the winter and away late into the spring they may be found in our local markets more plentiful than any of the half-dozen species of wild geese shot about here. They are usually the latest in market, after the honkers, the gray geese, the snow geese, etc., have all departed for the icy north.

As an advocate of small bores, I am pleased to note the fact that the big No. 10s are going out of fashion here as elsewhere. When a man can offer no better argument in favor of his arm-breaking cannon than that "he can kill more game with it" than with a No. 12 or 14 gauge, then I say he has a poor cause. He can get a singlebarreled 8-gauge that will not weigh more than 12 or 13 pounds (just a couple of pounds more than his 10-gauge), and with that he would be able to pile up his heap of game still higher. I say give us smaller bags of birds, more skill in the use of the gun, and a greater amount of pleasure with less toil.

The late Legislature had bigger fish to fry and did not get down to game legislation—at least, the Senate did not. But if even the present laws were enforced in all cases, there would be little cause for complaint; but, as before stated, they are wholly disregarded in some localities.

We lately had the handsome, entertaining Tucker, of Parker gun fame, with us, and now he's down among the Texas cowboys (I wonder if there are any cowgirls down that way). "Tuck" is a jolly good fellow, a fine shot, and all that; but he's a better business man than either. He has a good gun to work for, it is true; but he's the chief in his line. SMALL-BORE.

SACRAMENTO, Cal., May 11.

WISCONSIN GAME.

Editor Forest and Stream:

From information that I get from the farmers of this and adjoining counties, more game has lived through the past winter than usual, and consequently our shooting prospects for next fall are promising. I am very sorry the bill to create game wardens in this State did not receive the Governor's signature and become a law. I am satisfied that we cannot preserve our game and good shooting without an officer whose particular business it is to look after the parties who are continually shooting out of season. It is difficult to understand how we can protect our game so as to get moderately good shooting in the future as we have had in the past. Almost half the population of this vicinity are armed against attacks from game with Winchester rifles and breechloading shotguns, mostly Winchester rifles, and it is well known that when those parties want a prairie chicken to eat, especially those who live in the country, that they shoot it. I believe there is more game killed out of season than in season in this part of the State, and the reason for it is plain; the great number of fine shotguns and repeating rifles that are constantly being offered for sale and their perfection and cheapness, especially of repeating rifles; the popularity of wing-shooting among the owners of guns, and the skill that is developing in wing-shooting by gun clubs; the natural desire of most gun owners to want to kill something, and add to this that where game is known to have been killed out of season, no one feels like making enemies for life by reporting the law-breakers. Altogether it looks as if game must go unless something is done to stop illegal shooting, and when game becomes scarce the gun dealers will realize it. Without game birds to hunt it will be a difficult matter to keep up the interest in trap-shooting; very few will care to purchase fine guns without a prospect of using them in the field. Trap-shooting (with the majority of shooters) is indulged in chiefly as practice for field shooting. The whole gun business depends for its existence on game, and when game goes there will be a good many guns offered for sale cheap.

MENOMINEE, Wis. WING-SHOT.

KANSAS LARGE GAME.—Cimarron, Kan., May 20.—The antelope are being driven back by settlers, who are coming in and locating on bare prairie, where one has to dig 150 feet to water, and where you can't raise enough to keep a goose on 100 acres. There are just as many antelope, but I have to go 100 miles for good hunting. I bought a .40-60 repeater last winter, and had it resighted by A. P. Clarke, of New York. It holds up well and shoots accurately. Had it sighted for 125 yards, and don't have to change my sights up to 200 or a little over. But the ball is too light for antelope shooting on prairie. I am going to get a .45-85 and try that. A great many cattle died from starvation and cold on the range last winter, and I never saw coyotes so thick as they are now. The spring flight of geese and ducks was very light through here. They were reported to be plenty seventy miles further east at Larned, and from there east. Cowboys are quite plenty this spring. A large one was killed near Dodge City last week; but they are not hunted much at this season of the year, nor in fact at any other.—W. J. D.

SHORE BIRDS AND WOODCOCK.—Philadelphia, May 23.—The spring flight of shore birds still continues. Some of the varieties have already passed north, but the robin breast and black-breasted plover, which are usually later comers, have only begun to arrive. These latter named varieties will stay on our shores but a few days. The wildfowl, which remained with us late this spring, have left for the north. A few straggling snipe still linger. I am told that rail birds have been heard in the marshes below Chester on the New Jersey side; if this is true, they will breed here. More woodcock than for some years back are breeding on the borders of the creeks running into the Delaware through New Jersey, and I get it from good authority that as many as three broods were discovered in one wet woods. It looks as if there would be good woodcock shooting in July. How much better would it be, though, to let them rest until autumn.—HOMO.

CALIFORNIA.—San Diego, May 11.—I have seen numerous coveys of quail about one-third grown; and rabbits are very numerous, two-thirds grown.—D. B. H.

GAME LAW CHANGES.—Will correspondents favor us with a memorandum of whatever changes may have been made in their State and local game laws.

Sea and River Fishing.

MUSKOKA.

THE old proverb holds. There are not only as good fish in the sea, but in the rivers and lakes, as ever were caught. All that is necessary is that you shall go where they are. When once there, it is only a question of season, skill and the right kind of tackle. Ten years ago, when I first began to fish and simultaneously to read the FOREST AND STREAM, I was both grieved and disappointed to find that nearly all the interesting accounts of successful fishing expeditions in choice waters were dated a generation earlier, and that little remained to the younger fishermen but the tantalizing reminiscences of the "good old days" as described by our elders. I have since discovered that I was in error.

Two of us last summer, while casting about for a new territory, had our attention called by a friend to the Muskoka country. The very name had an attractive sound to us from the first. It was round and mellow, full of vowels, and easily spoken. The tales that were told us about the lake country which bears the name were even more alluring to us than the sound of the name itself. This was by no means conclusive, however, to a couple of cynical sportsmen, who for years had wandered up and down the lakes and streams which are so beautiful in the excursion pamphlets and railway folders, and so utterly barren and unattractive in reality. But we afterward found that not the least singular feature of the stories told us about the Muskoka country was that they were true. This, however, is anticipating.

It might be remarked, apropos of setting out, that the lucky number in a fishing expedition is always two. That number represents the happy mean between solitude and a crowd. Two in a party are company, and as there never can be more than two opinions as to any plan, the chances of disagreement are reduced to a minimum. Two men never quarrel on an expedition, because they have no third parties to take sides, while for efficiency and mobility the party of two cannot be equaled. Lastly, there are only two sides to a penny, one for each man, and when in camp a "toss up" will settle the most perplexing question to the entire satisfaction of both. Of course no record is made in a calculation of this kind, of guides and camp men, who form the "working corps" and who do not vote on questions of route, etc., unless they are invited to do so.

Every fisherman knows that if one should attempt to take note of the preliminary talk and time expended in preparing for a fishing expedition he would never get to his story. And so I may simply say that our point of rendezvous and departure was Detroit, and our route over the Grand Trunk to Toronto, thence over the Northern & Northwestern Road to Gravenhurst (or more strictly, Muskoka wharf), and from there we could go onward and upward in as many directions as there are fingers on one hand by the lively little steamers of the Muskoka and Nipissing Navigation Company. Any one who will remember these points, "blazed" as above, can never lose the trail to the Muskoka country, and having once traveled it, he will need no summer guide book to tempt him to repeat his visit.

The man who goes into the Muskoka country on a piscatorial trip ought to be thoroughly equipped both for fly and bait-fishing. The great variety, not only of the waters of the Muskoka country, but also of the fish, renders this absolutely essential; unless, perchance, one is willing to confine himself to a particular locality and provide himself accordingly. Our trip was made in the middle of August, and while we went in one direction for bait and another direction for fly-fishing, we would not for any consideration have willingly foregone the pleasures of either.

Leaving Detroit in the evening, the next day found us at 1 o'clock in the afternoon on the docks at Muskoka wharf, and that same evening, after a charming steamer ride over lakes Muskoka and Rosseau, with an incidental diversion up the Muskoka River to Bracebridge, we landed at Rosseau happy and hungry. We were without any preconceived plans as to the waters in which we should first wet our lines, but a lucky accident directed us toward Crane and Blackstone lakes, and starting bright and early over the Parry Sound road, we "rounded to" at 5 o'clock in the afternoon on the banks of Blackstone, still somewhat incredulous, but none the less ready and anxious to test the stories we had gathered at Rosseau, and which had been the moving cause of our last day's journey. For there were maskallonge in these waters, we had been assured at Rosseau, and we had examined and cross-examined the guides and hotel people in that quiet little village till we had accumulated testimony concerning the habits and doings of these fresh-water tigers that made our blood run hot and our fingers tingle.

The shores of the Crane and Blackstone lakes are capital specimens of the primitive wilderness, and long may they so continue. The broken beer bottle and the disemboweled tin can do not disfigure their borders, and the few who have visited their teeming waters have mostly been genuine fishermen, who are happiest when furthest from the conventional summer hotel, and wholly indifferent as to their accessories. Each lake had only one family living upon it, and one small clearing on Blackstone was all that broke the majestic sweep of the grand old forests. Within the sheltered bays the loons laughed undisturbed, and the wild birds splashed in the marshy edges or upon the sandy shores, with none to molest or make them afraid.

When an angler goes forth to catch the maskallonge, it is necessary to be careful lest the maskallonge should catch him. Here are the precautions suggested by actual experience against so untoward a result: A 10-ounce split bamboo rod, 9½ feet long, a quadruplex reel with adjustable click and drag,* and carrying 200 yards of No. 5 (or smallest size) braided linen line, at the end of which is attached by a swivel 2 feet of medium sized copper wire, and lastly a No. 4 or 5 spoon and double hooks. Finally a good gaff.

"Better leave them little rods," said our guide, philosopher, etc., as we prepared to start over to Crane Lake the first morning. "You can't use them rods; they are no good."

"We'll take them along," said I; "they are not hard to carry."

[The proper method of taking the maskallonge, on the primeval waters of Canada, is by a small clothes line, hauled in by main strength when the fish bites.]

The old man smiled, but when he found later that the assurance that we would break our rods did not change our intention of fishing with them, he indulged in a little prospective enjoyment of our discomfiture as we rowed toward the lower end of the lake.

For myself, I confess that underneath my placid outward mien I felt a little nervous. I had been fast to a maskallonge but once, years before, and the result of that experience was a panic that overwhelmed the boatman, my partner and myself, and lost us a magnificent fish through a piece of strategic and brilliant stupidity. [Perhaps I may write that experience some day.] But I really meant to hook a maskallonge with my "little rod," and I didn't mean to back down till compelled.

Swinging around a little point, with some twenty yards of line astern, before fishing a great while, I felt a sudden movement at the spoon that was more like a "crounch" than a bite. It took only a second to give the rod a turn that fixed the hooks, and another second to discover that I had hung something. Scarcely had I tightened the line when the fish started. I do not know that I wanted to stop him, but I put my thumb on the reel, and felt the line slip rapidly from beneath it, as though attached to a submarine torpedo. The first run was a long one, but the line was longer and the fish stopped before the reel was bare. This was my opportunity, and I had the boatman swing his craft across the course, and reeling in the slack line I turned his head toward the deeper water. Forty-five minutes of as pretty a fight as one could wish to see left my new acquaintance alongside the boat, and before he recovered his surprise the gaff was in his gills and the boatman lifted him on board. He weighed fourteen pounds on the steelyards, and was my heaviest fish.

This little encounter and its termination was a revelation to the boatman, and in the course of the day there were others of a similar character, but none which developed quite so protracted a contest. As for myself and my companion, I think we should not have been afraid of the largest veteran in the lake, and our nerves were as steady as clockwork. Our time was limited (shorter than my story), and in a word a day and a half on Crane Lake gave us ten maskallonge whose weight aggregated 110 pounds (on the scales), an average weight of eleven pounds per fish. This was taking no account of black bass and pickerel. It seems strange to talk of shaking off black bass and making disrespectful remarks about these gamy gentry when they insisted on taking the hook, but they were so plenty as to be really troublesome. "When I go a-cattin' I go a-cattin'," said our colored friend.

If the editor doesn't put his finger down (and his foot too) I hope to say something another time about the black bass and the trout in the Muskoka waters. JAY BEBE.

* I want to express the opinion "'umbly" that the bobtail rod and the superfine tackle that some of our fishermen talk of are a delusion for anything but fingerling trout. There are a good many reasons for this opinion as applied to black bass fishing, but cannot stop to give them now.

SKINNED STREAM.

THE stream that I am attempting to describe, and along whose banks I am about to give my experience, is in Litchfield county, Conn. Possibly it may have been stocked since I waded its pure waters. It certainly ought to be, for if ever I tried my skill in a "lovely" trout brook (to use a lady's expression) it was in that brook and in one of its branches. But no doubt many of the readers of FOREST AND STREAM will think of several just such brooks in all of our Northern, Eastern and Middle States—streams that have been fished in out of season, and netted to supply a boarding house demand, and scooped when their waters were low, and whipped on all days of the week and hours of the day, not even Sunday excepted.

But the way I came to call the brook in question Skinned Stream was this: The morning after our arrival at Maple Grove House I was asking Sam, the proprietor's brother, if there were not some trout streams in the neighborhood. I remembered that among the attractions of the place this was named. "O, yes," said Sam, "there are plenty of beautiful streams here, but not many fish." This was a new idea to me. I thought of many other just such places—first-rate brooks to fish in, but very poor places to catch any. However, I learned all I could from Sam, and will give his account of the stream in question as well as I can remember it.

"Yes sir," said he, pointing to the stream running through the meadow in front of the house and winding down to the left of it, "that is a good trout brook. When I was a boy we used to get lots of them there, and an old codger around here even now picks up a good many. Two years ago I caught a pounder off of that bridge you see there. But the fact of it is the stream is skinned now; and it is skinned every year almost before the law is up. I have seen three or four fellows every day for nearly six weeks in the spring poking along there, and then they drop off to one and two a day until June. Sometimes one of them will get a fish, but I think there are more fishermen than trout, and they break down our fences and tread down the grass."

This is in substance all that I could learn from Sam, but he told me that he knew of a good trout brook about six miles from there, and that his brother had a fine team and an easy-riding wagon. However, Sam had told me enough and I thought at once of what I would do when I got stronger. I would try the Skinned Stream for myself.

It was now July, and I knew that the farmers' sons living in the neighborhood in all probability had not fished the stream for some weeks and would not be able to again that season unless they went out on a rainy day. I knew also that the boarders in the place were in the habit of going to the lake for their fishing. It had been stocked with bass some years before and now they were allowed to catch them. The fishing, too, I had learned, was quite good in the lake. So I gave myself no uneasiness about any one troubling the Skinned Stream and said, now I will just wait until I am well enough to travel and then I will explore its waters for myself. I will try and be ready for the next rainy day. For this I had to wait a week; may be it was just as well that I had to wait so long. But I felt strong enough by the morning of July 20. We had had a thunder storm the afternoon before and it had not cleared off as usual, but promised to be cloudy and overcast the next day. It was so.

I left the Maple Grove House about half-past 8 and commenced to fish just below the hotel. As I was going out the proprietor told me he hoped I would get some; that if I did it would be a good thing for his house. I thought he was very candid for a Yankee; but it seemed he had taken a fancy to me, and was very careful to tell me what I would come to on my way down and where I would find the road to come home. Joe smiled as I went off, and said, "Good luck, sir, but don't feel disappointed if you do not get any."

But now I am by the stream. On my side the alder bushes have recently been cut off close up to the water's edge. They are lying on the ground preparatory to being piled up and burned, and are continually catching on this lame foot of mine. What a beautiful hole that seems to be! There must be fish under that bank, close to that bush. I am trying a worm now, using it as I would a fly on the top

of the water. This is a favorite plan of mine after a rainstorm, where trout are scarce and when the brook is falling. What! none; is it possible? Try again. I do so, and again. No! Not even a rise nor the sign of one. Let the bait sink. It disappears. Ha! there is one at it; a little one. Come along fishie. What! a miserable chub? Go back. You were only intended for trout food. Another bite. Here he comes. A, redfin I think they call you. I have caught plenty of trout with your kind in their maws. I am beginning to be disgusted. What! a shiner this time? Why, what kind of a place have I come to? I will go to the bank and look into the stream and see if I can see anything. Just at this moment a gleam of sunshine comes through a rift in the clouds. I peer over carefully, and there, so far as I can see, is a peck or more of suckers and chub and redfins and shiners, all spread along the bottom of the hole and seeming to feed in the utmost harmony. This don't look like trout, I say to myself. But here is a nice place to get bait for bass and pickerel fishing. But now I put on some flies, a coachman, a red hackle and brown gnat. Here goes. There may be a trout in the neighborhood that will be tempted by one of these. Yes, here goes. Whew! Is the water alive? A fish on every hook, and every one seems to have found the very fly that he was in search of, chub and shiner and redfin, but no trout. Will try again by that log. It looks deep there. I do so, and again these miserable bait fish have seized my flies. It would be no use to attempt to catch them all out in the hopes of getting a trout, I would have to fish for a week, and you may be sure there are very few trout where these fish are so plenty. There is everything indeed to make me think that this is a skinned stream. But here I would interrupt my narrative to say that when a few days after this some of the boarders in the house wanted bait fish to take to the lake, and asked me if I would not catch them some or help them get minnows, that I put on three small flies one evening and in half an hour had all the fish they wanted. Those too large for bait were thrown back again into the stream.

But now I go in, and my ardor is cooling—I try the worm again. What splendid woodcock ground, I say to myself as I walk along, has been destroyed here. But there is plenty of it here, and untouched. Now I am crossing a sweet little brook, with a grand bottom, clear as crystal. There must be a fish at its mouth, where it runs into the larger stream. That is a deep hole there. Stand back from it and cast a long line. No, nothing! Is that so? Let the hook sink. A bite! Here he comes. Another check, and then another, and another. Oh, go on. Now, there is a rock in the stream; try behind it; and there are more bushes and trees by the side of the bank. No; none here either, and the moment the line sinks a redfin or a chub is on. But wait. There must be a fish in that hole by the bridge. I feel that there is—feel it in my arms. I wonder if I have lost my skill since I have been sick? The old rod will get disgusted directly. Well, the trout here, I say to myself, are really a little too scarce for pleasure. I did not count upon this. I am afraid Sam will have the laugh on me. He said I would get none; that if the boys around here could not get any, the city chaps had not much chance. But I try, and I declare not one yet.

Now I am coming to more alders, and just below that place where it ripples so there seems to be a hole. Don't give up yet. Have the fun of fishing even if you do not get any. If it were only the season of birds I could enjoy myself; but all, except a few thrushes and occasionally a sparrow or a robin or a vireo, seem to have stopped singing around these parts. But try there. Stand far back and let your bait float down. That is it. Whew! what a thrill goes through my arm. I have him, and there is a spluttering on the water away below me. Reel up quick. Don't slacken on him. It may be a trout. Here he comes. Yes, it is a trout. Let me look at you, you pretty fellow. It does seem a shame to kill you; but I am not well now, nor is Mrs. Stillaboy, and we have an invalid friend at the house. Ah, what apologies we can make for our sport; but you were made to eat, and, like a strawberry, with an extremely good flavor. He is a nice fish, nine inches long, and as beautifully marked as a trout could be. And now my spirits begin to revive. I have one fish, and I am coming to the woods and may possibly get more.

I have waded the stream (it is not deep), and am approaching a bend in it where it turns from the meadows above into the alders. The tall woods are not far below me. I can just manage to peep over a bush and see my bait as it touches the water. A fish rises to the surface and seems to push his nose against the bait and then goes down again. I raise the rod and drop the bait again, and again the fish does as before. I know what he wants. He won't take the bait. He wants a fly. Now he rises and has caught a miller that was floating on the water. I wonder what kind of one it was. I will try him with a coachman and a red hackle. He jumps again. But now I am ready. I have him. A trout, too, and good sized—and I think I saw another one come to the surface when he took hold. But I try again and I have another one. I wonder is he large enough to keep. Yes, he is a good six and a half inches. I am almost sorry for him. He looks so much smaller than either of the other fish. There is no use trying here any more. But what is the meaning of this wave coming up the stream and disturbing the quiet surface of the little pond? Let me see. I approach carefully, and there, in his brown coat of summer, is a large mink, that swims away down stream as he sees my head over the bushes. His bright beadlike eyes look at me, as much as to say "why what are you doing here?"

And now I am nearly half way to where Skinned Stream empties into the Shepang River. I have been working hard for two hours and have three fish. The features of the stream are changing now. It is becoming more rapid. I am passing under very tall alders as I wade. The waters are spread out over a gravel bed some fifteen feet wide and a hundred feet long. They are only three or four inches deep and the alders arch overhead, forming a beautiful avenue as you look down the stream. What a spawning ground this must have been, I say to myself, in past days. But I am playing my line away below me, when the first thing I feel a bite. The line has searched the lower end of the gravel bed, when the stream contracts and passes into what is seemingly a pool. I strike and I have a fish on. It is not large I know. Feels like a chub. I reel away and here he comes. Why, he is a little trout, five inches long. He is not hurt, so I take him carefully off, and away he shoots. But I must try that place again. Another bite. What have I now? You do not splatter or kick much. I have you, you nasty redfin, and he drops into the water. No more for some time, and I have to pick my way over rocks and fallen trees until I come to a place where the stream makes a plunge of about six feet and then rests for a moment in a long pool about twenty feet wide. Ah, here is a place I say to myself. I will have one here. I will stand above it behind that arch and let my line float down. I do so, saying to myself, if I should get a large one on how will I manage to draw him out? No need of saying it. I try a fly with the same result. I let the fly sink. No use.

There is a large rock at the lower end of this pool that turns the stream to the left in its course, and I see there is an opening at the side of the pond that will allow me to cast my line there. I make for it, and after tumbling over a log and scratching my face I am by the stream again, and the perspiration is running, it seems to me, from my head to my boots. But I make a cast with bait again. And good! I have a fish. I am dreadfully afraid I cannot get him in. I will pull my basket around in front of me and open it and take him off. I cannot afford to lose a fish, and this left hand is so weak. I do so and he is safe. This one was eight inches. I try again, casting up and down. No more. Now the stream is running by a high bank, and there are a succession of deep holes, and a little meadow on one side. That looks like a nice place to fish, and I am not far from the river, I guess. Try a grasshopper here. This seems to be a good hole, and you can screen yourself well behind those low alders. I am ready. Swing your hook out if you can. I have one. Come out here—seven inches. Try again. Hah! that is a trout, but he is a small one. I have him, though. He has to go back; he doesn't come up to the measure. I try another hole, and no luck, and another, with the same result. Now I am coming to a place where the water glides over a shelving rock into a great pool. Go carefully now, and see to your bait. I do so, and here comes another fish. I am too much interested in securing him to notice that kingfisher that has passed so near me and that humming bird that has darted at my head. I have not time to think that he may have a nest on one of the limbs of that beech tree opposite. No, no time for birds now. This is a nice fish, and I must see if I cannot get another. I hear the Housatonic as it madly rushes down over the rocks at my right. But there is no more fish in this pool. Now I am to cross the road and try under the foundation of that old bridge. That is the last place. Try a fly there. Now try and make a good cast. I do so; and, glad again, I have a seven-inch one. See if you cannot get another on that red hackle. Let it sink a little, like a drowned miller. Ah, I have another, have I? and a good one. My, you make my rod bend. But are you tired out so soon? Then you may come in here. You worked too hard at first. But I never saw a trout act so strangely. Oh, you disgusting thing; you are a pumpkin seed—a sunfish—and never in my life before did I fish for trout and catch one of your kind.

It is after 12 now and I return home. I have fished about a mile and a half of stream, and have now to walk almost that distance to the Maple Grove House. I do not let every one see what is in my basket. But Mrs. Stillaboy and myself have a small dish of trout set before us at tea time that we distribute around to our particular friends, while I take care that Mrs. S. has a nice one for herself. Sam and his mother regard me as quite a fisherman, and tell me that I must try the stream the other way. That really the best fishing is above their house. I promised them that I would do so the first good day we have.

The week after my excursion down "Skinned Stream" there came another good day for fishing, and as I had not fallen in the brook, nor hurt myself, nor taken cold, as Mrs. Stillaboy predicted, she made no objections to my going out again. This time I was to go up the stream, and had to slip away from the house before the boys were around. The fact of it is, I was watched. Several of them wanted to go with me. Now, don't think that I am not fond of boys. I am fond of them generally. But any man who has ever fished where trout were scarce knows what it is to have inexperienced lads talking to him all the time, or stamping around the bank of the creek.

I had to get up pretty early and take breakfast with the proprietor. He said he knew I would get some fish, and Sam seemed to think that I would get more than I did the first time. My directions were to take the road we had driven recently to a bridge near an old cider mill. Sam thought about a mile and a half away. This he said would be all that I could fish before dinner, and take me over some of the best ground. He remembered when it was good, he said, before the Litchfield boys and Boston fellows found it out. Among the things that the proprietor advised was to carry a rubber coat—if I had one, and if I got lost to inquire for Maple Grove House.

I had a coat with me, a thin one, not fit for the woods, but Sam said I would not meet with any tall trees, although I might expect to find some thickets of alders along the edge of the stream. I hoped this, for I knew that my chances would be slim indeed if I had to fish in open meadows at this season of the year. So the coat was put in the basket, and my readers will see what use I had for it before I got home.

The place described was found, and about 8 o'clock I commenced fishing. The stream was very full and where I began was deep and narrow, as it came through a meadow that had once been a bog. I should think the brook here was about half the width that it was below. Here it was not more than four feet wide, there it was six and eight. Two of its smaller branches came in below, and these, too, were streams for trout. But now the success. Not a bite nor a rise, nor, as I occasionally went to the bank and looked into the clear, cold water, could I see a fish of any kind. There did not seem to be even a minnow here. But I worked, starting up a flock of meadow larks as I got over the fence and nearly breaking the tip of my rod as I caught the line on a stake. There were alders below me, and before you came to the alders quite a steep bank. A tree grew opposite the bank on my side, where the ground was low and the water ran rapidly down a gravel incline before it comes to this place. I could not see distinctly from where I stood; but I said I must try there. That tree is a good shade for the pool that is beneath it, and that rippling stream coming in, if I know anything about fish, is just the spot; so I reel off some thirty or forty yards of line. Then I get close by the side of the stream, bending down as low as I could, so that my head should not appear above the grass on the margin, cast just above the pool so that the water would carry my hook into it. It is in now and r-r-r-r-r sings my reel, while I see my line going toward the bank. It is a trout, I say to myself. Check the reel. What were you thinking about that you did not keep your finger on it? He is not even hooked. But now he is, and he don't like it at all. Reel up. He makes considerably flapping as he comes. But he is in—an eight-inch fish. I have not gone near the pool and hope to get another one. No such good luck. However, I solace myself with the reflection that I have at least one fish, and will most likely get a few more.

Now I come to another deep hole just above the alders. Hope leads me to think I will get another here. No; no signs of a fish neither small nor large. But see; see that snake four feet long at least uncoiling himself from that bush and gliding into the water. I wish you were where I could kill you. But my, I have not gone thirty yards from this place, peeking into the alders as I go along to see if the water is deep or there are any holes before I see, in a little opening just in front of me, half the body of a huge black snake disappearing in the grass. I should judge from what I have seen that he must be a good six feet. And now I am getting over a fence into a bog meadow where the grass had neither been cut nor fed down. It comes up to my waist and higher. But before I go through this grass let me peer into the stream again where the fence crosses it. There is a chance here to throw my line. The water I see is deep on my side of the fence, but shallow on the other and it is filled with sticks and roots. This is a place I say to myself for trout to hide and live, if the snakes do not eat them up. There is one place in the stream there where men cannot get at them at least, and that is among these thick alders. But I am going to try this hole. After some maneuvering I get my line in near the fence. Something is on. Pull up. It is another trout, the least trifle over six inches. I try again with no success. And now I shall have to pass for some distance down the stream and through that tall grass. The alders on each side of the stream seem to overlap each other here, forming a complete tangle. I never saw just such a condition of things before. The tops of those on the opposite side of the creek are on this side and *vice versa*. I say to myself there is no wading that stream.

I am in the meadow now, working my way down by the side of the alders; and all the time I am thinking of snakes. I say to myself I wish I had not seen them, while I know they will be careful enough to get out of my way. But then suppose one should wind around my leg, as that one did one day when I jumped upon his tail. And these bogheads will upset me directly, for I cannot see them. There, I am over. I hope there are no snakes here. Why did I not let one of the boys come? But I am up again. When will I get through this bog? I never in all my life met anything to equal this. I am nearly wet through with perspiration, and it is going to rain directly. Well I was a fool. Think of me leaving a quiet home to come here; and if anything should happen who would ever think of looking for me in this place? And now I am down again, and my nose peels the bark off of an alder bush; and the nose is peeled a little too, I guess. But don't give up, Stillaboy. Only the next time you go fishing know where you are going. But there is a fence, and an opening on the other side. Yes, keep up your courage. You were not wise, especially to come alone; but it is a good thing you led no one but yourself into this scrape. What an old bridge! And an old road by the side of the fence. Why, how nice. I must try again under the bridge. Yes, I have one seven inches. Oh, I guess I shall get some yet, and I feel better now.

And here I am in a meadow that is pastured and the walking is better. The stream still runs through alder bushes, and there are no openings nor chances to get to the water on this side except those we have tried. For nearly half a mile this has been the case, and the waters have been sluggish and spread out to a width of ten feet or more. But a current is very perceptible in them, and it is evident that years ago this stream was much larger than it is now, and for this whole length that I have found it so difficult to travel was once deep and still. I should judge from some of the alders and the way the bark is peeled from them, and the grass and sticks along the bank, that there must be considerable ice passing down here at times, and that the bogs are overflowed in spring and fall.

But now the current is swifter, and I see coming a rocky section. I hear a rumbling below me too that sounds as though there might be a fall there. I have not seen the sign of a woodcock boring, nor have I noticed any birds but field sparrows and goldfinches since the larks flew up. However, I am after fish now, and here is another chance to reach the stream. I got over another fence, and just below it is a large rock in the center of the stream with the water foaming around it. It looks like a good place, and I approach with extreme caution. I cast just over the rock, and in a moment my hook is taken. But alas, he is a little fellow and does not come up to the measure, and consequently is thrown back. I try again with fly and grasshopper. No success.

Now I am walking by the edge of a good grass field, and the noise of a waterfall is increasing, when all of a sudden my foot goes down and I tumble headlong. I have stepped into a little stream that comes trickling through the tall grass that conceals it, and enters the brook close to my left, beside those brier bushes. I must try there. Surely a trout will be lying in that cold water. No. As I turn around I see the little stream some five hundred yards away, tumbling down from the uplands over a ledge of rocks some thirty-feet high. It seems to fall that distance in three little cascades, and is a gem of scenery from where I stand. I say to myself I will go to it. There may be a pool above the fall. I do go, and after climbing the rocks and trying the little pools, look for some distance up the almost dry bed of what was once a mountain torrent, that is arched over with alder bushes as perfectly as though they had been planted there. But as I return to Skinned Stream again, I say there may be a trout in the meadow where this little brook runs through the grass. I have known very nice trout to seek such places at this season of the year. Nor was I mistaken, except as to the sort of trout.

The moment I cast my line where the stream ran under the fence, I had a fish about five inches long. He had gorged the bait, and as I unhooked him his gills were injured, so I had to kill the little fellow and put him in my basket. I try again, and again the same thing happens, only this time the fish is uninjured. Again and I have a little fish. I am determine to get over the fence where the grass is tall and see if I cannot find out what is under that fence rail. I approach very carefully and part the grass with the butt of my rod and look down, and there, in a hole about three feet deep and two feet wide, I see a half dozen or more little trout. As the grass is parted they hurry and skurry from side to side. I wait until they all get settled and straightened out, so that I can have a good look at them through my peep hole and then go on, saying to myself some of these days the creek skinners will find you out and catch you all. As I follow the little rill down I find an opening in the tall grass, and I drop my hook in, and again I have a little trout. This is one of the supply brooks no doubt to Skinned Stream and perhaps is so small that no one suspects that there are any fish in it.

I am at the stream again. It is running very rapidly, and I can see by the formation of land that there must be rapids or a fall here somewhere. It is beginning to rain now. What a good thing it did not come on while I was in the alders. No chance to fish yet. Alders and rock and rapids, but only for a few hundred yards, and now a fall, or rather a steep incline, almost like a pair of stairs, and about fifteen feet high. There is a deep hole at the foot of it, and a large rock stands out from the low cliff on the other side. The pond is about twelve feet across, and, best of all, some low alder bushes are growing on my side near the edge of this stony basin. I am in just the place I want to be to fish that pool. Send your hook over by the rock. It has gone, and from behind my alder screen I see two fish come to the surface, and one of them has the bait, and now I have him, a 6½-inch trout. I cast again, and now I have one a little larger. Must try again. Quite a large fish comes to the surface now and pushes his nose against the bait, and then goes down. I can see his brown form just as I saw the forms of the others as they came up to the surface. The water, dark and black over that side, is the reason; and I see this in spite of the rain drops that are falling on the pool. But I have no time to see much; I must put on a fly—two of them, a white miller and a coachman. I cast them. There is a swirl on the water, the top of my rod bends down, and I know I have a fish. He is a nice one, too; not large as some men count size, not one where we speak of pounds, but the largest that I have caught in Skinned Stream yet, 11 inches long and plump and round as possible.

Of course I try again and again and again; but no more. My, how it rains. And now I am coming to a succession of meadow lands where there is not an alder bush, it appears to me, for a quarter of a mile. Once I had too much of alders to-day, now I have not enough. It seems a pity though, that the farmers of Connecticut could not leave a few bushes here and there along a trout stream. But I suppose such a thing would not agree with their ideas of thrift. But I try and try for some distance. I am now within half a mile of the house, and know perfectly where I am. That is a relief. But I get no fish and now is the very time to take trout if they are here. I change from fly to grasshopper and then worm, and no fish. Splendid holes I have tried too. Now I get the bite of a redfin or a chub. I have caught one chub. He was a good sized one and the redfin too was large. I am tired trying and it is now half-past twelve, and yet I make one more cast, just below where the water runs so close under the bank. I have forty feet of line out. My! That was really a bite. I have him. Why, he is lively. He jumps out of the water way down there. Here he comes though, a nice fish, nearly nine inches. This was the last trout I caught. I tried most carefully at the next branch of the stream and in all the deep holes until I came in sight of Maple Grove House. Nothing but redfins and chubs rewarded me, even when I promised myself I would certainly catch a fish.

But I must end here. It leaked out in some way that I had caught trout in Skinned Stream, and almost every day fishermen were seen passing up and down the brook. One of the boarders, I understood, sent to New York to get an outfit. He gave every one to understand that he could catch them too. I never heard of his getting any, nor any other person, while we were in the neighborhood. Nor can I wonder at it. If I succeeded myself it was by dint of more labor and painstaking than I ever expect again to spend upon any fish. And I would only say to men who really want to catch trout not to go to a skinned stream for them.

STILLABOY.

JOINING GUT LENGTHS.

IN reply to a corrrespondent's inquiry, Mr. Leopold writes as follows: The knot is tied as follows: The two ends of the gut required to be tied are laid side by side for the space of three inches. Then a circle of these is formed and the right hand end is passed through twice. The knot is then drawn tight. I will try to explain more fully. The two gut lengths are laid together with the ends overlapping each other three inches, just as two sticks would be laid together for splicing. Now, the knot is to be tied in the part that is double, the part which constitutes the splice. In making the tie, handle this double part exactly as though it were a single strand. In fact it could be whipped together with thread and the tie made afterward. A knot is tied in the middle of the splice, not a single knot but a double knot. The single knot I speak of is the simplest form of knot that can be tied in a single strand of gut, and is formed by making a ring and passing one end through. The double knot is formed by making a ring and passing one end through twice, then drawing tight. Of course I do not advocate whipping the splice before the knot is tied, because in that case the knot could not be drawn into a neat and compact shape.

To tie a loop on the end of a snood or leader, double the end of the gut back two inches. Then treat this double part as a single gut, tying a double knot in it. To draw right, put the forefinger of the left hand through the loop, hold the long end of the gut in the right hand, grasp the short end of gut between the teeth and see-saw.

NORRISTOWN, Pa., May 22.

HOME-MADE MINNOW NETS.

Editor Forest and Stream:

I was much interested in E. A. Leopold's article in May 14 number of FOREST AND STREAM, on "Home-Made Minnow Nets," but either I am particularly stupid in comprehension, or his explanation of its construction is too meagre for me to grasp the idea fully. What does he refer to as the "upper ends" of the bows to be attached? The outer points or the ends attached to the handle? How long is the three-inch diameter wooden block to be made, and is it inserted between the netting and the tube? How does he strengthen the outer rim of the netting? Please ask him to give a fuller and more lucid description. C.

Editor Forest and Stream:

By "upper ends" of bows I meant the ends fastened to the handle. The extreme length of the block is about four and one half inches. Its length depends somewhat upon the length of the tube to which the bows are hinged. I find it difficult to describe the exact shape of the block without the use of a diagram. It is something like an umbrella turned wrong side out by the force of the wind, or like a mush-room with the top amputated, inverted, and replaced on the stem. It can be made on a lathe by turning a hard wood block down to three inches diameter. Then turn one end down, making a straight stem or handle small enough to fit loosely in the tube. The stem and shoulder should form an obtuse angle of about 130 degrees. The block is inserted between the net and tube, the head of the block spreading the bows apart and stretching the net. If mosquito netting is used, run a stout cord around the lower ends of the bows, attaching it firmly to each bow, and sew the netting to this cord. If heavy, strong netting is used, no cord is needed. After catching your minnows let your net dry thoroughly before folding. To fold the net remove the block, grasp the net in the center and raise it slowly. This folds the net inside the bows. There are several other ways of doing it but they lead to much profanity. Mental profanity is the kind alluded to. E. A. LEOPOLD.

NORRISTOWN, Pa., May 22.

TO ATTACH THE DROPPER.

Editor Forest and Stream:

Your correspondent, "M.," is at a loss as to the manner of attaching a short looped fly, as a "dropper," to his leader. These flies are not only tied so as to be used for stretchers, and to use them as droppers he simply needs to take a spare length of gut, tie a loop in each end, as described by Mr. Cheney, and then loop one end to the fly and the other to the leader. It is a very simple operation, and I wonder he has not seen it himself. He can readily knot up a dozen or two lengths of gut into these hookless snells, and carry them in his fly-book, all ready for use.

I came up here a day or two since, hoping to try some of my old haunts along the mountain brooks, but find myself rather too early. However, we are getting a soaking rain to-day, and after it clears and the brooks get settled I hope to get a few small trout; but the glory of this region is departed. The advent of railways, and the clearing of the forests for sleepers and fuel, has dried up nearly all the brooks in the summer and exterminated the trout, and it is yet too early for black bass in the Connecticut River.

I propose next week to try a fly on some of the largest and more open streams, where I do not believe a fly was ever cast, and where the "small boys" do not fish with "wurrums." Should I have any success will advise you.

CHARLESTOWN, N. H., May 23. VON W.

Editor Forest and Stream:

In last issue of FOREST AND STREAM "M." asks how to fasten the looped flies to his leader. The most common way is to tie two loops in either end of a length of gut; one small loop simply large enough to fasten the gut length to the leader, as in the case of an ordinary fly. The other loop large enough to admit of passing the looped fly through it. First fasten the double-looped gut length to the leader by the small loop which leaves the large looped end free as though it were the end of the leader. If the fly is first fastened it will not pass through the small loop. This is the way to fasten bass flies; but for looped trout flies a length of gut with a hard knot in either end may be used, and the fly fastened as the reel line is fastened to the leader, and then fasten the other end of the gut to the leader with a simple knot. A. N. C.

GLENS FALLS, N. Y.

FLORIDA FISHING REMINISCENCES.

Editor Forest and Stream:

As I read from week to week the interesting account of "Nessmuk's" experiences in Florida, memory brings pictures of like experiences during some years of residence there. How often, while watching for ducks, or fishing, or in camp, have I seen the upper half of a sail gliding over the prairie, the hull that it propelled hidden by the rushes as it turned this way and that, following the devious ways of the typical Florida stream; and how often have I been in that boat on that crooked stream, wanting badly to go somewhere when the wind couldn't accommodate itself to the twist of the channel, or the bushes or palmettoes acted as a barrier to the breeze, and an ash breeze had to be substituted, with the sun blazing furiously, and none but brackish water to quench an unsatisfied thirst. But how good it was when the day drew to a close to run in to shore, where the cabbage palms in close array lined the bluff, and make camp beneath the ample canopy that rustled soothingly in the dying breeze. A fire is easily kindled with dead fans and bloom stalks, the old coffee pot is put on, while a few casts with the whirling spoon or minnow secures the necessary bass. With what enjoyment the apppetizing meal is attacked, while darkness thickens and shadows dance on the palm tree's netted bole, the overhanging leaves or on the surface of the smoothly flowing river. Then follow pipes, jest and story until the luxurious beds of soft moss invite repose.

Yet it was not always thus. I have laid me down to sleep with a good fire at my feet, and awoke to find the coals just dying, a wild wind raging, rain falling and weather cold enough to freeze the marrow. Then how pleasant it was to turn out, hunt the axe and skirmish for dry wood, while the wind blew the rubber off the nest and wet it thoroughly.

"Nessmuk's" account of the shooting of the squirrel and its falling into the water, brings to mind many such occurrences when hunting in the hamaks bordering on bayous, the little fellows getting their death while jumping about on limbs overhanging the water. And what forlorn looking objects they were, all bedraggled. I think "Nessmuk" errs when he says "they are identical in all points" with the gray squirrel from the North. I never saw one as large as the average gray squirrel of New York, and I have shot many hundreds, if not thousands of each. In every other respect I believe them to be identical. The fox-squirrel of Florida is a fine fellow, both in size and coloring. I have shot them weighing over two and one-half pounds. They are very wary and inhabit only the open woods, while the gray or "cat" squirrel chooses the hamaks almost exclusively. Not only gray squirrels, but quail, rabbits, deer, native cattle and horses are smaller in Florida.

How well I remember fishing the quiet reach of water overhung with moss-draped cypresses where Soldier Creek empties into Lake Jesup, the counterpart of the one described by "Nessmuk," and of which there are so many in Florida. My last fishing excursion was made to that spot with a friend in an Osgood canoe. It rained at intervals all the forenoon and we got pretty damp, but what sport we had with the pickerel and bass; seventeen of the former ranging from two to four pounds, and a goodly number of the latter accompanied us home. I always loved to visit that spot. When the waves were rolling on the lake it was still and quiet there.

Speaking of fishing for bass, reminds me of Mr. Ira Wood's article on "Fly-Fishing," in your issue of May 7. My experience has taught me that the open water, regardless of depth, just outside a bank of weeds, is a first-rate place to cast the fly for bass. They lie in wait and cover there waiting for a good morsel. How often while sitting in my boat in such a bank of weeds have I seen great (and small) fellows glide through the grass, on the lookout for stray minnows, and this where the grass is so dense that it would seem folly to expect bass to harbor there. One of my favorite methods of fly-fishing was to let the fly sink to quite a depth, and then by little jerks draw it to the surface. If a bass took it, it was almost invariably just as the fly reached the surface, and sometimes by a leap after it left the water. I have repeatedly seen bass allow the fly to pass them under water without apparently noticing it, and when the fly was about to disappear, turn like a flash and seize it; the disposition being apparently, as Mr. Wood says, that of a cat with a mouse—as long as the mouse is in no danger of escaping, all right, but let the mouse make for cover and the paw comes down. Many times have I, while casting the spoon or minnow on the banks of the St. Johns, seen bass follow the bait (which was some six inches beneath the surface) for a good many feet leisurely, and only seize it when with slightly accelerated motion it was about to leave the water. The sense of satiety seems to have been omitted in bass, the instinct being strong not to let anything good escape, for I have caught them under conditions mentioned, when their maw was so full that it seemed impossible to introduce anything more.

Speaking of fishing, can any of your readers inform me where, within a few hours' ride, in the mountains of Pennsylvania, I can enjoy tolerable trout fishing? I should be greatly obliged for such information. S.

CHESTER COUNTY, Pa.

FISH LAWS OF NEW YORK.

THE following is the last bit of tinkering done by the New York Legislature. It will be seen that under the plea of protecting "bullheads" (catfish) in Lake George, it is forbidden to take any fish until July 1, except pickerel, of which none exist in the lake. It is said that the bill was amended in the interest of the hotel keepers, who wish to prevent all fishing until their guests arrive. The original bill was one to protect fish on their spawning beds, but in its passage this clause was stricken out and the time limit smuggled in. We give the law in full:

SEC. 21. No person shall catch or kill any black bass in the waters of Lake Mahopac or of Columbia county (or in the waters or Schroon Lake or river or Paradox Lake, in the counties of Essex or Warren, or in the waters of Friend's Lake, in Warren county, between the first day of January and the first day of July), or in Lake George, or in Brant Lake, in Warren county, between the first day of January and the twentieth day of July, or catch or kill any black bass, Oswego bass, or muscalonge in any other waters of the State between the first day of January and the first day of June, unless alive for artificial propagation, or the stocking of other waters, except that bass and muscalonge may be caught in the St. Lawrence, Clyde, Seneca and Oswego rivers, Lake Erie, Lake Ontario, Lake Conesus and Niagara River, above Niagara Falls, on the American side, between the twentieth day of May and the first day of January. No person shall catch, kill or expose for sale, or have in his or her possession after the same has been killed, any black bass or striped bass weighing less than one-half pound, or less than eight inches in length from end of snout to end of caudal fin, at any time. No person shall expose for sale, or have in his or her possession after the same has been killed, any black bass, Oswego bass, striped bass or muscalonge, save only from the twentieth day of May to the first day of January. Nor shall any person catch or kill, or attempt to catch or kill, any bullheads or other fish in the waters of Lake George or in the waters of any of the inlets or creeks emptying in said lake, between the first day of April and the first day of July in any year. Nor shall any person catch or kill, or attempt to catch or kill, in the waters of Lake George or in the waters of the inlets or creeks emptying into the same, any fish with any set line, or with any device whatever except that of angling with hook and line held in the hand. Nor shall any person catch or kill any pickerel in the waters of Lake George between the fifteenth day of February and the fifteenth day of June, in any year. Nor shall any person expose for sale, or have in his or her possession, any bullheads or other fish caught or killed in the waters of Lake George, or in the waters of the inlets or creeks emptying into the same, between the first day of April and the first day of July in any year, or any pickerel caught or killed in the waters of said Lake George between the fifteenth day of February and the fifteenth day of June, in any year. Any person violating any of the provisions of this section shall be deemed guilty of a misdemeanor, and in addition thereto shall be liable to a penalty of ten dollars for each fish.

Sec. 24. Any person having in his or her possession upon any of the waters of this State, or upon the shores of or islands in any waters of this State, inhabited by salmon, salmon trout, lake trout, black bass, Oswego bass, striped bass or muscalonge, without the permission of the Commissioners of Fisheries, any snares, nets, stake poles or other device used in unlawfully taking such fish, shall be deemed guilty of a misdemeanor, and in addition thereto shall be liable to a penalty of twenty-five dollars, but nothing herein contained shall apply to that portion of the Hudson River south of the dam at Troy, or to Lake Ontario, or to the waters of the Walkill River in Ulster county.

Sec. 3. This act shall take effect immediately.

KILLING FLIES.—*Editor Forest and Stream:* I inclose a cast of flies which, under certain conditions of water and atmosphere, I have found "most killing." They are duplicates of a cast with which I killed 42 trout, averaging four to the pound, one bright still day last August; water low, clear and still; while my two companions, equally expert, but using larger flies and coarser tackle, only got about thirty between them. Try them under same conditions, and I feel confident the result will prove satisfactory.—H. [The flies are egg, claret gnat, and Montreal dressed as midges. We will try the cast, but do not know the conditions of water, etc., hinted at.]

FOOD OF TROUT.—Paterson, N. J., May 19.—While dissecting the stomachs of trout recently caught, I find that their food consists chiefly of dobson, crayfish and shells containing insects about five-eighths inches long, one-eighth inch in diameter. I have found them in brooks clinging to rocks. The shell is composed of sand-like material. What is this insect called? [It is the caddis worm.]

GAME LAW CHANGES.—Will correspondents favor us with a memorandum of whatever changes may have been made in their State and local game laws.

That Wax Recipe.—*Editor Forest and Stream:* I am receiving many letters asking for recipe for making wax, referred to in my recent remarks about snelling hooks. Will you please say that the recipe can be found in your issue of Jan. 22, 1885, page 508.—E. A. Leopold. We repeat it here: "The mode of preparation is as follows: Get a common jam pot, and to two ounces of the best yellow rosin in powder, add one drachm of white beeswax sliced in minute pieces. Place the jar in a saucepan of boiling water, taking care that no water gets in the jar. Stir thoroughly with a stick when melted. Add two and a half drachms of lard (without salt), and let the whole remain ten minutes, stirring it the while. Pour it into cold water, and while warm pull and knead it, to give it toughness, until nearly cold. With a pair of greased scissors cut it into twelve balls. Give eleven of these balls to your friends; the one which you keep for your own use will last you a year or more. Keep the wax in a cellar or other cool place. Extra heavy salmon gut makes a good snood. Soak it in warm water, bite the end flat for a distance of three-eighths of an inch. Tie on with heavy sewing silk well waxed. When winding on the silk be careful to draw so tight that the wound part shows a glossy surface. This is caused by the wax oozing through the fibres. If the part that is wound does not show this glossy surface, the work has not been properly done. Either the thread was not waxed sufficiently or it was not drawn tight and kept so until secured. If a fine finish is desired, varnish with shellac dissolved in alcohol. This varnish may or may not hold throughout a whole season; it is a small matter. The wax is there to stay, and will do its work until the snood is worn out. I used this wax last season, tying all my own hooks and a large number for my friends, and I have yet to hear of the first one to give way in the binding. I have never used gimp, but I believe it would hold on gimp, as it has never failed to hold on to anything with which I have seen it come in contact. It can easily be removed from the hands by using soap and warm water."

Fly-Fishing for Shad.—Holyoke, Mass., May 22.—*Editor Forest and Stream:* The shad season is opening with a boom and promises an improvement on the last two years; 1883 gave up no shad until June, when for a week the fishermen rejoiced over their catch of from one to three shad per day—hardly a bone for each fisher; 1884 commenced a week earlier with about the same number of shad. On the 12th of this May, 1885, when cleaning out the fishing ground with a small net one shad was taken. On Wednesday evening, 20th, they ran out the large net for the first time; result, one dead and one living sucker. Not discouraged, they (the fishermen) were up with the lark yesterday (Thursday) morning. The day's work counted forty shad; this (Friday) morning up to noon forty shad and one pike of seventeen pounds. The shad are good in quality. Hope the number will keep increasing and give us a little good angling. The shad have not been tried with the fly yet. Expect to see a couple of boats out this or to-morrow evening. Will give them a trial myself next week if the prospects are good. Will expect to see your Mr. H. along, with tip and landing net in position. His little hands were never made to lift a shad out of the water into the boat. Quite a number of shad hatched here last year. With the exception of a few days at a time, there was a good flow of water. After the fishing season was over there were more and better fish up than all through the open season, and many were visiting the spawning beds late in September.

Pennsylvania Fish Notes.—It is not generally known that fair bass fishing can be had about a mile above Trenton, N. J., where the first rocks show themselves and the water begins to tumble. One or two railroad employes have been taking bass from this ground by trolling for them with spoon bait at the end of twenty or thirty yards of line. It has struck your correspondent that fly-fishing could be had there early in the season from what has been told him by these railroad men, and I shall make the attempt when June opens. At the dam, which is situated on the Susquehanna River at Wrightsville, Pa., fly-fishing for rockfish or striped bass can be had when these fish begin to run, in fact they will jump at anything which is skittered over the water in imitation of a living object. I got my information from friend Krueger, of beagle fame, and would ask him to enlighten the readers of Forest and Stream on the subject. Now that the bass season is drawing near, our anglers are looking over their traps and I hear of many trips in prospect. The trout fishing in our State has not tempted many to indulge in it yet this spring. Only those who have had permits to fish in streams protected from the "trout-hog" can return and speak enthusiastically of their outings.—Homo.

Elkhart, Ind., May 20.—At the regular meeting of the Elkhart Sportsmen's Club, the following were elected: President, Col. A. M. Tucker; Vice-President, Ed. R. Kerstetter; Secretary, J. M. Hughes; Treasurer, P. J. Parmater; Executive Committee, W. L. Gilmore, Dr. F. L. Miles, Frank Sell. The club numbers thirty-four members, and owns fine and commodious club and boat houses at Cristiano Lake, Cass county, Mich., six miles north of this city, and is making extensive improvements in them. The annual competitive fishing contest takes place May 26, 27 and 28. Captains Frank Sell and Thomas Turnock, the two veteran fishermen of northern Indiana, have selected their teams for the contest, the losing party to present to the winning team a silver medal beautifully and appropriately engraved. Several members of this club are expert anglers, and in the art of casting a fly Capt. Kerstetter has no peer.—A. M. T.

Worcester, Mass., May 25.—Next Thursday will be the annual fishing day of the Worcester Sportsmen's Club. The rules provide that all fish must be caught in a lawful manner, and no trout less than six inches in length will be counted. The points allowed are: Trout, 16 per pound, and all over 8 ounces an extra point per ounce; perch 2 points per pound, pickerel 4 points and pouts 2 points.

Vermont.—East Berkshire, May 13.—Our spring flight of ducks has been very poor, and the sportsmen do not take kindly to the new law forbidding fishing with hook and line till June 15, and the brooks are so high yet that but few trout have been taken, consequently sportsmen about here have the blues.—L.

To Keep Lampreys.—*Editor Forest and Stream:* Will you kindly ascertain for me from some of your numerous readers the best method of keeping lamprey eels, and how long they can be kept alive under the most favorable circumstances?—Giarc.

Pelee Island.—Southport, Pelee Island, Lake Erie, via Sandusky, O., May 20.—We are having some very fine bass fishing on the Pelee reefs. The catches have been running from 40 to 100 per day for each boat, with two fishermen. Self and partner took 61 good fish yesterday.—B.

Lake George.—In fifteen years I have not found the lake trout fishing in Lake George so poor as this year. I hoped to try the brook trout to-day, but a heavy rain prevented my starting.—A. N. C. (May 23).

Fisheculture.

AMERICAN FISHERIES SOCIETY.

The Giant Clams of Puget Sound.

BY ROBT. E. C. STEARNS.

Dr. STEARNS, referring to the fact that his paper was the first on the programme, said: At the time my friend Prof. Goode asked me to say something to you about the big clams of the west coast, I supposed that my place would be toward the close of the feast, somewhere near the nuts and raisins, or the special delicacies and dainties of the dessert. However, as this is a fish convention, and the Professor's request may be considered as semi-of-fish-ial, I accept the place assigned me, and you must regard what I have to say as being in the nature of grace before meat.

When an illustrious stranger from a remote country visits a great civilized center, it is customary to introduce him into the distinguished society of the place with some formality, if not ostentation. Gentlemen, permit me to make you acquainted with *Glycimeris generosa*, the boss clam of North America, recently from Puget Sound.

You will see that he is in that condition which prevents him from saluting you. Besides, he is by nature somewhat reticent. He is evidently in high spirits (95 per cent. alcohol), but nevertheless speechless (as an Irishman might say), "as many a gentleman has been before."

This clam, *Glycimeris generosa**, by far the largest found on either coast of North America, was first described by Dr. Augustus A. Gould from specimens (probably of the shells only) obtained by the exploring expedition commanded by Commodore Charles Wilkes, during his famous cruise in the years 1838 to 1842 inclusive.

It was detected in Puget Sound and subsequently collected in Awatska Bay, Kamschatka, by the North Pacific Exploring Expedition, under command of Commanders Ringgold and Rodgers; the late Dr. William Stimpson was the naturalist of the latter expedition.

The range of distribution, it will be noticed, is quite extensive, as from the above points in the North Pacific it extends southerly along the west coast of America to San Diego, Cal., where it has been found by Mr. Hemphill. A range northerly and southerly twenty degrees of latitude. It is apparently much more abundant in the north, for Mr. Hemphill states that at the southern locality I have named, in the course of several years he had not been able to find more than a dozen.

From Captain J. S. Lawson, of the U. S. Coast Survey, I learned some years ago of its frequent occurrence in Budd's Inlet, Washington Territory; from others residing in the same general neighborhood I had heard of its presence at various points in Puget Sound.

Aside from its large size, which would naturally attract attention, its excellence as an article of food is attested by all who have eaten it, and it holds by common consent a place in the front rank, in the opinion of the epicures of the northwest coast.

In the spring of 1882, Professor Baird, being desirous of obtaining further and more definite information as to the occurrence, habits, quality and abundance, etc., of *Glycimeris* or geoduck,† as it is called by the Indians, and also more special knowledge of the principal (so-called) clams of that region, I went up to the sound at his request in June of said year, and fixed upon Olympia, at the head of Budd's Inlet, as a base. The character of the sea bed here may be described as varying from sandy mud to muddy sand, occasionally gravelly, and there is sometimes found a patch of hardened or compactly indurated clay of a light blue color.

The most striking peculiarity of the environment, and the principal one relating to the presence and obtaining of geoduck, is the extreme tides which occur here from about the middle of May to the summer solstice in June, or a little later, during which period the rise and fall of the tides, or in other words, the difference between high and low water, is twenty to twenty-five feet. Now it must be borne in mind that it is only during the season of these extraordinary tides that the big clam can be obtained. I found that by the 23d of June, "the long run-outs," as they are called by the people there, had nearly ceased. The white man and Indians employed by me, who had been sent out in various directions, returning at night or early in the morning for three consecutive days, had met with "fisherman's luck." I was not disappointed for I knew the cause, not having been able myself to reach the low water line of three or four days before.

By this we are able to perceive more clearly the force of the common expression, "as happy as a clam at high water."

It is presumable that the scarcity of the geoducks along the ocean coast as far to the south as the species is found, is more apparent than real. The rise and fall of the tides along the main coast is, say, about six feet, and not sufficient to uncover that portion of the zone preferred by the geoducks: again the temperature of the water at the southerly stations may be too high and cause them to seek a cooler temperature by living at greater depths. As to the more special habits of the geoduck, such as burrowing, etc., the following is not without interest.

Captain Lawson informed me that upon one occasion he saw the end of the large siphon tube projecting above the surface of a small shoal. Upon examining the spot it was found to be sandstone; in order to capture the clam the stone had to be broken with a crowbar. Beneath this superstratum was found sand and gravel, in which the huge mollusk was "at home." Its communication with the water above being by means of a hole in and through the sandstone capping; through this hole it extended and protruded its siphons. The hole, no doubt, was originally made by the clam, when quite small, in its younger stages, in order to reach a permanent and suitable burrow or bed, and of course the principal growth was attained after it had reached the more favorable substratum of easier material; the hole or perforation through the sandstone being enlarged coincident with its growth as needed to meet its requirements.

As may be supposed it is quite a job to remove a good-sized geoduck from its native bed without injury; to do so with proper care as many as three persons are needed, otherwise the clam will be more or less mutilated. The length of the siphons when extended indicates the depth of the burrow, if this word may be used, and an excavation equal to the size of a flour barrel has to be made. The instance related of Captain Lawson's specimen shows the difficulties which are sometimes met with in collecting these big fellows.

This mollusk may well be called *generosa*, for its ample and generous size makes it at least the mammoth clam of North America. According to the testimony of Captain Lawson it has been known to reach the weight of sixteen pounds and frequently seven to ten pounds, while the siphon tube may measure one and a half to two feet in length. Those collected and observed by me weighed from three and a half to seven and a half pounds.

More might be said of the many virtues, which in connection with high water, may be the cause of the clam's happiness, such as pertain to its gastronomic excellencies, etc. Geoduck is, however, a real delicacy, and skillfully cooked, would completely puzzle anybody tasting it for the first time, as to whether he was eating fish, flesh or fowl.

The nearest guess that I have heard was by a person to whom I gave a piece, "That it tasted a little perhaps like nicely stewed crab," which hits the mark very nearly. The proper way to cook geoduck, or one way, is to parboil thoroughly, then remove the skin and cut in strips about one inch and a half wide by a half an inch thick (no thicker) and fry the pieces in good batter, in very hot salt pork fat. I dare to say that parboiled, then stuffed and baked or roasted geoduck would prove satisfactory to the daintiest epicure. Mr. Hemphill thinks it tastes somewhat like poached egg, but the taste to me did not suggest that of eggs cooked in any form. If fresh and well cooked, it is, as I wrote to Professor Baird in my report, "suitable food for good men of scientific proclivities."

*Etymology—*Glycimeris* from *glukous*, sweet, *meris*, bitter; *generosa*, from its ample size, etc. Sometimes placed in the genus *Panopæa*, from *Panopê* a nereid, ancient mythology.

† Accent the second syllable and pronounce hurriedly, with a hard g and a short o, as if spelled ge-wo'; gewo'duck.

THE ILLINOIS COMMISSION.

We have the report of the Fish Commission of Illinois for 1884. The principal work has been, as in former seasons, the taking and distribution of native fishes. These are gathered from the low, flat places, levee pits, etc., along the Mississippi River, where they are left by the freshets to die in summer. In this way many thousands of valuable fish have been saved. To facilitate this work a boat 34 feet long and 12 feet wide has been built, containing a cabin and an office, with storeroom for nets, etc. Two other boats are also owned by the Commission, one of which is for the storage of tanks, small boats and cans, while the other is fitted for a man to live in to protect the property and the fish which may be in the boxes. There has been no effort made to hatch fish, but the Commissioners think the time has come to do some work in that direction.

In the matter of fishways, the laws requiring their erection have not been enforced, and the opinion of Justice Walker is given at length, wherein he interprets the law as constitutional, and the best form of fishway is now sought. We think the Commissioners are wrong in their interpretation of the manner in which the meshes of nets should be measured, they following the mode of some inland fishermen of measuring from knot to knot, instead of measuring the mesh stretched to its greatest length, four knots making a mesh, as is done by net makers and all marine and most lake fishermen. The report gives the laws regarding the netting of fish, streams in the State, tables of distribution of carp by the State and United States Commissioners, and two valuable articles by Prof. S. A. Forbes, Professor of Zoology in the Illinois Industrial University, one a catalogue of native Illinois fishes, with illustrations, and the other on the food of fishes.

MASSACHUSETTS LOBSTER LAW.

The M. F. & G. P. Association has since its organization accomplished much, and it is in the hope of further usefulness that we are again kneeling at the feet of the Legislature. We have obtained a close time for smelts, lobsters, trout and other fish—prohibited the netting of smelts, restricted the sale of lobsters to ten and a half inches, secured some protection for our game birds, and, were our laws enforced—absolute immunity from danger to our useful birds; and yet we are charged with a selfish design to monopolize all the sporting and angling of the commonwealth. If we could imitate the State of Maine—which so far as game is concerned, is a hundred years ahead of us—and secure the appointment of some efficient game wardens to enforce the laws we already have, there would be less need of further legislation. As a rule, longer close time means more protection to the birds. Close your markets during the breeding season and your birds are safe. Acting upon this principle we think it wise to give to the ruffed grouse (*Bonasa umbellus*) and also to our quail the entire month of December. What few of both species are left on hand at the first day of the month are worth more to the sportsman and consumer left on the field as breeding stock than taken to bag after that date.

We need more protection for our brook trout (*Salmo fontinalis*). They are poor, and have an earthy, muddy flavor until they begin to "feed at top," and we think April should be a close month, nor should any ever be caught during or after the month of August. And further, all trout less than four and a half or five inches in length should at once be returned to their native element. Black bass we have no love for, do not believe they are worth as much or give as much sport to the angler as the species they have displaced. The selling length of lobsters we honestly think should be increased to twelve inches. "Ruin our business," the lobster men would say. Yes, partially, for one year, but then such luscious fellows as we should get after that—three, four and five pounds—a thing hardly known to the present generation. A catches lobsters down to ten inches, B is in the same business and he must beat A, and so he goes down to nine and a half. C also is "buffeting with lusty sinew" time and tide for a bare subsistence. He has customers who want small lobsters for bait, canning, or domestic use—there is an open market—the Fish Commissioner isn't around very often, and it is easy enough to elude him, so he takes all the nine-inch crustaceans, and this in time gets to be about the standard length; nor are we quite clear that this is in all cases respected. Well, a nine-inch lobster will weigh about three-quarters of a pound, nearly half of which is shell. Query: How many lobsters would it take for a full meal for a man, his wife and six children? We give it up. We are not, however, surprised at the universal complaint that there are no large lobsters. Let these nine-inch lobsters live another year and they will weigh one and a half pounds. And just give them one year more, and lo, you have three-pound lobsters. Does it pay to keep them? Decidedly, yes. But we cannot make any lobster man understand that if he would give these little loosters two years growth, his business would be increased three hundred per cent. What will the people do for lobsters during the next two years? Just what we are told they are doing to-day, sending smacks down to the British Provinces, Newfoundland or Labrador, where lobsters are cheap and of good size.

Member of the M. F. and G. P. A.

Boston, Mass.

FISHWAYS ON THE NEPONSET.—Boston, May 22.—*Editor Forest and Stream:* Will you please inform me to whom I must apply to have the fishways on the Neponset River put in repair? They are in a terrible condition, and as the shad and herring or alewife are now running, I think it high time they were fixed. A friend of mine, and also one of your old subscribers, Mr. Geo. T. Esty, stocked the river a few years since, and while he lived they were in perfect repair. Since his death I am quite positive nothing has been done to them, and even if the water was allowed to run through them they would be no good, as the pieces that alternate are, half of them, knocked out. Mr. Esty died some three years ago, and for the last two seasons there has been a marked falling off in the number of fish running up our stream. Would it not affect the smelts too? I know some of them go up a small creek that finally becomes fresh and should suppose they would go up river if they could get there.—H. E. [Apply to the Commissioners of Fisheries of Massachusetts. They are E. A. Brackett, Winchester; F. W. Putnam, Cambridge, and A. W. Lathrop, Springfield.]

The Kennel.

FIXTURES.

BENCH SHOWS.

June 2, 3, 4 and 5.—First Annual Dog Show of the Illinois Kennel Club. John H. Naylor, Secretary, 3,182 Archer avenue, Chicago, Ill.

FIELD TRIALS.

Nov. 16, 1885.—Seventh Annual Field Trials of the Eastern Field Trials Club, High Point, N. C. Entries for Derby close May 1. W. A. Coster, Secretary, Flatbush, L. I.

Dec. 7.—Seventh Annual Field Trials of the National Field Trials Club, Grand Junction, Tenn. Entries for Derby close April 1. B. M. Stephenson, La Grange, Tenn., Secretary.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc., (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **2386.**

THE NATIONAL DERBY.

Editor Forest and Stream:

I send you four entries to the Derby of the N. F. T. Club, in addition to those published last week:

SETTERS.

JUDGE FLIPPIN (R. H. Rivers)—Black, white and tan dog, Aug. 12 (Startle—Floy).

COUNT GLAD DRACO (B. Crane)—Black, white and tan dog, March (Gladstone—Princess Draco II.).

DUKE GLAD DRACO (B. Crane)—Black, white and tan dog, March (Gladstone—Princess Draco II.).

LADY GLAD DRACO (B. Crane)—Black, white and tan bitch, March (Gladstone—Princess Draco II.).

B. M. STEPHENSON, Sec'y.

LA GRANGE, Tenn., May 21.

EASTERN FIELD TRIALS DERBY ENTRIES.

SETTERS.

PEG III. (N. Rowe, Chicago, Ill.)—Blue belton bitch, May 2 (Cambridge—Marchioness Peg).

PEGPEEP (N. Rowe)—Blue belton bitch, May 2 (Cambridge—Marchioness Peg).

PEGFLY (N. Rowe)—Black, white and tan bitch, May 2 (Cambridge—Marchioness Peg).

PEGJIM (N. Rowe)—Blue belton dog, May 2 (Cambridge—Marchioness Peg).

PEGBID (N. Rowe)—Blue belton dog, May 2 (Cambridge—Marchioness Peg).

ONTARIO LUREY (Wm. Davidson, Chatham, Ont.)—Black, white and tan bitch, July 18 (Dashing Berwyn—Romp).

KING DRUID (Wm. Langdon, Detroit, Mich.)—Black and white dog, June 26 (Druid—Nell).

GROUSE III. (W. T. Mitchell, Lynch's Station, Va.)—Red dog, Feb. 22 (Grouse II.—Colleen Rhue).

LOGAN (J. M. Avent, Hickory Valley, Tenn.)—Orange and white bitch, 1884 (Lightning—Kate).

SHARPLESS (L. Shuster, Philadelphia, Pa.)—Blue belton dog July 12 (Gladstone—Coomassie).

STORM PETREL (Rancocas Kennel, Jobstown, N. J.)—Black, white and tan dog, July 25 (Don Juan—Petrel).

DAME PETREL (Rancocas Kennel)—Black, white and tan bitch, July 25 (Don Juan—Petrel).

REGENT (C. DuBois Wagstaff, Babylon, L. I.)—Black and white dog, March 29 (Bruce—Lorna Doone).

NANNIE GLADSTONE (P. H. & D. Bryson, Memphis, Tenn.)—Lemon belton bitch, April 10 (Gladstone—Sue).

DAN GLADSTONE (P. H. & D. Bryson)—Black, white and tan dog, Nov. 15 (Gladstone—Sue).

SUE GLADSTONE (Memphis & J. M. Avent Kennels, Memphis, Tenn.)—Black, white and tan bitch. April 10 (Gladstone—Sue).

JOE NOBLE (Memphis & J. M. Avent Kennels)—Tri-colored dog, Feb. 27 (Count Noble—Countess A.).

GLAD (Memphis and J. M. Avent Kennels)—Tri-colored dog, July 8 (Gladstone—Bessie A.).

CANADY PEG (Memphis & J. M. Avent Kennels)—Tri-colored bitch, May 2 (Cambridge—Marchioness Peg).

GLENCLAIRE (Jas. T. Walker, Troy, N. Y.)—Red dog, April 10 (Glencho—Claire).

BELLE (E. H. Height, Allaire, N. J.)—Black and tan bitch, January (Dan—a native bitch).

GROVER CLEVELAND (J. L. Young, New Albany, Miss.)—Lemon and white dog, May 23 (Gladstone—Nellie).

JIM BLAINE (J. L. Young)—Black and white dog, May 23 (Gladstone—Nellie).

NOBE (James Verner, Pittsburgh, Pa.)—Tri-colored dog, Feb. 23 (Count Noble—Hazel).

COUNT KNOWLES (E. Gray, Pittsburgh, Pa.)—Tri-colored dog, March 18 (Count Noble—Rosa Lee).

AMERICAN GAILY (Howard Hartley, Pittsburgh, Pa.)—Lemon and white bitch, June 16 (Royal Ranger—Gaily).

CARLOTTA (W. H. Parsons, Atlanta, Ga.)—Tri-colored bitch, Jan. 1 (Lightening—Dora Royal).

FAIRY KING (F. E. Lewis, Tarrytown, N. Y.)—Orange and white dog, Aug. 3 (Foreman—Jessie).

BELVA (F. E. Lewis)—Tri-colored bitch, Aug. 3 (Foreman—Jessie).

CLARA G. (Sanborn Kennel, Pittsburgh, Pa.)—Orange and white bitch, June 8 (Count Noble—Dashing Romp).

RODNEY (Sanborn Kennel)—Tri-colored dog, March 25 (Doc V.—Katy D.).

NELLIE BLY (Edward Dexter, Boston, Mass.)—Black and white bitch, Nov. 3 (Count Noble—Nellie).

BOB GATES (B. M. Stephenson, La Grange, Tenn.)—Tri-colored dog, April 22 (Count Rapier—Belle of Hatchie).

DAISY (G. R. Stevens, Keeling, Tenn.)—Tri-colored bitch, May 22 (Gath—Gem).

FAERIE (S. Fleet Speir, M. D., Brooklyn, N. Y.)—Tri-colored bitch, Feb. 7 (St. Elmo IV.—Lady Fayre).

PRINCESS LOUISE (T. C. Vail, Warwick, N. Y.)—Orange and white bitch, March 28 (Bronze—Paris Belle).

GUY GLADSTONE (C. Tucker, Stanton, Tenn.)—Tri-colored dog, April 26 (Gladstone—Lavalette).

LADY DONCASTER (C. Tucker).—Tri-colored bitch, May 1 (Doncaster—Bessie Brown).

SAM STERRETT (C Tucker)—Tri-colored dog, April 26 (Gladstone—Lavalette).

PENDENNIS (Chas. Heath, Newark, N. J.)—Black and white dog, Jan. 1 (Blue Drake—Diana II.).

DIANA III. (Chas. Heath)—Black and white bitch, Jan. 1 (Blue Drake—Diana II.).

TARQUIN (W. B. Gates, Memphis, Tenn.)—Tri-colored dog, June 14 (Paul Gladstone—Bo-Peep).

NORTIER (W. B. Gates)—Tri-colored dog, June 14 (Paul Gladstone—Bo-Peep).

BOB BOWLES (Wm. Bowles, Jr., Memphis, Tenn.)—Tri-colored dog, June 14 (Paul Gladstone—Bo-Peep).

PRINCE IMPERIAL (Ramapo Kennels)—Orange belton dog, Feb. 28 (Emperor Fred—Bessie).

BLUE SPECKS (Ramapo Kennels, Mahwah, N. J.)—Blue belton dog, March 28 (Bronze—Olivette).

GATH'S JOY (James N. Maclin, Keeling, Tenn.)—Tri-colored dog, May 23 (Gath—Gem).

GATH'S MARK (James N. Maclin)—Tri-colored dog, May 23 (Gath—Gem).

CLEO (H. D. Nicholls, Chicago, Ill.)—Tri-colored bitch, April 26 (Gladstone—Lavalette).

KAISER (S. W. Everitt, Weldon, N. C.)—Orange and white dog, July 11 (Count Rake II.—Bas-Bleu).

WINFIELD (Jas. H. Goodsell, New York city)—Lemon and white dog, July 8 (Plantagenet—Queen Petrel).

PRINCE ROYALTY (Chas. L. Dick, Johnstown, Pa.)—Lemon and white dog, April 28 (Royal Rock—Nellie Laverack).

LADY ROYAL (Chas. L. Dick)—Lemon and white bitch, April 28 (Royal Rock—Nellie Laverack).

JERRY (J. A. English, Mount Olive, N. C.)—Blue belton dog, Jan. 1 (Blue Drake—Diana II.).

BESSIE (T. E. Smith, Stockholm, N. J.)—Red and white bitch, April 24 (Pat—Lill).

NANNIE S (G. G. Ware, Stanton, Tenn.)—Black and white bitch, April 12 (Dashing Berwyn—Juno A).

MINNIE (G. G. Ware)—Black and white bitch, June 20 (Ben Hill—Leora).

DIANA (W. B. Wells, Chatham, Ont.)—Black and white bitch. July 18 (Mingo—Fausta II.).

PHYLLIS (W. B. Wells)—Tri-colored bitch, March 8 (Nixey—Grace Dormer).

LA BELLE (I. R. Henrichs, Pittsburgh, Pa.)—Blue belton and tan bitch, April, 1884 (Count Gladstone—Queen Laverack).

POINTERS.

EARLE (F. R. Hitchcock, New York)—Lemon and white dog, May 22 (Bang Bang—Graceful).

FANITA (F. R. Hitchcock)—Liver and white bitch, July 28 (Croxteth—Fan Fan).

UNCAS (F. R. Hitchcock)—Liver and white dog, December (Tammany—Grace).

COMET (Westminster Kennel Club, Babylon, L. I.)—Liver and white dog, April 7 (Meteor—Trinket).

NANCY (Westminster Kennel Club)—Lemon and white bitch, July 26 (Bang Bang—Polly II.).

PICKET (D. S. Gregory, Jr., 2d, New York)—Liver and white dog, April 16 (Scout—Ruby).

OLD PEBO (Chas. D. Ingersoll, New York)—Liver and white dog, Sept. 19 (Bang Bang—Lill).

HALF AND HALF (Edward Dexter, Boston, Mass.)—Liver and white dog, Jan. 27 (Priam—Malt).

MITER (Jesse M. Whaite, Newton, N. C.)—Liver and white dog, May 14 (Lort—Lady Croxteth).

DIXEY (J. R. Andrews, New York)—Dog, Oct. 30 (Sensation—Loela).

MALITE (J. W. Munson, St. Louis, Mo.)—Liver and white bitch, May 6 (Meteor—Dell).

METEROITE (J. W. Munson)—Liver and white bitch, July 19 (Meteor—Vanity).

BANG GRACE (Luke W. White, Bridgeport, Conn.)—Lemon and white dog, May 23 (Bang Bang—Grace).

RESULT (J. E. Thayer, Lancaster, Mass.)—Liver and white dog, May 4 (Shot—Floy).

BILL (James P. Swain, Jr., Yonkers, N. Y.)—Lemon and white dog, July 27 (Rush—Nan).

DUKE OF BERGEN (Ramapo Kennels, Mahwah, N. J.)—Liver and white dog, Jan. 6 (Bang Bang—Fan Fan).

HAPPY MEDIUM (Ramapo Kennels, Mahwah, N. J.)—Liver and white bitch, May 3 (Croxteth—Fan Fan).

LUCKY MEDIUM (Ramapo Kennels, Mahwah, N. J.)—Liver and white bitch, July 28 (Croxteth—Fan Fan).

BELLE OF THE BEAUTIES (J. F. Jackson, Washington, Ga.)—Liver and white bitch, Sept. 15 (Peter White—Beauty).

HUGUENOT (Neversink Lodge Kennels, Guymard, N. Y.)—Liver and white dog, July 25 (Croxteth—Fan Fan).

NEVERSINK (Neversink Lodge Kennels, Guymard, N. Y.)—Liver and white dog, Oct. 16 (Croxteth—Gwendoline).

JEWEL (Neversink Lodge Kennels, Guymard, N. Y.)—Liver and white bitch, Oct 16 (Croxteth—Gwendoline).

CITRON (Westminster Kennel Club, Babylon, L. I.)—Lemon and white bitch, May 16 (Bang Bang—Rose).

PHILADELPHIA BENCH SHOW.

THE Philadelphia bench show last week was most excellent in the arrangement, management, quality of exhibits and attendance. The affair was throughout a credit to the club, and we presume that it was financially a success.

The manager was F. A. Diffenderfer, who did well; the dogs were well benched by him. B. F. Lewis cooked the food for them and served it fresh. This was better than the usual biscuit provender, and the improvement in the well being of the dogs was manifest. The customary bench show noisome odor, consequent upon a biscuit diet, was delightfully missing. The building was not well ventilated, and on Tuesday and Wednesday the room was oppressively close, but Thursday and Friday were cooler and comfortable. The dogs were, as a rule, shown in good condition, there being fewer poor coats than usual. The foxhound display was very attractive, but not equal to the exhibit of last year. The great feature of the show was the English setter classes; their name was legion, and a more beautiful collection has never been seen in this country. The judging was finished on the first day and the marked catalogues were out on the second day; this wrinkle was introduced by the National Breeders' show in Philadelphia last October, and it is a pleasure to see the clubs following the example then set. The show was one day too long. Three days are enough. The judging rings were badly lighted, which may account for some of the decisions rendered by the judges. Below are our comments on the classes:

MASTIFFS—(MR. DUDLEY).

Nevison was the only entry in the champion class. He was in splendid condition, and easily secured the special for the best mastiff in the show. In the open dog class, the good-headed Homer had a clear win over Dread and Hildebert. The last named does not fill out, but we like him quite as well as Dread, who is very faulty in hindquarters and deficient in head. Don's head is not typical, and he is light of bone. Prussian Princess was once again to the front in the bitch class, and was way ahead of her kennel companion Hebe, who is a niceish bitch on the small side. Dido carries a pretty good head, but is faulty in ears, feet and shoulders. Zara, third prize, was not entitled to the honor. She is small and very faulty in head and ears. The puppies were judged as one class, but afterward they were divided into a dog and bitch class. In the dog class, Hero III. is a big dog but is leggy, deficient in head and ears and character. David has a fairly good head, but his ears are not well carried, neither are his forelegs straight, and his tail is faulty. Xerxes is very like his kennel companion Minerva, winner in the bitch class, except that he is not so good in feet. Minerva, badly shown, was the best of the puppies. She is small, light in bone, and faulty in eyes. In head she shows a great deal of mastiff character. Dora lacks size and is wanting in head and ears. With the exception of third to Zara in the bitch class, the classes were well judged.

ST. BERNARDS—(MR. DUDLEY).

The champion classes for rough-coated dogs and bitches did not fill, and First Choice was the only entry in the open dog class. He will prove a stumbling block to many at future shows. Beryl was alone in the corresponding bitch class. Konig, better in condition than Margery, took the blue ribbon to Bergenfield. He is a bit straight behind, and might be improved in tail and ears. Margery has a niceish head, and is of good size. She would do with more bone. Victoria is by no means a bad one, but was handicapped on account of age, and had the misfortune to get one of her legs injured before the judging commenced. Mr. Dudley made a blunder in giving vhc. to King; he is not a St. Bernard, and his pedigree is funnier even than his appearance—by Sancho out of Jack. The Millbrook Kennels won both the champion prizes for smooth-coated specimens with Verone and Wanda. The former is a much-improved dog. Ernst, in the open dog class, is faulty at both ends. Nero is an immense dog, but he lacks character and is faulty behind and weak in the pasterns. Barkis, the winning puppy, is fairly good in front, but short of back and a bit off behind. Nellie's head and ears are deficient, and Ion lacks in stifles.

NEWFOUNDLANDS—(DR. DUDLEY).

Miro and Sam were the champions on this occasion, and Mr. Nickerson's dog was easily defeated. The open class contained the usual medley of fair, indifferent and bad. The winner is faulty in head, eyes and coat. He was in nice condition. Jalma is faulty in head, ears, tail and shoulders. Riley, placed third, is more to our liking, but neither his head nor tail is good. Mr. Dudley was generous in giving a first prize to Nell. She is faulty all over.

COLLIES—(MR. DAVIDSON).

Ben Nevis and Rex fought out the battle in the champion class, the result being as usual. Robin Adair was outclassed. Winnie, in the bitch class, is a bit faulty in head, ears and coat. The winner in the open class has very bad ears, and is soft of top coat and lacks undercoat. Bruce of the Fylde and Kilmarnock Bruce are better specimens. We would have given the latter first prize and his kennel companion second. Bounce deserved another letter, and we like Joe Nettles better than Glencove. Bitches were better judged. The winners are all well known to our readers, and there was nothing good behind them. In the puppy class Craft, faulty in ears and coat, was very closely pressed by Kilmarnock Belle, a niceish sable and white with faulty ears. The class was a poor one, and none of the winners will develop into first-class dogs.

DEERHOUNDS—(MR. MORTIMER).

Perth was the only entry in the champion class, but we did not get a view of her. In the open class, Bran, wrongly entered as Bravo, was placed first, and Heather, bad in feet and on the small side, was next. Brian, placed third, was our choice for first.

GREYHOUNDS—(MR. MORTIMER).

The Philadelphia Kennel Club allowed Mr. Smith one page and a half of catalogue space in which to advertise the performances of his dogs. If such a precedent is to be established, the price of catalogues will have to be raised, and it is high enough already. In the champion class for dogs Memnon won. He should have been ordered out of the ring. He was not only in wretched condition, but had a large and angry wound on the off forearm. Surely such a grand dog is deserving of some attention when suffering from a wound that is reducing him ounce by ounce. Mr. Smith, his owner, was absent from the show, or he would not, we feel sure, have allowed the gallant runner-up for the Waterloo purse and winner of other stakes to suffer to such an extent. But Mr. Smith should be severely censured for sending Memnon to the show at all. Fan, looking fairly well, had things all to herself in the bitch class, and in the open dog class (a very poor one), Ben, in bad condition, was declared the winner. Captain is bad in loin and feet, light in stifles and plain in head. Fleet is not a show dog. In the corresponding bitch class, the gamy-looking Begonia beat a smartish little bitch named Saturday Night. She is racy-looking but lacks substance. The puppies were a poor lot, and School Boy, plain in head and shallow, was rightly placed first. Lady Halifax is shallow and light of bone.

POINTERS (MR. APPOLD).

There were no entries in the champion class for large pointers. In the open dog class Beaufort, looking well, scored an easy win. Donald II. came next: he was in fair condition. Tammany, not quite up to his New York form, was third. Nero, c., lacks character in head; his ears stand out and his tail is bad; he has a fair chest, legs and feet. Sport, unnoticed, is heavily made and has a split nose. Only three showed up in the corresponding bitch class. Lulu Faust, placed first, is not mature; she has a fair head and legs and a good tail; she is throaty, slack in back and has open feet. She should have changed places with Princess II., the winner of second. She is rather a nice bitch with a fair head and neck, good shoulders and legs; she is a bit lathy and weak in pasterns. Lucille, the only other entry, was placed third. Robin Adair was alone in the champion class for small dogs. He was looking well and deserved his prize. There were no entries in the bitch class. In the open dog class Bang Bang was placed first; he was not in first rate condition and was badly broken out with blotches the second day and was sent home. Rapp was placed second; he is a good dog with no glaring faults, and should have been first. Adonis, third, is a fairly well-formed dog with fair chest and loin and good legs and feet; he is weak in head, a bit snipy and has a bushy tail. Shot and Hamlet, both hc., are fair specimens and deserved their cards. Bangor, unnoticed, is a useful looking dog and deserved mention. In the corresponding bitch class Modesty, looking fairly well, had an easy win. Rosa was correctly placed second. There was not much to choose between Polly, third, and Pocahontas and Virginia, both vhc. All are rather pretty, but none of them are first class. The dog puppies were a very ordinary lot. Castor, first, is quite taking at first glance, but he is weedy and his fore feet stand close together. He is fairly well formed, and may improve with age. Bang Grace was placed second. Owing to his peculiar name and appearance he figured as a bitch in our report of the New York show, and he met the same fate at the hands of the printer here, but was transferred to the dog class. Tempter, vhc., got all that he deserved. In the bitch class Lou, looking well, was deservedly placed first. Nancy, second, and Carrie, vhc., are both fairly good. The classes were as a whole rather above the average.

ENGLISH SETTERS—(MAJOR TAYLOR).

The English setters were the grandest lot that we have ever seen together. In the champion dog class there were three entries, Plantagenet, Gladstone and Paul Gladstone. Gladstone being absent. Greatly to our surprise, the prize was given to Paul Gladstone. He is rather a taking-looking dog with some good points, but his weak head, crooked tail and lack of bone and substance, place him far behind Plantagenet. In the bitch class, Queen Alice, looking well, was placed over Petrel II., not in the best of condition, as she was heavy in whelp. In the open dog class, Rockingham won the pride of place, which he deserved, Foreman making a very good second. Gus Bondhu was placed third. He has greatly improved since we saw him last, having put on lots of muscle behind, which gives him a more symmetrical appearance. He was in capital condition. Mack B., vhc., was also well shown. Stanton, also vhc, is a nice little dog, a bit weak in head and straight behind. There were several others in the class that were deserving of the three letters, among them were Royal Ranger, hc., not in good condition, Chalkey D., unnoticed, Prince and Don Juan, both hc., although they were not well shown. Many of the others are deserving of mention in almost any company. We do not believe in an indiscriminate bestowal of commendation cards, but in a class like this the judge could not be blamed if he had been more liberal. The bitch class was fully up to the dog class in quality. First went to Modesta, looking better than we have seen her. Juno A., winner of second, should have been content with vhc. in this company. She is a fairly well made bitch, but lacks quality and substance, and is out at elbows. Fairy III., winner of third, is a much better bitch, indeed, we think her a little better than the winner, although she was not in so good condition. Petrel III., hc., we fancied for third place. She was not well shown but her beautiful form entitled her to the place. Queen Petrel, vhc., was close to these three, all of them being remarkably good and of very nearly the same type. As we remarked of the dog class, there were a large number of good specimens that well deserved mention. In fact after the winners in both classes had been

selected there remained very good classes. In the dog puppy class Storm Petrel, winner of second at New York, was placed at the head, and Fairy King, a son of Foreman's, came next. Rowdy and Brier, both c., are not quite up to the others. In the bitch class the judge got all astray. Dame Petrel, much the best in the class, was given only hc. She was looking well except that the hair has been clipped from her flank, giving her a tucked up appearance. Lady Rock, placed first, is rather a moderate specimen; her head is not first-class and her ears stand out and are small and set on too high; she has a fair neck, good loins, legs and feet. She is a trifle wide in front and might be better in bone and tail. Nancy Dawson, placed second, was perhaps entitled to the place, although there was not much to choose between her and Lady Rock. Hasty, vhc., was very lucky; she is far from first-class and her feet should have prevented her from being noticed.

IRISH SETTERS—(MAJOR TAYLOR).

The Irish setters were not so good an average lot as we expected to see, although there were many fine specimens present. In the champion dog class, Elcho, Jr. was alone, as was Lady Clare in the bitch class. She was looking fairly well except that she was a little off in coat. In the open dog class, Chief was placed over Blarney. This should have been reversed. Both are capital dogs and were looking well. Blarney is better in head and hind legs, and Chief beats him in color and back, but Blarney is more the type of an Irish dog. Roland, third, we do not like so well as Bruce, vhc. Roland is coarse in head and straight in stifle, otherwise he is good. The bitches were not of so good quality as the dogs. We thought them well placed. The puppies were nothing extra. Gerald was the best of the lot.

GORDON SETTERS—(MR. BERGEN).

The Gordon setters were not numerous, but of better quality than we have seen for some time. In the champion dog class, Argus, in good condition, beat Gem, his only competitor, not at his best. In the bitch class Lady Gordon was alone; she was looking well. In the open dog class, Royal Duke came out in capital condition and won the prize. Little Boy was placed second; he has a very good coat, of nice color, is good in bone, and shows quality. He is weak in head and too light in muzzle; his tail is too long and badly carried. Flash, third, has improved somewhat in appearance. Rex, vhc., has a fair head and body, with good bone, legs and feet; he was in poor coat and color, and has a coarse tail. In the bitch class Rhoda was placed first. She is heavy in shoulders and light in head and pricks her ears at times. Jennie, second, is rather a nice bitch of heavy type. She is a bit round in barrel and too wavy in coat. Lady Bislow, third, was in good condition and deserved her prize. The classes were well judged.

SPANIELS—(MR. DAVIDSON).

There was only one Irishman, but he is quite a nice dog—might be closer in curl to advantage. The field spaniels were a poor lot. Coaley, the winner, is light of bone, not clean enough in head, leggy, and faulty in coat. Jack, the only opponent, is very leggy and has a bad neck. Of the two champion cockers under twenty-eight pounds, Helen was much the best. Hornell Silk, curly and short in back, is well known. In the open class Brahmin was well placed first. He stands too high on the legs, and is light of bone and middle. In head and coat he is fairly good. Hornell Jock is also too long on the legs, short in back, and faulty in muzzle. In coat, legs and feet he will do. The winner in the bitch class is faulty in head, eyes and coat, and her opponent is lacking in head, shoulders and ears. In the class for cockers other than liver and black, Hornell Sunlight is light of bone, snipy and short of coat. Wanda T. is deficient in head, coat and bone. Othello, in the puppy class, promises well. He has a good flat coat, nice legs and feet, and by no means a bad head. He is a bit leggy, but will let down with age. Minnie is a long way behind him in good looks, being much too curly. Mr. Richardson's team of Clumbers had a walk-over for the honors. Newcastle, long and low, is much the best dog we have seen in the country. Poor Bateman had the misfortune to lose one of his ears. He slipped his collar, went off on a ramble, and returned minus a piece of the organ of hearing. He was last seen in the company of a bull-terrier, and it is thought the latter relieved him of the ear in settlement of an old account. These classes were carefully and well judged by Mr. Davidson.

FOXHOUNDS—(MR. STOVELL).

Three packs of foxhounds of five couples each, with one or two single entries, made up the exhibit. They were shown in a circular enclosure of wire, in the center of the building, subdivided into kennels to accommodate each pack. The space was entirely too contracted, crowding the dogs too much, and they did not show to advantage. The first pack in order of merit was that of the Chichester Hunting Club, of Linwood, Delaware county, Pa. This was a very sorty lot of hounds of the true old Southern type, large in size, heavy in bone, long pendulous ears folded at the tips, deep set eyes, showing the haws, square cut muzzles, and lips deeply flewed. The judge very properly selected these as winners of the special for the best pack, but as two of the dogs had been emasculated the contesting clubs entered a protest on the ground that they were not perfect dogs, which protest the Kennel Club sustained. Unfortunately none of this pack were entered for the individual prizes, and therefore this meritorious lot received no recognition. The contest for the special, therefore, narrowed down to the two remaining packs, the Rockland Hunt and the Silver Brook Club, of Wilmington, Delaware. There was not much uniformity in either of these lots, the dogs varying in size and type. The Rockland was chosen as the best. In the open class for dogs first went to Lead, a large red and white dog, with good body, legs and feet, but whose sour face and defective carriage of ears were objectionable features. Stormer, the winner of second, is a fair dog but troubled with the same faults as Lead. A commendation was given to Dash. This dog was a mongrel and unworthy of notice. In foxhound bitches first went properly to Roxey, a good bitch whose head and ear is of the best; second to Doxey, a bitch built on speed lines, but very weak in ear; and third to Margaret, her counterpart, but not quite so good. For the best couple of foxhounds Lead and Doxey received the club prize and special. The Rockland pack got the special for the best pack, while the Silver Brook pack was awarded a special prize for the second best. The entire class was as well handled as was possible under the circumstances, for owing to the fact that the rings were occupied by the other judges, the hounds had to be adjudicated in their kennels, a very difficult task.

BEAGLES—(MR. SLOAN).

The beagles were a capital class. The influence of the Beagle Club is being felt, and we no longer see the list spoiled by a medley of nondescripts partaking largely of foxhound and other crosses. Exhibitors have learned that under the standard of the club such dogs have no chance of being placed. There were no entries in the champion class. In the open dog class over twelve inches, Rattler III. received first award. He is a neat white, black and tan dog, with good head and well hung ears. He is rather long cast and does not carry his tail as well as he might. In other points he is a very taking dog, and was deservedly first. Rover, another white, black and tan, got second. He has a wonderfully good body, compact and cobby; he carries his ears well, but they would be improved by being a trifle longer. His only other defect is that he is slightly out at elbow. Third went to Duce, a good little dog of very nice type, who, with his mate Frisky, vhc., were a well-matched couple. They would be improved by a little more length of ear and a better carriage of tails, but in bodies, legs and coats, were up to the mark. Grand Duke, vhc., was another good one, just a shade long in body and not quite as fine in beauty lines as some of the above mentioned, but made up of the stuff for a workman. Monroe, a useful-looking dog, is short of leather and his ear thick and boardy. These, with a tendency to open feet, are his worst faults. In bitches over twelve inches, Mischief was first, and by odds the best. She is good in all points, and clearly outclassed her competitors. Veta, white, black and tan, loaded with fat to the extent of deformity, was second; she shows lots of breeding and in proper form would do herself credit. Blue Maid, blue mottle, is fairly good with nothing pronounced about her. She was awarded the third prize. Lucy, mottled black, white and tan, plain looking, large (in fact we thought her above the standard height), was outclassed, as was Belle, the other contestant, neither filling the requirements of a true beagle. Dogs under 12 inches brought out Bannerman and Marchboy II.; Bannerman won; this dog has been described before in the FOREST AND STREAM, but we may say that his only defects, apart from his unfortunate color, are too great breadth of skull and weakness of muzzle. In other points he is nearly perfect, and he may be accounted the most perfect dwarf beagle that has ever appeared at any of our bench shows. The dog was shown in grand form. Marchboy II., winner of second, an excellent puppy, was heavily handicapped in meeting such a dog as Bannerman, of course an undeveloped puppy could have no chance; a year hence he can enter the lists again on more equal terms. Beagle bitches, under 12 inches, brought out three. First went to Bunnie, a little beauty, full of breeding and quality. Magnet, black, white and tan, another nice one, got second; there was very little between these two bitches. Flirt, winner of third, we did not like particularly well, her light bone and thin tail are against her. Puppies had only one entry, Fair Maid; she was awarded the prize, but hardly deserved it. The special for the best beagle in the show was won by Bannerman, as was also the Beagle Club Cup for best under twelve inches. Rattler III. won the Beagle Club Cup for best beagle over twelve inches. There were two other specials, one for best couple imported English beagles, the other for the best English beagle bitch under twelve inches. This latter prize went to Blue Maid, a bitch over twelve inches, while the brace prize should seemingly have gone to Marchboy II. and Magnet, both imported and both winners of second prizes. Instead of which the cup was given to Blue Belle and Blue Maid, the former unnoticed and the latter winner of a third prize. The judging in the regular classes was so consistent, and the breed so thoroughly well handled that we are at a loss to understand these discrepancies in the award of the two specials referred to.

BASSET HOUNDS (MR. STOVELL).

Sport, the only entry, was vhc. The judge considered the breeding of this dog as very questionable; if Nemours is the type there is certainly a difference.

BENCH LEG BEAGLES—(MR. STOVELL).

Ranger got first, a very fair dog, but deficient in crook. Punch, second prize, has better bent forelegs, but is deficient in head properties. Judy is very little behind the others. The class was fair, and well judged.

DACHSHUNDE—(MR. STOVELL).

Waldine, black and tan, first; Driver, fallow red, second. Neither is a typical specimen. They were rightly placed.

WHIPPETS—(MR. STOVELL).

The winners are not typical specimens. Whip has prick ears and is faulty in head, but he looks like galloping. Jack is light of bone, faulty in head, and too straight behind. In the bitch class, Sallie is light of muzzle and faulty behind. Maggie was absent when we made our call. Nigger is round in barrel and heavy in shoulders. Nell has a bad head and shows too much terrier, and too little greyhound character.

BULLDOGS—(MR. BARLOW).

These classes were very well handled, and Mr. Barlow has shown himself an excellent judge of bulldogs. In the champion class for both sexes, Mr. Thayer's great bitch Bellisima was alone. From stop to tip of nose she is a trifle too long, but little, if any, fault can be found with her in other respects. In the open class for dogs, the whelpish-looking Romulus beat his younger rivals. Remus is a promising pup, but is too narrow in front and was not well shown. Cribb is pinched in muzzle and wanting in depth. His body hangs well, but his ears are inclined to prick. Punch is not up enough in face, and his shoulders are not well thrown out, neither are his legs well put on. Toper is a mongrel. Britomartis, a grand bitch, stood out in bold contrast to the others in her class. She is a bit tucked up at the shoulders, but has a magnificent head. Bonnie Duchess and Juno were outclassed in such company. The former is light in skull and faulty in muzzle, deficient in bone, and her body does not hang well. Juno is leggy, faulty in skull, muzzle and color.

BULL-TERRIERS—(MR. BARLOW).

Victoria, the handsome and well-known, was alone in the class for champions, and Dutch, Jr., the patched son of Old Dutch and Nell, repeated his New York and Toronto victories in the open dog class. The Earl, a bit faulty at both ends, came next, and Saxon, another patched dog, was next on the list. "Cheeky and faulty in tail," says our note book. Nipper was lucky in getting a c. card. Among the bitches, Gipsey was the winner. She is faulty at both ends. Young Venom, placed second, should have been first. That wall-eye is against her, but it is more than counterbalanced by Gipsey's patched and weak head. The winning puppy is faulty below the eyes and is coarse in tail.

BLACK AND TAN TERRIERS—(MR. BARLOW).

There were only three entries, and Queen, shown in beautiful condition, scored a very easy win. She is weak below the eyes and lacks substance. Beauty is faulty in head, legs and tail, but is fairly good in coat, color, legs and feet. Old Vortigern had the champion class all to himself. We never saw him looking better.

FOX-TERRIERS—(MR. BARLOW).

Raby Tyrant and Richmond Olive represented the champions on this occasion, and in the open class for dogs Spice scored a very easy win. This dog is six years old, not five, as entered in the catalogues. He is a good, game-looking terrier, rather high on the legs and long in coat. His mouth is going, and we would like him better if his hocks were nearer to the ground. Scarsdale, well known, was away behind his distinguished kennel companion, and so was Surprise, who is coarse in muzzle and heavy in ears, besides being in wretched condition. Nick is faulty in skull, ears, eyes, bone and coat. Crisp is wheel-backed, leggy and coarse in skull, but on the top of these faults he shows considerable terrier character. Bruce is faulty in head, wide in front, long between the couplings, and light in coat. Phantasy, winner of first in the bitch class, is light of bone and soft in coat, but she shows a lot of terrier character. Jaunty is faulty in ears, skull, chest, bone and coat. The winner in the puppy class is a rare bred one, a bit heavy in ear and thick in muzzle. She is good in body, legs and feet, but would do with more bone. Belvoir Scamp, good in head, but faulty in body, and Rustic Flash, were placed equal second. Dan is coarse in skull and light of bone. They were well handled.

OTHER TERRIERS (MR. BAROLW).

In the class for Irish and rough-haired terriers, Gem, faulty in head and color, was first, and Sir Garnet, big and soft in coat, second. Mustard, hc., is a poor Irishman. Beresford, the winning Bedlington, is faulty in head and coat. He stands too low on his legs. Sting is long, low, faulty in head and soft in coat. Young Sting is faulty in head, tail, coat and eyes. Mr. Sanderson's kennel of Skyes took all before them, being longer, lower and better in coat than their opponents. The Yorkshires were as usual a poor lot. Charlie, the winner, is short of coat and tan. Togo is long cast, dark on the back and lacks tan on head and legs. Mr. D. is faulty in coat and color, so is Lady, and the same may be said of Mistress, Mary and Daisey. The toys, rough and smooth, were poor classes. Romeo, better in coat and color than Pawsee, should have won first.

PUGS—(MR. MORTIMER).

In the champion class for dogs, Joe beat George. The latter seemed to have the call among the talent. Effie was absent from the bitch class. Bradford Ruby won easily enough in the open dog class. He is looking very light and requires rest. Tu-Tu, heavy of ears, small of eyes, and not straight on his forelegs, came next, and Punch, the fortunate winner at New York, took third. Smut, shown in wretched condition, did not deserve the hc. card, and Harry, long in face, heavy in ears, leggy and faulty in tail, got at least two letters more than he deserved. Miss Kitty, small in skull and faulty in mask and ears, won in the bitch class over Flossy. The latter is faulty in ears and tail. The puppies were a wretched lot.

KING CHARLES AND BLENHEIM SPANIELS—(MR. BARLOW).

Otto, the winner in the King Charles class, lacks skull and is too small in eyes. He is leggy, curly and is not of good color. Prince is snipy, curly and small of eyes. Chappy was about the best of the Blenheims, but is faulty in head. Rubes is faulty in head, ears and coat. Charlie has a poor head and small eyes. Daisy is faulty in head, eyes and coat.

ITALIAN GREYHOUNDS—(MR. MORTIMER).

Only four were shown, and Fanny was much the best in head, ears and size.

POODLES—(MR. MORTIMER).

Jack, a good dog, took first, and for second we preferred Jet II., who is closer in coat than Sabot.

MISCELLANEOUS CLASSES—(MR. MORTIMER).

In the heavy-weight class a boarhound, shown in good condition, took first, and third was given to a very poor retriever. He has a bad head and very light eyes. We failed to discover the merits of the second prize winner. In the light-weight class Napoleon was a long way the best, but the judge gave first to a big, long-faced specimen, and to make matters worse, said that Prince Charles spaniels should be entered in the King Charles class. He never even turned up the ears to see if the underside had the necessary markings. Napoleon beats the winner in skull, muzzle, eyes, ears, body, coat, frill, feather, markings and size. Dog shows become a farce when such decisions are made. The skull of a toy spaniel should be high and full, the stop well pronounced and the muzzle short and blunt, the eyes should be large, dark and mild in expression, the ears long and set low, body compact, legs short and well feathered. In size the dog should not resemble the Irish water spaniel. A toy dog is a little dog.

ADDENDA TO AWARDS.

Following is a list of awards in addition to those published last week: The mastiff puppies were divided into dog and bitch classes. In the dog class David was first, Xerxes second, Brother vhc., and Hero hc. In the bitch class Minerva was first, Dora second, and hc. was given to A. D. Campbell's Zoe (Homer—Zara). In the deerhound class first went to J. E. Thayer's Bran, misprinted Bravo. In English setter dogs J. C. Johnson's Duke of Devon (Doncaster—Fan) was rejudged and given vhc. In English setter dog puppies Fairy King is owned by F. E. Lewis instead of the Blackstone Kennels. In bitch puppies, first, Jos. Lewis's Lady Rock (Royal Rock—Nellie); second, R. B. Pense's Nancy Dawson (Emperor Fred—Mollie); vhc., Dan O'Shea's Hasty; hc., Rancocas Kennels' Dame Petrel (Don Juan—Petrel II.). In champion Irish setter dogs Dr. Wm. Jarvis's Elcho, Jr., won. In Gordon setter bitches Dan O'Shea's Bell was wrongly credited with winning vhc. In liver or black cocker spaniels second went to Hornell Spaniel Club's Hornell Jock (A.K.R. 1877), and in bitches second went to C. N. Lewis's Virginia. There was but one entry in the Basset hound class, J. V. Heidrich's Sport; he was given vhc. The bench-legged beagle awards were given last week under the head of Basset hounds. Sport, vhc., should read Judy. In Yorkshire terriers, over 5 pounds, L. S. Boraef's Paul was commended. The special awards followed the decisions in the open classes in most cases. The special for the best kennel of five English setters was won by the Blackstone Kennels, beating the Rancocas and Goodsell kennels. The Goodsell Kennel should have won the prize for the best stud dog, with one of his get, was won by Rancocas Kennels' Dashing Monarch with Blackstone Kennels' Plantagenet against Foreman with Fairy King, Prince with Fairy III., Flash with Rhoda, Don Juan with Storm Petrel, Chief with Chip, and Elcho, Jr., with Bruce. The Chichester pack of foxhounds were disqualified and the Rockland Hunt pack were awarded the prize, and the special for the second best pack went to the Silver Brook pack. The special for the best mastiff, dog or bitch, was won by C. H. Mason's Nevison. Paul Gladstone was awarded the special for the best English setter. There were several better ones and the prize should have gone to Rockingham or Fairy III.

THE CHICAGO DOG SHOW.

Editor Forest and Stream:

The entries for the Illinois Kennel Club's first bench show of dogs are coming in at a lively rate, and from present appearances it will be the largest ever held in the West.

The club has made additional classes for Gordon setter bitches, beagle bitches and Irish water spaniel puppies. They also offer a special premium of $50 cash for the best kennel of St. Bernards, to consist of five over one year old. An entry fee of $5 per kennel will be charged each entry for this special. The same on like conditions for mastiffs. Also $25 cash for the best kennel of greyhounds, to consist of not less than five over one year old. A good list of specials has so far been offered by other parties.

The committee on special prizes are canvassing for the same, and will be able to secure a large number.

Mr. Hugh Dalziel having been compelled to return to England, Mr. J. F. Kirk, Toronto, Ont., will judge in his place. The list of judges is as follows: Major J. M. Taylor, Lexington, Ky., setters, pointers and Chesapeake Bay dogs; Dr. E. C. Franklin, St. Louis, Mo., cocker spaniel classes, to be judged under the standard of the International Cocker Spaniel Club, and Mr. J. F. Kirk, Toronto, Ont., will judge the remaining classes.

All the railroads running east from Chicago will carry dogs to and from the show free when crated or boxed, and in charge of owner or care taker. The New York, West Shore & Buffalo Railroad running east of Buffalo, will do the same.

L. F. WHITMAN, Supt.

DEATH OF LEICESTER.

THE champion English setter dog Leicester died on Tuesday, May 19, aged nearly thirteen years. He was one of the most famous dogs in the country, and his name is a household word among sportsmen throughout the land. His winnings on the bench have been many and valuable, but the chief glory of his name rests upon a more enduring foundation. The blood of the dead champion coursing through the veins of his numerous descendants is a far more valuable and lasting monument than the highest honors of the show bench can establish. Leicester was imported by Mr. L. H. Smith, of Strathroy, Canada, in 1874, and sold by him about six years ago to Mr. A. H. Moore, of Philadelphia, who owned him at the time of his death. His winnings on the bench in England and America are appended.

English Bench Winnings in 1874: first, Glasgow; second, Wolverhampton; third, Crystal Palace.

American Bench Winnings.—1875: First, Memphis. 1876: Second, Chicago. 1877: Championship and stock dog cup, New York. 1878: Championship and stock dog cup, St. Louis and Baltimore. 1880: Championship and stock dog cup, St. Louis. 1881: Championship and stock dog cup, best English setter, second best setter any strain, and special with Berkely,

Pittsburgh; champion (31), best English setter stud dog, best English setter, dog or bitch, one of five best kennel English setters, New York. 1883: At Washington, D. C., he was presented with a silver collar, value $50.

THE AMERICAN KENNEL CLUB.

Editor Forest and Stream:

At a meeting of the A. K. C. in Philadelphia, May 19 and 20, Major J. M. Taylor was elected President; Mr. Elliott Smith, First Vice-President; A. W. Pope, Second Vice-President; G. E. Osborn, Secretary, and E. Comfort, Treasurer. The Committee on Constitution, By-Laws, etc., reported, and with few alterations and amendments were accepted.

At a meeting of the Executive Committee held after the adjournment of the association, a committee of three on each different breed of dogs was appointed to investigate as to standards and report at a meeting to be held in October.

A protest, entered by Mr. James Watson against Mr. D. P. Foster's entry of St. Elmo at the late New York show, was referred to a sub-committee of three, consisting of Elliott Smith, of the W. K. C.; Mr. Faxon, of the N. E. K. C., and Mr. Wade, of the Pittsburgh Club, who are to investigate and report. It is proposed to give the shows next season in a circuit, and the clubs are invited to give their views on the subject. G. EDW. OSBORN, Sec. A. K. C.

BIRMINGHAM, Conn., May 25.

NEW JERSEY KENNEL CLUB.—A meeting of the New Jersey Kennel and Field Trials Club was held May 25 at Jersey City. Those present were: Percy C. Ohl, Geo. L. Wilms, E. R. Hearn, A. P. Vredenburgh, J. H. Phelan, K. E. Hopf, James Lindsay, A. C. Wilmerding, Louis Brigham, H. C. Sherman, G. W. McNeil and H. Pape. The following gentlemen were selected to pass on the names of persons for membership: Messrs. Lindsay, McNeil, Vredenburgh, Ohl and Pape. They reported favorably on twenty-eight names, and these were elected. After slight revision the constitution was adopted. Officers: President, Chas. Heath, Newark; Vice-President, C. J. Peshall, Jersey City; Secretary, A. P. Vredenburgh, Bergen Point, and Treasurer, E. R. Hearn, Passaic. With a view to give representation in the executive committee of persons from all over the State, and that each breed of dogs should have its champion, the committee elected was: Max Wenzel, P. C. Ohl, J. Lindsay, Geo. L. Wilms, K. E. Hopf, N. E. Hamilton, G. W. La Rue, W. W. Tucker, L. F. Brigham, A. C. Wilmerding and J. D. Shotwell. A committee, Messrs. La Rue, Wilmerding and Wilms, was appointed to draft suitable by-laws to be referred to the executive committee for adoption. The new club starts well, and promises to enliven dog matters in New Jersey, as it contemplates giving both annual dog shows and field trials.

SPRINGFIELD, Mass., claims to be ahead of most other places in its appreciation of good dogs. Says the *Republican:* "It was not a startling scene just about dusk the other day that made foot passengers in a little alley in this city stop and stare into a dark corner. There was nothing there but a dirty, tired little newsboy who had sunk into a restless doze with his ragged cap pulled over his eyes—and close beside the dreaming urchin a pert little terrier, keenly watching every living thing that approached with an air that betrayed an intent to defend with the whole of his fiery little body the bundle of papers that lay at the boy's side. There was not much to the picture, to be sure, but somehow or other nearly every one gazed at it with a curious eye, and not a few smiled at the comically fierce attitude of the dog. It was a bit of the doggish which would have delighted to its uttermost the soul of good old John Brown, whose friendship for Rab is well-nigh immortal. The popular interest, too, centered rather in the dog than the boy, and no doubt aroused in the mind of more than one thoughts of stories heard before, touching canine fidelity and intelligence. The link of attachment between man and dog is a stout one and more firmly welded in this city than in perhaps half the places of its size in the country."

DEATH OF MAIDA.—The well-known setter bitch Maida, owned by Dr. S. Fleet Speir, died last week at Robins Island. She was 7¾ years old. Her sire, Dick, was of a capital strain of native English setter, and her dam was the Gordon bitch Clio. Maida was a grand field dog, as her public performances testify. We can pay no better tribute to her memory than to quote our comments upon the heat between her and Grouse Dale at Robins Island, in November, 1881: "Both dogs worked splendidly, pointing in grand style, and backing superbly. It is very rare that one sees such good work as this. We were nearly fagged with the hard tramping that had been done, but from the time that Maida had opened the ball until they were taken up, 'we were a boy again,' and although lunch intervened, we felt no fatigue, and even now our pulse quickens and the very ends of our fingers tingle as we review the scenes and incidents of this well-contested struggle for supremacy. We shall long remember the graceful evolutions and intelligent performance of this wonderful brace of dogs."

FOX-TERRIER PEDIGREES.—*Editor Forest and Stream:* Concerning "Fox-Terrier's" notice of erroneous entries of our bitch Clover Blossom, as regards pedigree, I would say that Clover Blossom's pedigree should read either "By Dynamite Joe ex Puzzle" or "by Dynamite Joe (late Catesby) ex Puzzle," and Clover Fidget's pedigree as "by Belgrave Tony ex Tricksey." Such pedigrees as have appeared differently are erroneous and were occasioned doubtless by haste in writing entries. Subsequent to the entry in the *American Kennel Register*, I noticed in the Stud column of the *Fox Terrier Chronicle* that Catesby was now known as Dynamite Joe. Wherefore the appellation.—CLOVERNOOK KENNEL.

TORONTO DOG SHOW.—London, Ont., May 22.—*Editor Forest and Stream:* Your reporter on the above show needs a little information before he so sweepingly condemns my judging of the spaniel bitch class. I may state that the dogs of Mr. Carter did not arrive in time for judging. I never saw Lady Mack off the bench; Sport, Jr., I was asked to give second prize to, which I withheld; I did so several hours after the classes were judged. One of the best puppies, Jill, I never saw till late in the evening, and the same I can say of Princess Tiney, she was not in the ring and was marked absent.—J. S. NIVEN.

PENNSYLVANIA.—Pennsylvania Fish Commissioners Gay of Greensburg, and Porter, of Corry, were at Erie last week and arranged for securing a large quantity of rock bass from the bay with which to stock the head waters of the Schuylkill and Susquehanna rivers. This is a move in the right direction, and we have not the slightest doubt but that the attempt to stock our waters with this fish will prove successful.—HOMO.

WINLAWN KENNELS.—Mr. Stevenson informs us that he has secured the services of Mr. H. W. Lacy to take charge of the Winlawn Kennels, and that he will at once assume the entire management.

NEW YORK SHOW.—The special for the best greyhound at the New York show was won by Mother Demdike instead of Memnon, as reported.

KENNEL NOTES.

NOTICE TO CORRESPONDENTS.

Kennel notes are inserted in this column free of charge. To insure publication of notes, correspondents MUST GIVE the following particulars of *each animal:*

1. Color.
2. Breed.
3. Sex.
4. Age, or
5. Date of birth, of breeding or of death
6. Name and residence of owner, buyer or seller.
7. Sire, with his sire and dam.
8. Owner of sire.
9. Dam, with her sire and dam.
10. Owner of dam.

All names must be *plainly* written. Communication on one side of paper only, and signed with writer's name.

NAMES CLAIMED.

☞ *See instructions at head of this column.*

Madge. By W. H. Burr, Phœnixville, Pa., for red Irish setter bitch, whelped Feb. 5, 1883, by champion Glencho (Elcho—Noreen) out of Samson's Nora (Elcho—Fire Fly).

Excellence. By A. C. Krueger, Wrightsville, Pa., for white, black and tan beagle bitch, whelped Dec. 15, 1884, by his Bannerman (A.K.R. 1709) out of his Rena (A.K.R. 1727).

Standard. By A. C. Krueger, Wrightsville, Pa., for white, black and tan beagle bitch, whelped Feb. 11, 1885, by his Bannerman (A.K.R. 1709) out of his Rena (A.K.R. 1727).

Flirt. By A. C. Krueger, Wrightsville, Pa., for white, black and tan beagle bitch, whelped April, 1884, by Prince out of Daisey.

Hospice Kennels. By K. E. Hoph, Newark, N. J., for his kennel of imported St. Bernards.

NAMES CHANGED.

Rosey. White, black and tan beagle bitch, whelped Nov. 21, 1883 (Mark Antony—May Belle), by A. C. Krueger, Wrightsville, Pa., to W. J. Percival, Stanton, Mich.

Hiram. Sable and white collie dog (A.K.R. 882), by Jas. Lindsay, Jersey City, N. J., to J. C. Cady, New York.

DEATHS.

☞ *See instructions at head of this column.*

Cleopatra. English setter bitch, whelped Sept. 1, 1879, owned by James B. Tilley, Catskill, N. Y., April 27, from poison.

Rifle and Trap Shooting.

RANGE AND GALLERY.

BRATTLEBORO, Vt., May 7.—There was a small attendance at Oak Grove Range. The shooting being done on Massachusetts target, 200yds., off-hand. W. H. Taft of our club, made the best score ever made on Massachusetts target. The rifle used was Maynard, .38-cal., 50 grains, 255 bullets:

Taft	12 12 12 10 12 12 11 12 12 14—117
French	11 10 11 10 12 11 12 11 12 12—112
Nichols	12 10 10 11 10 10 11 9 10 11—104
Sargent	11 11 11 10 10 10 9 10 10 8—100
Barnes	5 9 11 11 9 10 10 9 10 10— 94
Parker	8 10 9 11 12 10 10 10 6 6— 92

H. C. F.

GREENVILLE, O., May 16.—The match here to-day between the Richmond and Greenville clubs, resulted in a victory for the home team. The following is the official score, Creedmoor target, range 200yds.: Greenville—Himes 43, Habney 41, Culbertson 43, Schwable 42, John 40, total, 209. Richmond—McNinnie 42, Sanders 39, Howley 41, Hampton 44, Morris 39, total 205.

THOMASTON, Conn., May 16.—The weather conditions at Bridgemoor range to-day were a bright light and a very tricky 9 o'clock wind, position standing, off-hand, 200yds., Massachusetts ring target.

C F Williams	8 10 10 10 9 10 12 11 12 12—104
G A Lemmon	10 11 12 10 10 11 8 11 11 9—103

FRED. A. PERKINS.

THOMASTON, Conn., May 21.—The third annual tournament of the Empire Rifle Club closed this afternoon and proved a perfect success in every respect. The weather was splendid throughout the whole time, though a rather tricky wind baffled the riflemen somewhat on the third day. Riflemen were present from nearly every New England State, New York and New Jersey. Subjoined are the winners: G. F. Ellsworth 174, E. J. Cram 171, J. D. Marks 171, O. B. Hull 171, L. DeClair 170, D. E. Marsh 170, S. J. Lyon 169, P. S. Fenning 168, A. C. White 168, W. H. Beardsley 161, A. Henry 161, W. H. Dunbar 160, E. T. Stephens 158, E. L. Holmes 157, G. E. Betts 157, G. A. Alling 157, A. H. Merriman 156, B. W. Pease 155, G. C. Canfield 152, P. M. Beers 152, D. B. Wilson 150, W. B. Daniels 149, D. H. Ferris 145, B. H. Sutliff 144, P. Simons 143, S. P. Williams 143, C. F. Williams 138, S. D. Bland 133, G. P. North 131, G. C. Gilbert 131, F. Whitlock 128.

ELGIN CLUB.—The Elgin (Ill.) National Rifle Club was organized May 1 with the following officers: C.W. Cole, Captain; H. A. Wyman, Secretary; C. A. Jonnson, Treasurer. Executive Committee—C. W. Cole, J. M. Adams, H. A. Wyman, G. N. Spencer, J. T. Zander. The Charter Members are: J. F. Zander, J. M. Adams, S. M. Adams, G. N. Spencer, J. A. Fairbanks, C. W. Cole, G.W. Bullen, H. A. Wyman, C. A. Johnson, J. J. Rodda, D. A. Barker, G. E. Hawthorne, E. De Barthe, L. S. Wright, C. A. Rickert, W. L. Weatherill, C. E. Lightner, J. H. Ward, E. H. Heath, A. H. Heath, Mark Yarwood, J. D. Child, C. S. Mixer, C. Stone, A. E. Rigby, F. Guptill, J. J. Sowers, J. J. Osmer, E. C. Grant, A. Bielingburg, A. Kobler, R. Jackson, H. F. Downs, M. D. Lull, C. W. Halsey. The club adopted a model constitution, short, sharp and concise, and the members evidently intend to treat rifle shooting as a rational enjoyment.

BULLSHEAD RIFLE CLUB.—May 22, 12 ring target, possible 120.

M Dorrler	114 A Koster 105
O Rein	113 H Wasmuth 107

H Lindlinger	110 J Jordon 104
C F Geusch	109 B Wragge 103
G Zimmerman	108 J Shaw 101
A Kroeger	106 D Louitzki 99

LAWRENCE, May 25.—The spring meeting of the Lawrence Rifle Club occurred on its range May 21, 22 and 23, and was a success financially and otherwise. Some of the most brilliant shooting ever made was shown. E. F. Richardson's 21 consecutive bulls on a paper target in a regular match has never been beaten or equalled, so far as the writer has knowledge. Appended are the winning scores. 200yds., any rifle within the rules; three best scores to count as one continuous score: Creedmoor rules to govern:

Rich'dson	5555555555555555555555—105

*Military, add 2 points.

WHEELING, W. Va., May 24.—The Wheeling Rifle Club held their first practice shoot yesterday on the new range just finished on the old Fair Ground on the Island. This is the first good range the club ever had, the ground in this section being so very hilly that a level range is hard to find. The present range, however, is as level and pleasant as the famous Creedmoor, and sliding targets and a good, solid back wall to stop the lead have been erected during the past week, and shooting bids fair to be more popular than ever here this year. A new club has been organized during the past winter, under the name of the Wheeling Schuetzen, and gallery practice has been kept up, so the members are now about to make their first trial at the 200yds. range on the Island, which will be used by both clubs. The following are the scores of the Wheeling Rifle Club of yesterday, 200yds., off-hand, Massachusetts target, possible 120:

First Match.

C E Dwight	9 12 11 7 12 11 12 9 10 10—103
Wm Cox	12 11 12 11 9 8 7 9 10 9— 98
R S Stewart	10 9 10 10 11 11 8 10 11 8— 98
Otto Jaeger	9 11 10 9 12 8 9 10 6 8— 94

Second Match.

Otto Jaeger	11 12 12 11 10 11 10 10 12 11—110
R S Stewart	12 11 12 12 12 10 8 12 8 9—106
C E Dwight	7 11 11 10 11 11 10 12 9—103
Wm Cox	7 8 11 10 10 11 12 9 10 12—102

To-morrow, the 25th, the Germania Singing Society give a grand picnic on the new State fair ground, and three elegant badges are offered as prizes for rifle shooting. The distance is 30yds., with 22 cal. rifles, off hand, at a decimal target, one-inch bullseye, with 9 and 10 counts in it. On Saturday, the 30th, the Wheeling Club go to Pittsburgh to shoot a return match with the Pittsburgh Rifle Club. This will be the third meeting of these clubs, the other two being won by the Wheeling team. The rifles used by the club here are Sharp's midrange, 40-cal., 70gr., 330gr. bullet respectively. Some of us expect to try the Farrow 22-cal. soon.—D.

NEWARK, N. J., May 25.—A series of three matches between the Essex and Frelinghuysen rifle clubs, teams of 10, 10 shots per man, Zettler ring targets, gallery distance, off hand, army .22-caliber rifle, minimum pull of trigger 3 pounds, no sighting shots. The first match at the Frelinghuysen range, May 7, was won by the Frelinghuysens, score 1,086 to 1,040. The second match, at the Essex range, May 14, was won by the Essex, score 1,105 to 1,079. The third match was shot at the Warren range, and proved very interesting, both teams doing their best. Shooting was so close that when eight men a side had shot the score stood a tie; on the ninth man the Essex gained the lead, and won the match with the highest score attained by any team in a match. Mr. Jackson, of the Celluloid Rifle Club, acted as referee at all matches. Ring targer, possible 120; Creedmoor, 50:

Essex Rifle Club.	Ring.	Creedmoor.	Frelinghuysen Rifle Club.	Ring.	Creedmoor.
Mie el	109	46	Chase	110	47
Heil	112	48	Brant	109	48
Cooper	114	49	Vreeland	114	48

Coppersmith	116—1128	50—485	Neuman	114—1116	49—477

CREEDMOOR, May 23.—The opening matches of the National Rifle Association were shot to-day at Creedmoor. Owing to the threatening weather the attendance was small, only about forty riflemen being present. During the morning the rain somewhat interfered with the shooting, but in the afternoon the conditions were all that could be desired, and some good scores were made. A team from the Fourteenth Regiment was on the ground for their first practice of the season. The following were the best scores:

Qualification Match.

	100yds.	300yds.	Total.		100yds.	300yds.	Total.
J S Shepherd	25	22	47	F Van Lennep	20	21	41

F Van Lennep	20	23	43	C F Robbins	20	21	41
G C Power	18	24	42	J P M Richards	22	19	41
J F Klein	21	21	42	G F A Bondres	20	17	37

BOSTON, May 23.—There was a small attendance of riflemen a Walnut Hill to-day, due doubtless in part to the absence of many members who were attending the meet of the Lawrence Rifle Club, as well as to the disagreeable weather. The telegraphic match between the Pittsburgh Rifle Club and the home association resulted in a victory for Massachusetts. The score stood:

Victory Medal Match.

H Cushing	10 9 9 8 10 8 8 10 8 7—87
J E Dolman	9 8 8 4 10 6 7 8 7 8—74

Record Match

Dr Carl	9 12 11 9 8 11 10 10 9 11—100

HAVERHILL, Mass., May 23.—Rifle club match at Riverside range. 7yds., Creedmoor target. A rainy afternoon and small attendance:

S Busfield	4545554541—45	W Worthen	43 4455534—42
R Griffin	4444555445—44	J Manners	4445444434—40

THE TRAP.

Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

SACRAMENTO, Cal., May 11.—There is quite a stir these days among our local trap shots. A $50 match was shot a couple of weeks ago in this city, between F. L. Coons and G. W. Watson, at which some $1,500 changed hands. Beside numerous outside bets there

was $1,100 in the pool box. Since then friends of James Parrott offered to bet $500 to $250 that their man could beat George Routier in a 100 bird match. The challenge was accepted and the match was to have been shot last week, but has for the present fallen through. And now Coons comes out with a challenge to Routier, even up, and it is understood that they will shoot such a match very soon.—SMALL-BORE

FALL RIVER, Mass., May 19.—The Fall River Gun Club held its first shoot to-day for two prizes of $10 each, one match at glass balls and the other at clay-pigeons; screened traps, 18yds. rise:

	Balls.	Clay-Pigeons.

KNOXVILLE VS. LOUISVILLE.—Louisville, Ky., May 21.—Match at the Knoxville black birdsbetween the Louisville Sportsmen's Association and the Knoxville club. Each team consisted of ten men and each man shot at 20 single birds, 18yds. rise, 3 traps. The scores were exchanged by telegraph. Annexed is the result. The club will shoot same match again Saturday, with great big promises of success by the Knoxville club:

KNOX.

MONTGOMERY, Ala., May 23.—The annual election, barbecue and shooting matches of the Montgomery Shooting Club took place at the club's grounds, Jackson's Lake, yesterday, and was largely attended. In the early part of the day the crowd enjoyed fishing on the beautiful lake and shooting birds in the grounds. About a barrel of fish, mostly bream, were caught, and the following is the shooting score:

First Match—10 birds, 25yds.:

H D Long	1111101111— 9	D Ledyard	1111111111—10
S T Westcott	1111111111—10	H Crommelin	0111010110— 6
F C Randolph	1011111101— 8	W K Jones	1111111011— 9
G M Marks	1101011011— 7		

Ties, 30yds.: S. T. Westcott 111—3, D. Ledyard 110—2. S. T. Westcott won first prize, diamond badge.

Four pairs double birds, 21yds.:

Randolph	01 11 01 11—5	Marks	10 10 10 11—5
Jones	10 11 11 11—7	Long	10 10 10 11—5
Westcott	10 11 10 00—4	Ledyard	10 11 00 11—5

Ties of 5: Randolph 10 10—2, Marks 10 00—1, Ledyard 10 11—3, Long 11 00—2.

Third Match—5 singles, 2 pair doubles; 21yds. double, 30yds. single:

Randolph	11111 11 01—8	Westcott	11100 10 10—5
Ledyard	11011 11 10—7	Marks	11111 10 11—8
Long	10010 11 10—5	Jones	11101 10 10—7

Ties of 8: Randolph 10111 01—5, Marks 11011 11—6. Ties of 7: Ledyard 110—2, Jones 111—3.

Fourth Match—Miss and out, 45yds.: Randolph 1101—3, Ledyard 0, Marks 0, Long 0, Westcott 1100—2, Jones 0.

It was a miserably rainy day, the birds were lively, the smoke hung close to the ground, making double birds especially difficult. Election of officers: President, H. B. Metcalf; Vice-President, Dan Ledyard; Secretary, H. C. Davidson; Directors—H. D. Long, S. T. Westcott and Ben Sutter. President Metcalf made an eloquent speech. In substance he said: "I am grateful for the high honor you have conferred upon me, gentlemen, and I hope to prove myself worthy. I have been a member of this club for thirteen years, and you all know that I have been always first to reach the barbecues and last to leave. (Applause.) My heart has ever beat warmest when thinking of Jackson's Lake, where we shoot birds, catch fish and have a good time generally (Applause). And when this day shall have ended—and I am sorry it has to end—I shall begin to think of the 4th of July, the time when we shall once again meet beside this pearly lake amid these beautiful trees and enjoy our sport, and enjoy one another in true shooting club style. (Applause.) These are enjoyable occasions which come too seldom into our lives and we must make the most of them. Gentlemen, again I thank you (Applause)." At the conclusion of President Metcalf's remarks, the club presented Secretary Davidson with a handsome silver souptureen, which called out a charming little speech from that gentleman. The retiring president, Hon. Warren S. Reese, who was especially happy in his attentions to the guests, announced that dinner was ready. It was a genuine old-fashioned Southern barbecue, and was very fine. The party remained at dinner about an hour, which is sufficient tribute to the excellence of the dishes. The club now owns about twenty-two acres of land, which is really one of the prettiest parks in the country, controls Jackson's Lake, the loveliest sheet of water in Central Alabama, and is entirely out of debt.

NATIONAL GUN ASSOCIATION.—Since the last published report of the membership, the following gentlemen have joined the Association: Phil. C. Belles, Amboy, Ill.; H. Amberg, Cincinnati, O.; J. H. Gates, Hartford, Conn.; Henry Miller, Chicago, Ill.; H. Kaufman, Cincinnati, O.; T. D. Kimball, Clarendon, Tex.; Jas. Richards, New York; Jas. Tatham, New York; J. C. Palmer, Hartford, Conn.; M. Spencer, Windsor, Conn.; E. A. Folsom, Windsor, Conn.; F. J. C. Swift, Falmouth, Mass.; Fred Tompkins, Stony Point, N. Y.; M. W. Bull, Windsor, Conn.; D. Kirkwood, Boston; W. B. Witherell, Boston; G. W. Watson, Sacramento, Cal.; T. M. Flood, San Antonio, Tex.; Wm. M. Parker, Elizabeth, N. J.; Wm. Pryor, Elizabeth, N. J.; H. C. V. Harsel, Elizabeth; N. H. Astralt, Elizabeth; Adam Keming, Elizabeth, N. J.; W. J. Dean, Elizabeth, N. J.; G. W. Fenstermaker, Amboy, N. J.; C. A. Bragg, Philadelphia, Pa.; Chas. R. Park, Baltimore, Md.; E. A. Sharretts, Baltimore, Md.; W. H. Beecher, N. Industry, O.; A. C. Goodrich, Portland, Conn.; John Lane, Deborah, Ia.; Sam Hazlett, Washington, Pa.; R. E. Sheldon, Cleveland, O.; H. C. Powers, Cleveland, O.; Frank Wake, Bradford, Pa.; A. B. Walker, Bradford, Pa.; J. M. George, Miles Grove, Pa.; A. G. Allen, McPherson, Kan.; J. C. Myers, Philadelphia, Pa.; J. L. Brewer, Hammonton, N. J.; Chas. Wagener, Pultney, N. Y.; H. B. Whitney, Oaks Corner, N. Y.; L. C. Kirkpatrick, Springfield, O.; H. Hinkle, Springfield, O.; Eugene Bogardus, Elkhart, Ill.; L. C. Lane, Bellefontaine, O.; J. D. Kelley, Greenville, O.; J. McCartney, Huntsville, O.; Robt. Pierson, Huntsville, O.; A. E. Messerley, Greenville, O.; W. Gresham, N. Monroeville, O.; John Casper, Norwalk, O.; F. C. Perceval, Cincinnati, O.; R. G. Waddell, Cincinnati, O.; J. Von Lengerke, New York city; G. Holmes, Grand Rapids, Mich.; F. C. Randolph, Montgomery, Ala.; Clarence W. Taylor, Camden, N. J.; L. C. Smith, Syracuse, N. Y.; E. Von Culin, Delaware City, Del.—F. C. BISHOP, Sec'y.

SAN FRANCISCO, May 9.—The Neophyte Club held its third shoot of the season at Bird's Point to-day. The match was under Hurlingham rules, 30yds. rise and 80yds. boundary, with single birds, both barrels. The pigeons used were mostly tailers, and as such gave the members considerable trouble, no less than eight dropping dead out of bounds. This fact accounts probably for the meager score, the poorest yet made by the club since its organization. Up to the eighth round Brown had a clear score of ciphers and on the ninth a bird came almost to the muzzle of his gun. This he succeeded in killing, amid the wildest enthusiasm. Chas. W. Kellogg is the best shot of the club and kills his birds with the ease of a practiced sportsman. Young Golcher made some neat "kills," particularly on the seventh round, when he brought down a tailer at 70yds. The weather was all that could be desired, the breeze being just strong enough to carry off the smoke. The club does not make any pretensions to being crack shots and meets only for the sport of shooting. The following were the scores made:

Kellogg	101101111111—10	Chapman	111011001111—9
Chapin	111111011100— 9	Sprague	010111011001—7
Pollock	1111111101010—10	Dean	011011011011—8
Brown	000000001100— 2	H C Golcher	111001011111—9
Rambo	111101110010— 7	Roache	010100010002—3
Davis	111001001111— 8		

At the conclusion of the club shoot a freeze out was made up, $2.50 entrance, and resulted with the following score: Chapman 0, Pollock 10, Halton 0, Davis 1100, Golcher 1101, Mangel 1101.

WELLINGTON, May 23.—The grounds of the Malden Gun Club were visited by many spectators to-day to witness the challenge match between Bartlett, of Brockton, and Dickey, of Boston, and to participate in 21 other events, the winners of each were as follows: First, 5 pigeons—Dickey, Bartlett and Sanborn. Second, 5 blackbirds—Wilbur and Wood. Third, 3 pair pigeons—Wood, Tirrell and Parker. Fourth, 5 pigeons—Parker. Fifth, 5 blackbirds—Wood, Dickey and Wilbur. Sixth, 3 pair pigeons—Bartlett and Papanti. Seventh, 3 pair blackbirds—Bartlett. Eighth, 7 pigeons—Loring. Ninth, 7 blackbirds—Barker. Tenth, 5 pigeons—Parker. Eleventh, State clay-pigeon badge—Bartlett 47, Dickey 42. Twelfth, 7 pigeons—Loring. Thirteenth, 3 pair pigeons—Wilbur. Fourteenth, 7 blackbirds—Wilbur and Wood. Fifteenth, 3 pair pigeons—Wardwell, Sixteenth, 5 pigeons—Wood. Seventeenth, 5 pigeons straightaway—Wardwell. Eighteenth, 5 pigeons—Snow and Wardwell. Nineteenth, 5 pigeons—Dickey and Wardwell. Twentieth, 5 pigeons—Sanborn, Dickey and Wardwell. Twenty-first, 5 pigeons—Sanborn and Dickey. Twenty-second, 5 pigeons, Dickey. The challenge match for the State clay-pigeon badge, between J. B. Bartlett, of Brockton, and O. R. Dickey, of Boston, took place at 1 P. M. These gentlemen shot at 50 birds each, and Bartlett won, breaking 47, while Dickey broke 42. Bartlett broke his second 25 straight.

ALLEGHENY, Pa., May 24.—The annual pigeon and blackbird shoot of the Allegheny County Sportsmen's Association, at Idlewood station, attracted a large number of local patrons of sport. The weather was all that could be desired, barring a brisk wind which blew directly toward the sportsmen; but instead of interfering with them it favored them by forcing the birds to the score when thrown from the trap. In order to avoid the practice of "laying back" for prizes, the list of trophies were not announced until the end of the shoot. It was known, however, among the contestants that the Hague cup would be contested for the last time and would become the personal property of the winner. Nearly 300 pigeons at thirty cents each were purchased. Club rules governed, 26yds. rise, 80yds. boundry, two barrels allowed to each bird. Mr. C. D. Donnell, who made a clean score and won the Hague cup last year, only killed ten birds. On his final shot Mr. C. A. Painter made a glaring miss and he was accused of purposely missing the bird so as not to tie with his brother. He tied with Mr. C. B. Lovatt, but won the shoot-off at 31yds. by one pigeon, securing first prize. The ties between the remainder of the contestants were shot off this afternoon. Mr. Edward Gregg and W. W. Speer did some excellent shooting. The eighth bird of Mr. W. S. Bell was challenged by Mr. Hostetter because he held his gun above the elbow. The protest was not allowed. G. E. Painter was awarded first prize, the Hague cup, which is now his private property. His brother was awarded second prize, a silver sugar bowl. The third prize was a silver mug, valued at $50. The fourth was a set of gun-cleaning implements, and the fifth a recapper and decapper.

NIMROD GUN CLUB.—The Nimrod Gun Club, of Newark, N. J., gave a reception last Thursday evening to the South Side Gun Club, at their new headquarters, 46 Bloomfield avenue. The occasion proved to be a very enjoyable one. A number of crack shots with rifle and shotgun were present, and the evening was enlivened by the stories of adventure with rod and gun in woods and waters. The rifle range, which was recently completed, is 75ft. in length, and the visitors used it with evident satisfaction. The Nimrod Club is composed mostly of young men, and has its headquarters in the northern part of the city. The South Siders are somewhat older gentlemen, and have their rooms in the southern part of Newark, and between the two there is a very pleasant feeling. Since the Nimrods were organized, the members have shot ten glass-ball and eight rifle matches. The game around Essex county promises to become very scarce through the unerring marksmanship of some of the members.

TRAP NOTES.—The Fountain Gun Club of Brooklyn has elected these officers: President, Abel Crook; Vice-President, Dr. Chas. R. Weed; Secretary, Henry Thorpe; Treasurer, Robert Wells.... The Carteret Gun Club will hold a shoot at Bergen Point on Decoration Day, when members are privileged to invite their friends.... The Poningoe Gun Club, of Portchester, N. Y., will shoot on Decoration Day for a handsome cup, presented by Mr. Quintard, of the Morgan Steamship Company.... Dr. George B. McClellan, who says he wants to compete with Dr. Carver in an all round rifle contest for $1,000, is a native of New York city, who has made a fortune in Montana and Idaho, where he is better known as "Diamond Dick."... The annual election for officers of the St. Louis Gun Club took place May 11, and resulted in the choice of L. D. Dozier, President; H. C. West, Vice-President; W. A. Aloright, Secretary and Treasurer. H. C. Pierce and D. A. Marks were elected members of the Board of Directors. The following were selected as a team to shoot for the State medal June 2: Messrs. L. D. Dozier, H. C. Pierce, H. P. Wilson and J. G. Parish, M. D. Messrs. Dozier, West, Pierce, Card and Lucas were appointed delegates to represent the club at the State Association meeting.

OLEAN GUN CLUB.—The officers newly elected are: F. R. Eaton, President; E. M. Johnson, Vice-President; W. R. Page, Secretary; A. P. Pope, Treasurer. The Directors chosen are: F. H. Oakleaf, H. W. Moore, G. H. Strong, E. M. Johnson, A. P. Pope. Friday afternoon of each week was determined upon for field day during the summer.

MICHIGAN.—The second annual tournament of the Jackson Gun Club, will be held at Jackson, Mich., June 2, 3 and 4.—A. W. McNAUGHTON, Sec'y.

SEND ten cents for handbook of The National Gun Association to F. C. Bishop, Secretary, Box 1292, Cincinnati, Ohio.

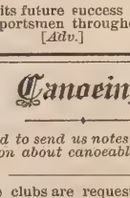
TESTIMONIALS:

"The very best and most complete rules."
April 3, 1885. (Signed) GANCHO.

"Very satisfactory comments from different parties"
April 13, 1885. (Signed) GLOAN.

"We want a national law and national officers to enforce it."
April 27, 1885. (Signed) ALMO.

"Fairly started and its future success depends entirely upon the manner in which the sportsmen throughout the country respond."
April 18, 1885. [Adv.] (signed) U. M. STARK.



Canoeing.

CANOEISTS *are invited to send us notes and full reports of cruises club meets, information about canoeable waters, and other communications of interest.*

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signals, etc., of their clubs, and also notices in advance of meetings and races, and reports of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

May 29, 30—Pittsburgh C. C., Camp on Monongahela.
May 29, 30—Hudson River Meet.
May 30 to June 1—Connecticut River Meet.
June 8 to 10—Canadian C. C., First Spring Meet.
June 24—Vesper Boat Club, Annual Regatta.
June 25—Jersey City Y. C., Regatta. Special Class for Canoes.
June 27—Eastern Meet, Merrimac River.
July 18, 28—Western Meet, Ballast Island, Lake Erie.
July 24 to Aug. 8—A. C. A. Meet, Grindstone Island.

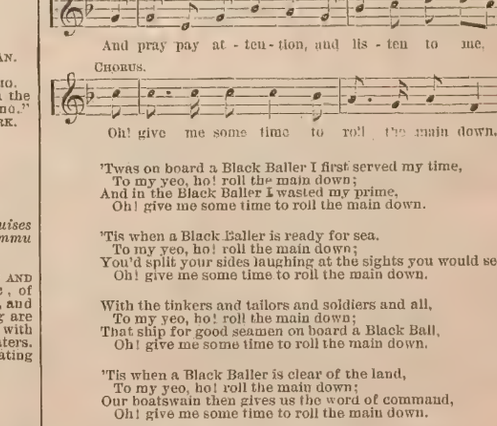
AMERICAN CANOE ASSOCIATION.

SECRETARY—C. A. Neidé, Schuylerville, N. Y. Candidates for membership must forward their names, with $2 for initiation fee and first year's dues, to the secretary, who will present the names to the executive committee. Money should be sent by *registered letter* or money order.

A LOCAL MEET IN CANADA.—Deseronto, Ont., May 18.—The first spring meet of the Canadian canoe clubs will be held here on the 8th, 9th and 10th of June next. An excellent camping ground has been chosen on an island opposite this place. All arrangements have been made to make the meet a success. There will be at least three sailing and three paddling races, for which the courses have been buoyed. All canoeists are invited to attend.—F. S. RATHBUN, Vice-Com. A. C. A.

AROUND THE CAMP-FIRE.

TO-MORROW, with the opening of the camp at Plum Point and the cruises on the Monongahela and Connecticut, the canoeing season of 1885 really begins. A late season that has re arded work afloat has only served to make canoeists more eager to be under way again, and all are ready for the first outing, either in company, or in distant localities for a two days' cruise alone. A new world of pleasure opens to the cruiser who launched a well equipped canoe for a cruise alone, the sole possession and command of a boat, the perfect sense of freedom, the exhilaration of fresh air and water, the release from the care and worry of business give an irresistible charm to solitary cruising that attracted and retained many recruits in the earlier days of canoeing. Of late, however, with increasing numbers, canoeists have grown more sociable, or rather have been able to disprove the charges so often made that they were a cross-grained, misanthropical, selfish set of men who went off alone and preferred their own society. The social features of canoeing are yearly becoming more prominent, and while the great charm and attraction of individual ownership and command still exists, there has arisen the custom of holding frequent meetings, in winter under city roofs, and in summer under canvas.



The annual and local canoe meets have become most prominent features in American outdoor sports, attracting attention from their unique character from a class little interested in general sporting matters. The races, sports and amusements of the day are not only interesting to the canoeists and their friends, but attract many outsiders to witness the novel sports; but it is at night that the real charm of the life is most apparent. Tired after the labors of the day but still eager for fun, all gather about a huge camp fire, grouped in picturesque attitudes, sitting or lying at length, the soothing pipe is lighted, the melodious banjo is tuned up, and soon the woods and hills echo with the sound of many voices. Beside the long list of college songs which all know, and the private repertoires of the more musically gifted, are several songs which have become general favorites with canoeists, not from any musical or literary merit of their own, but simply because they have hit the taste of the hour. Two of the most popular of these we reproduce herewith, "Roll the Main Down," by permission of Messrs. Pond & Co., who have inserted it in their interesting collection of "Naval Songs," lately published; and "Allouetté," furnished by Mr. C. M. Wilson, of Montreal, from the song book of McGill University. The other two songs are comparatively new to canoeists, being first heard last summer, but both promise to become quite popular. They were written by Mr. T. S. Westcott, canoe Lalage, purser of the Philadelphia C. C., whose genial face, surmounted by a big red and blue "Tam," will be remembered by all who were at Grindstone last year.

The song "Roll the Main Down," it may be necessary to explain, is a sailor's "shantey"—a corruption of "chanter," to sing—and is one of the many peculiar songs used by sailors to lighten their labors. Every sailing ship of any size, such as the famous old Black Ball packets from which the song takes its name, has a "shantey man," who leads the singing when such work as weighing anchor, hoisting topsails, etc., is to be done. He has his own collection of songs, some of the verses of his own composition, and hence varying on different vessels, but the airs being the same. In working together the "shantey," who usually does none of the work, sings a line or couplet, the crew joining in the chorus, and at the same time uniting their strength in one pull. The principal object of the singing is to secure unity of action, in time with the music, but further than this, in accordance with the old saying "a fiddle is as good as ten men on a purchase," it encourages and stimulates the men. The song given is commonly known as "Roll the Man Down" or "Blow the Man Down," but we have preferred the original version, "Roll the Main Down," as it is the mainsheet shantey, used in hauling in the sheet. The little song "Allouetté"—the Lark—is of French Canadian origin, and was brought to Grindstone last summer by some Canadian students, where it became popular with all who heard it. Another similar song was the one sung by the cook of the Deseronto C. C., "En roulant, ma boule, roulant," in the patois of the French Canadian lumbermen. Vice-Com. Rathbun has kindly furnished us with the words, but as yet we have been unable to obtain the music; perhaps some of our Canadian friends can supply it.

ROLL THE MAIN DOWN.

(BLACK BALL "CHANTEY" SONG.)

By permission of Wm. A. Pond & Co.

'Twas on board a Black Baller I first served my time,
To my yeo, ho! roll the main down;
And in the Black Baller I wasted my prime,
Oh! give me some time to roll the main down.

'Tis when a Black Baller is ready for sea.
To my yeo, ho! roll the main down;
You'd split your sides laughing at the sights you would see,
Oh! give me some time to roll the main down.

With the tinkers and tailors and soldiers and all,
To my yeo, ho! roll the main down;
That ship for good seamen on board a Black Ball,
Oh! give me some time to roll the main down.

'Tis when a Black Baller is clear of the land,
To my yeo, ho! roll the main down;
Our boatswain then gives us the word of command,
Oh! give me some time to roll the main down.

"Lay aft!" was the cry "to the break of the poop!"
To my yeo, ho! roll the main down;
"Or I'll help you along with the toe of my boot,"
Oh! give me some time to roll the main down.

'Tis larboard and starboard on the deck you will sprawl,
To my yeo, ho! roll the main down;
For "Kicking Jack Williams" commands the Black Ball,
Oh! give me some time to roll the main down.

Pay attention to orders, now lads, one and all,
To my yeo, ho! roll the main down;
For see high above you there flies the Black Ball,
Oh! give me some time to roll the main down.

When I was a walking down Madison street,
To my yeo, ho! roll the main down;
A burly policeman I happened to meet,
Oh! give me some time to roll the main down.

Said he, "I perceive you're a packet sailor,"
To my yeo, ho! roll the main down;
"I know by the cut of your togs that you are,"
Oh! give me some time to roll the main down.

"I am no packet sailor, you are wrong,"
To my yeo, ho! roll the main down;
"I'm a deep water sailor, bound home from Hong Kong,"
Oh! give me some time to roll the main down.

'Tis when a Black Baller comes back to her dock,
To my yeo, ho! roll the main down;
The lasses and lads to the pier-heads do flock,
Oh! give me some time to roll the main down.

THE WOODEN PADDÉL.

A NEW CENTERBOARD FOR CANOES.

A NEW form of centerboard and rudder for boats and canoes has lately been patented by Mr. J. W. Rough, of New Rochelle, N.Y., under the name of the "Perfection Centerboard and Rudder Attachment." It is intended to be applied to any boat without cutting or altering the hull, the only fixed pieces being four hooks on the gunwale. The board, which is shown in the accompanying cut, is fitted

with a shoe piece which lies flat outside the bottom of the boat, to which it is securely fastened by two brass bands or straps, adjustable for length, which are hooked over screw hooks in the gunwales. By releasing the bands from the hooks the centerboard is detached and floats to the surface, and may be stowed below. The rudder is hung on the after end of the centerboard nearly under the middle of the boat, and is worked by lines to each side. The entire device is cheap and simple and easily adjusted to any canoe.

KNICKERBOCKER C. C. RACES.

THE annual spring regatta of the Knickerbocker C. C. took place at the club house at the foot of 152d street and North River, on Saturday, May 23. The rainy morning prevented the attendance of many canoeists that were expected to attend from other clubs and enter the races open to all. The first race for sailing was called at 4 P. M. Course from K. C. C. dock around stakeboat across the river. Entries:

Inertia, Class B, E. W. Brown; time 1h.
Guenn, Class B, W. Whitlock; time 1h. 1m.
Lorelei, Class B, E. C. Griffin; time 1h. 4m.
Nettie, Class B, Prof. E. Fowler; withdrew.
Nettie, Class A, A. W. L. Green; time 1h. 7m.
Manche, Class A, A. Dormitzer; time 1h. 11m.

The first part of the race was confined to drifting with the tide toward the Mohican Club House; however, a light wind arose which enabled the canoes to sail over the course with the result that E. W. Brown, in the Inertia, received the first prize, and William Whitlock, in the Guenn, the second. After the finish of this race the time remaining being too short for the two paddling races only the Tandem race was called. Course, from half a mile up the river down to the club house. Entries:

Laura, M. G. Foster and P. W. Foster; time, 6m.
Lorelei, E. C. Griffen and E. A. Gardner; time, 6m. 2s.
Freak, W. Whitlock and E. Gould; time, 8m. 2s.
E. Adele, Dr. Chas. A. Neide and Col. C. L. Norton; time, 8m. 45s.
Lackawana, L. W. Seavy and R. B. Burchard; time, 9m.

One of the K. C. C. members has recently presented to the club a medal to be held by the winner in club races, subject to challenge from any club member when two weeks have elapsed from the race at which the wearer won it. The first race for this medal took place at the regatta, when Mr. Brown won the right to wear it. In spite of the discouraging morning many ladies attended from the Heights, and added to the enthusiasm of the contestants.

A PARISIAN ESTIMATE OF DR. NEIDE'S BOOK.—"The Canoe Aurora: a Cruise from the Lakes to the Gulf" (2). L'Amérique est le pays du "canoeing" par excellence; ses lacs, ses fleuves immenses y convient aux grands voyages et, avec leur esprit aventureux, les Américains qui ont des loisirs préfèrent aux moyens de locomotion vulgaires et rapides, steamboats ou railways, la flânerie au fil de l'eau, dans une pirogue où ils ont juste la place de transporter leur personne et leur mince baggage, c'est à dire une couverture, une tente, un rifle, et quelques ustensiles de cuisine. Le voyage raconté dans le petit volume que nous signalons à nos lecteurs n'a pas été de moins de 3,000 milles, ou de près de 5,000 kilomètres, des lacs du Nord à l'embouchure du Mississippi. Il a été accompli par deux amateurs, naviguant de conserve, chacun dans son canoe, et c'est l'un deux, M. C. A. Neidé, secrétaire de l'"American Canoe Association," qui en a fait le récit Ce récit, très varié et qui dépeint avec une sincérité pittoresque les incidents, les tribulations, et aussi les satisfactions et les joies d'une semblable expédition, a été extrêmement goûté en Amérique. Nous sommes persuadés qu'il le serait également de ceux de nos lecteurs qui ont une connaissance suffisante de la langue anglaise, et qui, s'ils étaient plus familiarisés avec ce genre de sport, pourraient le pratiquer, dans des proportions plus modestes, mais tout aussi agréables, sur les rivières de notre vieux continent.—*Le Yacht.*

CANOEING IN LOWER CANADA.—A largely attended meeting of the Lake St. Louis C. C. was held at the club house at Lachine, on Wednesday evening, May 20, for the election of officers for the ensuing year. The club consists of 48 members, 22 of whom are actual canoe-holders up to the present time, but doubtless others will join before the season is very far advanced. A cruise has been organized for May 23, 24 and 25, up the Chateauguay, one of the most historic rivers in Canada, running into the St. Lawrence a few miles above Lachine. On the south shore it is navigable at present about 70 miles from its mouth. The secretary would be very pleased to answer any canoeists making inquiries relating to navigation of rivers or distances around Lachine, or in the vicinity, and would welcome any brother canoeists passing their boat house. By writing the secretary treasurer advising him of the probable time of arrival, he would look up suitable accommodations and make any canoeist as comfortable as possible. The officers are as follows: Commodore, W. H. Kintoul; Vice-Commodore, M. R. Grahame; Secretary-Treasurer, George Auldjo, Lachine, or Box 2141, Montreal; Committee—Gordon Brock, Chas. E. Howard, H. W. Shearwood, C. L. Shaw.

BROOKLYN CANOE AND SAILING CLUB.—This new club have lately built a house, and on Wednesday of last week it was towed from the foot of Rutgers street, East River, to Mumm's Basin, at Bay Ridge, where it will be permanently moored in smooth water just inside the basin. The float is a raft of large spars, the platform being 22×70ft. The house, which is near one end, is 50×19ft., the second story being 19ft. square. Below is a fine boat room with space for nearly fifty canoes, and upstairs is a locker and dressing-room. On the front end is a platform, 22ft. square and about 8in. above the water, from which the canoes can be launched directly, no float being required. This platform is fitted at each corner with a mast step for rigging sails. The club now numbers eighteen active members and nearly as many canoes. The will send a delegation to Newburg and also to Grindstone.

VESPER BOAT CLUB.—This club opened the season last week with a cruise on the Salmon and Merrimac rivers. Sixteen went by barge to Dunstable, where eight others were awaiting them. Half the distance was quickly run, as the Salmon is narrow and rapid. A halt was made at Nasoua for dinner, and the group was photographed, including an instantaneous capsize. A halt was made at the site of the spring meet, Winn's Bluff, the party reaching home by evening. Rowing has declined of late in the Vesper Club, but on the contrary canoeing has grown rapidly in favor, and the old oarsmen are becoming converted to the paddle. The club is greatly interested in the coming meet, and will have a large representation at Winn's Bluff. A number of new canoes of various models have been added to the fleet.

CANOEING NOTES.—Ex-Com. Longworth has lately built a little steamer in Cincinnati for his own use. She is 80ft. long, 20ft. beam, and has a cabin 28×16ft. with 8 folding berths.... Dr. Neide has returned home and called on us on Saturday on his way. He is looking well and hearty after his winter in the South.... The many members of the A. C. A. who have met Mr. J. L. Weller, of Peterboro, at the meets of the Association, will be interested in hearing that he is at present in the field, being Staff Adjutant to Gen. Laurie, with headquarters at Qu'Appelle, N. W. T., Canada. He will probably be absent from Grindstone this year, but we hope to meet him in '86, and hear something about canoeing in the far northwest.

MR. ROBERT W. GIBSON writes to Mr. C. B. Vaux concerning the latter's "Canoe Handling" as follows: "I have read it with more pleasure than I would a novel, and the only criticism I have to make is that there is not enough of it. I see you have intentionally kept it down in size, and I suppose you and your publishers know best, but I should have liked to read more of your views than I did. I think the arrangement of the different subjects is first-rate, and as to the instructions given, all that I know agrees with them, and all that I don't know will be supplied by them."

N. Y. C. C.—Mr. J. F. Newman has resigned his office as secretary in consequence of his active connection with the new Brooklyn club, of which he is the president, requiring all his time. At a meeting on Monday, May 18, Mr. Vaux, formerly commodore and also secretary, was elected in his stead to the position of secretary-treasurer. The club have purchased a new scow, and the old club house at New Brighton has been torn down and a new one built on the scow. This house, which will be ready in a week or ten days, will be 50×20ft. below, with dressing room and racks for 30 to 40 canoes, as may be required. Above will be a meeting room 20ft. square, opening out on fore and after decks each 20×15ft. The new house, which will be moored near the site of the old one, will give the room so long needed, and being only a few hundred yards from the new ferry, on which boats will run every 20 minutes, it will be readily accessible, as it can be reached from the Battery in 25 minutes. The upper portion will be reserved on race days for the guests of the club, being entirely separated from the boat and dressing rooms.

Yachting.

FIXTURES.

May 30—Atlantic Y. C., Opening Sail.
May 30—New Jersey Y. C., Opening Sail.
May 30—Oswego Y. C., Opening Cruise and Pennant Matches.
May 30—New Haven Y. C., Opening Sail.
May 30—South Boston Y. C., Regatta, City Point.
May 30—Knickerbocker Y. C., Regatta.
May 30—Newark Y. C., Regatta.
May 30—Dorchester Y. C., Club Race, Dorchester Bay.
May 30—Fall River Y. C., Open Regatta.
May 30—S. C. Y. C., Opening Race.
May 31—Harlem Y. C., First Regatta.
June 1—Williamsburg Y. C., Opening Regatta.
June 2—Atlantic Y. C., Ladies' Day.
June 6—Larchmont Y. C., Spring Pennant Regatta.
June 6 Quincy Y. C., First Club Race.
June 8—Quaker City Y. C., Annual Spring Regatta.
June 9—N. J. Y. C., Annual Regatta.
June 9—Atlantic Y. C., Annual Regatta.
June 11—Brooklyn Y. C., Annual Regatta.
June 11—New York Y. C., Regatta.
June 13—Boston Y. C., First Club Race.
June 13—S. C. Y. C., Annual Regatta.
June 13—Winthrop Y. C., Sweep-takes Race.
June 16—Harlem Y. C., Annual Regatta, Oak Point.
June 17—Quincy Y. C., Review.
June 17—East River Y. C., Annual Regatta.
June 17—Pentucket Y. C.
June 17—Dorchester Y. C., Open Regatta.
June 18—New Haven Y. C., Annual Regatta.
June 20—South Boston Y. C., Annual Regatta.
June 20—Boston Y. C., Second Club Race.
June 20—Hull Y. C., Pennant Matches.
June 21—Quaker City Y. C., Review and Harbor Cruise.
June 25—Jersey City Y. C., Annual Regatta.
June 25—Oswego Y. C., Ladies' Day.
June 27—Brooklyn Y. C., Opening Regatta.
June 30—Eastern Y. C., Annual Regatta.
July 3, 4 and 5—Quaker City Y. C., Corinthian Cruise and Regatta.
July 3—Knickerbocker Y. C., Annual Cruise.
July 3—Quincy Y. C., First Championship Race.
July 3-13—Newark Y. C., Annual Cruise.
July 3—S. C. Y. C., Squadron Cruise.
July 4—Carolina Y. C., Regatta.
July 4—Larchmont Y. C., Annual Regatta.
July 4-11—Pentucket Y. C., Annual Cruise.
July 8—Beverly Y. C., Nahant, First Championship Regatta.
July 11—Hull Y. C., Cruise.
July 16—Boston Y. C., Third Club Race.
July 16—Cleveland Y. R. A., Annual Regatta.
July 16-17-18—American Y. C., Cruise and Races.
July 17—Cleveland Y. R. A., Cruise to Ballast Island.
July 18-28—Camp at Ballast Island.
July 18—Hull Y. C., Club Race.
July 25—Hull Y. C., Ladies' Day
July 25—Pentucket Y. C., Club Race.
July 25—Beverly Y. C., Marblehead, Second Championship Regatta.
July 30—L. Y. R. A., Cruise to Niagara.
July 31—Quincy Y. C., Second Club Race.
Aug. 1—Hull Y. C., Club Race.
Aug. 2—Quaker City Y. C., River and Harbor Cruise.
Aug. 3—South Boston Y. C., Regatta.
Aug. 3—Newark Y. C., Open Regatta.
Aug. 4—L. Y. R. A., Cruise to Oswego.
Aug. 5—Pentucket Y. C., Championship Race.
Aug. 7—L. Y. R. A., Cruise to Kingston.
Aug. 8—Beverly Y. C., Marblehead, Open Regatta.
Aug. 8—New Haven Y. C., Annual Cruise.
Aug. 12—L. Y. R. A., Cruise to Belleville.
Aug. 14—Quincy Y. C., Second Championship Race.
Aug. 15-30—Quaker City Y. C., Annual Cruise, Delaware and Chesapeake Bays.
Aug. 15—Hull Y. C., Open Race
Aug. 25—Michigan Y. C., Open Inter-Lake Regatta.
Aug. 25—Pentucket Y. C., Club Race.
Aug. 29—Quincy Y. C., Third Club Race.
Aug. 29—Beverly Y. C., Swampscott, Third Championship Regatta.
Sept. 5—Hull Y. C., Champion Race.
Sept. 5—Larchmont Y. C., Fall Pennant Regatta.
Sept. 9—Beverly Y. C., Nahant, Fall Regatta.
Sept. 12—Quincy Y. C., Third Championship Race.
Sept. 12—Boston Y. C., Fourth Club Race.
Sept. 19—Hull Y. C., Chamoun Race.
Sept. 19—Pentucket Y. C., Pennant Regatta.
Sept. 28—Pentucket Y. C., Championship Regatta.

THE CUP RACES.

ON Thursday last, early in the morning, before work began in the yard, the new yacht built for the New York Y. C., was launched by Messrs. Harlan & Hollingsworth at their yard in Wilmington. She was christened Priscilla by Judge Houston. She was taken in tow by the tug Ocean King on Saturday and started down the Delaware, making an easy passage, as the weather was rather bad, and putting in an appearance here at noon on Tuesday. She was at once towed to Poillon's yard where her spars are waiting for her. Her dimensions, as previously given, are 95ft. over all, 81ft. waterline, 22ft. 5in. beam, 9ft. depth of hold and 7ft. 9in. draft. The hull is entirely of iron, the plating being ⅜in. thick, laid flush with straps 5½in. wide over all seams. The rivets are spaced 2½in. The frames are of single angle iron 3½×2½in., spaced 21in. except for five frames abreast the mast, which are doubled. The deck beams are also of angle iron 3x2 double on double frames and 2½×2½ on the others. They are joined to each frame by gusset plates of 3 16in. iron, no knees being worked in the length of the ship. The shelf is 21in. wide and of 5-16in. plate. The centerboard trunk is 25ft. long and 7in. wide, of 5-16in. iron, lined inside with wearing pieces of half round iron on the sides to take the wear of the board. The latter, 21ft. long and 4in. thick, is of yellow pine, heavily banded with plate iron. Special hand holes are provided in the case for lowering the board when it is necessary to remove it. The deck is of white pine, 2½:2½, strengthened by iron plates wherever bolts or fastenings for fixtures on deck are necessary.

From the forehatch to the centerboard trunk a plate of 5-16 iron, 4ft wide, is laid on the deckbeams, through which the mast is stepped. The partners are made of two rings of angle iron, one above and one below this plate, to which both are riveted, making together a ring 21in. diameter and 7in. deck. The rudder stock is 2½in. diameter. Below nothing is done beyond ceiling the forecastle in white pine and laying an ash floor for the whole length; but Mr. Vandeveer, the joiner, has already started in with the fittings. The waterways, of oak, are 8in. wide, rail 5½×3in., and iron bulwarks 15in., or 18in. to top of rail. All cleats, eyebolts, chain plates and similar fittings are in place. Forward is one of the American Ship Windlass Co.'s yacht windlasses, and with it patent iron bitts, forming step for the heel of the bowsprit, as well as two bitts, both of which are fitted with screw caps, serving as ventilators to the forecastle. Aft of the windlass is the forecastle hatch, then a small sail hatch forward of the mast, then a large sail hatch, while over the trunk are two skylights, and aft of them the main companion. She is fitted with a Welles patent steerer and 36in. wheel. On each side of the deck amidships is placed a post and kevel, and also one on each quarter. About the mast is a handsome pinrail of mahogany, on locust stanchions, the holes for the pins, both here and in the rails, being bushed with brass. The chain plates are four in number on each side, with plate iron channels 11ft. wide.

Mr. Phillip Low has the rigging ready to set up, and will step the mast in a few days; the sails are ready at Wilson & Griffin's; part of the lead ballast is now on the dock, and there is apparently no reason why the Priscilla should not be fully ready before the time set for the trial races. Captain Gibson, of the Vixen, will command her.

The Puritan was also launched from Lawley's yard on Tuesday last at 10 A. M. Sails, spars and rigging are all ready, and she will be in the Eastern Y. C. regatta, after which she will come to New York for the trial races.

The dates for the latter are not yet fixed, but the following circular has been sent out by the committee:

MY DEAR SIR.—A series of races under the auspices of the New York Y. C., will take place at New York in the latter part of June or early in July. These races will probably be completed within the period of one week. They will be open to all single-masted vessels of not less than 60ft. in length on the waterline belonging to any duly organized yacht club in the United States, with the condition that any vessel taking part therein shall be subject to selection by the committee in charge as the representative of the New York Y. C. In the coming races for the America's Cup, the committee reserving to themselves the right of forming their own judgment as to the fitness for the purpose in view, irrespective of the actual result of the races. The dates of these races will be fixed as far as possible to suit the convenience of those taking part in them, and owners who intend to enter their vessels are requested to place themselves in communication with the committee as soon as possible by addressing the secretary of the committee, Mr. Charles L. Minton, New York Y. C. House, No. 67 Madison avenue, New York city.

THE COMING SEASON.

ALTHOUGH owners advance or delay fitting out according to the prevailing weather, and each March or April sees some of the hardier ones afloat, it has of late come to pass that by common consent Decoration Day, May 30, is the real commencement of the season, and the most tardy make it a point to be in commission by that time. Nearly all the clubs celebrate the day in some manner, either by a scrub race or a sail for the ladies, with a repast of some sort at night, and this year the usual events are announced. Some of the clubs have supplanted the usual aimless squadron sail by a race, all the fleet being expected to enter, and regular prizes being offered. While not approaching the dignity of the June contests, these little races furnish a pleasant diversion, and afford the Corinthian, ambitious of a well-tanned cheek and horny hands for the June races, a chance to raise a few blisters and renew his acquaintance with the smell of tarred rigging. While the cry of hard times is still heard, and some doubtless have flown their kites too high in Wall street to spread much canvas this summer, the prospects are good for a lively season in yachting all over the country and in all classes. The glory of large tonnage and twostickers has evidently departed when Montauk begs an owner and goes off at a low figure considering her age and reputation, and we shall not see off the Forts or at Newport or Greenport, any such fleet as took part in the former races for the America's Cup. The perennial flyer that first won it is still afloat in a hale and hearty old age, and ready, under the pennant of her bold skipper, to defend it if need be, and Columbia and some others will be on hand to witness the combat; but the day of these ancient beauties have passed, lead and iron have helped their younger rivals to first place at the line, and they must perforce play wall flowers.

While the fleet of to-day is smaller in length and tonnage than the famous ones of fifteen years since, it is no sign that yachting has degenerated or even stood still; but, on the contrary, in all respects but size we are well ahead of the former generation. Great as was the interest taken by all classes, the actual points of the contest are far more generally understood to-day, and the results will be more correctly appreciated; while in place of the many who looked at the fleet of big schooners with patriotic pride but no very clear idea of what it was all about, there is to-day a host of yachtsmen, owners of their own craft, large or small, who feel an intense interest in the coming struggle and are ready to weigh every point and clean every idea that may aid them in their sailorizing. Not only about the scene of the struggle is this so, but in the West and throughout the country a deep interest is awakened, and all yachting feels its influence in a revival in spite of the condition of business generally.

About New York the clubs are generally in a prosperous condition. The New York, while still without such a headquarters on the water as becomes the first club in America, retains its large membership, though owners are dependent on the smaller clubs for anchorage or club houses. A large yacht club, on such water as New York Bay, without any quarters for yachts, is rather an anomaly, and the only wonder is that the N. Y. Y. C. has prospered so well. Its age and standing have kept it thus far ahead of younger rivals; but it is time to look out that some of them with more life and enterprise and offering better facilities, do not step into first place. By their policy of encouraging Corinthian yachting, and of keeping up a really live interest, the Seawanhaka Corinthian Y. C. have in a few years won a place of their own in New York waters, and a reputation widely extended as active sailors and thorough sportsmen. Thus far the difficulty of securing a permanent anchorage has somewhat hindered them, but that is now removed, a good house and basin have been secured in a location that is easily accessible from the city, and the club is still to the fore in prizes and racing programmes for all classes of Corinthians, from the owners of large cutters and schooners to those budding yachtsmen, the canoeists, for whom a race is provided each year. A new feature this season and one that promises to become popular, and to work good results on the personnel of the club is the establishment of a club yacht, owned and kept in commission by the club for the use of non-owning members. The plan gives to this class, that up to this time has been rather neglected, an opportunity to sail at any time throughout the season, and should prove valuable as an inducement to join the club. As now located and under the management that has thus far made it so successful, the club has every promise of a brilliant future. The fleet is large and constantly improving, and not only in numbers, but in the class of boat.

Across the bay at Bay Ridge, the Atlantic Y. C. are still at their old quarters. The portion of their grounds formerly occupied by Mumm's yard is now vacant, as Mr. Mumm has removed to a new site just outside to the north, which property he has purchased, and where he has laid down a large set of ways. The club is in a prosperous condition, with a large membership of men and boats, and with every outlook for a successful season. This season, for the first time in many years, the red flag of the once famous Brooklyn Y. C., will float over their new quarters at Gravesend Bay. After lying dormant for so long, the club has been revived with the avowed purpose of encouraging the smaller classes of yachts. Starting out with fixed ballast and limited crews, they should find plenty of the little fellows to gather under their flag, and a continuation of the same policy, without ambitious bids for the presence of the big ones in the lists and races, will leave them with a large field to work in and a good chance to establish themselves once more. At the other end of the city is another club devoted to the smaller boats, the Knickerbocker, now firmly settled with a first rate anchorage and good sailing ground, and a large and growing fleet. Here the influence of modern ideas and a fair measurement rule have operated in favor of a class of staunch and handy little boats of good depth, many of them keel craft, while the once despised cutter, an extreme narrow lead mine, has not only found recognition, but has enforced respect. The club still number some of the open boats whose speed has made them famous, but the general movement is into craft of greater accommodation, even at the expense of speed.

On the North River the New Jersey Y. C. are still at their old home at Hoboken, but of late have moved the starting point of their races down to Bedloe's Island, avoiding the tedious work among the numerous ferry boats. With fixed ballast and limited crews they are doing good work among the small open boats, which class they chiefly favor, while they have extended their aid and protection also to the catamarans, and will doubtless enjoy some fine sport with them this season. Several new ones have been built and a number of matches are on, and the owners of these peculiar nondescripts are highly excited over the result. It might be thought that being lacking in many of the good points of a yacht they would be equally free from the questions that vex the latter; but alas, the never ending problem of keel vs. centerboard strikes the catamaraner with double force, as he has not one but two keels or boards.

Further down, by Communipaw, is the Jersey City Y. C., also devoted to small yachts, but numbering a lot of small cabin craft in their fleet, whose owners are apt to prefer a trip to the Hook of a Sunday or a run with the trolling lines out, to much spreading of kites and sweating over mainsheet. However, they will have a race in a week or so and have invited the mosquito fleet, or that portion who wield the double paddle in a calm, to have a try for a prize in a separate class of their own.

While the many smaller clubs about the city are generally flourishing, and have every prospect of a lively season, the interest in the sandbag fleet is each year decreasing as rules are changed favoring fixed ballast and limiting areas; and this feature, once so prominent and potent in yachting, is disappearing more rapidly each year. No one can say that it will be any loss to yachting in general, or that the supplanting of the wide, shoal and dangerous traps overloaded with men, sand, and often a ca go best carried in kegs rather than tags, by deeper and safer boats in which skill is required in the crew as well as the skipper, rather than mere gymnastics and weight; is other than a gain. Just outside of New York is one of the most prosperous of our country clubs, the Larchmont, whose beautiful grounds and convenient anchorage offer especial advantages to yachtsmen in the shape of pleasant country villas and good sailing ground close together. It is quite the fashion to belong to the L. Y. C., and many large yachts are enrolled, but the mainstay of the club is the small-boat contingent with its Corinthian sailors.

This year the small keel class will be a noticeable feature in the races, there being boats enough in it to make good sport. The in-

terest in this class of boat is growing in the club as they become better known, and several new ones have been added. As a class they have not yet received much attention from yachtsmen, designers or builders, and their ultimate possibilities have not yet been realized. Under suitable encouragement, and with the care expended on them that some other classes have received, the little keel craft of 25ft. waterline or under should afford as good sport as anything afloat, and be within the reach of many young yachtsmen. Speaking of this class of boat leads us back to Newark, N. J., where an enterprising and active club exists with a large fleet, mostly of the wide centerboard type, as their waters are of limited depth. While the keel class would probably be unsuited to the wants of many, they are too venturesome and fond of far-away cruising to be tied down to the ordinary skimmer with all its faults as a cruiser; and a crossing of some of their craft with the keel boat we have mentioned, resulting in such craft as the Brighton Beach boats, narrower, deeper, but retaining the board if necessary, and for some with moderate keels, would add new zest to their sport.

To the eastward along the Sound yachting matters are lively, especially in the New Haven Y. C., which now musters a goodly fleet of cutters, keel sloops and centerboards. At the smaller ports are a number of yachts and some clubs, while Newport is becoming more of a center each year, especially since the increase of the steam fleet. The various club cruises through the Sound, the American, New York, Atlantic, New Haven, Seawanhaka, Newark and others, serve to stimulate the interest in the small ports. The waters of Rhode Island and the neighboring coast of Massachusetts offer rare sailing grounds to the large fleet of small yachts that hail from Newport, Bristol, Providence, Warren, Fall River and New Bedford, and that make plenty of sport for the lovers of small craft. The latter place, with its yacht club and handsome club house, besides a fleet of large and small vessels and a fine harbor for sailing, is destined some day to become a favorite point with yachtsmen.

Boston is the center of a small yachting system of its own, including many clubs devoted mainly to the smaller boats and amateur sailors. Beverly, Lynn, West Lynn, Swampscott, Jeffries Point, Hull, Dorchester, South Boston, Boston and others, all of which are awake and ready. The visit of the Cruiser last fall gave an new impulse to the smallest class, and many new boats have been built and matches made for cats and sloops of about 20ft. loadline. The class for which this locality is best noted, the small keels, both wide and narrow, still flourish, and some important additions have been made, besides many changes in the directions of increased weight outside and cutter rig in the older craft. Shadow still holds her place among the centerboards, her rival, Maggie, now hailing from New York; two new keels, Melusina and Nebula, we have already noticed in detail. The crack club east of New York, the Eastern, has already come into general notice this season from its efforts to provide a vessel to defend the Cup; and all good yachtsmen east of Cape Cod already swear by the new Puritan, launched on Tuesday. While the defense of the Cup properly rests with the New York Y. C., so long its custodian, it speaks well for the spirit of the Eastern yachtsmen that they have of their own accord taken up the matter, and have done a full share toward furnishing a suitable American yacht. Whatever may be the result of the trial races, they deserve all credit for their earnest effort. The contagion of the great races has affected Boston as New York, and has extended as well to points further east and on the Maine coast. The presence of more large yachts each season in the harbors along the coast adds greatly to the local interests in the sport and strengthens the local clubs. The New England Yacht Racing Association, formed last year, has united nearly all the clubs, and as it prohibits shifting ballast and enforces uniform racing rules it exerts a good influence on all Eastern yachting.

Distant as the lakes are from the Atlantic seaboard they are still connected to a certain extent, and yachting there has felt the effect of the movement on tidewater. Ontario is the most advanced in matters of organization, in fact with its Lake Yacht Racing Association, it can set a good example to some clubs nearer Sandy Hook, and this season the "round" will be more interesting than ever before. A series of races at the different ports visited will give good sport to the participants, and better still, will give a thorough stirring up to the local clubs. Lake Ontario has long been the home of a breed of skimming dishes, second only to that once prevailing in New York, fast in smooth water but lacking in every other good point, and worse even in the rough water of Lake Ontario than in New York Bay. The deep cutter, however, has lately found a home there and made many friends and is working the same change in design that has followed her introduction here. To the westward of Ontario yachting has always been less permanently established and has shown the want of proper organization and general supervision. Nevertheless there are a number of clubs between Buffalo and Chicago all progressing steadily; but some more rapidly than others. Buffalo has lately taken a new start; Cleveland is busy with the grand meet in July, and Chicago will soon have increased facilities for yachting. The coming meet at Ballast Island in Lake Erie will give a needed stimulus to lake yachting generally, and even though no permanent organization is effected this year it will bring many yachtsmen together, promote acquaintanceship and good feeling among them, and pave the way for the union which must come some day. Last year for the first time the waters west of Niagara were stirred by the deep lead keel of a modern cutter. Like Madge here and the older Verve and Aileen on Ontario, the newer Verve showed what length, depth and weight could do in a sea.

Separated by half the width of the continent, and with different weather and water, San Francisco has little in common with the East in yachting matters, but there also yachtsmen are busy in the matter of improvements. The fleet has been overhauled and refitted this winter in anticipation of the advent of the Carmelita, built in New York, and of a type as yet unknown there. In matters of rig and finish she can teach something to the Western yachtsmen, and will no doubt exert an excellent influence on their craft, and we hope set a pace for the races. Along our southern coast yachting has not attained a very rapid growth, being confined largely to small open boats; but the yearly exodus to Florida is taking many yachtsmen there, and the sport is obtaining a foothold which will be greatly strengthened should the proposed plan of a rendezvous near Fernandina be established.

Taken all together the outlook for a busy season is excellent, the general interest in yachting is growing with the increased appreciation by the American public of the value of recreation and outdoor sports; the special interest and knowledge of the sport is growing each year, and yachtsmen are everywhere devoting more attention to the improvement of their craft and to increased skill in handling them; little by little local feeling is giving way to a broader view, and national characteristics are being developed.

As we have noticed, the interest everywhere is centered in the grand series of contests that will follow the advent of the visitors from abroad. Genesta is reported as having already started, and though the report is not yet confirmed it is probably true, and we shall soon have her with us. Curiously enough none of the English sporting papers make any mention of her whereabouts for the last two weeks, or say whether she has yet started. In any case both she and Galatea will probably be here on time, and the question with us is, "Are we ready to meet them?" Thus far all has gone well, two sloops are well advanced, and will soon be ready for their trial trips.

Not the least important feature of the contests will be the trial races to decide on the best boat to represent us. The races to be held in about a month will be open to sloops and cutters of 60ft. waterline and over, which will include more different types and perhaps be of still greater value than the main races. The latter will be restricted to three boats—two English cutters and an American yacht, while the former will bring out a mixed lot, Gracie, Fanny, Mischief, the latter with reduced spars and ballast, and possibly Hildegarde, of the old sloops; Thetis, the compromise from Boston; Huron, also of Boston, on the line between sloop and cutter; Bedouin, thus far at the head of the heap and ready to stay there if hard work by all hands, owner, skipper and crew, can do it; Ileen, in new hands this season and from Diaper's reputation abroad, about to show what she can do when properly handled.

Last of all are the new ones. Mr. Warren's Stranger of forty-seven tons, in size between Ileen and Bedouin—a modern cutter in all respects—has not yet left the other side; but may be expected here in time for the trial races. Boston contributes a new sloop, the Puritan, designed by Mr. Edward Burgess; of considerable beam and depth and with a heavy lead keel; and New York adds a new one, another Puritan, Priscilla, designed by Mr. A. Cary Smith, of more moderate beam and depth and with a different ballast plan. The former is of wood, the latter of iron, and both are largely cutters in rig. Such a fleet has never met in American waters, larger and more elegant vessels in some respects may have been seen here, but never a finer and abler racing fleet. The only pity is that this aquatic "happy family" is not made complete by the addition of a sharpie. The opportunity offered to this type to distinguish itself in such good company may not soon occur again, and it is greatly to be regretted that none of its friends have put their ideas into wood and iron instead of ink and paper, on a sufficiently large scale to test her fairly with so many representative yachts.

Looking over the list it will be seen that the question of type is more deeply involved in these than it is likely to be in the main races; as the extremes range from Fanny to Ileen by all the intermediate steps of the chain from the shoal American sloop, in all the glory of centerboard and single jib, to the thoroughbred "lead mine"; while in the main events the contest is likely to be between the extreme cutter, Genesta or Galatea, on the one hand, and a medium type of sloop with part cutter rig, as the two new ones, on the other. Of course, in any event it is unlikely that Bedouin, Ileen or Stranger would be chosen on our side, even should they prove superior to the others, but we may count on them in the trial races.

Naturally the sympathies of the great body of yachtsmen are with sail, as steam is restricted to the favored few, but the latter now demands more than a passing remark in any review of American yachting, as it is rapidly growing in importance. Last year marked a most important date in its history, as the first steam yacht club in the world, the American Yacht Club, of New York, was then organized. Its growth thus far has been satisfactory in every way. Club quarters have been established in New York, where regular meetings are held and where the foundation of a collection of books, models, etc., relating to steam navigation, has already been laid; while the club have commenced in earnest to deal with the many interesting and intricate questions involved, and to offer all possible encouragement to owners and others interested in the improvement of engines and hulls. The young fleet is already a large one, numbering two of the largest steam pleasure vessels afloat. The club is energetic and active in carrying out the liberal policy laid down, they have already taken up the subject of steam yacht racing, and besides their effort of last year have laid out a programme for a cruise and races this season, and in only one year have done much to systematize and establish on a firm and solid basis steam yachting in America. Taken all in all, the outlook both for a brilliant season and for permanent improvement has never been better, and in whatever manner the Cup races terminate, we believe that the record of the season in our columns and the final summing up in November, will not give any cause for disappointment.

A CATAMARAN RACE.

THE first race of the season was sailed on Monday last, between the catamarans Duplex, Messrs. Ogden and Longstreet, and the Ægir, Mr. S. D. Field. The former is a well-known centerboard craft, 40ft. over all, 37ft. 6in. on water line, and 19ft. beam, with a centerboard 9ft. long and 3ft. drop in each hull. The Ægir is of the same dimensions, but her hulls are deeper and narrower, with keels and no boards. She was built by Thomas Fearon last winter, and this was her first race. Both carry the same area of canvas, but the new boat has her mast further aft, and is rigged with a larger jib, of the rig shown in our issue of April 2. The course of 30 miles was from Bedloe's Island around buoy 8½ and return. Mr. Fearon sailed the new boat, while Mr. Fred Hughes handled the Duplex, and Ex-Commodore W. H. Dilworth, N. J. Y. C., was judge and referee; the race being under the rules of the same club. The tide was ebb, the wind directly up the Bay, and a light rain falling when the signal was given from the judge's tug, Lyndhurst. Ægir crossed at 11h. 27m. 27sec., and Duplex 21sec. later, both sliding well off to windward under the swift ebb tide. Ægir led for a time but lost by running into the slack, while the strong midchannel ebb swept Duplex steadily on. When they tacked near Quarantine Duplex was ahead and held her lead all the way to windward, gaining still more on the turn. The times at the buoy were, Duplex 1:49, Ægir 1:58:09. Wind and tide were both fair for home, while the weather also had improved. Ægir showed up better with lifted sheets, cutting down her opponent's lead, but still she was badly beaten, the finish being, Duplex 3:46:40, Ægir 3:52:27; a difference of 6m. 8sec. The next races will be a series, the first one on June 1, between the Jessie and Isis, for $250 a side, and on June 23 Duplex and Isis will race.

SEAWANHAKA CORINTHIAN Y. C.

A MEETING was held at Delmonico's on May 20, at which Com. Rogers presided. Mr. Wm. B. Simonds, for the Board of Trustees, reported the election of Mr. Geo. H. Warren. Mr. Simonds also read the correspondence between the Board of Trustees and Mr. Chas. H. Leland, a member of the club, in which the latter offered to present to the club the sloop yacht Venture to be used as a club boat. The trustees having accepted Mr. Leland's offer, the yacht has been placed in the hands of Mr. Wm. Foulke, Jr., to put her in commission at once, and she will be ready in a few days, when the regulations for her use will be made public. As she could not be formally accepted until the club was incorporated, the trustees recommend that steps be taken at once to this end. The secretary moved that a committee of three be appointed to prepare resolutions thanking Mr. Leland for his gift, and to have a copy of them and of the minutes of the meeting engrossed and presented to him, and also copies printed and sent to each member of the club. The motion being carried, Messrs. D'Oremieulx, O. E. Cromwell, and W. L. Suydam were named as members of the committee. The flag officers had no report to make, but the secretary reported the resignations of Messrs. W. F. Kingsland and J. A. Wheeler, Jr., the latter dating from last year, both of which were accepted.

Mr. Beekman, chairman of the Law Committee, made a report showing the necessity for the incorporation of the club, and it was moved and seconded that the trustees be authorized to incorporate the Seawanhaka Corinthian Y. C., under the laws of the State of New York. Mr. Simonds also stated that a new site for the club house and a good anchorage had been secured, but in the absence of Mr. W. A. W. Stewart, he was not prepared to report. As the property of the Yacht Anchorage Company, Limited, may be turned over to the club, the Trustees asked for authority to accept it at their discretion; a motion to that effect being made and carried.

The Commodore made some remarks on the question of a squadron cruise, and some discussion followed, it being finally decided to rendezvous at Larchmont on July 3, and from there proceed to the eastward. It was also decided that the Decoration Day cruise should be an informal race, to start at 11 A. M. from off the club house, to and around buoy 10 and return. A prize of $25 will be offered in each class, no entries being necessary and professional crews allowed. The sails will be those permitted by the sailing regulations, yachts to sail in their usual trim, but not compelled to carry boats. The usual time allowance will be given, with a one-gun start, all to be at the discretion of the Sailing Committee. It was also moved and carried that the same sums as last year be appropriated as prizes in the Annual Corinthian Race on June 13, and also that the Knickerbocker and New Haven yacht clubs be admitted in this race. All other matters were left to the Sailing Committee. The meeting then adjourned.

The difficulty of securing permanent quarters, which has so long hindered the development of the club, has at length been overcome, as in place of the old basin, held only from year to year and needing repairs and dredging, they have secured a good location just south of the Tompkinsville landing, about one-quarter mile north of their old quarters. The club house has been moved there and a good basin is provided inside the dock with 8ft. at low water. It is easily accessible from New York, as the boats land alongside of it. The new experiment of a club yacht, which is about to be tried, will no doubt be fully appreciated by the non-owners and will prove a benefit to the club. Their present location is an excellent one; the removal to it will mark a new era of prosperity in their history. The schooner Ranger, purchased by Dr. B. F. Dawson from Mr. John Morris, has just been added to the fleet, and also the new cutter Stranger, as well as Maggie. Mr. John E. Brooks, of the Montauk, is a candidate for membership, also Mr. Wm. Gray, Jr., of the Huron, Mr. Alfred Bierck and Mr. A. C. Ledyard. The club book will soon be ready.

A CHAT WITH THE CLUBS.

THIS week, the recognized opening of the American yachting season, we publish the notice of twelve events to take place on Decoration Day among the yacht clubs, besides others in canoeing. As these are scattered over various parts of the country and at wide distances apart, it is of course impossible to attend to all personally, and we must rely largely on the clubs for information in regard to their movements. In the interest of yachting and of yachtsmen, the FOREST AND STREAM endeavors to chronicle each week the doings of the yachting world of America, a field of no small magnitude, extending from the Gulf of Mexico to the northern shores of the lakes and St. Lawrence, and from the Atlantic to the Pacific. In this task we shall be glad of the aid of all yachtsmen, whether detached or members of clubs; but especially of the officers of the latter, who are presumably more interested in the advancement of yachting than are individuals. In many cases the secretaries furnish club book reports of fixtures, elections and minor notes, and in a few we receive more fully detailed accounts of cruises and races; but a large number of the clubs make no effort to supply any information, while at the same time they expect full and correct notices of events.

In the cases of clubs at a distance we are obliged sometimes to rely on information furnished by correspondents not fully posted, or on the more or less incorrect accounts in the local papers, neither of which sources is reliable. The season just opening promises to be a notable one in our yachting annals, the impulse given by the advent of Genesa and Galatea on the eastern seaboard will be felt on inland rivers and lakes, and even on the Pacific, in all clubs, and must awaken a fresh interest in yachts, small as well as large.

The FOREST AND STREAM will endeavor still, as it has successfully done for many years, to keep in advance of the improvement and growth of yachting; and in this effort we ask the aid of all, especially of the club; through their proper officers, in the collection of yachting news. From those clubs that have not yet reported we shall be glad to have full lists of the officers for the current year, of fixtures, notes of new boats, club matters, and all items of interest, and especially the annual club books. Notices of meetings, races and cruises should be sent as soon as the dates are decided on and abstracts of meetings immediately on their occurrence. Our yearly lists of races and winners is compiled with all possible care, but nevertheless many errors creep in that are displeasing to owners. To avoid this they should send, if possible, correct accounts of the races won by their boats as they occur, and also call attention to any errors in the current reports in our columns as they appear.

All club men are directly interested in seeing that their club is properly represented in the FOREST AND STREAM by full and accurate accounts of their proceedings. It may be urged by some that they are private parties enjoying themselves as they please, and that the general yachting public has no business to know what they do; but no club can prosper under such a narrow and exclusive policy. They are a part of the great system of American yachting and must share its growth and be in full sympathy with its interests or must fall to a subordinate place. What news they give to others through our columns they are more than repaid for by similar information. Everything tending to unity and organization is a direct benefit to yachting in all departments down to the smallest, and benefits more or less directly each individual owner; and no other agent is as powerful for good as the interchange of ideas and the thorough knowledge of what others have done and are doing, that are offered in the yachting columns of the FOREST AND STREAM. In the coming season the races will be of especial interest and we hope to publish accurate accounts of all, large and small, together with a complete summary at the close of the season, to which end we request the aid of each club, and also of the owners of racing craft. Next week we shall endeavor to give full accounts of the events of the various clubs that take place on Decoration Day; and we hope to receive from each such official information as will aid us in so doing.

YACHTING AT CHICAGO.

AT the spring meeting of the Chicago Y. C. it was decided to have races late in June and early in September, the exact dates being left to the regatta committee. A cruise to Milwaukee (or some other point within a hundred miles) has been ordered for July 4.

This club expects to be represented at the Cleveland regatta by Idler, schooner; Wasp, sloop; and Verve, cutter.

Liberal prizes for steam yachts and launches have been offered by Mr. Chas. P. Willard, a member of the club and a builder of marine machinery. It is hoped that three or four steam craft will come into the club this season and as many sail; also it is rumored that "something" is being built that will prove an eye opener, whether it be the club's or builder's eye that is to be opened is still to be told.

It was publicly announced at the meeting that a company had begun to build an island near the shore ten or a dozen miles south of the river's mouth, and that all the stock had been subscribed for. It is to have an area of about 18 acres, 8 acres of which will be left as a harbor that can be made in all winds by yachts drawing two fathoms. A suitable lot on this harbor has been offered the club for a permanent club house. Good shelter is promised by the end of July; the island will be finished by winter, and probably by the following summer an ideal summer hotel will be erected to accommodate from 500 to 1,000 guests.

It would be difficult for one unacquainted with Chicago's yachting possibilities or impossibilities, to appreciate how much this island can and will do for yachting on the upper lake.

In the present busy lives of most of Chicago's would-be yachtsmen, there is no time for an extended cruise. After a season or two, sailing "round the crib" lacks novelty, and even a straightaway run from shore and back again, all alone, becomes somewhat monotonous, but with the island and the life and interest that it will have and give, all of this it may be expected will change.

There will be some definite objective point for an afternoon's sail. Owners of small yachts and sailboats will have a place to dine. An evening's sail home will be a pleasure. A few hours at the club house and a sail home in the early morning will give one such a getready for the day's work as now out to be had—for turning out with other yachts for a morning's sail home is rather more to like one's bed for than getting up, dressing, going a mile or two or three to one's yacht, and then sailing out all alone, with one's freshness already gone. It will give a regular yachting highway.

The club is very jubilant over its near future, for it is believed that this island in three years will do more for yachting than would ten, or even fifteen years, were it left entirely to the slow moving processes of time. D. S.

TRIAL TRIP OF THE STRANGER.—The new 47-ton racing cutter Stranger, Mr. Warren, was out for her first sail on Friday, and on Saturday she was out again, in company with the Marguerite, racing cutter, 60 tons. Mr. Foster Conner, when there was a hard wind and considerable hail and rain. On Monday the Stranger went into Fay's, Northam, where she was built, and had about two tons of lead cut off her keel aft, and she was towed out again on Tuesday. The lead taken out was moulded and put inside amidships, and on Wednesday the Stranger went out for a trial with the Tara, 40-ton racing cutter, while the Irex and Marguerite were also out at the same time. There was a good southwest breeze, and the course arranged upon for the trial was from off the Town Quay, out round the Calshot Spit Lightship, thence round Lepe and the East Brambles Buoy, and back to Southampton, passing the Calshot Lightship on the way home. It was a beat out of the river, Tara quickly going into the leading position, and a reach from the Calshot Spit Lightship, where the Tara was seven minutes in front, the Stranger having gained fifteen seconds on her in the reach. From thence they beat to the East Brambles Buoy, where the Tara increased her lead to eleven minutes. From this mark it was a run back to the starting point, and the Stranger gained somewhat on the Tara in the run back, the latter not being severely pressed on account of her new mainsail. The Stranger had some difficulty in keeping up her canvas in going to windward, and her new gear stretched considerably. Those who watched the race concluded that the Stranger is no match for the Tara in beating to windward, but she reaches and runs wonderfully well, and in these points is quite as good as the Marguerite. The latter does not seem to be improved by her alterations, while the Irex is undoubtedly much better than last year. The alterations effected in the Stranger since she was launched have improved her appearance. To see Irex, Stranger, Marguerite and Tara beating down Southampton Water and out in the Solent together, reminded one of a match in August, barring the weather, which was cold.—*London Field, May* 16.

YACHTING NOTES.—Port Jefferson—Phantom has refitted with new sails and left for Boston; Alarm will probably loom up this season; Rambler will be out in another month; the little cutter Merlin lies afloat, but with her winter covering still on; the Sylph will soon be in commission; the Proteus, a large catboat, is ready to start for Larchmont; the Curlew is still in the harbor.... The Hera, sloop, is now afloat with new sails by Wilson & Carney, and two feet more hoist and 3ft. more gaff.... Mischief is off the ways after painting, and has been down the Bay.... Mascotte, Mr. Osgood's sharpie, has had her spars shortened, as they were too big for her. She has also had a new figurehead added, and been painted black instead of white.... Nebula, cutter, Mr. C. W. Jones, has done very well on her trial trip, and all who have seen her under sail are pleased with her.... Montauk, schooner, is reported as sold to Mr. J. E. Brooks, and Resolute has been taken in part payment by Mr. E. A. Houghton.... Isis, cutter, Mr. A. Cass Canfield, has sent her new Lapthorne sails. Mohawk, schooner, once the property of the late Com. Garner, and so well remembered from her sad capsize off Staten Island in 1876, is once more in the harbor. Under her present name of Eagre she is engaged in the survey of the East River, and has laid for a week past in Buttermilk Channel. The various red, blue, and white flags that have attracted the attention of travelers on the ferries have been placed in connection with her work.... Stranger, cutter.—Randall, who formerly sailed Maggie here, will bring Mr. Warren's new cutter across as soon as she has been tried.

LUCILE.—The Herreshoff yacht Lucile, No. 122, left Bristol on May 23 and made the run in 12h. 53m., from the builders' yard to Poillon Bros.' yard in Brooklyn, an average of 14 miles. From Brooklyn she continued to Sing Sing where she was delivered to her owner, Mr. Chas Kellogg, of Athens, Pa., who will take her to Chesapeake Bay for some cruising. Messrs. Herreshoff have taken in part payment the yacht No. 110 built for Mr. Kellogg last season, as she was too small for his use. This yacht, 69ft. long, has a record of over 18 miles on a measured course. She is fully described in our advertising columns. The two new launches, Adelante and Ollie, built by Messrs. Poillon, were success-fully launched, one on Monday night and the other Tuesday morning, and the Herreshoff Co. are putting in boilers and engines of their make at Brooklyn. Poillons have also Mr. Bush's schooner planked up and ceiled, and a very handsome deck of clear pine laid, and near by, under the sheds, are the spars of the new sloop.

THE SAN FRANCISCO Y. C.—This club opened the season on May 2 by a reception at the club house with a dance, the fleet lying anchored off Saucelito. At 11 A. M. on the following day the fleet got under way for a cruise, starting with a light wind. The Frolic, Com. Harrison, took the lead, followed by Nellie, Startled Fawn, Whitewing, Chispa, Rambler, Emerald and Idle Hour. A squadron drill by signals was on the programme, and when in Raccoon Straits the order was signaled to form into line abreast on port side of flagship, which was finally accomplished. Next a similar line was formed on the other side, followed by the signal to steer for Red Rock, which was performed in fine style. The cruise ended with a beat home. The Casco has had her mainboom lengthened 6ft., with a new mainsail. Her jib also has a new boom. Halcyon has had lead added to her keel, putting her down by the head and improving her speed.

PACIFIC Y. C.—Saturday, April 25, was the opening day of the Pacific Y.C., and an entertainment was given at the club house. Dinner and dancing over, the guests went on board the yachts and at 6 P. M., all were under way for Vallejo in the following order: Annie, Nellie, Rambler, Whitewing, Fleur de Lis, Halcyon, Frolic and Lurline. The wind was light at first, coming fresher off Point Pinole. Fleur de Lis was first in, her time being 2h. 32m., with Lurline 2h. 34m.; Annie was first on corrected time with Rambler second. Before morning the fleet was increased by Emerald, Ella, Virginia, Solita, Ripple, Nellie (sloop), Syren and Red Cross. Next morning brought a reefing breeze when they started, and Fleur de Lis was soon disabled, first with a broken block on her gaff, and then with the loss of her jib tack. Halcyon, with the 3½ tons added to her keel, (4 tons in all), sailed in fine shape, coming in first, with Lurline second and Nellie third.

NEW YORK Y. C.—A meeting was held on May 21, at the club house, the Cup committee reporting progress. They are still waiting an answer from Mr. Beavor Webb before settling all details. The date of the cruise was discussed but not finally decided upon. Mr. John R. Platt presented to the club a painting of Montauk. The following gentlemen were elected as members: John J. Phelps, of the schooner Brunhilde; H. W. Collender, of the schooner Speranza; C. A. Robbins, of the cutter Mu iel; Geo. G. King, steamer Ludoga; J. Stickney, steamer Falcon; Daniel S. Appleton, J. Nelson Howard, Brent Good, Prescott Lawrence, Thos. F. Rowland, W. Lloyd Jeffries, J. H. Ladew, Addison Thomas, Charles Sweet, Thos. J Cassidy, Henry B. Belknap and Henry Breevort. Judge J. W. Wallace, of the United States Court, was elected an honorary member.

LLOYDS REGISTER.—We have received from Lloyds agent in New York, Mr. Thos. Congdon, a copy of the Yacht Register for 1885. A comparison with that of last year shows 3,284 yachts now listed, in place of 3,086 then. The dimensions of some most interesting to Americans are as follows: Genesta, composite, length, stem to sternpost on deck, 85.6ft., beam 14.6ft., depth from main beam to floors 11 75ft. Galatea, steel, length 90.42ft., beam 15ft., depth 13.33ft. Stranger, composite, Mr. Warren's new cutter, length 67.8ft., beam 13.6ft., depth 9ft. Bayadere, Mr. J. M. Forbes's new cutter, designed by Watson, length 46ft., beam 10ft. The book contains the full tables of scantling, anchors, chains, etc., which have come to be recognized everywhere as the standard in building, and a list of American yachts not rated by the society.

NEW 5-TONNERS.—Besides the new 5 for parties in Hamilton, Ontario, which Mr. Wm. E. Paton has lately designed and whose dimensions are 32ft. waterline by 5ft. 11in. beam, he has had proposals for another yacht of the same length for Lake Ontario, and he has also designed a racing 5 for English waters, 33ft. 4in. long and 5ft. 8in. beam. He has lately been at work on the designs for a 20-tonner, 53ft. 4in. waterline, 8ft. 9in. beam, and 9ft. 5in. draft; and also a little craft for Australia, 32ft. waterline, 7ft. beam, and 7ft. 4in. draft. Mr. Paton has thus far been very successful in the smaller classes, having designed and built Trident, 5 tons, six years since and raced her successfully for five seasons, while Olga and Currytush have since added greatly to his reputation as a designer.

NAVAL SONGS.—There are always times when music is welcome on the water, and especially in yachting where ordinary occupations sometimes fail to amuse, or when at the close of the day all are disinclined for even the exertion of reading. Almost any company of yachtsmen can boast musical talent sufficient to render the many simple airs so popular with all. A collection specially suited for the use of yachtsmen has lately been issued by Wm. Pond & Co., of New York, under the title of "Naval Songs." It includes all the well known and popular sea songs, besides an interesting notice of the songs peculiar to the sea and sailors, with a number of examples of the "shanty songs," one of which we reprint on another page.

AMERICAN Y. C.—A meeting was held on May 19, at which the following programme of races was arranged. The yachts will leave the Larchmont club house on the morning of July 16, sailing direct to New London. On the morning of July 17 there will be a boat race of small boats and captains' gigs opposite Pequot House. At 1 o'clock in the afternoon the squadron will leave for Shelter Island. On Saturday, July 18, the steamboat carrying non-yacht owners will return to New York, and afterward the yachts will be under the command of Commodore DeCordova, who will direct the future movements of the fleet.

A NEW SINGLEHANDER.—Dr. W. H. Winslow, of Pittsburgh, Pa., has ordered from E. L. Williams, Boston, a little keel catboat, 24ft. over all, 20ft. waterline, 7ft. beam, and 4ft. 6in. draft, with an iron keel of 1,500 pounds.

CAMBRIA.—This schooner was at Bermuda on May 20, forty-four days out from Cowes. She is bound for New York. Her former owner, Mr. Jas. Ashbury, was in New York this week.

NEW HAVEN Y. C.—The annual cruise of the New Haven Y. C. will begin on Aug. 8., on which date the club will sail to the eastward.

HARLEM Y. C.—The date fixed for the annual regatta of the Harlem Y. C. is June 16. The races will be held off Oak Point.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

A. D. F., Boston.—Deer shed their horns annually.

W. H. T., Schuyler, Neb.—The article was published on April 16.

J. C. R.—We published the lines of a Clapham sharpie on Sept. 13, 1883.

C. G. B., Providence, R. I.—The paint will be of a yellow color, we cannot give the quantity required. The receipt is as good as any of the others.

A. B. C., Toledo, O.—We can furnish you "Kemp's Yacht and Boat Sailing," price $10. "Frazer's Practical Sailing," price $1, will aid you with the ropes.

G. C. Lynn, Mass.—You will require 75 to 100sq. ft. of cedar ¼in. thick, for 14x30 canoe. It can be had of boatbuilders in Boston. The price is from 4 to 8 cents per square foot, according to quality.

W. E. N., Lewisburg, W. Va.—Can you give me name of some person or firm (one that is reliable) who make greenheart bass bait-rods? Ans. All our advertising tackle dealers are reliable men, write to any of them.

E. J. F., Boston, Mass.—The term Corinthian is synonymous with amateur. Its origin is not known, but it has been applied for many years in England to gentlemen sportsmen, though of late years used only in connection with yachting.

T. W. B., Odessa, Ont.—I had two bitches served by a dog belonging to another man. When there was no distinct understanding about a money consideration for the service of the dog is there any law, written or unwritten, that allows the man owning the dog to have first choice of the pups of both litters? Also please give me the main points as to color and markings that show best breeding of pugs. Ans. It is generally understood, unless some other arrangement is made, that the owner of the dog has first choice of the litter. 2. Consult a good dog book such as Stonehenge or Dalziel's "British Dogs." We have not room here for the description which you ask for.

J. M. H., Oakland, Cal.—Stingaree is a corruption of sting-ray, applied to several fishes of the family *Trygonidæ*, genera *Urolophus* and *Dasyatis*, both of which are found on the Pacific coast. We do not know what the oil is used for.

W. T. L., Little Falls, N. Y.—Will you give me the title and price of some good work on ichthyology? Ans. Get the "Synopsis of the Fishes of North America," by Jordan & Gilbert, published as a bulletin of the U. S. National Museum, 1882, no illustrations.

M. M., Fort McHenry.—Please send me this piece of information: Does the vessel that is filled with water with a fish the weight of five pounds therein, weigh as much as it would with the fish out of it? Ans. This is older than the days of William the Conqueror. The weight of vessel, water and fish is five pounds more than that of vessel and water without the fish.

V. Z., New York.—Is there trout or bass fishing in Lake George? If a person would have to have a guide to find them, and also what the best flies are for August? Ans. No brook trout, but lake trout and black bass. The former must be taken with bait or trolling spoon. You would need a guide or boatman if a stranger. Use red ibis, Cheney, oriole, Mather or jungle cock for black bass.

C. P. W., Westboro, Mass.—I this morning noticed a bird I have never seen before. It was the size of a catbird, colored and marked as follows: Head, wings and tail black, breast white, a deep scarlet heart-shaped spot underneath the throat, three narrow white stripes across the wings, its note resembled that of the thrush, but clearer and not so long; it was on an elm near my barn, and quite tame. Can you tell me what it was? Ans. It was a male rose-breasted grosbeak (*Goniaphea ludoviciana*).

L. T. R., Louisville.—Where can I find some fair trout fishing in Western Pennsylvania or Central New York not more than a day's ride from Buffalo? How would Potter county, Pa., do? Ans. The county named has some trout streams, so has Tioga, Clinton and Lycoming counties, Pa. In the latter you strike Pine Creek. In Central New York there is little good fishing in public streams. If you want to fish a preserved stream, write to James Annin, Caledonia, N. Y. The fish there are plenty, but shy biters, and small flies and fine fishing are necessary.

BOOKS RECEIVED.

FIVE ACRES TOO MUCH.—A truthful elucidation of the attractions of the country, and a careful consideration of the question of profit and loss, as involved in amateur farming, with much advice and instruction to those about purchasing large or small places in the rural districts. New and enlarged edition. By Robert Barnwell Roosevelt. Price $1.50. O. Judd Co., New York.

LORD,** 10 Dexter Place, Cleveland, Ohio.

"THE FAIRY" MINNOW.

IMBRIE'S FAIRY 7.
This is by far the best artificial minnow ever made. It is a great improvement on the "Phantom," which has long been considered the best of all minnows. When put into the water it almost immediately becomes as soft as velvet and as tough as leather, besides having the exact appearance of a real minnow, even in the matter of scales. Our Phantom has been imitated, and so, no doubt, will this be. Anglers will find our name on every box containing one of these minnows, and our well-known trade mark on the card to which each minnow is attached.
The above minnow is No. 7. The following are the various sizes we keep in stock.

Nos.	4	5	6	7	8	9
Inches Long	2	2½	3	3½	4	4½

If your dealer does not keep our goods in stock, or will not order them for you, send us 50 cents for 120-page illustrated catalogue.

FIELD & YOUNG, Steam Yacht Brokers,

6 STATE STREET, NEW YORK.

Black Bass Four-Multiplying Reel.

Designed and made expressly for the "Standard Henshall" Black Bass Rod, which has the reel above the hand. This Reel has our new Lever Drag (patent applied for), as shown in the engraving, by which the line can be stopped when casting at any point in an instant, simply by the pressure of the thumb. And also when the fish is hooked the tension can be regulated by the thumb from a free running to a light drag, or a heavy drag to a complete stop. This Reel also has an Adjustable Drag and Adjustable Click. It is made of the very best of German Silver, has steel gears and steel pivots throughout; is handsome, substantial and well made in every way. This Reel is warranted just as represented, and if not satisfactory can be returned and money will be refunded. Price 15.00.

OUR HEXAGONAL SPLIT BAMBOO

"Standard Henshall" Black Bass Rod,

Which has the endorsement of Dr. Henshall, and from the large number of orders received this season, proves it to be the black bass anglers' favorite. Length 8ft. 3 3-10in.; weight 8oz.

HINDS' BLACK-FLY CREAM,

For Repelling

Flies, Mosquitoes, Midges and other Insects, and protecting the Skin from Sunburn, Irritation and Infection.

No Tar. No Stain.

GLENS FALLS, N. Y., June 15, 1884.

Mr. A. S. Hinds, Portland, Me.:

DEAR SIR.—I have not sooner acknowledged the receipt of box of "Black-Fly Cream," as I desired to first test it; this I have now done on two fishing trips where I found the Mosquitoes, Black Flies, Punkies and Moose or Deer Flies in great abundance. Although all these pests swarmed about me, I found the *Cream a perfect preventive* against their bites when it was applied to face, hands, ears and neck. For many years I have sought after *the* insect repellent, and have tried all manner of compounds, but yours is the most thorough, at the same time cleanly and not disagreeable.

Yours truly, A. NELSON CHENEY.

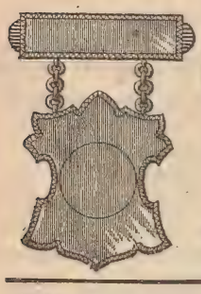
GLOBE FLIGHTS

PERFECT TARGET.



The Globe Flight consists of a pasteboard disk, 5½ inches in diameter, the center cut out to admit a rubber ballon 2¼ inches in diameter, when inflated; 100 can be carried in a coat. There is no rubbish. They may be thrown from any C. P. Trap or by hand. They present a perfect mark, as the balloon is red in color and quickly attracts the eye. A single pellet of shot will puncture the balloon and it collapses instantly. Its use will obviate all causes for dispute. They are all perfect, and fly from the trap perfectly. They will not break unless hit. Every Flight guaranteed perfect, and full count. Packed in small packages, 500 each. For sale by all dealers in sporting goods. Price $20 per thousand. We will pay $2.50 per 1,000 cash for the Pasteboard and Tape in perfect condition at either of our offices.

Samples sent free. Send 4 cents for postage.

CANOE HANDLING.

By C. B. VAUX ("DOT").

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners; and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

Conroy's Patent Universal Reel Seat.

NEAT, SIMPLE AND EFFECTIVE.

It will fit perfectly and securely hold any reel, from the smallest trout to the largest salmon or striped bass size, and its peculiar construction makes the sticking of the reel band impossible. SEND FOR DESCRIPTIVE CIRCULAR.

Province of Quebec.

SALMON FISHING.

North Shore Gulf & River St. Lawrence.

WARNING TO ANGLERS

AND ALL OTHERS WHOM IT MAY CONCERN.

Whereas a suit at law respecting the ownership of certain territory on the north shore of the Gulf and River St. Lawrence, between Cape Cormorant and the northeastern boundary of the Province of Quebec is now pending in the Superior Court of this Province; and whereas a notice has been published by the Labrador Company, offering to lease the fly-fishing in certain rivers flowing through the said territory. Public notice is hereby given that any person or persons making use of the fishing privileges in any of the rivers flowing through the said territory under lease or permission from the said Labrador Company will render himself or themselves liable to prosecution for trespass upon Government property.

E. E. TACHE.
Assistant Commissioner of Crown Lands.

DEPARTMENT OF CROWN LANDS,
Quebec, May 21, 1885.

WILD WOODS LIFE;

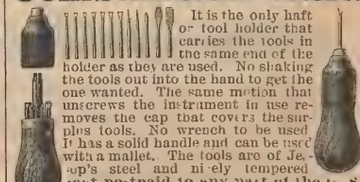
OR,

A Trip to Parmachenee.

BY

Capt. CHAS. A. J. FARRAR.

In this volume the party of young men who figure in "Eastward Ho!" make their second trip to the Maine Woods, going further into the wilderness, and meet with many unusual incidents and exciting adventures. Sure to please all who read it. Charmingly illustrated with full-page engravings. Bound in cloth, 400 pages, uniform with "Eastward Ho!" Price $1.25. Mailed on receipt of price by



JAMAICA PUBLISHING CO.,

JAMAICA PLAIN, MASS.

A Handy Tool for Sportsmen.

HENRY'S PATENT

Combination Haft.

It is the only haft or tool holder that carries the tools in the same end of the holder as they are used. No shaking the tools out into the hand to get the one wanted. The same motion that unscrews the instrument in use removes the cap that covers the surplus tools. No wrench to be used. It has a solid handle and can be used with a mallet. The tools are of Jessop's steel and nicely tempered. Sent post-paid to any part of the U. S. or Canada on receipt of 75c. postal note. Extra Brad Awls, 15c. per doz. **JOSHUA BRITTON & SON** STOUGHTON, MASS.

For Sale.

SALMON FISHING

IN CANADA.

Fly-Fishing for Salmon, Grilse and Sea Trout to let in rivers discharging into the Gulf of St. Lawrence, during 1885 season, from about 10th June to 1st September. Rents from $50 to $1,000 per river.

The undersigned will receive offers for the Fly-Fishing in the following rivers, situated in the Seigniory of Mingan, on the north shore of the St. Lawrence, from the mouths of said rivers to a distance of six miles inland in a direct line.

	Rents.
Manitou	o—Great falls near the sea; untried.
Sheldrake	$100—Good pools, with salmon; untried.
Thunder River	o—Good pools, with salmon; untried.
Magpie	$125—Good pool; falls near the sea.
St. John	Reserved—Large river; good pools.
Mingan & Manitou	$750—Large rivers; good pools; plenty salmon. Rented.
Romaine	$1,000—Large river; splendid pools; large salmon.
Corneil	$125—Small river; good pools; plenty salmon.
Pashasheeboo	o—Small river; untried.
Nabisippi	$100—Good pools; plenty salmon; untried.
Aguanus	$150—Fine river; good pools; plenty salmon; untried.
Natashquan	$1,000—Large river; splendid pools; plenty salmon. Rented.
Kegashka	$100—Fair sized river; plenty salmon; untried.
Musquarro	o—Great fall near the sea.
Little Musquarro	o—Small river; plenty salmon
Washeecostai	$250—Fine river; fine pools; plenty salmon.
Olomansheebo, Coacoacho, Etamamu, Netagamu, Mecattina, Ha! Ha! St. Augustine, Esquimaux, Blanc Sablon,	Each $50. These rivers so far as known have never been tried with fly-fishing, and only partially explored, but are reported by the Hudson Bay Company's officers to be fine rivers, with good pools, abounding with salmon and sea trout.

The first twelve rivers on the above list can be reached by a coasting steamer from Quebec, or by a mail carrying schooner leaving Gaspé the 1st and 15th of every month; the others are accessible only by a yacht or hired coasting schooner, obtainable at Quebec at $6 per day, including crew, who find themselves in provisions.

Stud Fee, $25.00.

STUD FOX-TERRIER

Champion Raby Tyrant,

(K.C.S.B. 11,179.)

Pupped October, 1880. Weight 16½ pounds.

Raby Tyrant is a white dog, with an even marked rich black and tan head. He is a thoroughly game and stylish terrier, possessing a beautifully shaped long punishing head, with perfect drop ears, small eye, rare neck and shoulders, deep chest, well ribbed and muscular quarters, short, straight legs, excellent feet, great bone and substance, with an exceptionally hard and dense coat.

Raby Tyrant is without doubt one of the most successful terriers of the present day. He has been exhibited 67 times, 33 different judges having adjudicated upon him, and has won 47. First 10 cups and specials; 12 second and 2 third prizes. His breeding is undeniable, combining as he does the choicest and most valuable blood that can be obtained. At the stud Raby Tyrant is proving himself eminently successful.

Fee, $15.00.

JOHN E. THAYER, Hillside Kennels, Lancaster, Mass.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, JUNE 4, 1885.

VOL. XXIV.—No. 19. NOS. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices $1.00 per line. Eight words to the line, twelve lines to one inch. Advertisements should be sent in by the Saturday previous to issue in which they are to be inserted.

Transient advertisements must invariably be accompanied by the money or they will not be inserted.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. Newsdealers in the United Kingdom may order through Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng.

Address all communications.

ANSWERS TO CORRESPONDENTS.

PAST AND FUTURE.

BY no means everything has been told as to the extremely unsatisfactory condition of things in the National Park under the late Superintendent. As time passes, new facts come to light, showing his hopeless inefficiency. Travel had already begun in the Park by the middle of last month, and tourists were arriving in considerable numbers. Game was very plenty on the reservation at that date, and hunters were preparing to begin their work of destruction. The presence of all these visitors made it important that the assistant superintendents should be alert and active, moving about from place to place and protecting the game from molestation, the geysers from destruction and the forests from fire.

At this time there were in the Superintendent's corral at the Mammoth Hot Springs five mules and four horses, and about the headquarters were seven assistant superintendents, two constables and a game keeper. These men were unable to do any work, because they were not allowed to use the horses, but Carpenter's family used them whenever they wished to for their own riding or driving, and in fact it is said that the sole duty of one of the assistants was to drive about the members of the Superintendent's family. These subordinates were literally unable to get horses to patrol the Park, and it seemed as if the then Superintendent expected them to walk, packing their grub and blankets on their backs through the snow in pursuit of violators of the law, who were well mounted and equipped.

Ex-Superintendent Carpenter's shortcomings are such unpleasant ones, that we are very willing to bid them farewell, and we shall not refer to them again except when necessary.

The future promises better things. From various quarters come to us comforting assurances of the interest which is felt in the Park by prominent members of the Government at Washington.

A well-known gentleman, in whose judgment great confidence is felt, and who has met Col. Wear, the new Superintendent, says of him: "He is a man with a backbone and, I think, a level head."

When the new Superintendent reaches the Park, he will find an abundance of work to do. We hope that he may select as his advisers men of the right stamp, and we have reason to know that he has already made an admirable beginning in this respect. Col. Wear may feel assured that it will be an easy matter to win the cordial approval of all those who feel an intelligent interest in the Park.

We hope that better times are coming.

THE NEED OF EXPERIMENTS.

THE season of 1885 is to be a busy one on the home ranges. There is not, it seems, any chance of a match against a visiting team of foreign riflemen, but with the growth of shooting here and the multiplication of clubs it is coming to be recognized more and more that there is no end of good and exciting sport in shooting club against club, in telegraphic or mail matches.

In some respects these matches fall far below a personal meeting of the men on the same range at the same time for a shoot under exactly the same conditions, but the very fact that two clubs are in shooting rivalry, leads them to study each other's methods, to read conditions critically, and to apply them exactly, and most of all, it teaches a rifleman that most important lesson, that there is somebody else who can shoot as well as he, and perhaps a bit better.

The new army target is now going into use at the various posts, and has provoked a great deal of talk and comment. There is much to be said in its favor; much more against it as a theoretically correct target. The best test will be to have one of the new targets on each of the civilian ranges throughout the country and then a body of scores will be made up for comparison with the records of the army marksmen. Where there is an army post there should be at once a team of militia shooters ready to do battle with the boys in blue. This will show the people not to place too much reliance on the professional, and at the same time urge the army men up to the very best class of work. This was the plan by which, during the past ten years, the regular soldiers were made into shooters, and by which they have learned no end of valuable lessons about rifles, their make and loading, from men who shoot because they love the sport, and who bring brains and money to the development of their hobby.

There is not enough of this experimental work on the range. Each association should devote a portion of its efforts and treasury contents to this important pioneer branch. On every range where more than a dozen shooters congregate there is some one who will undertake these experiments, and give his time and labor provided the necessary expenses of arms, ammunition and appliances are met. These need not be very great, and with the suggestions and hints which all may offer, much that each man may use in his own practice will be the outcome of the effort. There is too much pot-luck banging away at present. Each man thinks he has a trick of getting bullseyes, and proceeds to put his notions into practice. Instead of that the art of rifle shooting is an exact one, which any man of proper physical abilities may acquire, and which he may teach to his fellows with assurance and ease. *Experimentia docet* applies here, as well as in any other department of human knowledge.

CAN WE KEEP THE AMERICA CUP?

WHILE scarcely two opinions exist as to the superiority of the cutter over the sloop under most conditions of wind and weather, recent information has enabled us on this side of the Atlantic to gather fresh hope that the America Cup may not go abroad after all. The agent on the part of the English challengers is likely to be compelled to accept the three courses proposed by the committee of the New York Yacht Club to make the matches at all possible. As far as known these courses include one of twenty miles to windward and return, outside the Hook, one triangular drive, and one over the club course of the New York Yacht Club. Manifestly the chances are strongly in favor of the best reaching boat, and on that point of sailing the sloop seems to have the best of it, so far as opportunity for comparison between the two types has been afforded during past years. But, with an overconfidence not justifiable, the English also appear to be on the point of sending out green vessels whose performance is a matter of speculation rather than certainty. Thus, while Genesta was unquestionably a good one to windward last season, she has at the last moment undergone radical alteration in the addition to her outside ballast and more hoist to her mainsail. This may all be an improvement and it may not. To take her departure without full and satisfactory trial is to send across a vessel whose capabilities are not truly known, and a corresponding risk of failure will have to be shouldered.

On the other hand, the new Galatea is now being subjected to preliminary ordeal with other British yachts, and up to date has not fully borne out expectations. Much must be allowed for her green state and the lack of a practiced crew, so that with sundry improvements in trim, and with the limbering up of her gear, she may yet make her mark as a fitting representative. At present, however, despatches indicate that she is not the equal of the yawl Wendur, and not specially bright either in running or turning to weather. Apparently she attains a tolerable average, but that is not enough to warrant sending her across as the champion flyer of the small-waisted family.

It is to be regretted on the English side that both Genesta and Galatea emanate from the same source, and that neither is up to the mark in reaching, the most essential attribute in three matches, four-fifths of which will likely be with sheet stuck out. We regret that Irex is not among the visitors expected. Last year she carried off the palm as a reacher, and this year is doing famously at turning as well. It would not surprise us to find Irex at the top of the heap in this season's record in English waters.

What further experiment may do for Galatea, and how Genesta will show up with her alterations, no one can yet positively say. But so far as the pair have made any display we may summon fresh courage on this side of the Atlantic, for it is doubtful after all whether we are to meet the best or only the second best of the squadron of big foreign cutters.

It is not out of place here to compliment the New York *Herald* for keeping us informed by cable upon the doings of the cutters abroad, supplying through its enterprise more information concerning Galatea and Genesta than is to be gleaned from all the English publications right on the spot.

THE NATIONAL GUN ASSOCIATION.—In a letter printed in another column, Mr. J. E. Bloom announces that he proposes to retire from the active management of the National Gun Association. Mr. Bloom, as is well known, was the originator of the association, and since its formation he has been its head and front—the man who did the work. He has given to the project a very great deal of thought and time, and has labored diligently and courageously to establish the concern on a self-supporting basis. But the association is not yet so strong that it can dispense with such an executive officer as Mr. Bloom has proved himself to be. When he steps out, then, it is extremely important that his successor should be a man of the same devotion to the work and ability to perform it, for without such an officer the association will just naturally fall apart. Who is the man for the place?

MUTABILITY.—The report of the Woodmont Rod and Gun Club (of Washington) just at hand, contains a striking illustration of the mutability of human affairs. The president of the club, Mr. S. H. Kauffman, of the Washington *Star*, notes that of the twenty-five members originally constituting the club in 1880, but nine are now connected with it. These changes have come with the common mutations of life. Death has played his tragic part with the little circle; business reverses may have caused some to withdraw, and removals to other localities have in some instances rendered resignations unavoidable.

THE DEER HOUNDING BILL has not yet been signed. When Gov. Hill intimated that his objection to it lay in the clause respecting giving of evidence, and when he assented to sending the bill back for alteration in this particular, he as much as said by that action that in its amended form the measure would receive his sanction. We do not understand how he can now creditably withhold his name from it. Certainly the bill is not one of those which he can avoid signing on the plea that he did not have time to consider it, for he has considered it and must know that it is a righteous measure demanded by the people.

SUMMER READING.—In cosy camp, quiet cabin, carvel canoe, cornfield corner, conspicuous castle or crashing caboose, the FOREST AND STREAM will prove just the sort of reading for summer hours.

The Sportsman Tourist.

HO FOR THE WOODS!

OUT of the madding crowd,
Away from wolfish care,
On the might of white-winged steam,
Away through the July glare;
What hope and promised peace,
In the stretch of the iron track,
To the north-land's wind-swept lakes,
And its hemlock shadows black.

Cast not a look behind
At the cornfields, waving black,
Or the white heat quivering o'er
The wheat-land's golden back;
And ne'er a backward thought
Of the pulsing, dusty ways,
Where thick walls mesh the sun,
And thrall the burning days.

But on, with deep desire,
Where blue waves lap the shore,
And jagged pines keep watch
By th' white beach evermore;
Where Norway columns red,
Lift dusky arches high,
Murmurous as summer seas,
To north-land's violet sky.

There, where no axe hath cleft
In solitudes profound
The sinuous trout streams run,
Darkling the rocks around;
And by some lonely lake
The red deer antlered stands,
'Mid flowering lily-pads,
Beyond its hoof-marked sands.

When evening's sun sinks low,
In deeps of rose and gold,
When weird loons, shrill high,
In strong flight, swift and bold;
When mellow whip-poor-wills
Make sweet the thicket's gloam,
And through the clear, crisp dusk,
The whizzing night-hawks roam—

Then pile the resined logs
'Till red flames flush the night,
And showers of sparks on high
Glow each tall pine alight;
As jest or stories pass
From lip to lip with zest,
Like children out of school
Recline in careless rest.

Then think, in blest content,
Of summer's quivering heat,
O'er field and parching plain,
And the pulsing, dusty street;
Fair gleams the forest tent
Against night's starry crown,
And sweet its hemlock couch
As monarch's bed of down.

MRS. M. E. BANTA.

ON THE GREAT MEXICAN DESERT.

A DESERT is not generally supposed to be very enjoyable, but among the pleasant recollections that I shall always have of Mexico, the days that I spent last winter on what is known as the desert in the State of Durango, will hold no subordinate place. This desert, which covers a large part of what is known on the map as Bolson De Mapimi, is called a desert because the rain is in general insufficient to raise crops, and springs or streams are too far apart to make it available for live stock without digging wells. Most of the soil is, however, very good, and underground water is not so deep as in many good sections of the United States. Much of it is well covered with bunch grass, and none of it bears any resemblance to the sterile deserts of Nevada or Arizona.

When the sun rises upon this country in the morning it looks like an enchanted land. The rugged mountain chains in the distance are cut up into turreted castles, with miles of space between them; lofty towers arise where yesterday you saw nothing, and whole miles of mountain that yesterday bounded the horizon are suddenly gone. Broad lakes with timbered islands shimmer in the distance, and miles of dried bunch grass far out upon the plain arise in a long, yellow palisade beyond it. Many of the effects of the mirage continue through the day, but the most wonderful are just about sunrise.

Climb one of the highest hills and you look down upon a vast succession of stupendous plains, gray and yellow, and brown and dark, according to the vegetation, but nearly all as level as a ball-room floor, and most of them of a soil of great richness when properly wet. Among them rise ranges of low ragged hills, some rolling four thousand feet above the plain, but most of them from one to two thousand feet high. Over these hills your eye may wander in vain for timber, streams or springs. It rests upon no soft green mountain meadows, no timbered cañons, no grassy slopes. All is a dry, bare, dreary waste of rock and rubble, with a few bushes and an endless variety of cactus struggling for existence in the openings among the stones.

Little would one expect to find any game upon such a tract. The hare you think may live there, but you little suspect the existence of antelope, deer or wild pigs on a vast reach where you can see no sign of water, no green grass, no green bushes, scarcely cover enough to shield a hare from the noonday sun; yet they all live there, not indeed in general abundance, but concentrated enough at times to make good hunting in places. Those broad sweeps of bunch grass contain antelope, though the land may there be too level to stalk them. Those wide expanses of dark, weary looking brush that so thinly cover the plains in places often contain plenty of deer. Vainly you would look for them in these hills, for they do not keep in them as deer generally do, though none too rugged for their nimble feet to traverse. But upon the low mesas and rough washes by which the mountains slope away into the plains, where the Spanish dagger and other varieties of cactus stand so dense upon the ground that you must watch nearly every footstep, you will find the large mule deer as fat and glossy as ever you saw a well-groomed mule. And when he runs it will not be toward the hills, as you would expect, but toward the brush that stands upon the open plain below. Into this brush on the plain it is quite useless to follow a deer; and in it there is little use of hunting unless upon horseback or in a wagon, to raise you above the brush enough to see a deer to advantage. Though comparatively thin and low and easily threaded, it is still dense enough to conceal a deer at any considerable distance, and high enough to hide his body at a very short distance. But with a horse from which one can shoot with a rifle, fine sport may be had in most of it, and deer would be even less afraid of a wagon.

On the rolling washes and mesas between the mountain and the plain, I found the best hunting; but even there I found extreme caution necessary. The deer were much wilder than I had expected to find them in a place where no one hunted them, and the ground being stony and rough they were easily alarmed. Even with the advantage of moccasins I could get not a bit too near to any of them. They were also extremely hard to see, even in the low cover of thin brush and cactus that clad the slopes. Often only the head and part of the neck could be seen. Three in succession I shot through the neck purposely, it being impossible to tell where the body was. Though I have fired thousands of shots at deer, I never before shot deliberately at so many necks in so short a space of time. In spite of these disadvantages, however, I found it about as pleasant hunting as I ever had. There were no big hills to climb, streams to cross, or bogs through which to flounder. Cactus I knew how to traverse long ago, and there was no brush through which it was necessary to force my way. Deer were plenty enough to make a shot at one or two almost a certainty when I went alone, and it was not necessary to go more than three miles from the house to find them, and generally not half of that.

The weather was absolute perfection. It was just warm enough to allow one to hunt in thin clothes and lie upon the ground to rest, or sit upon knolls and look over the surrounding brush, yet just cool enough to be bracing. This combining with the elevation (4,000 feet) and the extreme dryness of the air, produced a ravenous appetite. Even without any game it would be a luxury to lounge about in this mountain air in shirt sleeves after reading of the blizzards and snowdrifts and polar waves that have swept the North this winter. I have but one opinion of the man who will stay and stand such inflictions when he can get away from them. The more time I spend in luxurious climates and think of what I used to endure, the more I feel that after all fine weather is about half that is worth living for. It is an old remark that you "cannot live on climate." But you can come very near it. Get the climate and it takes a very small amount of lubricant to overcome the rest of the friction of life. The climate of this part of Mexico is much superior to to that of the Valley and City of Mexico. It is infinitely drier, even the rails of the Mexican Central being nearly always perfectly dry at sunrise. During the three winter months that I have spent at various points from Lerdo on the southern edge of Durango to Chihuahua, there have been but three rainy days and five others cloudy. All the rest have been bright and warm, with an absence of wind that is most remarkable for such great plains. When a polar wave rolls over the north it is felt here in cold nights which occasionally make ice, but when the sun comes up it is soon warm.

The deer here range with freedom in the thickest cactus and run through both prickly pear and Spanish dagger in a most reckless manner. I found the stomachs of five filled with the lobes of prickly pear which they had swallowed in large pieces without apparent inconvenience from the spines. Their feeding upon this and also the central stalk of a low kind of dagger plant explains their living without water and the good condition in which they are found late in the winter when deer elswhere are getting poor. Many, however, stay far out in the brush of the plains and rarely go to the hills, but will go many miles for water.

In most all the hilly sections of this tract and even well out in the brush of the plains the Mexican wild pig, or peccary, is found. It is built more like a sunfish on legs than a hog, is extremely watchful and can vanish through the brush in fine style, unless wounded, in which case you had better vanish if any of its companions are near by. They travel in bunches of five, ten or even more and beat regular trails or runways on the rough ground, but are even harder than a deer to get sight of, as they are so low and do not hold up their heads as deer do. They are said to be very good eating if a gland in the back be removed and if they are kept a few days before cooking, but having plenty of venison I did not try any of them and did not hunt for them at all.

The large hare occasionally sprang from my path and darted away with ears brushed back as he plunged through a large clump of bunch grass or under some projecting stick, and in a moment skimming an open open spot with lofty jumps and ears upraised, stopping at the opposite side, perhaps to inspect me. The little hare, too, whisked out of an occasional bush and dodged, with tail of flickering white, quickly out of sight. Quail like those of California in general color of the body and energy of legs ran along the ground well out of shot or rose with a whizz when surprised. These quail instead of having a single plume as the California quail have topknot of several feathers, a dirty gray below and white upon top, the white showing plainly when they fly. About the only notes they make at this time of the year are the alarm notes, a faint *week-wee, week-wee*, in quick succession and a *ching, ching* at intervals of a few seconds. Both of these are different from the notes of the California quail. This quail keeps in coveys and does not pack into large flocks as the California quail does, which would materially lessen the possibility of making a large bag of them. They are, however, of much better flavor and a trifle larger than the valley quail of California.

But small game is not here abundant enough away from the water courses, lakes and irrigated fields to make its pursuit worthy of much special attention. All through Mexico, wherever there is water there is generally plenty of waterfowl and English snipe in winter. I have not had time to inspect the lowlands, the *tierra caliente* or hot country, but would advise any one going there to take both gun and rifle, as one is liable to stumble upon fine shooting where one least expects it. Not one in a hundred would expect to find deer on such ground as I have described, and the hills between Jimulco and Fresnillo, which abound in both mule deer and the white-tail or Virginia deer, most hunters would pronounce worthless for deer hunting.

On this desert the deer have all the little tricks of brush deer generally. They will lie still and let you pass them without moving at all. They will stand still in the brush with heads down, and in the same way let you pass them. They will sneak off on a low trot without raising their heads or making any noise that you can hear. As with other deer, their curiosity often gets the better of them, and after they have neatly avoided your eye and got well past, they cannot resist the temptation to have a look at you. One of the finest bucks I got here let me pass him about sixty yards on one side. When I had got nearly one hundred yards past him I looked around again, as on account of this trick it is my custom always to look around on each side, behind as well as in front. There, in a place where a minute ago there had been nothing at all, was a huge head and horns and half of the long gray neck in plain sight, with a full battery of curiosity from the big ears and black eyes playing full upon me.

Some of the streams that cross this vast tract contain plenty of fish—in fact, contain about the only fish worthy of mention to be found in the highlands of Mexico. At Lerdo I have seen a half a dozen donkeys each staggering under a load of catfish, and as many more beneath a load of suckers. The catfish run from half a pound to twelve pounds in weight, with an average of about six pounds. They are caught with the hook, also with nets. These are, by all odds, the finest flavored catfish I have ever seen, being as much superior to the catfish of the United States as the catfish of the East is to the "mud cat" of the lower Mississippi. They are plainly a different variety; but it is so many years since I have seen a catfish that I cannot accurately describe the difference. The suckers run as high as eighteen pounds in weight, with an average of about eight. These, too, are different from anything I have ever seen East or West. They are deeper than the Eastern sucker, in whose capture with the spear I took so much delight when a boy, yet not so deep as the "buffalo fish" of the Western waters, with which it is here classed by some. It is also much thicker than the "buffalo fish" and a different fish entirely.

This sucker I did not try, being satisfied with the very safe presumption that a sucker is a sucker the world over. They do not take the hook, but are taken with nets and spears, etc. Both these fish are extremely cheap, the catfish selling at two cents a pound and the suckers at about one cent. So far as I can learn by the most careful inquiry among natives and Americans and other foreigners who have lived here many years, there are no trout in Mexico. From the high mountains that form the southern rim of the Valley of Mexico tumble brooks as clear, as cold and as foamy as ever gladdened the soul of an angler. Every pool or ripple speaks of trout, but none are there. And among the natives are no traditions from which one could conclude that there ever were any. Still there is reason to hope that in the great range of the Sierra Madre, abounding in deer, bears, turkeys, squirrels, etc., and almost unknown to any but the Indians, there are trout. These mountains are of vast extent, abounding in fine forests, parks and brooks, and will afford a splendid field to the sportsman for many years to come. The greater part of the range is free from the Apaches and has never been troubled by them.

By the way, it is refreshing to note the progress of the world in matters of natural history. A short time ago, some one shot from a train on the Central a sickle-bill curlew. It was pronounced a woodcock by every American on the train, one gentleman from Nebraska snuffing out my feeble light with the remark that he "had shot thousands of woodcock and knew what he was talking about." I forgot to take his name and address. So far as I can learn there is not a woodcock to be found on the Mexican highlands, and all the natives I have questioned insist that the English snipe is the only *Picolargo* (long bill) that they know of that kind.

T. S. VAN DYKE.

Natural History.

THE LESSON OF A MARKET.

ON March 28 of the present year I took a glance at the market of Norfolk, Va. On entering the market square my attention was called to the strings of small birds suspended from the booths, and I at once examined all I could see exposed, and carefully noted the species and their condition. The hour was late, it being midday, and I have no doubt an earlier hour would have shown a much larger exhibit, besides, probably, adding to the number of species observed. The following were the species exposed for sale: Robin, *Turdus migratorius;* catbird, *Mimus carolinensis;* brown thrush, *Harporhynchus rufus;* bluebird, *Sialia sialis;* yellow-rumped warbler, *Dendroica coronata;* cedar waxwing, *Ampelis cedrorum;* red-eyed greenlet, *Vireo olivacea;* loggerhead shrike, *Lanius ludovicianus;* English sparrow, *Passer domesticus;* purple finch, *Carpodacus purpureus;* savanna sparrow, *Passerculus savanna;* grass finch, *Poœcetes gramineus;* song sparrow, *Melospiza fasciata;* cinereous snowbird, *Junco hiemalis;* white-throated sparrow, *Zonotrichia albicollis;* fox sparrow, *Passerella iliaca;* chewink, *Pipilo erythrophthalmus;* cowbird, *Molothrus ater;* field lark, *Sturnella magna;* red-winged blackbird, *Agelæus phœniceus;* purple grackle, *Quiscalus purpureus;* common crow, *Corvus frugivorus;* red-headed woodpecker, *Melanerpes erythrocephalus;* flicker, *Colaptes auratus;* screech owl, *Scops asio;* Carolina dove, *Zenaidura carolinensis;* besides the various species of sandpipers, plovers, snipe and ducks, the only legitimate game birds seen at the market.

In point of numbers the robin was by far the most numerous of those not considered game birds. Next to the robin was the field lark, then cherry birds or cedar waxwings and blackbirds (including the grackles and cowbirds). Woodpeckers were upon almost every string and bench. The sparrows were perhaps the most prominent of the remaining birds in the list. Some twelve or fifteen booths or stands had these birds for sale, along with limited quantities of every conceivable animal and vegetable that the fields, woods or water could contribute. While some stalls had three or four hundred small birds, others would have but a dozen or two. I regretted that I could not have seen the market before the sale of the day began, as undoubtedly most of the stuff had been disposed of before I arrived upon the scene. Nearly all of the venders were colored people, and doubtless most of the birds were captured by the same class. A glance at the list will show an utter disregard of the game laws, if indeed such laws exist. Several purchases were made in my presence, and the vendors laid great stress upon the good qualities of the waxwings, sparrows and blackbirds as being superior to the shore birds and robins, which latter are more commonly and abundantly offered for sale.

At one stand I was amused to find a crow and a screech owl. To the question, "Are owls good?" the darkey re-

plied, "Yes, sah, all birds is good to eat;" and when the question was asked, "They don't eat crow, do they?" the answer came, "Course dey do. Crows eat corn, don't dey? Den why isn't dey good?"

The very poor condition of the birds was surprising. I was aware that all birds in the spring migrations were usually in poor condition, and was prepared to find them unusually lean this spring on account of the lateness of the season and the intensity of the cold weather then hardly past, but did not expect to find birds for sale in such skeleton condition as were these. Among all the kinds exposed for sale, not even excepting the ducks, no bird in fair condition for market could be found; most of them were scarcely better than skin and bone. Even were these songsters in marketable condition, their killing should be unlawful. How great must be the number of migratory birds which annually are killed, in poor condition for food, while on their way from perpetual abundance to their breeding homes still covered with frost and snow.

The object of this article is to bring before the minds of naturalists, sportsmen, farmers and the public at large, the immense destruction of birds that are a protection from an over abundance of insect pests, at the same time cheering the hearts of all by their beauty and song. The daily exhibit in Southern markets furnishes an illustration of the utter want of public opinion and law against the practice of shooting everything with feathers on it and calling it game. This indiscriminate shooting is needless and does incalculable harm, as is evident to those who have given the subject any thought.

Laws should be passed in sparsely settled States as well as in the most populous one, which would restrict the shooting of birds other than game birds. Economic ornithology is of more importance than economic entomology, and upon both of these depends the success of economic botany. Protect the birds and they will protect the plant food from insects. Once get this idea into the minds of the farmer, the merchant and the consumer, and he will vote for the man who will pass laws to protect the birds. This is the best and most economical method of keeping down the superabundance of destructive insects and keeping up the harmony and proportion of nature.

If every one who takes the FOREST AND STREAM would interest himself and his friends on this subject and place it properly before the Assemblyman of his district, it would not be long before laws would be passed in every State against the wholesale destruction of our needed friends and cheerful companions. It is but natural that the Southern States should be far behind in the enaction of game laws, and that, on account of the negro population now thrown upon their own resources for food, there should be more destruction of useful birds than in the North. Agriculture and horticulture, which need protection more in the South than in the North, demand the protection of birds not fit for food. The only way to reach the pot-hunter is not only not to buy his insignificant food supply of small birds, but to pass laws against the killing of such, other than for strictly scientific purposes.

There is a good reason why there should be more strenuous laws in the Southern States against the indiscriminate killing of birds than in the Northern States, and that is this: Almost all of the birds of the North migrate to or through the South, and the killing of birds in the Southern States, especially in the spring and fall, not only destroys the friends of the South, but the friends of the North as well. It is a well-known fact that when Northern birds migrate South they collect in communities or flocks and thus remain until they return the following season to breed, when they are scattered in pairs in secluded places to rear their young. It is evident, therefore, that greater numbers of migratory birds can be slaughtered in the South than in the North, and all the more reason exists why there should be stricter laws where at present little or no attention is paid to the matter.

The subject seems to me an important one and should be brought to the attention of every intelligent person who can aid in remedying the evil as it exists and where it exists.

GEO. B. SENNETT.

AM. MUS. OF NAT. HIST., NEW YORK, May 21.

PHILADELPHIA, May 30.—The warbler tribe have been passing through this section since the 18th or 20th of the present month, very little specimen shooting has been done, however, owing to a fear of arrest. The property owners in the several districts within the city limits have become much put out in the last two or three years at the wholesale destruction of song birds in the spring and do not hesitate to arrest for trespass, feeling that if the law which protects these men and boys in collecting for scientific purposes is used by the milliner as a blind, the best way to stop the shooting is to post their lands and prosecute for violating the trespass law and the ordinance which prohibits the firing off of a gun or pistol within the city limits.—HOMO.

ARIZONA BIRD NOTES.

Editor Forest and Stream:

Presumably in bird life, every part of the country can and does produce its own peculiarities: but the season in Arizona, for nesting and bringing forth young, being fully twice the length of those in the Eastern States, extending as it does from early in February to September, the opportunities for observations of interest are proportionally greater.

The *Harporhynchus palmeri* are now busy with their second brood. On the 7th of March, I found the first broods almost fully fledged and ready to take to the brush. Here in the vicinity of Tucson I frequently found four and five eggs in a nest. In the vicinity of Quijotoa, between seventy and eighty miles southwest, I examined many nests and found three eggs to be the maximum number. Why this should be I do not know, as the conditions of life are similar except that it is much drier there; but I have thought that probably the explanation lay in the clutches being those of the first and second broods. Those that I examined here belonged to the former; those at the Quijotoa to the latter. The *H. palmeri* invariably in Southern Arizona build their nests in chollas, one of the prickliest and most dreaded of the cactus family. The nest is generally from four to six feet from the ground, the foundation is laid with coarse thorny twigs, the nest proper of finer material, lined with grass or vegetable fiber, and commonly about four inches deep with a like diameter.

H. bendirei did not nest till some two weeks later than the *palmeri*. As a rule they nest in similar places, but do not confine themselves to the chollas, inasmuch as I have found them nesting in the branches of mesquite eight and ten feet from the ground. Usually, however, they patronize low, bushy chollas, and build not more than three or four feet from the earth. The nest is made of much lighter material than that of *palmeri*, less bulky, and on the whole it is less laboriously made. Three eggs is the maximum number laid. There is a wide difference as to coloring and size, the eggs in no two nests being alike, but more of this in a later letter, as I will then give measurements.

The *Scops trichopsis* did not begin laying until about April 1, and the Whitney owls (*Micrathene whitneyi*) not until a month later. The young of the former are full fledged while those of the latter are yet either very small or undergoing the process of incubation. Both birds nest in woodpecker holes in the sahuara (giant cactus).

Two weeks since a friend and myself, by the aid of a 20-foot ladder, secured ten young *Scops*, and have succeeded in raising them all. The five that fell to me are thrifty-looking birds and not at all wild. Their manner of swaying their bodies to and fro is both a curious and interesting sight. I secured one nest of *Scops'* eggs (five) that have the appearance of being fathered by a sparrow hawk (*T. sparverius*). In size and shape they are thoroughly like *Scops*, but are spotted after the manner of those of the sparrow hawk. I imagine that spotted *Scops'* eggs are exceedingly uncommon. I could not be mistaken as to their identity, inasmuch as I took a female *Scops* off the eggs.

Another curious thing in the egg line came to my notice during a visit to the Quijotoa some two weeks since. I found seven eggs of the Arizona quail (*Lophortyx gambeli*) in the newly made nest of a Palmer's thrasher. The nest was near the top of a cholla about four feet from the ground. My first impression was that probably an Indian had placed them there, but was soon convinced to the contrary, as I found it impossible to get my head near the nest without first breaking down a part of the cholla with the barrels of my gun. The eggs were fresh and very finely marked.

While at the Quijotoa I heard of a very curious bird-animal, a fully-feathered bat, color of plumage grayish brown. Unfortunately I did not see it, but the statement may be relied upon, however improbable it may seem. It was purchased by a lady (Mrs. L. A. Henry) from an Indian for a loaf of bread, with a view of sending it to me here, but it escaped on the third day of its captivity. It, I was told, resembled a cross between an owl and a bat. It was feathered and had a beak much resembling that of a small owl, but its body and feet were bat-like. The Indian had a string around its body and allowed it to crawl up his person; this it would do with any one on whom it happened to be put. If placed against a rough, perpendicular board it climbed it with ease. This entire statement may sound cock-and-bull-like, but that there is such a thing as a bat-bird I am satisfied is true nevertheless. What say you, Mr. Editor, as to the probability of such things existing? The one in question was seen by many people, who can testify to the truthfulness of the foregoing.

At Quijotoa I received several specimens of Bendire's thrasher. This was something of a surprise to me, as I had never before known the bird to be south of this place. Also secured from an old prospecting shaft a fine specimen of the barn owl (*Aluco flammeus pratincola*). It is the first of the kind that I ever saw in the Territory. When in the same section of the country four months ago, I made close search for the Whitney owl, but could find no trace of them, which fact led me to believe that they did not live in the high dry mesa lands. I was further convinced by a futile search made for them several months previously in a like waterless locality, but this theory was upset during my last trip by the killing of a fine male specimen on the eastern slope of the Quijotoa range. Scott's oriole was also there and other birds, of which I will write you more anon.

HERBET BROWN.

TUCSON, Ariz., May 25.

[The "bat-owl," if seen by our correspondent, would probably have resolved itself into some well-known bird.]

THE IVORY-BILLED WOODPECKER IN FLORIDA.—A correspondent of FOREST AND STREAM, writing from Glencoe, Fla., inquires about this bird and where it can be found. It would be well for all correspondents to mention the name of their county, so many new towns are springing up everywhere that are not down on the maps. In the month of March, 1870, being camped at the foot of Merritt's Island on the Indian River, in Brevard county, Fla., I was waked at sunrise by a noise as of a gang of ship carpenters at work in some heavy timber near a quarter of a mile from our tent. Inquiring of my guide the cause of this, I was told it proceeded from a family of "big logcocks," and from his description I was satisfied that it was *Picus principalis*, the ivory-billed woodpecker, of which I had read in Audubon as occurring in these Southern forests, which was making the chips fly. In 1872 I procured a male specimen of this bird, which was shot in the great Turnbull Swamp, near New Smyrna, Volusia county, Fla. Afterward, about 1878, I saw a pair of the skins of this woodpecker for sale at the shop of a taxidermist at Enterprise, on the St. John's River. I have no doubt this bird is to be found in the cypress swamps of Southern Florida, but nowhere within sound of the guns of the game butchers who infest Florida in winter. It is always rare, inhabiting the most solitary places remote from mankind.—S. C. CLARKE (Marietta, Georgia).

NIGHT HAWKS have arrived round about Philadelphia, and as is often the habit of these birds, more than one pair will select the extensive roofs of large buildings on which to build their nests One pair I have noticed, have evidently chosen the roof of the Academy of Natural Sciences on Broad street for this purpose, and their queer gyration from 4 P. M. until sunset last evening, proved to me that they had mated. I was told a pair used the same roof as a nesting place last year, and their movements were carefully watched by a merchant across the way.—HOMO (Philadelphia, May 30).

CENTRAL LAKE, Mich., May 26.—The humming birds, bless 'em, made their first appearance among our flowers on Saturday, the 21st, and have since been constant in their attentions and civilities.—KELPIE

KEOKUK, Iowa, May 28.—At a meeting held at the United States Court room Tuesday evening, the Keokuk Fish and Game Protective Association was formed, the object of which will be to see that the laws of the State of Iowa looking to the protection of fish and game shall be strictly enforced. Col. S. S. Curtis presided and Luke Hulskamp acted as secretary. The following officers were elected: President, H. H. Clark; Vice president, Luke Hulskamp; Secretary, Fay Worthen; Treasurer, I. L. Brown. Frank Hagerman and W. T. Rankin were appointed a committee to dratt the articles of incorporation and by-laws, and to circulate the same for signatures.—W.

Game Bag and Gun.

THE ANTIQUARY'S ARMORY.

(Suggested by K.'s "Reminiscences" in Forest and Stream, May 7.)

THEY hang on the carven oaken wall
Of picturesque, ancestral hall,
Armors in ancient battles worn,
Banners and pennons shred and torn;
Cuirass and helmet, gorget bright,
Dinted and pierc'd in stormy fight,
Breastplate and morion, casques of proof,
Hanging from rafter and groined roof,
Burnish'd shields that have turn'd aside
Bullet and arrow in battletide;
Swords double-handed, claymore blade,
By Scottish hands in forays sway'd—
Weapons of every age and race
In this old gallery find a place.

Stiletto, dagger and poniard keen,
Toledo rapier, Highland skene,
Banners that stream'd from castle crag,
Trafalgar Nelson's blazon'd flag,
Standards at Moscow's gate that flew,
O'wav'd in the flames of Waterloo,
Banners of Cressy and Poitiers,
Or Marston-Moore in the vanish'd years,
Star flags that wav'd on Bunker's height,
Flags of the old Saratoga fight,
Blood-red ensigns of Lundy lane,
Of Orleans, borne o'er the British slain;
Flags of the grand, chivalric joust,
Where spears were shiver'd and lances lost;
Flags of Gettysburg's stricken field,
Or where the cannon of Shiloh peal'd;
And many another tatter'd fold,
Scorch'd in the fires, in slaughter roll'd.

There were weapons of Indian strife,
Red tomahawk and scalping knife;
Buckler of skin and wampum crest,
War club and sling of the savage West,
Shafts of a pre-historic race,
Fashion'd for ravage or the chase;
Knife of the Norseman, keen to slay,
Pawnee arrows of lawless fray,
Spears of the ruthless Carib band,
Light assegais of Afric land,
Deerhorn naliget, tipt with steel,
Of Arctic hunter of the seal;
A Feejee paddle and war canoe
Once mann'd by a Cannibal Island crew.

All these mementoes of peace and war,
From frozen pole to the tropics far,
Shine out as the sunbeam filters clear
O'er kandjar, creese and spur and spear.
They rest in peace from hunt and fight,
The dust of years gathers on them white,
They crumble in Time's corroding rust,
The hands that fashion'd them lie in dust.

These weapons remind of other years,
When swept the Saxon with plump of spears,
Of pulk of Cossacks in wild hourra
Storming around Napoleon's war;
Of Indian tribesmen o'er grassy plain,
The plunging chargers, the tossing mane,
The swinging lariat, level'd lance,
The massacre, the great war dance,
And of many another stirring scene—
When these old weapons were bright and keen.

GREENPORT, May 11. ISAAC MCLELLAN.

THE BIG BOAR OF OKTIBBEHA.

THE sketch in your issue of May 14, "Wild Boar Shooting in Syria," reminds me of an incident many years ago in Mississippi. Three of us were on a deer drive in good old Oktibbeha county and bordering on Trimcane Swamp. A few miles north and west of Starkville lies a beautiful egg-shaped prairie, about one mile across and two the longest diameter; perfectly level, and at the time one mass of brilliant flowers and wild strawberries. A gray horse in the company looked as though he had walked in blood fetlock deep, just from the strawberries crushed in riding over the prairie. As we rode through the center we met a hunter on horseback carrying a wounded hound before him on the saddle and in his arms, and upon inquiry we learned that the monarch boar of all that country had attacked and nearly killed his favorite dog, and he was hurrying home to have him attended to—at the same time with a hearty oath—he wished we would go back with him and kill the brute. After attending to his bleeding hound we mounted and rode back with him, calling in all the dogs (we had ten or twelve splendid ones) except one, a pup that we had lost an hour before, that was still behind. An old boar, monarch of a gang of hogs, running wild all his life as they do in the swamps, is a dangerous enemy to meet, for with his scimeter-shaped tusks and stubborn courage he feels himself able to cope with the largest gray wolf, and never hesitates to attack on sight. The one we were in search of had ripped the shoulder and neck of the poor hound open with a deep and fast-bleeding gap eight inches long.

After riding a mile we found him backed into a clump of small pines, growing very thick, with his head just out of it and all his body partially protected. He sat on his haunches champing his jaws and with the white foam gathered in great flecks over his breast and forelegs. The hounds gathered baying around him, of which he seemed wholly unmindful, and gave no evidence of watchfulness, except from the vicious look of his devilish eyes and an occasional swift movement of his head when an unwary hound came too near him. But while we sat on our horses and consulted whether we had better shoot him as he sat, we heard far back of us and coming over the prairie the full mouthed cry of our pup we had lost some hours before and now was on our track hunting us up. As he came near enough to hear our dogs and our voices, he raised his head while in full run, and seeing the boar facing out of the clump of pines, without an instant's hesitation he charged directly upon him and leaped squarely upon his head. Instantly, and before we could think for a second, every dog was upon him and he striking and cutting with all his fearful power. The whole scene was one wild confusion, and in a second of time Calvin, our stoutest and bravest, was off and on to him trying to save

his dogs. In fact, almost before we could think we were all on top of him and holding him down. It was a fearful fight for six of our dogs. The poor pup, whose inconsiderate courage precipitated the fight, did not suffer so much as some others, having only been cut through the side about four inches. But we had the boar down and were sitting on him. Now what to do with him was the question. I measured his tusks and found them about five inches and a half long, white as ivory and sharp as a knife. We broke the points off and concluded after a council of war, that we would let him live, if none of the hounds bled to death right there. But we were tying up the wounds and staunching the blood in the mean time and found that all would get well with care. So we let the monster go. Even then we were careful to mount and call off the dogs out of his reach, but he simply rose and sullenly stood his ground, while we rode off and left him, the fight not all out of him yet. H. B. S.

MARIETTA, O.

THE CHOICE OF GUNS.

Editor Forest and Stream:

I was very much pleased with Mr. L. I. Flower's article in your issue of May 14. It is evidently written by an educated sportsman who has had many years' experience with a variety of guns, and cannot fail to interest those of your readers who contemplate the purchase of new guns, but who are in doubt as to what description of gun will best suit their requirements. There are few sportsmen who do not hope at some time to possess a really first-class gun, but there are very few whose experience is alone sufficient to determine their final choice. The requisite knowledge can only be obtained by experience and a study of articles such as occasionally appear in the columns of the FOREST AND STREAM. It cannot be had from books. It is true there are many works on shooting both interesting and instructive, but none of them furnish the information necessary for the judicious selection of a gun. Col. Hawker, who was perhaps the ablest writer on shooting that ever lived, was an engineer rather than a sportsman, and one who would probably derive more pleasure from shelling a flock of ducks a mile out in the bay, than in making a double on snipes. Roosevelt's work on "Game Birds" is delightfully written, and the late J. W. Long's "Wildfowl Shooting" is perhaps the best work on shooting ever written on this side of the water. I was greatly disappointed in Stonehenge's last book. I may have expected too much from the author's high reputation as a writer. "The Gun," etc., by W. W. Greener, is pretty well "padded." The author is scarcely fair in his criticism of guns of other makers, and his conclusions are often forced, but the work contains a great deal of information not elsewhere to be found, and I would advise any one intending to buy a gun to get a copy of this book.

My own shooting experience is hardly worth recording, although I have shot a good many guns in the last twenty-five years. Two of these guns were Joe Mantons, one a 20 and the other a 14. The strongest shooting gun I ever used was a long single barrel, which had been altered from a flint to a percussion. This gun shot harder and kicked harder than any gun I ever handled, and finally went to pieces in my hands. The best gun I ever had was a little 14, by Hollis & Sheaf.

But I will not tire you with my experience with guns, as the object of this letter is to assure your able correspondents, "Backwoods," "Cyrtonyx" and others that their labors are appreciated, and to express the hope that their articles on the choice of guns may be continued. Perhaps as good a way as any to draw them out would be to give my own crude notions of what a gun should be, and ask them to point out my errors.

If I were to buy a cheap gun I would get a muzzleloader. A first-class one can be bought (second-hand) for $50 or $60, and will be a far superior gun to any breechloader at the same price. Indeed until the last five years I used nothing but muzzleloaders, my main objection to them being the tedious work of cleaning. I believe they shoot harder, kick less, and are cheaper in use than breechloaders. Of course one who can afford to get a high-priced gun wants a breechloader, and a hammerless is preferable in cover shooting. Many guns have the defect of being larger in the true barrel than the internal diameter of the paper shell. My attention was called to this matter by Mr. E. L. Mills's article in another paper. Most of them are said to be made of inferior metal and to be ill-balanced. Still I have read articles in sporting papers denying these charges, and claiming for American guns equality with those of English make.

The most important point to be considered in the selection of a gun is that it should exactly fit the shooter. I am satisfied that men can shoot far better with a poor gun which fits him than with the finest arm in the world with an unsuitable length or bend of stock. The balance of a gun is another very important item. I believe most men use too short a stock, and, with very heavy guns, too little bend or "drop."

I think the qualities desired in a gun, in the order of their importance are: Strength and durability, range or penetration, regular, even distribution, the required pattern and minimum recoil.

I agree with Mr. Flower, that for an all-round gun, as large a gun as one can handle is the best, but for one who does no duck shooting and who believes in loading a gun to do its best a 10 would be too large in my judgment. I would not feel justified in sending 4¼ drams of powder and 1¼ ounces of shot after a single quail or woodcock. But I would not recommend a very light gun, as it is apt to kick too much and will not shoot as hard as one having more metal. My idea of a gun for upland shooting is a 12-bore with 30-inch barrels, weighing 7 pounds 10 ounces. The barrel bored stout at the breech and light forward, with a very straight rib-stock 14½ inches to center, 3⅜ inches drop, full pistol grip with 5¼ inch band. I would have the right barrel bored to make a pattern of 135 and the left 170, with 3½ drams of powder and 1⅛ ounces Tatham's No. 7 chilled shot. I would use above charge for rabbits, squirrels and occasional teals and woodducks. For woodcock, quail, snipe, etc., use the same charge of powder with an ounce of No. 9 shot. Of course these measurements would vary to suit the sportsman's strength and figure, but I believe this gun would suit most men and answer for any game found in this part of the country. It will kill at short range without mutilating the game, and yet reach out any reasonable distance for a second bird. The gun I have decribed may not be the very best for every variety of sport, but it will answer for all and I believe will be found to be a happy MEDIUM.

WENONAH, N. J.

Editor Forest and Stream:

In thirteen years I have owned and shot fourteen different shotguns and two repeating rifles, four muzzleloading rifles, and several revolvers. The first of the shotguns was a 12-bore, 7-pound single murzleloader, 32 inch barrel. The second was a 10-bore, 10-pound, 30-inch double gun, muzzleloader, which cost me $75. I used it a good deal on ducks, penetration was good; did well enough on ducks, etc., in flocks, but scattered too much to be sure of a single object, so I disposed of it; after which I had several guns, 10 and 12 bore, single and double breechloaders, 30 to 34 inches. The action on the single guns I did not consider safe. The double guns did not shoot close enough for the kind of shooting I had, which consisted mostly of squirrels and other small game, so I bought a full choke, 30-inch, 12-bore, 8½-pound gun. This was the best shooting gun I had ever owned; so was satisfied for a year. But one day in the month of September I was cleaned out by a muzzleloading, 18-bore, 40-inch, 8-pound gun. At a small object at long range I was nowhere. This set me to thinking—was it length of barrel or small bore? So I decided to try bore first, and an 18 bore, 31 inch gun was the result. But still I was not satisfied. I wanted a gun that would hit a small object at 60 yards or less, and I bought a 42-inch, 16-bore muzzleloader single gun, 7 pounds weight. Last fall I got more squirrels and small game with that gun than any one around here; and they also debarred me shooting in a match. I admit that for brush shooting it makes but a poor arm. It has only one drawback, that is, being a muzzleloader. The 10 and 12 bore guns are not used here lately. The favorite bores are 16, 18 and 20, also long barrels from 34 to 40 inches. No doubt if this is printed, lots of sportsmen will laugh at our having such long guns; but if they will shoot with us at a mark at long range, say 70 yards, the laugh perhaps will be on the other side. I myself am very well satisfied by trying the different arms, and do not begrudge the time or money spent. We find that three-quarters of an ounce of shot and from 2 to 2½ drams of powder in our long guns are equal to 1¼ ounces of shot and 3½ to 4 drams of powder in the large bores. There is no theory in this, but all practical knowledge. J. C. Y.

WASHINGTON, Mich.

THE ARK.

THE following account of the famous Cleveland (O.) club known as "The Ark," is given by the *Voice* of that city:

As a club wherein men have met almost every day for fifty years to discuss natural science, play whist and chess, and chat about field sports, must have a history interesting to all, we have worked up, in a desultory way, some data about it. "The Ark" is a name familiar to most of our citizens, yet popular knowledge on the subject seldom goes beyond the fact of its existence and the names of a few of its members. The Ark is not a club in the conventional sense. It was never formally organized. It never had a president, a vice-president, a secretary or a board of directors. It never had any by-laws. It never had a charter. But for all that the membership is as sharply defined as the strictest red tape could make it; and its unwritten laws hold everything in place as securely as the most formal of enactments.

In 1836 or '7 a little plain wooden building stood on the ground now occupied by the custom house, midway between Superior and Rockwell streets, fronting on the Park, or "Public Square." It was used by the late Leonard Case's father as an office. William Case, then a young man, had begun to collect specimens of the rarer birds and quadrupeds of Ohio. The eye of an artist and the knowledge of a trained naturalist and taxidermist enabled Mr. Case to mount his collections with unusual fidelity to nature. As this labor of love grew upon him he built against the rear of the office—a one-story structure 20x15—two rooms for its better accommodation. In the front room what was afterward called "The Ark" proper, met, and this opened into the second, which was used for the storage of the specimens.

In time Mr. Case gathered about him—insensibly almost—men of similar tastes. These earliest associates of the naturalist—and they were the first Arkites, strictly speaking—were:

Leonard Case,*	Capt. B. A. Stanard,
Dr. Elisha Sterling,	Dr. Maynard,
Stoughton Bliss,	D. W. Cross,
Col. E. A. Scovill,	Henry G. Abbey,
George A. Stanley,*	R. K. Winslow,
Bushnell White,*	J. J. Tracy,
John Coon.	

* Deceased.

By the efforts of these gentlemen an admirable display of birds and animals eventually grew up to grace what was known as the "L" of the building. Besides those who were known as the regulars, there was a number of promoters, so to speak, who were thus far known more as hunters and collectors than as actual members. Among these were James or "Dad" Williamson, E. A. Scovill, Oliver Perry and John Wills. From the descriptions of an old member we have been able to vividly imagine those early scenes of study, work and play. Mr. Case and his companions would meet in the front office. Its accessories were a dozen chairs, a large round table, a big open fireplace, with its andirons and shovel and tongs, a few pictures illustrative of shooting and fishing, and a homely mantelpiece, on which stood a couple of second-hand bottles, doing duty as candlesticks. The drawers of the big table were filled with tools for taxidermy and the skinning and preserving of game, together with such implements as were necessary in the cleaning and repairing of guns. In the course of time everybody who loved outdoor sports fell into the habit of looking to Mr. Case's office for any information in the line of his taste; and finally—suggested, perhaps, by its array of stuffed birds and animals, and accumulation of nearly everything else—Stoughton Bliss christened the place "The Ark."

The gentlemen we have named were especially attracted to The Ark evenings. In summer the "members" began to come in right after tea. The first thing on the programme was an exhibition of feats of strength and agility on the pleasant grounds outside, in front. William and Leonard were adepts in these, and always took part. When it was time to light the candles there were birds to mount and guns to fix; and then for whist and chess. On a side table, usually littered with books and papers on natural history, a little space was usually made for the chessboard. Those not otherwise engaged would while the time away in conversation and discussion.

In 1858 William Case employed Julius Gollman, a German artist, to paint a portrait group of the original Arkites, in their characteristic attitudes as they stood or lounged about the room. This picture is now preserved in the present quarters of The Ark, in Case Hall. The portraits are of the men whose names are given in the above list of first members. A photograph of the painting may be seen in the museum of the Western Reserve Historical Society. Gollman returned to Cleveland a few years ago and opened a temporary studio. He was a painter of repute, especially in portraiture. At the time Mr. Case engaged him he happened to be in town executing some commissions. Mr. Gollman endeavored to make The Ark picture a piece of actual realism, and his success was pronounced perfect.

Whenever William Case found that the museum lacked a desired specimen, he made the fact known and an effort was promptly made to supply the want. In this respect Captain Ben Stanard was his ablest "lieutenant." He was the genius of the department of construction, mounting, collection and mending. On one occasion he made a pair of skates, out and out, for Leonard Case, who took great pride in them.

"Captain Ben" commanded the "J. J. Astor," which sailed the waters of Lake Superior "before the canal." In that vessel he explored both sides of the lake in the interest of the American Fur Company, and for the gratification of his love of nature. Afterward he sailed the lower lakes. Later he was appointed inspector of hulls, and still holds that position.

When the building of the custom house began The Ark was moved to the lot where the Case building now stands. Afterward and finally it was set down on the northwest corner of the City Hall lot. When it was demolished the oak of which the house was built was made into the tables and other fixtures of the new (and present) quarters in the southeast corner of Case Hall, second story.

In the design of the Case Building rooms 19 and 20 were set aside for the permanent occupancy of The Ark. This was William Case's idea, and his brother Leonard faithfully carried it out. The rooms were handsomely fitted up with a fine library and other choice and appropriate accessories. The natural history specimens were moved into a special department, where they formed the nucleus of what is now the noble Kirtland Society of Natural Science. Most of the work of remounting was done by Messrs. Stanard and Winslow, under the direction of Leonard Case. Since then the collection has been steadily enlarged till it has become one of rare completeness and beauty.

Some time before his death Leonard Case, agreeably to the design of his brother William, deeded the free use of the rooms and all their contents to the following named members, and to the last survivor of the list—upon his death all the property to revert back to the Case Library:

Charles L. Rhodes,	Stoughton Bliss,
S. O. Griswold.	Levi T. Scofield,
D. W. Cross,	Rodney Gale,*
H. M. Chapin,*	Jabez W. Fitch,*
E. A. Scovill,	Henry G. Abbey,
W. H. Sholl*	Bushnell White,*
J. J. Tracy,	B. A. Stanard,
John Coon.	

*Deceased.

The personal annals of The Ark deserve to be worked up by some veteran. Few associations can boast of more brightness, genius and talent. The Ark illustrated the social graces in a high degree. Repartee, wit, humor and harmless conviviality, sat by that quaint fireside. A dull, commonplace man could not thrive in its atmosphere.

Leonard Case, without saying much himself, was a remarkable inspirer of conversation and discussion. He could draw out people. As a mathematician Professor Loomis said he had no superior in the United States. He was a literary man of fine taste and discrimination, and his ability as a writer was attested by "Treasure Trove." A specimen of his mathematical quality was the calculation of the flight, velocity, effect, distance and time of every grade of projectile from the ounce bullet to the No. 10 shot, which Mr. D. W. Cross embodied in his work, "Fifty Years With the Gun and Rod." Except with his intimates Mr. Case was reserved. He was benevolent beyond the knowledge of his closest friends. Leonard Case died Jan. 6, 1880.

Elisha Sterling is a naturalist of a high order and an able surgeon. He began his professional studies at the old medical college on Erie street (now demolished), under Professor Ackly, and supplemented them by a course in Paris.

Oliver Perry, a brother of Mrs. Senator H. B. Payne, was a keen sportsman and an ardent student of nature. He was a particular friend of Mr. Case, and contributed as much as any one to The Ark Museum. He was killed in a railway accident near Hudson, Dec 23, 1864, while on the way to some shooting ground accompanied by his two dogs. The portrait of one of these dogs was afterward painted from a photograph for Mrs. Payne by Beard, of New York, who used Mr. Perry's gun and hunting outfit for the accessories of the picture.

Mr. Willis was one of the early municipal officers of Cleveland and displayed great activity in the promotion of tree planting, a service which resulted in the giving to Cleveland the title of the "Forest City."

In the beginning of this sketch we have mentioned certain characteristics of William Case—Mayor of Cleveland, the first president of what is now the Lake Shore & Michigan Southern Railroad Company, procurer of the right of way for the old Columbus road, etc. He died April 19, 1862.

R. K. Winslow is a keen lover and student of nature. He is an officer of the Kirtland Society of Natural Science and one of the most active promoters. For taste in taxidermy he is unrivaled.

The late Bushnell White will live in the history of The Ark as one of its best whist players. In whist, White, Cross, Ed. Scovill and Leonard Case constituted the "old squad" of forty years' service.

James Tracy, identified with the earlier banking interests of the city, is now a trustee of the Case School of Applied Science.

John Coon is a graduate of Yale College, and known to a large circle as a gentleman of fine culture and many accomplishments—a wit and *raconteur* of the first water.

Henry G. Abbey was one of Leonard Case's prized intimates. The two often went on long journeys together—once to the Black Hills; and for years Mr. Abbey was Mr. Case's confidential adviser and agent, eventually becoming the managing trustee of the Case estate and one of the trustees of the Case School. All the property which Mr. Case devoted to public purposes was transferred through Mr. Abbey's hands.

No social chronicle of Cleveland would be complete with Colonel E. A. Scovill omitted. Before the war he was extensively engaged in the packing business with William Sholl, and during that period he commanded at Fort Johnson, on the lake. He is an honored member of The Ark circle.

Mr. Spangler was an old-time merchant, once associated with Dudly Baldwin. His store stood on the site of the Weddell House, corner of Superior and Bank streets.

Mr. Rattle had charge of the Case farm for several years

(west of the city), and of the Case residence on Rockwell street, up to the time of Leonard Case's death.

Stoughton Bliss was prominent in the old military organization—the Grays and Artillery—and at the breaking out of the war did good service in the work of organizing troops.

D. W. Cross is known as the ardent lover of all sports in the realm of the rod and gun. He is a genial expert in all these matters, as his published writings show.

We have spoken of the attraction which The Ark had for outsiders of tastes similar to those of its oldest frequenters. After awhile there was an established set of these who, without being "members" in the strict, were yet so practically. The following is believed to be a correct list of those known as "outside members" of The Ark: Hon. Emory D. Potter, of Toledo, O.; Maj.-Gen. James A. Potter, U. S. A.; General John Pierce, Denver, Col.; L. M. Hubby, Thomas Winch, E. A. Brown, O. A. Skeels, John Proudfoot, house painter and poet; Mr. Stevenson, Levi Kerr, T. Kelley Bolton, T. N. Bond, John Williamson, O. C. Scovill, Stephen Remington, Henry C. Gaylord, E. S. Flint, John Shelley, John A. Wheeler, George H. Russell, James Fitch, L. Austin, Mr. Pettibone, Basil Spangler, William Rattie, Gen. James Barnett, William Cushing.

An anecdote or two will not be inappropriate—we wish we had more material of the kind: One evening, in the late fall, William Case wanted to use the round tables in The Ark for some scientific purpose, but found White and Bond absorbed in a game of chess at the side, and Scovill, Bliss, Leonard Case and Cross at the center table, oblivious to everything but a game of whist. With his usual suavity and politeness William requested the players to yield the tables to himself and Captain Ben for a few minutes. No one moved. The request was repeated; not a move. Case looked at them sharply for a moment; then, turning toward the door, said, with a slightly sarcastic emphasis, "Good evening, gentleman. I will wait until you get through." He had not been gone long before all began to smell smoke, and soon the room was suffocatingly filled with it, in spite of various attempts at a remedy. Just then William Case's twinkling eyes were seen at the window, succeeded by the sound of his retreating footsteps as the crowd made for him. Captain Ben hastily climbed to the roof, removed a board from the top of the chimney, The Ark was aired, and the games went on.

William Case's tenacity of purpose in the pursuit of his favorite science was proverbial. Once, with a companion, late in April, he was gunning up the river in search of specimens, when he suddenly espied a phalarope—a rare "wader." He at once began to stealthily approach the bird, when suddenly it flew across the river and into the woods. Nothing daunted, Mr. Case adopted this desperate plan: Looking around till he found a log upon which he could rest his gun, he stripped, swam the river—pushing the log before him—and disappeared in the forest. After a while the report of a gun was heard, and soon the gunner reappeared, bird in hand, swam back to his friend, donned his clothes, and went on with the hunt as though nothing had happened.

William Case's dog was named Old Guide. It was wonderfully trained in all field work. One pleasant day, in the spring following the smoke-out, the Arkites were lounging about the front of the house, when Leonard Case suddenly espied William's wallet protruding slightly from his trousers pocket. It was quietly abstracted and passed from hand to hand to the rear of the group, and hidden under some litter of the room. Then Leonard happened to want a little money for marketing, but was "broke." Several offered to lend him, but William told them to put up their money, and placing his hand on his pocket, said: "Here * * * *." The "loss" was discovered. Suspecting a joke, he began to search the innocents, but without result. Then espying Old Guide he made him understand by signs that something was missing, and, after holding his nose to the pocket, and ordering him to search, the dog immediately went to work, "ran down" the pocketbook and returned it to its owner.

If William Case's name appears in this "history" more than others, it must be remembered that he was the founder, the master and the soul of The Ark.

A MODERATE CHARGE.

"JESS, how was't about that man—'scursioner, you know, 'at nigh got kicked out'n the boat that time?"

"Well," said Jess, taking three or four puffs at his pipe and rising to throw another log on the fire, "that was—haw, haw—that was one o' them 'xcursionary fellers. Pooty good sort o' feller, too; didn' care nothin' for money, I jedge, by the way he slungit around. He warnt no hunter, neither, but he'd brought a gun—a 12-bore—one o' them Stevens's single barrels, but hadn't brought no cartridges to fit it. The only breechloadin' shotgun around these parts in them days belonged to Mr. K., and 'twas a 10-bore. He'd furnish No. 10 catridges 'f them 'd do any good, but wouldn't lend his gun to nobody. So the man was kinder blocked at fust, kinder reckoned on gittin' a lot o' ducks to make a big show with down to Elk Rapids, and he wanted me to row him. I sat and thought a minnit—we hadn't nothin' but rifles nigh hand—'n' then I thought o' Bill M.'s gun, 'n says I, 'I guess I can fix ye.' So I sent the boy up to Bill's and he lent him the gun. You've seen it, I reckon—a reg'lar old blunderbuss, 8-bore, and cut down to about twenty-eight inches. Bill said if you cocked both bar'ls to be sure and pull off the left 'n' fust, otherways they'd both go to once.

"Well, we started, and the man was awful good-natured, seein' he 'xpected some tall shootin', for I'd told him the' was lots o' ducks up river. Shore enough, when we come to the fust mash, they b'gun t' git up, right 'fore the boat, 'n' he b'gun ter bang away. I loaded for him, but he couldn't hit nothin', and after awhile he says, says he, 'You don't put in powder 'nuff.' So I fed her up good, 'n' the ducks they kep' a hoppin' up 'n' he kep' a bangin' 'n' a bangin' 'n' I kep' a feedin' of her a little more 'n' a little more, cos he kep' complainin' (though I see well enough he couldn't shoot), 'n' at last, seein' he was a complainin' so much, 'n' the ducks didn't come down, 'n' I was a gittin' kinder mad, I jest shoved in two topfuls inter each bar'l. He cocked both on 'em 'n' 't warnt three minits 'fore along come the all-bustinest lot—nice ones, now I tell ye—'n' he—they warnt more'n four rods off—he jest up gun, kinder cool 'n' car'ful, like he meant to git some on 'em, 'n' onhitched. I thought I'd heard noises afore when I was in the army, 'n' I hev seed some scatterations one way 'n' another in my time, but when that old carnon went off you'd a thought the' was forty full batteries o' ten-pound Parrotts aboard that 'ere skiff. The ducks didn't come down—not the derned one—but they jest scattered f'r all they was wuth, 'n' the old gun flew over back'ards, 'n' upsot the man, 'n' the skiff dipped, 'n' the feller hollered 'Ow-w-w,' 'n' grabbed a oar to save hisself, 'n' let go the gun 'n souse that went, muzzle down, but I ketcht it 'fore it farly slid out'n the boat. It took that feller some minits to git righted 'n' rub the powder out'n his eyes, an' says he, 'Jess, you must a' overloaded that ere gun.' 'I reckon not,' says I. 'You kep' a tellin' on me to powder up, but 'a fur 's I ken rec'lect, I hed in a very moddit charge. But I'll tell ye,' says I, 'where ther trouble was,' 'n' I showed him the gun. 'You pulled on the right bar'l fust, 'n' they both went.' 'By jimminy,' says he, 'I b'lieve you're right. But that ere gun kicks awful. I guess the ducks is scartered now,' says he, ' 'n' I don't b'lieve we'll git any more to-night.' We hadn't got the fust one yit, but I see he was a-gittin' oneasy, 'n' 'twas a'most grub time, 'n' we pulled out for home.

"Next mornin' he was up bright 'n' early to ketch the Queen for Elk Rapids. He didn't have no ducks to take down though. He was a gentleman, I must say, for he paid his bill, 'n' never said a word; but, some ways, he was the derndest fool I ever see." KELPIE.

CENTRAL LAKE, Mich., May 26, 1885.

READING, Mass., May 24.—A new society has been organized here, known as the "Farmers' and Mechanics' Fish and Game Association of Reading." The object of this Association is to collect and diffuse practical information concerning the game fishes and game birds of Massachusetts, and to secure to the people their rights in the same. To attain this object the Association proposes: 1. To ascertain and publish the breeding time of said fishes and birds. 2. To aid in regulating by law the close and open time for fishing and for the taking of game. 3. To aid in securing such legislation as will best protect the fish and game and preserve the sport in taking them. 4. To secure and maintain a perfect equality among the people of this Commonwealth in the taking of fish and game. 5. To ascertain, declare and secure by law any local and private right to any fish or game. 6. To discover and defeat all schemes, legal or otherwise, to monopolize the sport of taking fish or game, and to make rod and gun as free to the poorest as to the richest. 7. To restore and secure to the people any rights which are natural and handed down by common law, and of which they may now be deprived, to take fish and game within lawful time. 8. To aid in the observance of all the fish and game laws of the Commonwealth, while the same are in force. 9. To collect and make public any important results of our fish and game laws. 10. To countenance and aid the Commissioners of Inland Fisheries, as an important Board of Officers in all the work which the Legislature may assign to them. E. H. Gowing is the corresponding secretary.

PHILADELPHIA NOTES, May 29.—All through the week just past we have had capital shooting for bay birds on the New Jersey coast, and large numbers were killed. The flights consisted almost entirely of calico-backs, robin snipe, black breasts and dowitchers, the tell tales, willets and curlews having come and passed on a fortnight since. This season, owing to its backwardness, the later coming varieties are behind the dates of last year's arrival. Among the bay birds sent to Philadelphia this week, not a few were found to have eggs in them when they were opened. It is safe to say that before the birds reached us they had all mated and would go to nesting at once on their arrival at their northern breeding grounds. Shall we ever have an end put to this destructive and inhuman spring shooting? Woodcock are reported to be having a good breeding season, and more than a usual number have taken up their residence in the low wet thickets of New Jersey, so I am told. These birds, young and old, will, however, all be cleaned out before the law allows them to be killed, and at any game store woodcock will be for sale on the sly by the middle of June.—HOMO.

TEXAS.—Clarendon, May, 1885.—Game is very scarce here this spring. A few ducks on the ponds or lakes on the plains, but too far away to get at often. Am afraid the quail are nearly all killed by the extreme cold of last winter. The plover have not reached us yet in their annual visit. Am looking eagerly forward for their coming, as they afford good shooting. We will have a good many turkeys this season, as they have not been hunted so closely the last year by the pot-hunters. Some men who call themselves sportsmen have no regard for the game laws of the State or the future of our game, as evidenced by the killing of a deer last week near this place. Devotees of the rod report fair sport with perch and catfish—not very gamy, but far better than none. There is a growing interest in field sports in this section, and but few who care more for the game secured than the sport in securing it.—PERRITO.

MONTREAL, May 23.—The fish and game laws for the Province of Quebec are the same as last year. There were no changes made fortunately. A clique in Parliament attempted some retrograde movement but were beaten. I happened to be in Quebec that day and had the pleasure (?) of listening to the debate.—V.

THE GAME LAWS OF NEW YORK have been tinkered at so much this winter that many do not know what is lawful and what is not. In our advertising columns will be found an announcement of a new edition of the laws to date.

MINNESOTA.—We have received from Messrs. Warner & Foote, Minneapolis, Minn., a large map of that State, showing the waters and timber regions. It will prove very useful to sportsmen tourists.

A RABBIT FARM is to be started at Wells, Me., to supply the Boston market.

ANSWERS TO CORRESPONDENTS.

S. S. H.—Is there any good hunting and fishing near Warren, Warren county, Pa.? Ans. Fishing and shooting there is not very good. There may be some squirrels and perhaps ruffed grouse in season, especially east of Warren.

A. L. P., New York.—What are considered the best flies for the streams of the Northern Peninsula of Michigan flowing into Lake Superior? Ans. Use large, high-colored flies, such as Canada, red spinner, royal coachman, queen of the water, Coughlin, and jungle cock.

G. H. H., Chatham, N. Y.—1. Please inform me if there is a law against fishing with floats and also against fishing with more than two hooks on a line? 2. What kind of artificial bait for bass and where to purchase? Ans. 1. We have no knowledge of such laws. 2. For artificial baits use rubber frogs, crayfish, etc., we cannot recommend them. Write to our advertisers.

G. P.—Sometimes there is a recognized difference between the expressions "sportsman" and "sporting man," and sometimes no such distinction is made. As used by the FOREST AND STREAM and by a constantly growing number of well informed people, the term sportsman is applied to gunners and anglers. The term sporting man is promiscuously used for betting men, prize fighters, men about town, gamblers and riffraff. If you hear any one speak of an angler or a shooter as a "sporting man" you may know that the person is behind the times.

Sea and River Fishing.

CAMPS OF THE KINGFISHERS.

CARP LAKE, MICHIGAN.—I.

THE peninsula running north from Traverse City, washed on the east by Grand Traverse Bay, and on the west by the blue waters of Lake Michigan, although not much frequented by the hundreds that go annually to Northern Michigan during the summer months, is a region full of delights to the angler and lover of nature (and who loves not nature may not claim kinship with the brotherhood) and nowhere in all the North Woods where the Kingfishers have kindled a camp-fire have we found a region where those in search of quite and rest, or "the contemplative man's recreation," may obtain a fuller measure of benefits than just here on this forest-clad tongue of land, the Leelanau Peninsula. No bold rocky headland, towering cliffs or beetling crags stand grim guard around its shores, but a soft beauty reigns over it throughout the long mellow summer days, and the eye may feast on green woods, laughing waters and the rarest and dreamiest of outdoor pictures till the soul finds rest.

Along the east shore, from above Northport down to Sutton's Bay—the region so delightfully portrayed in *Lippincott's Magazine* a few years ago, by Maurice Thompson—the trout fisher too may find exceeding comfort in a half dozen or more clear, cold streams flowing into the bay, the best of which is perhaps Mosso's Creek, a couple of miles below Omena, a little hamlet tucked away in the bight of New Mission Bay, a matter of thirty miles above Traverse City.

One of our party in the summer of '82 was Mr. T. H. Foulds of Cincinnati, one of the old Kingfishers, who on his way home spent a part of two days at New Mission to have a look at the famous orchard on the place, which is more than a mile long, and contains something more than 3,500 fruit trees. The whole tract, including the orchard, embraces 540 acres, most of it an untouched forest, and he was so pleased with it all, that learning from the tenant in charge that it could be bought, he soon after took a friend into the scheme and made purchase of it. The house on it, a solid and well-preserved structure of thirty-two rooms, was originally built by the Presbyterian Board of Mission for a mission school, where they proposed to educate the Chippewa Indians of that neck o' woods, and here poor Lo was expected to change his nature and waste his time in trying to master the mysteries of the three Rs, with a sprinkling of easy Scripture lessons thrown in, and learn the, to him, strange and shiftless ways of his white brother. But blood is thicker than water, and "Injun natur' is not white natur'," and after a lapse of time, all that did not die off with laziness and brain fever brought on by too much "rasrelin' with the rudiments," got all the education they could hold, and naturally drifted back into the primitive methods born in them of getting an honest living hunting and fishing, and lo! the mission school for poor Lo was a thing of the past. Such is a brief and condensed early history of the place as related to the writer last summer by one of the "old settlers." But the inroads of civilization have broken the spirit of these children of the forest—the market-hunter and pot-fisher have despoiled the woods and the waters of their antlered and finny denizens, leaving to them only a blank and aimless existence, waiting to be called by the Great Spirit to the traditional happy hunting grounds of their fathers. However, a measure of retributive justice seems left them, for now the remnant of the once numerous red man of that region is diligently striving each season to get even with the white man for robbing him of his heritage by picking huckleberries and selling them to the hostelries to be fed, like a physician's prescription, "three times daily" to the confiding and unsuspicious tourist and resorter—verily a sweet (and succulent) revenge.

Since coming into possession, the present owners of the New Mission farm have remodeled and modernized the house from cellar to flagstaff, adding another story, more rooms (forty-six in all) and an observatory from which, on a bright day, may be seen the Beaver Islands away north, Torch Lake and Elk Rapids across the bay, Traverse City south, and most of the Peninsula stretching north, south and west. It will be opened this season—'85—as a summer resort, and as the trout and bass fishing is fair to good within easy reach, a tired soul that don't care to camp out or don't know how, may find here, as Uncle Dan Sloan would most likely put it, "a place of rest and pure delight."

We have suggested to brother Foulds that in the fitness of things, and as a reminder of drizzly days and pleasant nights spent around the camp-fire with the "old boys," he call it the "Kingfisher's Nest," but as this world is full of small disappointments, we will not be set back much if he call it by some sweeter smelling name.

But to come back to the trail: We had about made up our minds to build our camp-fire again on Central or Grass Lake for the summer fishing of 1884, the scene of many former triumphs and hard fought battles, when brother Foulds and another friend or two spread out before our mind's eye the beauties of the Peninsula, and chiefest among its attractions that had most to do with luring us away from the old haunts and camps of the intermediate region was Carp Lake (a name that ought to have paralyzed the idiot that suggested it), a body of water heading some eight miles west by north of Traverse City, and having its outlet in Lake Michigan at Leland, the county seat of Leelanau county, across the country a little south of New Mission Point. (There are two Carp Lakes on the lower peninsula of Michigan, this one above Traverse City, the other one a short distance below Mackinaw City, up near the straits.) The stories they told us of the bass, pickerel and an occasional maskalonge to be found in these waters settled the matter, and when the information was added that there were six or seven good trout streams flowing into the lake at various points, a trip to Carp Lake was at once decided on, at least by the writer, for who of us all can withstand the coaxing whisper, the syren song of the rippling of a trout stream?

A correspondence was opened with Mr. Noel Couturier, postmaster at Provemont, a little hamlet at the head of the "Narrows" of the lake (of which more anon), asking about boats, camping places, trout streams, supplies in the way of country produce, etc., and received in reply that he had four boats to hire, price to be agreed on at any figure to suit, as he had never hired them before. There were plenty of good camping places along the lake, he wrote, "and four or five trout streams at different points within five miles of the Narrows, and as to supplies, he kept a general country store and had also fitted up his house for a hotel in a modest way, and was prepared to take a few summer boarders provided

he could 'git some.'" He was a druggist, too, and kept on hand a general assortment of physic and a few of the most "sarchin'" of the patent medicines. He was owner and proprietor of the hotel, drug store, dry goods, hardware, boot, shoe and notion store, and post office, all in one, and had teams with which to haul us and our "calamities" from Sutton's Bay—where we would leave the steamer—to Provemont or to our camping place. He wrote also that he "kept on hand butter, eggs, hams, and berries while in season, salt pork, flour, potatoes, onions, fish hooks, etc.," and wound up the letter with the refreshing information that he kept "also maple sugar and liquors." We learned afterward that besides all this he owned two or three good farms along the lake, and after we got acquainted with him old Ben R——w said, "with all his prosperity, he's a helrackin' good ole feller," and in Ben's vocabulary, this word, although a trifle sulphurous, means that anything he honors with it is with him superlative and "jest good enough to be let alone."

Could we ever expect to find a place that promised more comforts, as Dick Mac would say, "adjacent to camp"? What a place Provemont would be as a base of supplies for a camping party—solid, fluid and medicinal. If any of the party should get sick or out of gear, I could write a prescription and neighbor Couturier could compound it, whether it called for a sedative, laxative, cathartic, astringent or stimulant, or all combined, as the symptoms might indicate; and any or all of these failing, I could fall back on a dose of his fish hooks or "liquors" and be sure of some kind of a result. And then there was the "side meat," a mighty factor in a hungry camp, and the maple sugar to make 'lasses for our flapjacks. We made up our mind that we would camp adjacent to the narrows.

This year we were moved to make a new departure by the importunities of our women folks to go a-fishing with us, and camp out and have heaps o' fun and rough it like the rest of the boys. For three or four years my daughter Kit had "been a-pesterin' of me" to take her along on the annual fish to Michigan, and I had been annually promising to do so; but somehow something always turned up so she did not get to go, and it was of course annually my fault. This time she argued that, as she was drifting into her twenty-first year, it was high time she was learning some of the mysteries of the gentle art if she was to be considered a chip of the old block, and it was my paternal duty to take her along and teach her to get the hang of the rudiments at least. I was clearly cornered, and the only way to even matters up for old promises broken was to find out how many of the persuasive sex belonging to the "family" had the fever seriously and take them all along. Fortunately (for me) Jim, ye Editor, got married early in the spring, and of course the "new member from Butler county," Mrs. Jim, wanted to go wherever Jim went, and her sister Fanny, being a little ailing and having much faith in the bracing-up qualities of Michigan air, concluded that she would never be of any more account unless she could go along.

Miss Annie Muller, a sister of the Assistant Postmaster, was in such rosy, rugged health that it was a burden to her, and she thought it would be a fine scheme to go along and camp out in the woods and get sick a little just for a change.

Brother M. got into more trouble by letting his daughter Cora, a bright, womanly little lass of eleven years, overhear the plans, and he got no rest till she too was booked for the trip. Then one of old Ben R.'s nieces took it into her wise head that she too wanted to go a-fishing "bad" to see, Ben wrote, "if she couldn't catch him in some of his fish lies," (Ben says fish lies don't count). So we had a fair sprinkling of the fair sex in the party, and it is but fair to say they were the better half, six of them to five of us of sterner stuff—Uncle Dan Sloan, Old Ben R., Jim, brer Muller and the writer. Uncle Dan was voted the black sheep of the flock because he brought none of his women folks with him, they pleading home duties and cares as an excuse for not wishing to cultivate a taste for the distracting melody of the multitudinous Michigan muskeeter, but our girls, knowing the great store we set by Dan, and having heard so much talk about him by us, had each fixed up a warm corner of their hearts for the old pelican beforehand, and I am sure every one of them took genuine pleasure in making him feel that their regard for his comfort was earnest and sincere. (I may explain here, as in a former letter, that Uncle Dan has little use of his right hand and arm from paralysis—a "Kingfisher" with a broken wing.)

"Old Knots," that blessed old bachelor, wanted to go with us the worst way, but he was a little skittish about the girls. The ways of girls were to him past finding out; bangs, back hair, bustles and the like were frivolities and mysterious abominations, and he was afraid to trust himself in the "bresh" with them.

The spirit in him was strong (to go), but it evaporated as the season advanced and left him high and "dry" on the resolve to stay at home.

This was in the nature of a calamity, for we have come to believe that a camp of the Kingfishers without Old Knots is just about no camp at all, but he oiled the troubled waters at the last minute by promising to come up and look in on us for a week or more if we would put aside a couple of good reliable straws or a few balsam feathers for him to sleep on in case the ground did not just fit his frame. The two straws were carefully selected and put away in a dry place.

The time set for starting was July 30, and ten days before that our calamities were shipped to Sutton's Bay and Couturier notified to get them over to Provemont and hold them till called for by the cook and camp keeper, a young man (son of Mr. Mossman, who was in charge of the New Mission farm) hired on recommendation of brother Foulds and Mr. F. M. Guthrie, of the G. R. & I. R. R., and whom we found to be perfectly trusty, and as good a boy as ever flipped a flapjack. He was instructed by letter to go over three or four days before our arrival, get the boats and outfit and hunt up a good camping place, put up a couple of tents, construct a table, procure straw for beds if it could be had, otherwise to strip the feathers from a few balsam saplings, and have the camp fairly ready for us, not forgetting to locate it as "adjacent" to a trout stream as might be convenient.

Could that genial and well beloved old brother, "Nessmuk," have seen the amount of "duffle" we shipped ahead for that trip, not counting the trunks and gripsacks taken along as personal baggage, he would like as not have been seized with vertigo, or petrified with amazement. It required nineteen boxes of various sizes to pack the five tents, two camp stoves, bedding, groceries, etc., and a broad gauge express wagon to transport them to the depot. Total weight as per shipping bill, 1,165 pounds. Jim's box containing his bedding, old clothes, boots and "sich," would, I venture, have made a shelter camp for brother "Nessmuk," the Sairy Gamp, and all his duffle, ditty bag and all. Jim said he would have had the box made a trifle larger, but the carpenter he let the contract to didn't happen to own a lumber yard. In justification of taking so many things to the woods—none of them without a use—I have about made up my mind that the more comforts you have in a camp the better you will like it, and the more things you take along to make yourself comfortable with, the more comfort you will have, and this, I take it, is about the best end of a camp for a tired man or woman that goes to the woods to rest. It is all right for brother "Nessmuk" or me to "go light" to the woods, if we go alone, for in that case a light load is a good companion to travel with, especially when no friendly shoulder is near to share our burden over a long, blazing hot carry, and I have no doubt but a couple of tough old gobblers like brother "Ness" and the writer could make our way through the woods from St. Ignace to Agogebic Lake with a rifle, some ammunition, a hatchet and a little primitive fishing tackle, but how many out of five hundred that go to the woods every year would like to undertake it?

I have roughed it somewhat in the Rocky Mountains years ago, and can get along in the woods with as few comforts perhaps as the average camper out, but I don't see any sense in doing without conveniences when they can be had with a little extra trouble. I don't believe in squatting on the ground like a tailor to eat your dinner, just for the sake of squatting, when a little work would make a bench and a table. I don't believe in sleeping on hard lumpy ground with nothing but a blanket under me when a neighbor's straw or hay stack is accessible, or browse is handy, and I do believe a good camp stove—and there are good camp stoves—discounts in matter of comfort in cooking on it the most artfully constructed open fire that ever flickered or smoked your eyes out. An axe, hatchet (not one of those two-edged abominations) and saw, are mighty handy implements to have around a camp, and a jack-knife is an instrument of many possibilities when better tools are not at hand. There are, however, sometimes trips to be made deep into the woods where many things that would be convenient in a permanent camp cannot be taken along, and in this case don't take them, but go with just as as little as you can get along with and don't whine about it. When a camp can be readily reached by wagon or boat I believe in taking along all the conveniences, if not comforts that may be needful to a thorough enjoyment of the trip, and if the women folks are going, it is well enough to bear in mind that they are not quite as tough as "us fellers" and will want little knick knacks and creature comforts that we would never think of or hanker after. A "Nessmukian" outfit is well enough for an old camper who has meandered in the woods for years and knows the ways of the silent forests and how to make the most of their bounties, but with it one inexperienced in the mysteries of woodcraft would come soon to grief. I don't believe in littering up a camp with useless trifles, but I do believe in having needful and handy things to do your work with, and if any credulous tenderfoot thinks he can do it with a "double-geared hatchet," a jack knife and a hip pocket loaded with navy plug, let him try it and be undeceived.

All this may be taken by the reader as a good word for the girls, and a general defense of and a leaning to camp comforts, and not as a cast at brother "Nessmuk," for no one holds him in higher regard nor bows in profounder respect to the glorious old woodsman and his knowledge of woodcraft than I do, albeit I have a notion that he is a trifle like his ten-pound canoe, "a leetle mite cranky," only and solely, however, in the matter of "lightness of equipment." These few remarks, condensed into a sentence of advice, might read. When you go a-fishing take all the conveniences and comforts you can get there with, and if you can get there with only a few, or none, go a-fishing anyhow.

The morning of July 30 finally crept around, and Kit and I were off by ourselves, Muller being detained by some office work until two days later. At Hamilton, O., we were joined by Jim and his wife and sister-in-law, and as soon as the girls were introduced and had fairly settled into the inevitable "chattering match," Jim and I hunted a quiet seat and discussed Carp Lake and swapped fish lies till the agreeable pastime was cut short by a change of cars at Richmond, Ind., to the G. R. and I. R. R.

At Fort Wayne, where old Dan, Ben, and his niece Miss Cora R—w, were to join us, Jim and I got out, prepared, however, for any kind of joke old Ben might attempt on us—like the one he played on the writer the year before—but Ben had somehow forgotten to concoct any new scheme with which to astonish "old Hickory," and we were at once in the midst of a vigorous hand shake in which I am sure each one's heart reached out further than the finger ends.

In the smoker the talk drifted back to old camps on stream and lake, bringing up many a pleasant memory that had been sleeping for years; camps on the Wabash, the Tippecanoe and the Kankakee; Black Lake was again visited in fancy, and the later camp on Cental Lake the same year was told about and Dan was easily cajoled into telling Jim about Old Ben's great fight with a 23-pound maskalonge, his first one while in that camp, and about the many quaint and side-splitting remarks Ben made to that fish while the never-to-be-forgotten struggle was going on; how Ben swore that "the fish jumped out o' the water twenty-seven foot high seventeen different times, an' the last time he went straight fur the bottom an' I thought he'd never stop till he got plumb through into Chiny," and how when Ben got home and went up the streets of Decatur with the skin of the old warrior hanging over his shoulder, one of his friends saluted him with, "Hello, Ben, where'd ye ketch that gar?" and how Ben withered him with, "That's a muskalunge, you sweet-scented idiot; any fool kin ketch bass an' pickerel, an' suckers an' gars, but it takes science an' a scientifick fisherman to ketch a muskalunge, an' don't you forgit it." And then to keep his end up, Ben told how "Old Hickory" lost the "helrackinest big bass in Michigan, up around the pint above Johnson's, on one o' them cussed no 'count barbless hooks, made out o' pianer wire, a straightenin' out on him. When that bass"—after a few vigorous whiffs at the briar root—"broke loose an' made a bee line for the bulrushes, the line flew back over our heads an' Hickory thought it had broke; but when he reeled up an' looked at that pianer wire hook with the pint turned an' about the shape of a new moon, he jest wilted down on to the seat o' the boat an' made a few remarks that wouldn't hev oncouraged the feller that made that hook to persevere in their manufacture. I'm always willin' to chip in and help a feller out when he gits stuck for a good word in a pinch like that was, but on that special occasion my services was not needed. Hickory jest scooped my vocabulary clean an' left me a settin' there a blinkin' through the smoke." And then Jim and Dan and I laughed till we disturbed everybody in the car, while Ben fired his briar-root for the ninth or tenth time and smoked in solemn silence.

Carp Lake was again discussed, and I had to tell all over how the calamities were shipped, the cook secured, boats engaged, how a request had been made to have the "menagerie box" filled with frogs, etc., and we wondered what kind of a camp young Mossman had selected and what kind of trout fishing we would find, and planned out the general outlines of the lake as we imagined they ought to look from a careful study of the map and what we had been told of its features by brother Foulds. Did you ever go to a new lake or stream, or brook without first having fixed in your mind just how it would look or ought to look, and did you ever find it very much resembled the mental picture you had made of it? The general outlines may have been correctly traced, but when you come to face the reality there is usually something lacking. The little bay nestling behind the headland, the noisy stream tumbling into the lake there where the water is carpeted with broad lily leaves, the bold ledge of rocks overhanging the stream just below the riffle where the deep water promises good work for your rod, and the deep pool at the sharp angle of the brook where the "big trout" lurks under a labyrinth of gnarled roots in serene security—all these that you have spent days in painting with colors of green and russet and autumn brown, have flitted away into the shadows of your picture to be seen no more. The real picture often exceeds in rugged beauty or quiet loveliness the sketch penciled in the mind, but 'tis a pleasant pastime to the lover of the woods to weave these fancies into unreal pictures and set them in unreal frames of evergreen forests and gray rocks, and soft, mossy banks. It is a part, and a most pleasant part of the contemplative man's recreation.

The talk took a turn to wind up by old Dan knocking the ashes from his pipe by tapping it on the open window sill, and remarking in his quiet way, "Well, Hickory, here have we two old pelicans been fishing and camping together for twenty odd years in all weathers, and the love of it has not died out in us yet. It seems to me the trip that is coming is always to be the best, and we talk it over with more eagerness and expect more days of pure delight to fall to us than on any other one in the past. Truly, the heart of the angler never grows old, and a love of the woods is a prolonger of life and makes us all boys again."

"Correct, Danny, chimed old Ben, "goin' a-fishin' makes a feller feel young again; bedurned ef I don't feel friskier 'n a yaller pup this afternoon, an' ef I was a equine quadruped of the hoss kind I'd jest give my heels a flirt an' squeal an' whinner like a yearlin' colt."

"Hooray for Carp Lake an' goin' a-fishin'; but let's go back an' see what the gals 's doin; 'xpect their jaws have all run down an' they 're jest a settin' there makin' signs an' motions."

Bob and Kit had never been over the road before and they were delighted with everything they saw, an especial exhibition of ecstacy breaking out when they got a sight of the lake at Rome City, Ind.

Jim's wife and her sister had spent a part of several seasons with friends in Northern Michigan, and could afford to put on the airs of old travelers, and it was amusing to note how wise and motherly Mrs. Jim looked when pointing out some fresh attraction along the road to the two younger girls, whose interest in the changing landscape never flagged till darkness shut out the view.

At Grand Rapids we were to see "old Bill Hess" and little Charley Pike, who had written that they would be at the depot on our arrival to have an old time shake and swap a few fish lies during the hour or more our train would wait for a connection. To pass through Grand Rapids without seeing old Bill would seem like something was out of gear with the trip, and it was a genuine pleasure to find him waiting for us, with his broad face beaming all over with smiles and ready with a hearty greeting for the Kingfishers. The pleasure of the meeting was, however, marred by the absence of little Pike, who was confined at home by sickness, but we sent our sympathies by old Bill, which, we trust, proved a help to his speedy recovery.

Great big-hearted, fun-loving old Bill Hess and quiet little Charley Pike! I can never grow tired of writing something good of you, and may the friendships formed at the mouth of Sweeney's Creek with the "Kingfishers" be more firmly cemented each year till we are called to make our final camp in the happy hunting grounds.

We left him, with a promise given that he and brother Lockwood, general passenger agent of the road (Lockwood is an ardent angler, hence the "brother") would look in on us at camp some time during our stay in the woods if they could manage to slip off for a few days, and he went off into the darkness with the good wishes of our entire party to lighten his old heart.

After we had transferred at Walton Junction about daylight in the morning, I went back to the sleeper to get Bob and Kit out to see the new country and get a smell of the pines and the hemlocks and the balsams. KINGFISHER.

[TO BE CONTINUED.]

WEST VIRGINIA BASS FISHING.

SHOULD any of your readers desire a charming spot to pass away a vacation this summer, I would advise them to go up in West Virginia to a place called Hanging Rock, between Green Spring Run and Romney, on a branch of the Baltimore & Ohio Railroad. This place is on the south branch of the Potomac River, about fourteen miles from Cumberland and three from Romney.

A few summers ago I went there and was amply repaid, for the stream teemed with fish and gave me all the sport I wanted. A more convenient place for a fisherman could hardly be found. The stage landed me in front of the farm house where I had engaged to board, and I had only to pick out my baggage and go into the house, where I was given as nice quarters as any one could wish. The house was quite a large brick one, with large rooms and a delightful shady lawn in front, making it cool all day long. At the end of the lawn was the Potomac River, where, in a boat owned by the proprietor of the house for the convenience of his guests, you could roam up and down the river and get as good bass fishing as any one could wish. The bass range here up to three and four pounds, and can be caught with bait or fly. At times the fish would jump up all around me and I could not catch one, and again I would be quite successful. I fished with bait altogether, as I am not an expert with the fly, but should think this would be the place for fly-fishermen, as the bass are jumping out of the water all the time, and the wading is so good that you can go out to the middle of the river and have a splendid swing for your line without getting it entangled with branches or snags, etc. The stream

is easily waded and you can go down to the main Potomac, some twelve miles, and have good fishing.

I have been in the Adirondacks, at Lake George and other places, and have never struck such a place for fishing as this. I boarded with Mr. John T. Vance, who gave me a room fit for a prince to sleep in, and Mrs. Vance makes the grandest wheat bread I ever eat. The bass I caught the day before were served up in first-rate style at the next morning's breakfast. Since I was there the Baltimore & Ohio has built their road from Green Spring to Romney, which lands passengers just in front of the door of the house where I stayed. One can leave Baltimore in the morning and get to their house in time for supper. While this is a quiet place, yet there are visitors calling and staying over almost every night, for Mrs. Vance has a large circle of acquaintance, and she keeps up the old style of Virginia hospitality. For those who want to drink, carouse and carry on in high style, this is not the place, as nothing of that kind is tolerated there. Churches, stores and other conveniences are found at Romney. There is also a good supply of minnows, grasshoppers, toads, helgramites, etc. JOHN GEORGE.

No 87 WEST LOMBARD ST., Baltimore, Md.

MAINE AND NEW BRUNSWICK WATERS.

MANY lovers of fishing are doubtless already trying to decide upon a place where they may cast the fly for a few weeks of summer vacation. Remembering the time when I should have been very glad of some definite and reliable information to help one in selecting a place where I could spend to the best advantage my short vacation, I am minded to give something of this kind from my own experience. Of course, there is no lack of suggestions in the so-called guide books, but many of these will be found, on trial, simply "a snare and a delusion." But I know whereof I affirm, and I herewith give a list of a few good streams and lakes in Northern Maine and New Brunswick, which I have visited, some of them several times, with brief descriptions of them, and plain directions for reaching them.

First is the chain of lakes known as the Fish River Lakes. The best way to reach them is to go first to Portage Lake. To do this take the cars at Bangor for Presque Isle, and thence by stage to Ashland, twenty-three miles, thence by private conveyance to Portage Lake, ten miles. There is a good road all the way. No difficulty will be found in procuring boats and guides at the lake, but if one wishes to write and secure these beforehand, the postmaster at Ashland, Mr. Mooers, or Mr. Jarvis Hayward, of same place, would undoubtedly attend to it. Arrived at Portage Lake, one could fish this first or cross it and proceed directly to Big Square Lake. This is the first in the chain, but cannot be reached except by way of Portage Lake, the second in the chain. The thoroughfare between the two is about eighteen miles long. Big Square Lake is as pretty a spot as one could wish to see, and as it is off the common route of fishermen is a grand place for sport. I have visited it twice and found abundance of fish. There is also a fair chance to find game. The trout are many of them large, and the fishing places easy to find. There are two streams that run into the lake, and the trout lie at the mouths of these in such numbers that the fisherman, though a novice, can soon catch all he wants. From this lake one has the current in his favor through all the thoroughfares between the rest of the lakes. Portage Lake, to which we must now return, has many good fishing places, but as it is more frequented than Big Square Lake, one is not so sure of finding plenty of fish. All through the other lakes will be found good fishing and fine scenery. I need not try to point out the different fishing spots, for the guides well know them, and also if the fisherman has had experience he can judge for himself where are the likely spots for trout. This chain of lakes extends about eighty miles, and you pass out by Fish River, which runs into the St. John river at Fort Kent. Twelve miles down the St. John brings you to Edmonston (or Little Falls), where one can take the cars for Bangor.

If the tourist wishes to avoid the ride from Presque Isle to Portage Lake, he can reach these lakes in another way, and go through them in the opposite direction from that already mentioned, and then come back again to the starting place. To do this it would be necessary to take the cars at Bangor to Edmonston and thence by boat twelve miles to Dickeyville. From here four miles will bring him to one of the lakes where a boat and guide can be procured. A few miles below Edmonston Green River empties into the St. John. This river is full of trout. They are not very large, but the quantity makes up for the size.

Another good trip is to go to the headwaters of the Restigouche River and fish it down. To do this one would need to take the cars at Bangor for Andover, N. B., where canoes and Indian guides can readily be obtained for about $1.50 per day. From Andover go up the St. John to the mouth of the Grand River. Before reaching this you pass Grand Falls. These falls and the scenery around are indeed grand beyond description, and the tourist may well reckon on spending a day at least to wander amid such wonderful displays of nature's work.

Arrived at Grand River (which is about fifteen miles above Grand Falls) you go up that about eighteen miles and reach a "waugan" or small stream, which soon brings you to the "carry," which is about three miles and not very difficult. Then down another "waugan" of about eight miles, and your canoe emerges from the damp overhanging bushes of the waugan into the magnificent Restigouche. Here at the headwaters are plenty of good-sized trout, and after passing down the river some twenty miles, salmon fishing will be found. These salmon pools are all owned by the proprietors of the river shore, and the owners have the exclusive right to catch salmon. But the trout are free, and also no one objects to the tourist casting a fly for salmon in the passage down the river. It is a large and beautiful river, with no difficult rapids, and will well repay the sportsman for a visit. There are several smaller rivers flowing into it, all of which have good trout and salmon fishing, notably the Upsalquitch and the Metapedia. I have been on all these rivers more than once, and speak from experience. At Metapedia, a village at the mouth of the river of that name, is a good hotel. Mr. Frazer, the landlord, is a most obliging person, and will make one's stay with him very pleasant. At this point the cars can be taken for the return home via St. John.

But if the tourist does not care to take the Restigouche from its headwaters as first described, he can go directly to Metapedia, which is a station on the Intercolonial Railroad, and distant about ten hours' travel from St. John city. Plenty of boats and reliable guides can readily be obtained, and also Mr. Frazer can supply permits for salmon fishing, as he has the control of some pools. Making your headquarters at the hotel, you could go up the Upsalquitch or Metapedia, or some of the other smaller streams and stay as long as desired, and return and try another. The railroad runs close to the Metapedia River its whole length, and the fisherman can have his boat put on the train at Metapedia Station and carried free of charge as far up that river as he likes to go, paying fare only for himself and guide. Then he puts his boat in and floats down at his leisure toward the hotel. My boat was taken up to the headwaters, over fifty miles, without charge, and this is the rule on the road.

The Tobique River flows into the St. John at Andover. Take cars at Bangor for Andover and there procure canoes and Indians. If one wishes to secure these beforehand, write to Mr. Allen Perley, the landlord of the hotel at Andover, who will attend to the matter promptly. The Tobique is not large, but it is a charming river. The water is as clear as crystal, and the scenery in many places exceedingly wild and grand. There are two rapids where the river dashes through high walls of rock in a way to make one dizzy to look at.

The tourist will probably prefer to walk around these, but the distance is not great. The Tobique Indians are good guides and perfectly familiar with all the fishing places on the river. It is fairly well settled for about thirty miles from the mouth, but for the remaining thirty miles to the forks the settlers are few. Many small streams flow into it, and good trout fishing is found at the mouths of these. There are also plenty of salmon in the river, but it has never been fished with the fly especially for salmon, and the "pools" are, therefore, not known. I have been up this river several times and hardly ever failed of taking one or more salmon by chance when trolling or casting for trout. The Indians spear large numbers of them.

At the forks, sixty miles from the mouth, the river branches into three streams, called the N. and S. branches and the Mamezekel. The latter is very small. About twenty miles up the N. branch is the "salmon hole," the headwaters for the salmon. The Indians often visit this place to spear. Bears are quite plenty on these branches. About twenty-seven miles from the forks up the S. branch we reach the Tobique Lake. It is quite small but is a perfect gem. High hills, densely wooded, slope regularly down to the shore on every side, and the little lakelet protected by this sheltering wall is always smooth and placid. The water is very deep and clear. In the middle is a tiny, rocky island about twenty-five or thirty feet long, where the voyager can camp and enjoy a brief paradise, free from flies and mosquitoes. It is impossible to imagine a more lovely spot than this little lake in the far backwoods. There is good fishing all along the S. branch of the Tobique, but only one fishing place in the lake itself.

Then if one wishes he can keep on from here and go into the Nipissiquit Lake, by a "carry" of about two miles. Nipissiquit Lake, the headwaters of the river of that name, is not so beautiful as Tobique Lake, but the fishing here is something marvelous. I have stood on the shore and in a short time caught so many trout that I was ashamed to take any more, as it seemed like wanton slaughter. Every time I would cast the fly the water near where it struck would be alive with trout jumping for it. If by accident I dropped the fly close to the bank right at my feet, some daring fellow would seize it. From this lake you pass into the Nipissiquit River, a very rough, rocky stream, but with good scenery and plenty of trout, some of them very large.

A journey of about eighty miles down the river brings you to Grand Falls, where the river plunges down in clouds of spray over a high and abrupt precipice. These "Grand Falls" have neither the height nor the volume of water of the Grand Falls of the St. John River, but still the view of them and of the wild and picturesque scenery around, is enough of itself to repay one for the journey. Below the Grand Falls salmon are plenty. It is about twenty miles from the falls to Bathurst, at the mouth of the river, and a rougher twenty miles of navigable river it would be hard to find on the face of the earth. But with a staunch canoe and a trusty Indian it is the most exhilarating sport to shoot these frequent rapids, and one soon becomes accustomed to them and enjoys them. At Bathurst the cars of the Intercolonial Railroad can be taken for home via St. John. The head waters of the Upsalquitch (to which I have alluded before) can be reached from the Nipissiquit. The "carry" between the two rivers is about three miles long, and is situated about fifteen miles below Nipissiquit Lake. The Upsalquitch is about fifty miles long, and is a fine river for trout and salmon. I found this carry rather difficult, and also we were obliged to "shoe" the canoe for part of the headwaters of the Upsalquitch.

I once took a trip from Andover up the Tobique River to the forks and return, with four ladies and two boys in the party of eleven. After going up the river by the road about twenty miles we chartered a flatboat, which, towed by a span of horses, took us to the forks very comfortably in about five days, fishing as we went along. At meal-time we would land and cook our gipsey meal on the shore and camp for the night on the banks. The ladies enjoyed it very much, and the boys were wild with delight all the trip. We were absent from Andover ten days and came back a healthier, if a blacker, crew than we started. A party of Philadelphians, with ladies, passed us on their way through to the Nipissiquit River. Indeed, it is not at all unusual for ladies to take this trip.

The Miramichi River has two main branches, the northwest and the southwest. Of the former I cannot speak from personal observation, but it is said to be a good river for salmon. It can be reached by a long, hard carry of twelve miles from the north branch of the Tobique River, or by the way of Fredericton and stage to Boiestown. The southwest branch is the best river for salmon that I was ever on. The pools are numerous and very accessible. The trout fishing is also good. This branch can be reached in two ways. One is to take the cars at Bangor for Fredericton, and thence by stage or private conveyance forty miles to a settlement on the Miramichi, about four miles above Boiestown, where Mr. Wm. Wilson lives. Here are quite a number of settlers, and boats and guides can readily be procured to go up the river. Like all the New Brunswick rivers, the salmon pools here are controlled by the owners of the shore. But the voyager passing up or down the river is not molested if he does not interfere with those who may be on the spot.

The other way to reach this river, and in some respects the better way is to go to the headwaters and so on down the river. To do this it would be necessary to engage boats and guides to meet you at a place called the Forks, about forty miles above Wilson's. This can be done by corresponding with Mr. Wilson. His address is Mr. Wm. Wilson, McDonald's Way Office, Miramichi River, above Bolestown, Bloomfield, N. B. Write some time ahead, as postal communication in New Brunswick is not so rapid or sure as in the States. Mr. W. is a very reliable person, and one can be sure of honest and prompt dealing in all negotiations with him. It would of course be necessary to state the date for the guides to be at the forks. Then two days before that date, take the cars at Bangor for Woodstock, N. B. Here ascertain the name of the station on the N. B. R. R. where you are to get off to cross over to the Miramichi. I do not remember the name, but it is some twenty miles above Woodstock, and the conductor on the train will know which it is. The railroad was not built when I made this trip. At this place you can procure a team to take you across to the forks of the Miramichi, twenty-four miles, to meet your guides. From the forks good fishing will be found all the way down to Wilson's, forty miles. Here you can take a team for Fredericton or go on four miles further down river to Boiestown and take the stage.

There are many other lakes and streams in this part of the country where good fishing can be had. One who has never visited this region will be surprised and delighted at the beauty of the scenery in many places, and also abundantly rewarded for his labor in the pleasant work of casting the fly over these streams and lakes. Of course black flies and mosquitoes abound; but with proper precautions in the way of fly poison and a well-arranged sleeping outfit, one need not suffer any great discomfort. For the benefit of whom it may concern I will give the recipe for a mixture that I can strongly recommend:

Oil tar	½ ounce.
Oil clove	1½ drachms.
Oil pennyroyal	½ ounce.
Spirits camphor	1½ ounces.
Ammonia water	2 drachms.
Olive oil to make	8 ounces.
Add castor oil	1 ounce.

Mix well.

Use this freely on face and hands and the black flies will not touch you. It is the best fly poison I ever used, and is not disagreeable.

For the benefit of campers out I will also give directions to make a sleeping outfit, which will save all annoyance from mosquitoes by night. Take some cheap blankets and cut out five pieces each 6 feet long, 3½ feet wide at one end and 2½ at the other; also another piece, same width, but 2 feet longer, for bottom. Sew up the sides and narrow end of these pieces, leaving the 3½ feet end open, making a bag, into which one may crawl feet first, under one, two or more thicknesses of blanket, according to weather, and sometimes in this region one is glad of the whole of them. Sew on over these blankets a piece of thin cotton cloth of following dimensions: 8 feet wide at one end and 2½ feet at the other, and 7 feet long. Sew the narrow end to the narrow end of the blankets, and the sides to the sides of the blankets, leaving the 8-foot end slack to be hauled up to the top of the tent, making an ∧ shaped covering when the bed is arranged. Have a good-sized piece of mosquito netting sewn on the wide end of the cotton covering, loose enough so that the sleeper can easily crawl under it, and long enough to be tucked under the pillow (and by the way, always take the pillow; it pays). With such an arrangement for sleeping one can rest comfortably, safe from the attacks of the buzzing mosquitoes. It is easily arranged, perfectly convenient, gives plenty of air, and every ounce of weight is utilized.

LEWISTON, Me. WM. H. WASHBURN.

WAX AND VARNISH RECIPES.

THE beeswax, resin and lard recipe for wax is a very good one, but I find it is much better to increase the amount of beeswax and all but omit the lard, putting in a very minute quantity. The grease is objectionable in all waxes, especially when one is fly-tying, as it is detrimental to the finer shades of silk. When the color of the silk is of no importance, there is scarcely any wax superior for rough work to the ordinary shoemaker's kind, which, in order to allow of its perfectly penetrating the silk, should be dissolved in methylated spirit till of the consistency of gruel. The binding silk should be placed bodily in this solution and the superfluous liquid removed between the finger and thumb. The spirit of course evaporates, leaving the wax hard and the silk perfectly waterproof. As to varnish, there is nothing, even for dark woods, which is superior to shellac and spirit, to which a little gum benzoin is added. The shellac and spirit should be put in a warm place and shaken occasionally till the latter will take up no more; then the benzoin pulverized is added, and after it is dissolved and the solution has stood twelve hours or so, the clear should be decanted for use. In applying this to rods a brush should not be used—a pad of cotton in a piece of old linen is the best means of application, and a half a dozen coats will not be too many if a beautiful polish is desired. Another very good varnish for light woods, termed in England the "Crystal" varnish, is thus made: Equal parts of Canada balsam and spirits of turpentine; warm the balsam till quite fluid and then add the turpentine. Shake the mixture well and place it in a warm situation. It is ready for use next. Here is another better than the last, if possible. Reduce gum copal to powder, and mix with it equal parts of oil rosemary till the two form a jelly, then add absolute alcohol gradually, shaking the mixture. A water bath greatly assists. A capital waterproof varnish for fly-tying is made by dissolving pure gutta percha in chloroform. The rubber must be finely divided. Don't get this too near the nose for any length of time or you will find yourself getting sleepy.

J. HARRINGTON KEENE.

THE MOST KILLING FLY.

Editor Forest and Stream:

I am glad to again see an article on "The most killing fly" and from the pen of one who has kept such close record, and evidently "speaks whereof he knows." I have had three very pleasant years acquaintance with *Salmo virginalis*, fishing almost daily during the entire open season and over a stretch of country extending from the far end of Gunnison county, Colo., to the borders of old Mexico, and it is a pleasure to be able to agree almost *in toto* with "Cyrtonyx."

I have kept no record save in my mind, but think on the whole if I had to take my choice between the black prince and coachman, I would cling to the prince, and more especially for Colorado waters. I have had exactly his experience with most of the popular Eastern flies. I don't think I ever caught a mountain trout on a red or split ibis, though I have often tried them for experiment. One fly that I have found very good, especially in ponds and lakes, is the silver doctor tied on a rather large hook. If you have not tried the doctor, try it, "Cyrtonyx," and you will find him "bad medicine." I have my fly-books by me while writing, and have been vainly searching for a fly that gave me great sport one afternoon late last season, but I can't find it, and

presume it must have gone as food for other trout when that Osgood patent folding boat quietly folded and left me standing in five feet of ice cold lake water. The afternoon I speak of the trout seemed to be off their feed, and it was hard work to get a rise of any kind, even with the most favorite and alluring flies. At last in sheer despair I sat down to look for the most unlikely outlandish fly in my books. I ran across this one, simply a black and white feather tied to rather a large hook, no body, simply a black feather on one side and white on the other. Well, I put it on, more I think with the idea of scaring the fish to death, than of catching them. I cast out my "forlorn hope," let it sink somewhat and was drawing it in, when it suddenly stopped. I thought I had a snag or black bass, but quickly found out it was a lively old trout and proved after a game fight to be one of the largest I ever caught. Nor was he the only one who seemed to have an attachment for "forlorn hope" (such I named the fly) as I had splendid sport till dark, and with two other flies on my leader, generally favorites, did not take a fish. Now, why was it? Black prince, coachman and in fact nearly every fly in my books were tried in vain, till in anger I picked out "forlorn hope." Surely trout and women are "queer creeturs."

The hackle that "Cyrtonyx" speaks of from the hairs of a deer's tail is also a favorite of mine, that is in fishing for *Micropterus salmoides*. I found it a very taking lure in Florida fishing, killing more than the red or split ibis.

Let us have more talk on flies, and do some enterprising brother angler agitate the idea of having a standard for flies, so that the angler far away from large towns and cities can send an order and receive something that has a slight resemblance to what he desires. SPORT.

CHICAGO, May 12.

THE FISH LAW FOR LAKE GEORGE.—In our last issue we mentioned the fact that a singular law had been passed which, while professing to merely protect bullheads, practically forbids all fishing in the lake until July 1. On this subject the Glens Falls *Republican* says: The publication in last week's *Republican* of the new law relative to fishing in Lake George has caused considerable commotion among anglers, and not a little conflict of opinion as to its interpretation. The clause creating most discussion is that which says: "Nor shall any person expose for sale, or have in his or her possession, any bullheads or other fish caught or killed in the waters of Lake George, or in the waters of the inlets or creeks emptying into the same, between the first day of April and the first day of July, in any year." It is thought that portions of this clause were inadvertently or surreptitiously inserted, as there was no call for such a sweeping prohibition. We are quite certain that the words "or other fish" were not in the bill while it was before the Assembly, and that it was not the intention of those having charge of it that they should be there. Bills have been wrongfully altered by designing persons during their progress toward final passage, and it looks as if this measure was "doctored" after it left the House, and that it slipped through the Senate in that condition. According to a law on the statute books the open season for catching salmon trout in Lake George begins May 1. Another law provides that brook trout may be taken in any of the public waters of the State from May 1 until September 1 of each year. Does the bill just passed annul the provisions of these statutes? The law itself admits that the words "or other" does not include all other fish, for it makes it unlawful to catch or kill or have possession of pickerel caught in Lake George from Feb. 15 to June 15 only; so that after June 15 the law would give the right to fish for pickerel, showing that the intention was not to include all fish in Lake George by the words "or other fish." The word trout is not used in this section of the law, neither is trout mentioned in Section 21 of the original law of 1879, which this new law seeks to amend. The original section is entitled "Bass," and only speaks of them and muscalonge, and the section as amended by this new law mentions bass, muscalonge, pickerel and bullheads only. Can it be said that these general words used in this law can be intended to prevent fishing for all kinds of fish within the time stated, when Section 20 of the Laws of 1879 regulates the closed season as to lake trout, and the law does not assume to change or amend that section? Neither does it assume to amend Section 19 of that act in regard to brook trout. It is a well-known rule and maxim of law that a penalty cannot be created by the use of such general words "or other fish" as used in this law. This is well illustrated by a case cited by Blackstone in his Commentaries, Vol. I., page 88: "By the statute 14 Geo. II., c. 6, stealing sheep or other cattle was made felony without benefit of clergy. But these general words 'or other cattle' being looked upon as much too loose to create a capital offense, the act was held to extend to nothing but mere sheep." Some people may ask why the bullhead and no other fish is mentioned in that clause of the law, and certainly it would be hard to answer the question. Many things are shrouded in mystery and past finding out, and especially the meaning of some laws passed by the average Legislature, but judging only from this act itself, and the incongruous mass contained in it, we should say at once that the framer of it was egotistic; that his main point in framing the law was principally for his own protection, and generally for all other fish.

THANKS FOR ANGLER'S LORE.—*Editor Forest and Stream:* My hearty thanks are due to "Von W." and "A. N. C.," who so kindly answered my queries about attaching flies with small loops as droppers. "Von W." describes a mode and says: "It is a very simple operation, and I wonder he has not seen it himself" I have seen it, and I also saw something else, namely, that while this mode will do very well for bass, it would not do at all for trout, because these additional loops increase the quantity of gut, thus rendering the delusion which we offer to the trout about as apparent to him as to the angler, if not more so. Hence I ruled out this method for trout. I had also seen for myself a mode somewhat similar to that described by "A. N. C.," but his is better, and the better way was that for which I was searching. To both gentlemen, but particularly to Mr. Cheney, I send thanks.—M.

CHAUTAUQUA LAKE.—Jamestown, N. Y., June 1.—The legal fishing season on Chautauqua Lake opened to-day and big catches are reported on all sides. One sportsman landed a 30-pound muskallonge, and others filled their baskets with from half a dozen to twenty yellow bass. Large parties of anglers are coming here this month from neighboring cities, attracted by the excellence of the sport. The fish laws have been enforced for two years, and in consequence the waters of the lake teem with pickerel and black and yellow bass.

A NEW ANGLING CLUB.—A club has been formed to buy a tract of land in the Southwestern Adirondacks, some six miles long by five wide, including Wilmurt, Pine, Big Rock and smaller lakes, and some miles of West Canada Creek. It will take the entire real and personal property of Hon. O. B. Matteson, in Hamilton county, N. Y., his Mountain Home, lodge, ice houses, stables, horses, carriages, bedding and household furniture. The capital stock will be $60,000, and the membership will be limited to twenty. The incorporators are: Hon. Warner Miller, Hon. Wm. B. Evarts, Gen. R. U. Sherman, Fred Mather and Charles A. Dana. On Monday night last the above gentlemen with some of their families left on a special car for the Mountain Home, accompanied by Mr. and Mrs. E. G. Blackford, Mr. and Mrs. John D. Hewlett, Judge Carter, Nathaniel Wilson, Capt. William Dunning, Amos Cummings and several others, to inspect the property.

WHAT BAIT?—Pittsfield, Mass., May 25.—*Editor Forest and Stream:* There is a large trout brook within a few miles of our home running partly between two mountains. As the water tumbles down the mountain several large basins or pools are formed. I know for a certainty in these basins are very large trout, one to two and a half pounds and over. Will some reader tell us through FOREST AND STREAM what these fellows will accept on a hook? Very seldom will they rise to a fly. Worms they will not notice. One was shot yesterday by a youngster, weight one pound six ounces. There is no guess with me about it. There are plenty there and fine ones, but they won't bite. If any one can help me get on to them, I will promise him a good string (delivered express paid).—SQUATTER.

THE QUEEN'S BIRTHDAY.—Montreal, May 26.—Fishing season opened poorly, very small catches being made all round. Queen's Birthday being a holiday here, thousands of lovers of the art indulged in an outing, and that was about all. No fish. Reasons probably are late season and high water. Netters are reaping a harvest. If we hope to preserve our fish we must follow in the wake of Vermont and extend our close season to June 15 instead of May 15. Some large maskinonge were brought in, but the writer surmises they were taken in a gillnet. A forty-two-pounder seen at Lachine looked as if he had been in a fight with a net; but I suppose we must believe he was caught in a sportsman-like manner.—LACHINE.

FLIES FOR STRIPED BASS.—Baltimore, Md., May 18.—*Editor Forest and Stream:* In your paper of 14th inst. I notice that "Homo," in speaking of putting rockfish in the Schuylkill, says rock will readily take the fly. I have been trying to find out the kind of fly for rock for some time, without success, as they (the rock) will take the fly in the Upper Patapsco, and I have delayed going as I could not get the right fly. Have been told that one with purple in it is good. Please advise me the colors, or if that is not possible, where to get them.—ROCK. [Red and yellow are good colors.]

PHILADELPHIA NOTES.—May 30.—Some of our bass fishermen, unable to wait until the law is out, have already wet their lines, and the streams being in the best of condition, not a few fish were taken last week. At Shawmont, on the Schuylkill, one angler basketed four three pounders, and at Perkiomen I hear more have been taken. The Shawmont bass were caught with minnow bait, and those at Perkiomen with fly. Rockfish angling still attracts many on the Delaware. At any of the wharves up the river good-sized fish can be taken with either shad or sturgeon roe.—HOMO.

Fishculture.

HIBERNATION OF THE BLACK BASS.

[Read before the American Fisheries Society.]

BY DR. JAMES A. HENSHALL.

THAT both species of black bass (*Micropterus*) hibernate, in the northerly part of the country, is a fact too well known to admit of a doubt. But, notwithstanding the evidence heretofore adduced in support of this fact, the occasional catching of a black bass during the winter season, in the North and West, is sometimes heralded by correspondents of the angling papers as a proof that former observers have been mistaken, and that these fishes, or at least the large-mouthed species, do not hibernate. Perhaps the term hibernation is not well understood by these writers, which may account for their hasty and erroneous conclusions.

Hibernation does not necessarily imply, as supposed by some, a state of complete torpidity or profound sleep during the entire winter. To hibernate, according to Webster, is "To pass the season of winter in close quarters, or in seclusion," and that this is just what the black bass of both species do, in northern and western waters, every one who has given the subject any intelligent investigation is prepared to admit.

Hibernation of animals is influenced, doubtless, by conditions of temperature and food supply, and the duration, extent or degree of this period of repose or seclusion is augmented or diminished by the particular state of these conditions. In the opinion of the writer, hibernation of animals is influenced as much (if not more) by the supply of food as by the state of the temperature. This is proven by the fact that while the black bass hibernates, other fishes in the same waters are active during the entire winter; and this fact may be accounted for by a lack of the principal food of the hibernating species, and an abundance of the particular food of the non-hibernating species, for it is not likely that the temperature, *per se*, would affect one species more than another. To illustrate: The principal food of young black bass (say from six months to a year old) consists of insects, and of adult bass, of crawfish and other crustacea, and both of these classes of food are very scarce during the winter months in the North and West. On the other hand, pike, pickerel, pike-perch and other exclusively piscivorous fishes find an abundance of certain species, as minnows, yellow perch, etc.

To be sure the black bass feeds on minnows and yellow perch occasionally, but not to any great extent, nor for choice; its weak, brush-like teeth are not so well adapted for a fish diet as the canine-teethed fishes above mentioned. And this is one of the strongest arguments in support of the fact of their hibernation, for were the black bass as piscivorous as many would have us believe, there would be no necessity for their winter seclusions on account of a lack of this kind of food. Of the two species of black bass the large-mouthed bass feeds more upon minnows than the small-mouthed bass, and hence is taken oftener during the winter. In the extreme Southern States the supply of crawfish and insects is constant, consequently the black bass does not hibernate in that region. Among the hibernating mammals the black bear, in the extreme South does not undergo the winter sleep of his Northern brethern because he finds his food abundant at that season. And even in the North, during mild winters when food can be procured, the black bear has been known to depart from his usual habit, and has been killed when roaming abroad, when he should have been asleep in his winter den; but such rare exceptions merely prove the rule, and do not disprove the fact that the black bear is a hibernating animal.

In Europe the German carp are typical hibernating fishes, burying themselves in the mud at the beginning of winter, their heads together in circles and their tails out, which are kept in motion more or less constantly. But American fish-culturists state that while the imported carp hibernate profoundly; their descendants, on the contrary, are more active during the winter, and the disposition to hibernate grows less with succeeding generations. This I believe to be more on account of an abundant supply of food than upon the temperature, for most carp culturists are liberal feeders from the fact that carp will grow more rapidly than other fishes if well fed.

German authorities are of the opinion that the carp takes no food during the period of its hibernation (from four to six months), though it has been proved that it does not diminish in weight during this entire time. I do not believe it possible for an animal to abstain entirely from food and maintain a uniform weight for a period of several months, even though it sleep never so profoundly. (The black bear goes into winter quarters excessively fat, but comes out in the spring weak and emaciated.) I am of the opinion that the German carp derives its nourishment during hibernation from the mud in which it is buried, for it is well known that all of the *Cyprinidæ*. *Catostomidæ*, etc., feed more or less upon the mud of the bottom, or at least upon minute organisms contained therein. This view seems plausible in connection with the fact that in Europe, carp kept in tanks for sale during winter rapidly lose in weight unless fed generously. In American waters, though frozen over during the entire winter, there are always some forms of vegetation, larvæ and animalculæ, to be had by herbivorous and bottom-feeding fishes, as carp, minnows, suckers, sturgeon, etc., consequently these fishes are more or less active during the coldest weather, and some of them in turn furnish food for the piscivorous tribes during the same season.

The writer has elsewhere stated: "During a residence of ten years in Wisconsin, where fishing through the ice is constantly practiced during the winter, and where tons of pickerel, pike-perch and yellow perch were so taken in a single season, I never knew of a single black bass being so taken except very late in the winter or in early spring, say in March, just before the breaking up of the ice; and even those instances were of rare occurrence, and happened only during unusually mild weather; and these same waters, be it remembered, afforded the finest black bass fishing during the summer and fall."

The above applies to the usual fishing grounds of the lakes and streams of Wisconsin with the water of moderate depth, from four to twelve feet, which are frequented by the black bass, large-mouth and small-mouth, in common with the non-hibernating species in spring, summer and fall, but only by the latter in winter, the bass retiring to greater depths at the beginning of winter and remaining until spring, and where they can be taken by the initiated with the right kind of bait; but as I deem such information of no special advantage, except to the poacher and lawbreaker, I think it best and proper, for obvious reasons, to withhold it. From personal observation I am pretty familiar with the habits of both species of black bass at all seasons of the year, in all of the States east of the Mississippi (except the New England States, New Jersey and Delaware), and with the exception of the Gulf States, I am convinced that both species of black bass hibernate in a greater or less degree, according to the supply of food in the winter season, or in other words, according to the climate. In these exceptional States, during the hottest weather, they retire to the deepest and coolest water to be found, and undergo a condition of rest and seclusion (estivation) analagous to hibernation; perhaps an inherited instinct.

In the foregoing hastily-written paper I have endeavored to show: (1) That hibernation of fishes (and other animals) is influenced more by the supply of food than by the temperature; for it is well authenticated that fishes can endure extremes of temperature that would prove fatal to other vertebrates. (They have revived after being frozen in ice, and on the other hand, they live in apparent comfort in the water of hot springs of a temperature of above 100 degrees Fahr.) (2) That both species of black bass hibernate in the northern sections of America.

MR. GOODE—Mr. President, I should like to say a word or two on this question of hibernation. It seems to me that hibernation is by no means a voluntary act, as might possibly be inferred from some things which Dr. Henshall has said. It is purely a matter of physical cause and effect, and the question whether the black bass will hibernate in a given latitude depends on the depth of water and the presence of warm spots at great depths in that particular body of water. Every fish has, I think, a certain limit to its powers of activity, a certain limit which varies with different species according to a scale of temperature. Many of the southern fishes which come to our northern coast in summer, are in the fall seen in the cold tidal bays partially torpid. In such a state they cannot feed. It is the torpidity which prevents their feeding rather than the lack of food; and it seems to me that in almost every case the fish has no power to escape from that degree of cold which produces torpidity. From reliable testimony I learn that black bass are taken under the ice in some of the northern lakes, and have no doubt, that in other lakes not so deep, the fish become torpid before the ice forms on account of the shallowness of the water. I think, therefore, that Dr. Henshall's theory is somewhat exaggerated. He may have heard of fish feeding during the period of hibernation. I am not, however, inclined to believe that they ever do this. I certainly very much question the possibility of carp feeding during the period of hibernation. It is generally known that they are then buried in the mud at the bottom of the water. This is a very interesting question, and one whose solution involves a great deal of experimenting. I should, however, hardly like to see the question settled upon hypothetical grounds before such experiments are made.

MR. MATHER—This question of the hibernation of fishes is one concerning which I have no special knowledge. I have, however, paid some little attention to it, having been recently engaged in endeavoring to learn the geographical range in which the black bass hibernates. As touching the question of temperature and food, I know that on our New York coast, in Long Island Sound, there are some fishes which are active all winter, and others which bury themselves in the mud. The tautog, or blackfish, practically hibernates. I do not think it takes a particle of food during the winter. Flounders go into the mud, and so does the eel, which latter buries all excepting its head. All the eels that are taken there in the winter are speared, the fishermen sounding in the mud with their spears. In the middle of April they come out and are taken in eel pots. The tomcod and some other fishes are active all winter. It always seemed to me that some fishes might be more susceptible to the influences of temperature than others. In lakes north of the fortieth parallel we know that the black bass does not feed much during the winter. Occasionally a specimen is taken with hook and line. Dr. Henshall's theory concerning hibernation is certainly a new one to me, viz., that the question is one of food and not of temperature, and is one, I think, which will bear considerable examination before it be accepted as the correct solution.

CARP IN THE SUSQUEHANNA.—An European carp of the mirror variety, weighing five and a quarter pounds, was caught in the Susquehanna River below the dam here in a seine, on the 15th inst., the first known here, and a source of wonder to the old fishermen.—A. F. CLAPP.

The Kennel.

FIXTURES.

BENCH SHOWS.

June 2, 3, 4 and 5.—First Annual Dog Show of the Illinois Kennel Club. John H. Naylor, Secretary, 3,182 Archer avenue, Chicago, Ill.

Sept. 22, 23, 24 and 25.—Dog Show of the Milwaukee Exposition Association. John D. Olcott, Superintendent, Milwaukee, Wis.

Oct. 27, 28 and 29.—Twelfth Dog Show of the Western Pennsylvania Poultry Society, Pittsburgh, Pa. C. B. Elben, Secretary.

FIELD TRIALS.

Nov. 16, 1885.—Seventh Annual Field Trials of the Eastern Field Trials Club, High Point, N. C. Entries for Derby close May 1. W. A. Coster, Secretary, Flatbush, L. I.

Dec. 7.—Seventh Annual Field Trials of the National Field Trials Club, Grand Junction, Tenn. Entries for Derby close April 1. B. M. Stephenson, La Grange, Tenn., Secretary.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register." P. O. Box 2832, New York. Number of entries already printed **2386.**

ENGLISH AND NATIVE FOXHOUNDS.

Editor Forest and Stream:

We notice what we (as breeders of both English and native foxhounds and as fox hunters) call a bright and right idea set forth by "Homo" and sanctioned by H. C. Newell, that there should be two classes in foxhounds, as the American foxhound and the English foxhound are entirely different in appearance and working qualities. There is nearly as much difference in a well-bred specimen of both breeds as there is between a pointer and a hound. But we differ a little with Mr. Newell, as we would prefer a good English hound to a "yearling calf" to run a fox over "granite hills" or any other hills. We don't find so much difference in their hunting as in their appearance, and no better feet or staying qualities were ever allotted any dog than has one of our imported English dogs. He is eight years old and this winter past was his first winter in America, and he had never run only in a pack, and the second time he was out with but one other dog with him, was toward spring, and on the heaviest sharpest crust we had. They started a fox at 8 A. M., ran all day, all night and until 10 A. M. the second day, when they caught and killed their fox, and came in with just as good feet as when they started. No blood on their trail. We call this good "doings." Would say the dog that ran with him was pure English, but American bred. We think them a good dog, but as there is so much difference in appearance I think there should be a standard for both, as there are some elegant native hounds and I would like to see the breeding of both varieties encouraged and our natives given a chance at our shows. BLACK-TAN-AND-WHITE.

GLENS FALLS, N. Y.

THE PROPER AGE FOR DERBY ENTRIES.

Editor Forest and Stream:

Your issue of April 2 contains the information that the Eastern Field Trials Club had reconsidered and abandoned the contemplated change of dates within which puppies must be whelped to be eligible to their Derby. The proposed change was an important and correct step in the right direction had it been taken, and undoubtedly would have found great favor with the supporters of field trials and would make the stake a popular and successful one. Under present conditions there is no doubt but what the stake will lose more or less support, owing to the hardship worked on real puppies. To make a showing of the injustice worked under this arrangement, it will be necessary to particularize, and this will develop the errors without argument. From Jan. 1 until the latter part of November of the following year is, in round numbers, a period of twenty-three months, and all puppies must be whelped during this time to be eligible to the Derby. It will be seen that this time covers a period of nearly two years, and that a dog whelped in January of the first year will be about eleven months old at his first Derby, and will have all necessary experience and training as a puppy, and as such, if he is precocious and well-grown, may run a brilliant race. Let us assume that, during the following January, another puppy is whelped, whose age and opportunities at due time will fit him in every respect to run in the Derbies of the year; but he has to compete with puppies, so-called, that had already been trained, run in one stake as a puppy, and were gathering strength and experience while he was in his puppyhood. Of course, this is all based on the assumption that a Derby is, according to the common and popular belief, a puppy stake; the belief is undoubtedly correct, inasmuch as the Derby is published to the world as a puppy stake, and conducted and completed with all due formality accordingly. As the clubs have agreed that a dog at twenty-three months of age is a puppy, the sportsmen at large are bound to believe it, since it is *ex cathedra*, therefore correct and final, and no dog, at least no well bred one, would outgrow his puppyhood in the face of orthodox dicta based on scientific principles, all of which is directed to his own good and advancement, although it does seem at first sight as if the two-year-old January puppy had all the advantage. There are about three or four months, from January to April or May 1, during which a puppy may be whelped, and have age enough to be educated and run in the Derby of the same year. Puppies whelped after May 1 cannot be trained until the following winter, and in the majority of cases, only partially then. The great majority of puppies that run in the Derbies are whelped between April 1 of the Derby year and May 1 of the year previous to that in which the Derby is run, thus covering a period, more or less, of eleven months. Puppies whelped during this time can have but one season's work, while the January or February dog of the previous year has been trained during the first year, has run already as a puppy in one trial, has had the benefit of extra education and experience of a full winter's work after the trials—from December 1 to April 1—and then the benefit of the same season, during which the later whelped dogs must be wholly trained. This January dog of the previous year is then about twenty-three months old, thoroughly trained and with all the experience and training necessary in an aged dog; in fact, a fully matured dog, both mentally and physically, and thoroughly educated. However, it might be worse than this, as the limit could be so fixed as to permit a dog to run three or four times as a puppy in three or four consecutive years, since shedding puppy teeth, and, in due course of nature, arriving at doghood, has so little to do with it. These twenty-three-months-old puppies, singularly indeed, generally vanquish their younger brethren, and sometimes the owners of these youthful dogs run them in the all-aged stake with signal success. These ripe puppies have a way of soundly beating their own class and demonstrating their ability to hold their own in the all-aged. It is well known that a dog between the ages of two and four years puts more spirit and dash into his work than at an earlier or later age. Of course, at a later age a dog will do good work, but generally he grows cunning and conservative, and loses some of his youthful fire and enthusiasm, particularly if he has been worked steadily every year during the whole season. It has been practically demonstrated so often that a puppy cannot compete with the slightest chance of success with an aged dog that it must be evident to owners that the time limit governing age is too liberal, and that a dog should not be permitted to have age enough to run in more than one entry. A policy that holds to such a wide limit for the sake of the few additional entries possible thereby is pursuing a policy fatal to the interests of the stake, as owners will keep aloof from all aged dogs in a puppy class; in fact it would not be surprising if many owners have taken this view already. Of course, there would be fewer phenomenal puppies, or in other words there would be fewer all-aged dogs in the Derby, but there would be more competition, a larger interest in it, and more assurance of establishing trials on a permanent basis than there is at present, for no man would care to run a real puppy against an all-aged dog after it dawned upon him that it was such. To fix the date so that a puppy could have only sufficient age to run one Derby with any possibilty of success, would, I think be the just and correct solution of the matter. FREE LANCE.

LAMAR, Mississippi.

THE EASTERN FIELD TRIALS CLUB RULES.

WE publish below the regulations and rules for running and instructions to judges of the Eastern Field Trials Club for the trials of 1885. We have received a letter from Mr. Elliot Smith, in which he says that Rule 4 will only be in force this year, and that in the future all dogs to be eligible for the Derby must be whelped on or after May 1 of the preceding year:

RULE 1. The management of the meetings for the Annual Field Trials shall be intrusted to the Governors of the Club, and with them lies the interpretation of the rules. They shall decide upon all matters not provided for in these rules.

RULE 2. The judge or judges shall be selected by the Governors, and their names shall be publicly announced as soon as possible after their selection, and before the closing of the entries. When a judge is prevented from attending a meeting or finishing it, the Governors shall appoint a substitute.

RULE 3. For all stakes, the names, pedigrees, ages, colors, and distinguishing marks of the dogs shall be detailed in writing to the Secretary of the Club, to be filed at time of making entry or entries. Any dog's age, markings or pedigree which shall be proved not to correspond to the entry filed shall be disqualified, and all such dog's stakes or winnings shall be forfeited.

RULE 4. Dogs, to be eligible for the Eastern Field Trials Derby, must be whelped on or after the first of January of the year preceding the trial for which the dogs are nominated.

RULE 5. The forfeit money must accompany every nomination, and the balance of entrance fee must be paid before the drawing.

RULE 6. The Governors may refuse any entry they may think proper to exclude; and no person who has been found, to the satisfaction of the Governors, to have misconducted himself in any manner in connection with dogs, dog shows or dog trials, or who is a defaulter for either stakes or forfeits in connection with either thereof, or for any money due under an arrangement for division of winnings, or for penalties for infraction of rules, or for any payment required by a decision of the Club, shall be allowed to compete in any trials that may be held under the auspices of the Eastern Field Trials Club.

RULE 7. Any objections to any entry must be made in writing addressed to the Secretary of the Club, and will be acted on by the Governors, whose decision shall be final.

RULE 8. Immediately before the dogs are drawn at any meeting, the time and place of putting down the first brace of dogs on the following morning shall be declared and posted in a conspicuous place.

RULE 9. All stakes shall be run in the order of the programme when possible. Should, however, the competitors or their representatives in the various stakes agree otherwise, the order may, with consent of the Governors, be changed.

RULE 10. Dogs shall be drawn in braces by lot and run in heats; the beaten dogs to be retired (except as hereinafter mentioned), and the winners run in heats again in the order in which they ran their successive heats. When two dogs, owned or handled by the same person, are drawn together, the name of the second dog so drawn shall be returned to the undrawn names, and another name drawn in its place.

RULE 11. If two dogs owned or handled by the same person should come together after the first series in any succeeding heat, the second dog so owned or handled shall change places with the first dog not so owned or handled in the order of running. If, after the first series, such separation is found to be impracticable or without benefit, the running of two such dogs may be permitted.

RULE 12. If in any series of heats there should be a natural bye, such bye shall run with the winner of the first heat of the previous series as the first brace of the next series, except as hereinafter provided. If, during the running of the first series, a dog be withdrawn or fail to appear, the brace mate of such defaulting dog shall run with the bye at the end of the first series of heats, except that should there be more than one of such defaults, the remaining dogs shall run together in the order of natural precedence.

RULE 13. Each dog must be brought up in its proper turn without delay; if absent for more than twenty minutes, its opponent shall be adjudged the winner and entitled to the heat, and shall in that case receive a bye, and be subject to rule twelve. If both dogs be absent at the expiration of twenty minutes from the time of call to run by the judge or judges, the judge or judges shall have the power to disqualify both dogs.

RULE 14. An owner, his handler or deputy may hunt a dog, but it must be one or the other, and when dogs are down an owner must not interfere with his dog if he has deputed another person to handle and hunt him. In members' stakes a dog must be handled by his owner.

RULE 15. The person handling and hunting a dog may speak, whistle to and work him by hand as he may deem proper, but he shall be called to order by the judges for making any unnecessary noise, or for any disorderly conduct, and if after being cautioned he persists in such noise or disorderly conduct they shall order the dog taken up and adjudged out of the stake. An opponent's dog must not be interfered with or excited. In such case an appeal should be made to the judges.

RULE 16. If an opponent's dog points game, the other dog must not be drawn across him to take the point, but if not backing of his own accord he must be brought around behind the pointing dog. Dogs must be hunted together and their handlers must walk within a reasonable distance of one another.

RULE 17. If a dog be withdrawn from a stake on the field or at any time during the holding of a trial, its owner or his deputy having authority shall notify in writing, with his name attached, the Secretary or one of the Governors of the Club. If the dog belong to either or any of those officials, the notice must be handed to one of the others. When a winner of one or more heats is drawn for any reason other than defeat, the dog or dogs previously beaten by him shall not be deprived of competing for second or third prize if, in the opinion of the judges, they have a chance to win.

RULE 18. If any person openly impugns the actions or decisions of the judge or judges, or otherwise annoys them during the progress of a trial, he may be debarred from further participation in the trials, and ordered off the grounds.

RULE 19. No person other than the judge, judges or reporters will be permitted to accompany the handlers of dogs competing in any heat, excepting owners of such dogs running in charge of a handler or deputy, and they shall be permitted to accompany the stewards until the finish of such heat, when they shall retire until their dogs again come in competition. Two persons are prohibited from working one dog. If from any cause the handler of a running dog is disabled to such an extent that he cannot shoot, upon his request to the judge or judges, he may select some person to shoot for him, and the judges may in any case require handlers running dogs to go through minutely the evolution of shooting either a blank or shotted cartridge over any or every established point, upon being ordered to flush a bird. The handlers of the two dogs shall go together as if it were a brace of dogs, so that the dogs shall be on an equality as to ground, opportunities for finding, etc. Spectators shall not be allowed nearer the handlers of dogs running than seventy-five yards to the rear. The privilege is granted handlers to ask the judges for information or explanation that has a direct bearing upon any point at issue; pending such questions the dogs shall not be under judgment. Dogs afflicted with any contagious disease, or bitches in season, will not be permitted on the grounds. Handlers shall not load their guns until a point be established.

RULE 20. When two dogs, the property of the same owner, or of confederates, shall remain in for the deciding trial, the judges may determine which is the better, either by prior performance or by further running, as they may order. Should the owner of a dog or his representative induce the owner or representative of another dog to withdraw such dog for a consideration or bribe of any nature whatsoever, all prizes won by either shall be forfeited upon the fact being satisfactorily proved to the Governors. If, however, either dog be drawn without consideration, from lameness, injuries or from any cause clearly affecting his chances of winning, the other dog may be declared the winner, on the facts of the case being clearly proved to the satisfaction of the judge or judges. When more than two dogs remain at the end of a stake, which is not run out, the stake shall be divided; and in case of a division between three or more dogs, of which two or more belong to the same owner, these latter shall be held to take equal shares of the total amount won by their owners, and in the division the terms of any arrangement to divide winnings must be declared to the Secretary.

RULE 21. The last dog beaten by the winner of the first prize shall compete for the second prize with the best of those dogs previously beaten by the winner of the first prize. The winner of this heat shall be declared the winner of the second prize. The dog beaten in this heat shall (except as hereinafter stated) compete with the best of those previously beaten by the second prize winner, and the winner shall be third in the race. The discretion is given to the judges of deciding which is the best of these beaten dogs in the competition for second and third places, by selection, or by running extra heats between them. After the award of first and second, the judges may name the winner of third without running.

RULE 22. All protests, except as hereinbefore provided, must be made and delivered to the Secretary of the Club, or in case of his absence to the President of the Club, or in case of his absence to a member of the Governing Committee at or before midnight of the date of running of final heat.

INSTRUCTIONS TO JUDGES.

The judges shall order up the dogs as soon as they have determined which is the better. Unless a dog shows such lack of merit that in the opinion of the judges he cannot be placed, all dogs shall, if time permit, have at least two chances to show their behavior on birds. Either or both dogs of a brace may be ordered up by the judges for want of merit.

Pointing fur, feather, reptile or scent of game birds, if the judges deem the same excusable, shall not be considered a false point.

The judges shall give a dog ample opportunity to discover whether he is on a true point.

No assistance shall be given by the handler to enable a dog to discover whether he is on a false point.

Judges are requested to avoid as far as possible holding a dog so long on a point for the purpose of securing a back, or otherwise, as to enable the birds to run. When a point is made, and has been observed by the judges, the handler should be ordered forward to prove his point forthwith.

Should a dog be held an unreasonable time upon a point he should not be penalized for a resultant fault.

The number of times a dog points, backs, etc., shall not necessarily give him the preference, but the judges shall consider the quality of the performance rather than the frequency of the occurrence.

BACKING.—The judges are requested to give no credit for backing unless it appear to be voluntary. Any assistance from the handler shall deprive the dog of credit for his performance.

RANGING.—The judges are requested to give greater credit to the dog that maintains the most killing range throughout, viz., wide or close, as the necessity of the case requires.

OBEDIENCE AND DISPOSITION.—The judges are requested to give greater credit to the dog that works promptly, without noise or severity and is obedient, prompt, cheerful and easily handled.

The rules are based upon the principle that each heat is a complete race, and the winner of the trial is the unbeaten dog who has directly or indirectly beaten every other dog in the stake.

The judges are requested to observe that the scale of points below given are set forth only as the view of the Club as to the comparative value of the various attributes or performances referred to. But the judges shall not, except in case of an absolute equality between the dogs, deem it necessary to keep any score whatever.

MERIT.

Pointing	Nose 25			
	Staunchness 10	35		
	Style in Pointing 5		40	
Ranging 12				
Pace 8		25		
Quartering 5			30	
Style in Same 5				
			70	100
Obedience and Disposition 10				
Backing 10			30	
Retrieving 10				

DEMERIT.

False Pointing, Breaking In, Breaking Shot, Chasing.—These faults shall be gauged by the judges in their discretion. The second chase, however, loses the heat.

DEFINITIONS.

Breaking In—Is where a dog, through imperfect breaking, or from excitement, leaves his position when the birds rise, whether the gun is fired or not, and starts to chase, but stops within a few feet from where he started, of his own accord or by command.

Breaking Shot—Is where a dog runs in, when a shot is fired with the intention of getting to the bird, and does not stop promptly at command.

Chasing—Is where a dog follows the birds, either when a gun is fired or not, to any extent to be beyond the control of his handler for the time being.

MASTIFFS WANTED.—*Editor Forest and Stream:* In consequence of rash spilling of ink, I am overwhelmed with inquiries for mastiff pups. They generally say "I know that ——, —— and —— are reliable, but they ask too much for my pile." What seems to be wanted is mastiffs of fair size, but not of show form, at from $25 to $35 for a six weeks puppy. If any one has them an "ad." in FOREST AND STREAM should bring customers. All hands that have anything to say against Mr. Dalziel's mastiff judging at New York are requested to open fire; my battery is masked; I am waiting for "Porcupine" to open fire, when I will demolish him.—W. WADE.

ENGLISH KENNEL NOTES.

XXX.

AT the Warwick dog show, of which more anon, I tumbled across an old setter chum. We had a long conversation about sporting dogs. He complained with all a sportsman's ozone-fed spirit that so many of our beautiful spaniels now distinguishing themselves on the bench have never been broken. If instinct be hereditary knowledge, and I have over and over again when breaking pointers proved to my own satisfaction that it is, then it can be only a matter of time when these spaniels shall lose their claim to the description "field" and go over to the "fancy" classes. We have already one notable instance of this in the Blenheim spaniels, whose good looks have been their misfortune, since they have given them the society of wheezy women and female men in the place of the sportsman's affections.

I could name one large and distinguished field spanniel kennel in which the only occupants that have ever put up fur or feather are some that may have been purchased broken. None of the home-bred ones is ever allowed to soil his handsome coat by doing anything to sustain his position in the canine t ibe.

I am not unreasonable. I give full credit to the marked and most laudable improvement that dog shows have affected in the appearance of dogs used with the gun, and I do not suggest that our prize-smothered cracks should absent themselves from the show bench in the shooting season to attend to their natural work; but do very seriously advise exhibitors to open their eyes to the neglect that will soon leave us no sporting dogs that are fit for sport. The last stage of such a course will quite invalidate the intentions of dog-show promoters. Those who only require dogs for work, but are willing to pay high prices for the pleasure of seeing symmetrical animals in front of them, will speedily find out, if successful kennels breed only for prize-winning, sportsmen will cease to give their ten guineas each for pups that are wanting in their appropriat instinct because they had none to inherit. They will return to the higgledy-piggledy period before dog showing commenced and again get their dogs from unattached gamekeepers. Thus modern breeders will lose their market, and the improvement of the dog will be arrested and quickly retrograde.

As an ardent admirer of our sincerest friend, the dog, I sorrowfully express my fears on this subject. Without good-looking and intelligent dogs to help me, the sport is no sport to me. I am a placid sportsman, one who loves to loiter through the lovely scenes of nature and to allow myself time for meditative admiration of the four-legged beauties as they move along, showing what man's tuition has added to innate ability. It would distress me to see a return from the noble Clumbers, the flat-coated Sussex and the sheeny black-coats to those ragged, curly liver and whites that went rabbiting with me in my school days.

I should suggest that all sporting puppies be broken, and when this has been done let those whose points deserve it be prepared for prize-winning and the others sold for work. As so many valuable animals contract fatal diseases in puppy classes it will be no loss to exhibitors to foreswear a prize or two, and only commence the grooming and attention on the second growth of the coat. When once a dog has been chosen for public display his toilet and appetite become the sole consideration, but not all the pups in the litter are Boss II.s, Newtown Abbot Blossoms, or Coys.

My friend told me that Graphic the pointer was at last booked for America. His emigration has long been rumored. We then got on to setters. Mr. Chum asked me if I ever saw any of the American papers. "Sometimes," I answered. "Which?" he asked. "Oh, FOREST AND STREAM, now and then. "Ah," says Chum, "that's the paper that chap 'Lillibulero' writes in." "Ye-e-es," I guiltily assented. "He is not a bit particular in saying what he knows about us over here; he lets us all have it. I call him 'capital L.' See the joke? If he has a friend I should call him Tommy. See—'L. and Tommy?" But I don't see much joke and still less compliment, so I testily remind him we were talking of setters. "Certainly," admits Chum, "so we were, and I was going to tell you that Rockingham has done very well out in America. Of course you remember him winning at Doncaster? Talking of setters, young Bevan, son of Setter Bevan, has gone over to New York with Dalziel. Did you ever meet the youngster? No. Oh, well, he's quite a chip of the old block. Of course you know his father? Yes, naturally. I never knew a man so thoroughly wrapped up in his dogs as he was." I remark that I knew he has been very successful in field trials. "I should think he had," says Chum, "and he broke them all himself. Dogs are more than a hobby, they are a passion with him. He gave up everything to his dogs, and even allowed a splendid business to go to them. He said he could never find time for his business. He wouldn't leave the dogs to his servants. In winter he had to be about looking after the tightness of the kennel, keeping it weather-proof; then in the spring puppies required his attention, the walking and breaking followed that; and so really he used to say "I haven't time for business." He brought out a handy little treatise called "Hints on Dog-breaking"; it is worth reading. The son grew up imbued with his father's tastes, and like him commiserates those wretched beings who can exist without canine company, and whom they compassionately term undogly. The lad tried city life, but the streets and the office withered his vitality, so at last, like many a young Englishman before him, he has made up his mind to earn his living out in the open air. He hoped to find employment in America in some large sporting kennel as manager, breaker or trainer. His college education has in no way unfitted him for such a position, and the practical schooling he has received from his father when together breaking their own field-trial winners will enable him to command success with setters, pointers, spaniels or retrievers. He has head and heart in the work. If you know anybody in America, put in a good word for the youngster, will you? Thanks. Good-bye, old chap, I must be off."

Very cordially do I wish the son of so good a sportsman may prosper in the new country. The best I can probably hope for him is that I may one day meet him at our English field trials in charge of an American bred team that he has broken himself.

I hear that Captain Mackie decided not to send his dogs to your shows because the prizes were too small. You must give the bawbees prominence to catch the canny Scotch exhibitor.

I dare say some of my American doggy readers who have visited this country have came acoss "Jim" Goode, the rather too well known 'purveyor" of dogs in Leadenhall Market. I have a long letter before me about his case. The strong grip of the law has got him by the collar. He has long been looked up to as the oracle of stolen dogs and has now to pay the penalty of greatness. The police have made a raid upon his place of business where they found in round numbers forty dogs, which, the report says, "Goode could give no satisfactory account of," but Jim says they had called "to have their hair cut." It is very awkward and very likely that the same operation may be performed upon himself as some of the dogs have been identified by their owners who had been getting anxious at the long time their pets were taking in getting shaved and clipped. Goode is considerably annoyed with the action the police have taken and told them he was poodle clipper to the Prince of Wales. He makes the third claimant I have heard of for that distinction, the others are Mr. Rotherham and Mr. Felix.

My informant tells me that Jim has undoubtedly added to his income by the trade that has its headquarters in Leadenhall Market, but he says he must give the "barber" his due in admitting that in several export deals Jim has so far forgotten himself as to behave straight and that he was never in his most natural moods so bad as Mr. Wm. Page, of the same address, for whom Mr. Gresham, inspired by the feelings that guided his conscience in the days when he kept pointers, was allowed to express his friendship in the pages of the *Live Stock Journal*. One of Goode's sons is well-known in athletic circles as a game and skillful boxer. A few months ago the editor of the *Referee* devoted several paragraphs to a very favorable notice of young Goode's gentlemanly appearance and conversation, which he compared to the disadvantage of racecourse cads, whose birth may be better, but whose manners were stones behind. Somehow this little touch of sport makes me, perhaps I should not confess it, hope that the old fellow may be dealt with lightly.

It was told me at Warwick that the Fox-Terrier Club gave Mr. A. B. C. D. Astley £100 for the *Fox-Terrier Chronicle*. If this is a fact I think Mr. Astley should present the money to a charity, for if ever a man of business should join the club he would promptly inform the members that a good price was paid for nothing. They can't make four per cent. out of the property and it has no saleable value at all.

Mr. Vero Shaw has poured the vials of his most virtuous indignation upon the astonished retriever exhibitors at Perth. Those persons had, according to custom, damped the coats of their dogs to add luster and deepen the color. Mr. Shaw told them it was faking, and ordered them out to dry. I agree with the judge and object to such artificial assistance; but I consider it a very small gnat to choke at when so many camels are daily swallowed without effort or remark.

I suppose Mr. Dalziel has landed safely among you. He wrote a note from aboard ship to the *Stock Keeper* correcting a generally accepted mistake that he was going to the States to judge dogs. He rather indiscreetly divulges that his real and secret mission is to discover "the mysterious Lillibulero," and he promises to return with him alive or to bring home "his scalp." I am quite sure he won't have my scalp, for that has lately been removed by a discerning nature overthoughtful for the entertainment of the frivolous flies who affect rinkualism.

Mr. Dalziel's last contribution to doggy controversy before he left home was anent topknots on Dandies. Though Corsincon does not appear to attach much value to this point, I consider it very characteristic. I hold with him that most rough-haired terriers have long hair on the face. I have invariably noticed that if there is much of it the coat is soft; where there is not much, not too much, the coat is pily, that is, a mixture of hard and soft hairs, like a Bedlington's; but when you get the forehead nearly smooth and a coat on the back, that coat is as hard as nails, but there won't be much of it on the legs and sides, and none where it is most wanted—chest and belly.

There is no mistake about the "go" in the Great Dane Club, it is one of the youngest and already advertises its own show. It is a lucky accident that one of their members is the proprietor of the Ranelagh Club. Mr. Herbert has granted the use of the beautiful grounds of Barn Elms (where the old Kit-Kat Club had its quarters) for the show. The enthusiastic honorary secretary, the Rev. Gambier Bolton, will judge. I have no doubt he will get a large entry as the breed has made rapid strides and puppies sell as fast as you can breed them. Several people have written lately to the daily press, complaining of Great Danes in the streets. They are rather too large for town dogs and although I can't agree with the timid division who describe them as fierce and untractable I am compelled to own that they have an excitable temperament which, when aroused, is beyond all control. They are not ladies' nor children's dogs.

Warwick continues to beat the record. In numbers and presence of canine notability they have equalled the Kennel Club shows. For the perfect manners and perfect management no praise can be extravagant. The weather was glorious and it was refreshing to have the judging al fresco. All the familiar faces were present and some of the exhibitors had kindly brought their wives, thus lending additional grace and brightness to the scene. It was quite a feat of management that the jud ing was all over by 5 P. M. on the first day. Mr. Salter, who should be equal to such work, seems to me to have made a great mistake in passing over that charming blue belton, Birket Foster, in the setter class. He was many points better than the winners. Mr. Shirley carried everything before him with his matchless team of wavy-coated retrievers. It will take a rare kennel to shake their position. There was the usual brilliant show of collies and the usual unsatisfactory results arising from double entries. A collie puppy is almost a certain win in the open class. The bulldog awards have not been received with unanimous satisfaction.

Some unpleasantness is likely to follow a letter in this week's *Stock Keeper*. The writer is Mr. James Stark, who, though treating a private and personal subject, attaches to his signature "Secretary, Dundee Dog Show." I don't see what the Dundee dog show has to do with the bulldog judging at Warwick. Mr. Stark gains no weight for his remarks thereby, and renders himself liable to be called to book for making such use of an official position. His grievance is that a dog he showed for a friend did not win the first prize. I have heard of such a case before, I think, the only difference being that on a former occasion the dog was the property of the "disappointed exhibitor;" this time the injured party is the secretary of the Dundee show. Mr. Stark says that the press (here they are—Lee, Langdale, Portier, Astley and Gresham!) "with one loud (devilish loud some of them are, too,) unanimous voice proclaim that the honors denied him (the dog) should have been his," and further, "the dog was the talk of all men," but *cui bono* if among all these men one man was not, and that man the judge! Mr. Stark and his friend now derisively want to know "Who is Mr. Best (the judge)?" but surely they should have satisfied themselves on that point before making the entry. I am not finding fault with Mr. Stark for raising a row because his tyke of "transcendent merits" didn't win. I have gone through it all myself. I have growled and howled like the rest of them. I know that only pen and ink can relieve their feelings, and I know that when I got up next morning I felt I had made a fool of myself; and I know I had myself in corners and by-ways for fear of seeing the letter in print.

Upon my soul I begin to like this wiry little fire-eating Scotchman for his "go," but he went a little too far when he wound up by asking, "Will any one assure us, so far away, that at the bulldog show in May Sir Walter will receive fair play?" That is not good form, and Mr. Stark, in making this slip, must have forgotten for a moment the position he has to maintain—the dignity of the secretary of the Dundee dog show!

The answer to Mr. Stark is the name of the gentleman who has been entrusted with the confidence of the club by his election as judge—Mr. Alfred Benjamin.

The collie classes at Warwick were, agreeably with Mr. Ashwin's desire, divided by colors. The result was candidly admitted to be a great failure. Mr. Ashwin has issued another circular on this haunting subject. I may refer to it another time. I hear that Mr. Ashwin felt much piqued with the reception his proposals have met, and even spoke of giving up the breed. He is, though, too old, too good a fancier for the collie fancy to spare, and the club will be wise in treading more lightly on his fads. We have all got our fads, and as soon as we expose them somebody mercilessly puts his foot on them.

The Irish Terrier Club stirred up the Dublin water for Mr. Gresham, and by the time he arrived it was boiling. He came fairly well out of the judging ordeal. In future, I suppose, show committees wishing to avoid such "Irish rows" will consult the club beforehand. The show paid well, though the Prince of Wales did not take the trouble to visit it, thereby giving a back-hander to the snobbery that led Mr. Snow to open the show a few days earlier than advertised in order to catch royalty. Mr. Snow was all that a secretary should not be. I was one of many who feared to intrude upon his uncouth presence, and who, when obliged to put a polite question about the removal of the dogs, got a boorish reply. The natives gave him a Celtic appellation, which, as it is not possible to adequately render into English, I must give in the original—"soorly bhrewt."

I am getting weary of referring to Mr. Gresham's doings. His name has been forced upon me to show you the incomplete character of our kennel press. I am still struck with the shortsightedness of the *Live Stock Journal* in employing a man so devoid of ability and character. The post he holds on that journal may be neither a proud nor important one, but some sort of qualities must be necessary, though heaven knows of what description these can be that exist in Mr. Gresham. However, this unfortunate relic of an unhealthy kennel past has been taken in hand over here, so I hope to be able to keep his name from the end of my pen for the future.

His last act of gross remissness occurred in connection with the Warwick show, full reports of which appeared in all the papers save the *Live Stock Journal*. Not till the following week did a milk and watery abbreviated skim-over of the classes find its way in. A month's wages and the door were the treatment he deserved, and what he would have probably received were it not that the *L. S. J.* finds him on the whole a useful man. God forbid that I should ever sink so low in the estimation of my friends as to be considered "a useful man!"

Mr. Gresham related the following week the festive evening he spent in the company of the huntsmen belonging to the harrier packs at the show. Was this why he couldn't write the report next morning, or was there perhaps a less pardonable reason? Would the enterprising proprietors of the *Live Stock Journal* be surprised to hear that he wrote the report which appeared the same week in the Warwick *Advertiser* and Leamington *Gazette*?

I will conclude these notes with a quotation bearing upon the above subject from the *Scottish Fancier*, which asks in an article last month "Why is it that in so many cases the dog is better than his master?" The answer to this question is not difficult to find. How many can "look the whole world in the face" and say that they have been fair and honorable in matters canine; that trickery and decep'ion and roguery have not played a part in their transactions? There are good men and true among us whom it is a pleasure to know and to have intercourse with. Long life to them. May they by their example long assist to clean from all pollution, all vice, the moral atmosphere of our doggy world.

Hear! hear!! hear!!! LILLIBULERO.

MAY 7, 1885.

THE MASTIFF TYPE.

Editor Forest and Stream:

As I understand that there is a movement on foot to form an American mastiff club, I beg to offer the following remarks which I think deserve considerable thought by our mastiff breeders: I want to protest against the great mistake that our cousins are making in England—the craze for short heads to the sacrifice of body and size. From what little experience I have had, I have always understood that the mastiff should combine great size and power with a gentle disposition until aroused, in fact, the personification of what a dog should be as a guard to our houses. Can any one in justice call the present type of winners representatives of the above? To show that I am not alone in my opinion, I will quote the following remarks of Lieutenant-Colonel Garnier from the *Kennel Gazette*, on mastiffs at the last Crystal Palace show, held Jan. 13, 14, 15 and 16, 1885:

"After some years' absence from England, I was disappointed on observing at the late show the deterioration of type in the present mastiff. Not only has the grave dignity of the old dog been replaced by a pug-dog impudence of expression, but the long, lithe and muscular body is well nigh lost, and a short, squat body with weak quarters and hindlegs, hardly able to support their own weight, has been substituted for it. Many of the old dogs could leap a fence or railing five feet and more in height, and for a short distance could gallop like a greyhound, but some of the poor animals at the late show could hardly waddle, and took every opportunity of relieving their hindquarters by squatting on their hams. The present dog seems also to be wanting in quality of muscle, and his general appearance is flabby and misshapen, giving an impression of weakness which is hardly characteristic of this breed. I believe these faults have been due to certain errors on the part of breeders and judges. Twenty years ago there were plenty of good mastiffs, but certain inferior animals with narrow heads and pointed noses and with slight bodies and small bone, were by judges who were ignorant of the true mastiff type, gradually raised to a pre-eminent position, and for no other reason than the possession of a blacker nose or toenails, or finer bone, or a few hairs more or less on their tail or body. Two centuries ago our ancestors knew little about the present art of judging, and would have been surprised to see a good dog neglected because his ears were not of the proper thickness or his tail curled the wrong way; but they knew the sort of dog they required for use, and by this law of necessity kept us to its pristine size, strength, character and coinage a breed which modern dog shows seem almost to have destroyed. During the last ten years there has been a reaction against the attenuated heads and delicate extremities which found favor previously, but in endeavoring to improve the type of head breeders seem to have forgotten that a dog requires a body as well as a head, and to have thought, also, that because a narrow head and muzzle ought to be condemned they could not be too broad or too short. But the old mastiff head was not a short head, but long, like his body, and yet broad and blunt and consequently a much bigger head for his size than the present dog's head. The result of this error in the opposite extreme is that breeders by carefully pairing such animals and keeping such whelps as answered this false type, have produced a dog from which the most important mastiff characteristics have been eliminated. I believe the bulldog cross which has been used to be most useful for improving the breed, on the same principle as it has improved the greyhound, but the cross should have been sufficiently bred out so as to leave all mastiff characteristics unimpaired, whereas the exact contrary has been done. I noticed in the late show that whenever a dog had anything approaching the characteristic mastiff head there was something of the right sort of body behind it, and that short and stunted bodies invariably accompanied the short heads to which I have objected, and so I consider that too short a muzzle or the development of stop or wrinkle below the eyes, which are bulldog points and are always accompanied by defects fatal to the true type, should count against, and not for their possessor."

Surely the above remarks coming from such an acknowledged authority are worthy of consideration, and certainly can be applied to our late New York show. Mr. Dalziel acknowledging that he judged according to the new type as defined and accepted in England at the present time. One thing is very certain, short heads mean short bodies and generally a want of size, power and loss of activity. Hoping that our mastiff breeders in America will think a little more of the body and less of the bulldog head of this noble breed, I sign myself MASTIFF.

NEW YORK CITY.

COCKER CONSOLIDATION.—The Ancient City Cocker Spaniel Kennel, established in 1870 by Mr. C. E. Scott, at Schenectady, N. Y., has been purchased by Mr. I. M. Dewey, proprietor of the Ideal Kennel, New Haven, Conn. The price paid was five hundred dollars. Mr. Scott was at one time one of the largest and most successful breeders of cockers in the United States, and his entire stock and good will have been transferred to Mr. Dewey.

Kennel Notes are unavoidably deferred.

CHICAGO DOG SHOW.

[Special to Forest and Stream.]

CHICAGO, June 2.

Editor Forest and Stream:

The Chicago dog show opened this morning with propitious weather, but about 5 o'clock P. M. we were visited with one of the most terrific thunderstorms that I ever witnessed. The lightning and thunder was incessant, and the rain fell in torrents. Rumors of extensive damage by the storm are current, and grave fears are expressed for the safety of vessels on the lake. The storm prevented a full attendance in the evening. There are 356 entries, and the quality in some of the classes is very good, making the show a fair average in this respect. The judging did not commence until 3 P. M., and only the setters were got through with. It is hoped that all of the judging will be finished early to-morrow. The list of judges is as follows: Major J. M. Taylor, setters, pointers and Chesapeake Bay dogs; Dr. E. C. Franklin, cocker spaniel classes, to be judged by the I. C. S. Club standard, and Mr. J. F. Kirk the remaining classes. Below is a list of the setter

AWARDS.

ENGLISH SETTERS.—EXTRA CHAMPION—Memphis & Avent Kennels' Paul Gladstone.—CHAMPION—*Dog:* Howard Hartley's Royal Ranger. *Bitch:* Howard Hartley's Queen Alice.—OPEN—*Dogs;* 1st, Dr. G. G. Ware's Gladstone's Boy; 2d, W. Fisher, Jr.'s, Pride of Dixie. Very high com., A. C. Waddell's British Chief and Chas. F. Louden's Stanton. High com., Dalliba & Munhall's Pendragon. Com., T. Donoghue's Chief's Clyde. John Watson's Porter's Don and Lake Shore Kennels' Coleman's London. *Bitches:* 1st, Memphis & Avent Kennels' Juno A; 2d, Jos. Lewis's Lady Rock. Very high com., T. Donoghue's Blue Spark. High com., Lake Shore Kennels' Jessica, C. T Donoghue's Blue Phantom, E. S. Bond's Jo-Jo Gladstone, Lake Shore Kennels' Dot W. PUPPIES—*Dogs;* 1st, J. S. Cusson's O. K.; 2d, C. Harris's Spray. *Bitches:* 1st, A. C. Waddell's Monty (only entry).

GORDON SETTERS.—CHAMPION—Chas. R. Taylor's Gem.—OPEN—*Dogs:* 1st, A. Ryerson's Dan; 2d, E. Mahar's Royal Duke. *Bitches:* 1st, withheld; 2d, Chas R. Taylor's Gipsy Queen. *Puppies:* 1st, J. Bardwell's Patty.

IRISH SETTERS.—EXTRA CHAMPION—J. A. J. Sprague's Brush.—OPEN—*Dogs:* 1st, withheld; 2d, John Delevan's Prince Rufus. Very high com., G. N. Short's Book. High com., F. Silcox's Dick. *Bitches:* 1st, H. E. Chubb's Bella Glenduff; 2d, J. A. J. Sprague's Megora. Very high com., J. A. J. Sprague's Lorraine. *Puppies:* 1st and 2d, T. Donoghue's Irish Boy and Irish Girl. Very high com., T. B. Rice's Larry. High com. and com., S. Johnston's Duke and Carlo.

CALIFORNIA FIELD TRIALS.—Sacramento, Cal., May 11.—I believe you have received ere this a list of the entries to the puppy stakes for this year's field trials of the Pacific Coast Club. The number (seventeen) might just as well be doubled, but a number of owners got mulish and declined to enter at such an early date as May 1. However, seventeen is a pretty fair number for our young club, considering the fact that so many of our sportsmen (?) go their piles on duck and rabbit dogs. It is quite likely that the all-age list will, however, exceed thirty. The grounds for this year's trials have not yet been selected, and it is hoped that the Executive Committee will use good judgment when it acts in the matter. For two seasons the club has tried the plan of camping out in mid-December, an expensive, uncomfortable thing to do. The trials should be held within five or six miles of some town or village or public inn, where all needs may be accommodated with good beds and well-cooked meals, and where every visitor must pay for what he gets. I am told that a man lately from the East has located in Marin county, near to San Francisco, for the purpose of breaking dogs, and that he comes well recommended. If so, we may have more systematic work done at our next trials. When found on good ground our quail lie well to the dog, and there is no reason why field trials should not be the leading feature among the sportsmen of this coast within a few years, or at least when the ducks and rabbits shall have disappeared.—SMALL-BORE.

THE MONTREAL HUNT CLUB'S PUPPY SHOW.—The Montreal Hunt Club held a puppy show at the kennels on Saturday. The puppies had been distributed among the members and the families in the vicinity and walked by them. They were all brought in on Saturday, and prizes awarded to those who brought in the best puppies. The farmers' prizes consisted of handsome pieces of silver plate, while the members received only cards signed by the three judges and Mr. A. Baumgarten, Master M.F.H., and Mr. Hugh Paton, honorary secretary. The following were the prizes awarded in the farmers' competition: Dogs—Mr. Desriviere's Hero first, Mr. Sam Nesbitt's Freeman second, Mr. R. Curran's Falstaff third. Bitches—Mrs. Hughes's Heroine first, Mr. Jeffrey's Harpy second, Mr. W. Henderson's Fairy third. Members' Competition. —Dogs—Mr. A. Galarneau's Lasher first, and Lightheart second, Mr. J. A. Strathy's Traveler third. Bitches—Mr. A. Baumgarten's Matchless first, Mr. Hugh Paton's Fury second, Mr. J. A. Stevenson's Hazard third. Messrs. F. Stancliffe, W. H. Rintoul and G. H. Matthews kindly consented to act as judges, and their decisions throughout were received with the greatest approval. They selected almost entirely from the one strain, which went to show that the club is in the right direction as far as blood goes. The puppies were very fine and do great credit to those in whose hands they were placed, and the show will doubtless become an annual event.—C. (Montreal, Can., May 18).

FOX-TERRIER IMPORTATION.—The Monmouth Kennels, Long Branch, N. J., have recently imported from the kennel of Mr. J. H. Murchison, London, Eng., two fox-terrier bitches, Lurette, by champion Spice out of champion Olive, and Doris, by Buff out of old champion Dorcas. Mr. Alex. Taylor, Jr., New York, has also imported from the same kennel the bitch Odette, full sister to the above named Lurette.

BEDLINGTON TERRIER IMPORTATION.—Mr. James Mortimer, Babylon, L. I., has recently imported from the kennel of Mr. S. W. Smith, Leeds, Eng., the Bedlington terrier bitch Zulu. She is four years old, and is by Tamar Lad and out of Juno. She is in whelp to Mr. Baty's Tinner.

GREYHOUND IMPORTATION.—John W. Trafton, Boston, Mass., has recently imported the greyhound bitch Lang Syne, by Warpath out of Palm Bloom, a litter sister to Princess Dagmar, winner of the Waterloo Cup, 1882.

PERSONAL.—Mr. Ronald H. Barlow sails for England on the 6th inst. on the Celtic. He will return about Oct. 1. His address will be Kennel Club, 6 Cleveland Row, Pall Mall, London.

PRIDE II.—Can any one give information about the English setter dog Pride II., said to be by Pride of the Border and out of a bitch owned by a Mr. Morgan?

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

G. H. W., Kalamazoo.—A friend of mine owns a valuable setter dog which for the past two months has had a bad swelling on the side of its throat and just back of its ear. A veterinary surgeon pronounced it swelling of the gland, but since has said he don't know what it is. It has been repeatedly lanced and emits bloody water, but seems to grow worse rather than better. Can you instruct me as to its cause and cure? Ans. Your dog has swelling of the glands of the neck. The causes are various. They frequently appear without any well-defined causation, and generally in dogs with a strumous or scrofulous habit. They may come from injury. Your dog needs internal medicine. Get your druggist to make you two dozen sulphide of calcium pills, each to contain one-tenth of a grain. Give one pill three times daily hidden in a bit of meat. Also get the following: Iodide of potash, one-half an ounce; syrup of sarsaparilla, one ounce; water, enough to make four ounces. Give a teaspoonful three times daily. Report result.

W. R. C., Brooklyn.—My two-year-old greyhound has a scaly and rough appearance to the edge of his ears which seems to increase, and also one or two bare spots on tail. I supposed at first his ears were frost bitten last winter and now were a little inclined to be sore in consequence. He seems to wish to have his ears rubbed. Ans. Your dog suffers from one form of eczema or mange. Sponge the parts with castile soap and warm water, dry, and apply twice daily the ointment of the oxide of zinc by rubbing. Give three drops of Fowler's solution of arsenic in food and increase one drop daily up to ten drops, and then decrease down to three drops and stop.

Rifle and Trap Shooting.

INTER-CLUB CONTESTS.

Editor Forest and Stream:

I would like to use your valuable columns to speak to my fellow riflemen of other clubs, and ask them whether it is not within our reach to establish a series of contests to be shot at our respective ranges after the manner of telegraphic matches, that will be the means of promoting friendly associations between our several organizations, as well as stimulating the interest we all take in rifle practice.

I would suggest that a series of contests be held to compete for a banner or other prize, whatever the associated clubs might see fit to provide, according to rules, which the same might see fit to adopt.

I would also suggest the following: That the shooting take place at a distance of 200yds., off-hand; that no restrictions be made as to style of sights, weight of gun, or pull of trigger; that we use the American decimal target; that ten men shall constitute a team, ten shots per man shall constitute a string or score, and that three scores shall constitute a prize score; that the shootings take place on our respective ranges once each month and within the same week of each month, but not necessarily the same day, the shooting to take place, however, on an appointed day, and to commence at an appointed hour, after which no sighting shots should be allowed. Each club to be allowed to select the day of the week and hour of the day for itself, which shall be most convenient for its members. That the prize be awarded to the team making the highest aggregate in a prize score, and held by them three months, or until another prize score shall be completed.

I would suggest that a detailed report of each shooting, together with the (paper) target, be forwarded immediately to the editor of the FOREST AND STREAM for publication, to the end that the reports of all competing teams may appear in one issue in their regular order of merit, and that the editor of the FOREST AND STREAM also act as referee in all said contests. That the prize be returned to him with the report completing a prize score, and awarded by him to the next winners. It will undoubtedly be necessary to select certain officers and in some manner obtain the voice of the several organizations represented for various purposes.

Will some one suggest a method whereby we may avoid the necessity of calling a convention and the necessary expense attending it, at least for the present? Possibly the editor of the FOREST AND STREAM would consent to act as secretary and treasurer, and such business as was necessary for the present be transacted through the medium of this most valuable paper and correspondence by mail with the secretaries of the various organizations. I think we should be able to start out with at least ten competing teams, which, it seems to me, would make it quite interesting from the start.

Suppose each team contributes ten dollars for prize purposes, and if other teams, or more properly speaking, clubs, join, let them contribute the same amount, which might afterward be used in some manner calculated to stimulate individual effort, for instance, given in the shape of medals for the highest individual average for a year. It is my mind that local organizations only should engage in this competition and that no one man should be allowed to shoot in two different teams, State organizations not being allowed to compete.

I would like to hear the views of others in the matter. I believe something of the kind may be done that would add greatly to the interest now taken in rifle shooting and be a means of improving team as well as individual records. SERENO N. AYRES,

President Chautauqua Sportsmen's Association.

JAMESTOWN, N. Y.

[The idea is an excellent one. It is now carried out in a limited way between certain of the clubs, and much satisfaction is felt at the working of this style of match shooting. We would gladly act in any way to further the object which Mr. Ayres outlines in his letter.]

RANGE AND GALLERY.

HAVERHILL, May 30.—Haverhill Rifle Club shoot at Riverside, Creedmoor target, 200yds.:

Practice Match.

J F Brown	4445555445—44	W Worthen	4545444444—42

NEWARK, N. J.—The deciding match of the series of three between the Essex and Frelinghuysen rifle clubs, of Newark, N. J., teams of 10 men each, 10 shots per man, Zettler ring targets, gallery distance, off-hand, any .22-cal. rifle, was contested May 23, the Essex winning by a score of 1,128 to 1,116. The first shoot was won by the Frelinghuysens with 1,086, and the second by the Essex with 1,105. Referee, Mr. Jackson.

PORTLAND, Me., May 27.—Representatives of the Richmond, Topsham, Brunswick, Pownal, Lewiston, Bethel and Portland shooting clubs shot with the Willard Club to-day, for the individual championship of Maine. W. S. Jones, of Portland, won the championship with a score of 88 out of 40, prize, a silver ice pitcher: A. S. Alexander, of Richmond, won second prize, $3, and C. F. Nason and A. Verrill, of Lewiston, divided $6, third prize. The conditions were 50 clay-pigeons, one barrel,

WALTHAM, Mass., May 30.—There were a number of marksmen present at the range of the Hillside Rifle Club to-day, and some interesting matches were shot, the details of which are appended:

PATERSON, N. J.—The Paterson Jager Rifle Club at practice has done some excellent shooting at Braun's Hall during the past three months. H. E. Mertel proved the best marksman in this team and J. Reynolds in the second team and J. Tounly in the third. The first 10 shots each man fires on each Monday evening during the three months are credited as his score, distance 40yds., Stevens .22 short caliber rifle, weight 7lbs., Creedmore target, possible 650, or 13 scores of a possible 50 each. The scores stood:

H E Mertel	42 42 42 43 44 45 40 44 36 43 41 43 41—557
J McNeil	41 40 43 43 42 44 38 45 42 43 44 42 41—548
W Barr	40 41 41 43 38 40 40 43 44 41 42 43 40—536

SPRINGFIELD, Mass.—The Rod and Gun Rifle Club went to Vernon (Vt.) Decoration Day, to shoot the Brattleboro (Vt.) Rifle Club, and were defeated by a score of 985 to 984. It was a splendid day for rifle shooting. The score of 112 points made by S. S. Bumstead, is a very fine one, and ranks high on a team match. Mr. Bumstead made 110 points in a match against the same club some time ago. A good time was had by all interested in the match. The following were the scores:

Brattleboro Team.

C L Cobb	10 11 10 12 10 12 11 11 10 11—108
J W Smith	12 8 10 10 12 11 10 11 10 12—106

	393		374

The first-class medal of the Rod and Gun Club is held for the month by I. DeClair with the score of 110 points. He also holds the record match with the same total. The second class is held for the same by E. S. Field with the score of 100 points, which makes him a first-class marksman. The monthly badge of the Schutzen Verein has been won two months in succession by W. Milton Farrow with the totals of 216 and 215, German target. He used a 10-pound gun, 3-pound pull. —PINHEAD.

WHEELING, W. Va., May 31.—The Wheeling Rifle Club went to Pittsburgh, Pa., and shot the third match with the Pittsburgh Rifle Club on the 30th inst., and were defeated, as they expected they would be. The match was five men on each team, at 200yds. off-hand, on a Massachusetts decimal target, twenty shots per man. The other two matches were shot on the Massachusetts ring target, but an estimate of the scores made yesterday shows that both teams averaged several points more than in either of the previous matches. The Pittsburgh club have improved very much in the past few months, while our team have not done anything since winning the other two contests, and are not any stronger than last fall. This defeat may put them to work and prove to be a blessing in disguise. They have the material if they would only practice and get in shape.

The Wheeling club were so well entertained by their Pittsburgh friends that their defeat did not cause them any uneasiness, and the best of feeling has been entertained between members of the two clubs, who will enjoy the friendly contests. During the match there was a very strong wind from three to six o'clock, which carried the 530-grain bullets from six to eight inches, and was a provoking element to the Wheeling men, who never had such a wind as this was, as it came up a deep ravine across which the shooting was done, and good holding did not get bulls. One of our team shot with no bullet and scored a goose egg for his carelessness. The men shot alternately, one from each team, and the Wheeling team led from the first round up to the sixth, when it was a tie, and at the tenth round the Wheeling team was one point ahead, and the thirteenth round showed Pittsburgh two points in the lead, and the nineteenth round put Pittsburgh thirty-six points ahead, but the last round gave the Wheeling team a gain of seven points, which cut down the total lead of their competitors to a total of twenty-nine points at the finish. The following are the scores of each team:

Pittsburgh Team.										
Sertch	5	10	9	5	7	5	5	7	9	9	5	8	8	8	9	7	9	10	8	8—151
Painter	10	8	7	7	5	7	10	5	9	7	8	5	4	8	7	7	10	10	8	5—147

*No bullet.

CHICOPEE FALLS, May 30.—The Maynard Rifle Club wisely rechristened their pleasant range to-day, and it will now be known more appropriately as the Riverside Range. The scores made were: Gassner, 105; Cook, 102; Eaton, 100; Soule, 100; Garner, 100; Morse, 97; Allen, 97; Clark, 95; Flint, 87.

FORT KEOGH, Montana, May 27.—At Fort Custer, Montana, as Lieut. De Frees of the Fifth Infantry was firing at the 300yd. target a soldier of the First Cavalry, without displaying the danger signal, walked from behind the bullet-proof butt in front of the target just as De Frees pulled the trigger. The bullet tore off the crown of the soldier's head. No blame is attached to Lieut. De Frees.

THE WIMBLEDON TEAM.—Lieut.-Col. Landry, M. P. of Montmagny, Quebec, has been appointed to the command of the Canadian team which will go to Wimbledon this year. Capt. Clark, of the Ninetieth Battalion of Winnipeg, who was wounded at the Fish Creek fight, will be second in command. The team will sail from Quebec June 27.

NEW HAVEN, May 23.—Fort Trumbull regulars came to New Haven from New London this afternoon, and in a rifle match at West Haven turned the tables on the Irish Rifle Team, the victors in a previous match. A dinner was one of the features of the day. The distances were 200 and 500yds., and the score was as follows:

Irish Rifle Team	219	276—495
Trumbull Regulars	327	333—660

THE TRAP.

Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

THE NATIONAL GUN ASSOCIATION.

To the Members of the National Gun Association and whosoever it may concern:

GENTLEMEN—I take this means of informing you that, at the meeting of yourselves, called for Tuesday, 8 P. M., June 30, at the Girard House, Philadelphia, I shall respectfully tender you my resignation as general manager. I do this for the reason that it seems to me now to be to the best interests of the Association to have for this position some one not in any manner identified with a target manufacturing company; and it is the primary wish of myself, as well as that of the board of directors of the Ligowsky Clay-Pigeon Company, to see the Association a complete success. The $500 of stock to which the latter company has subscribed will be placed in the hands of the new manager, whomsoever he may be, to be voted by him, and to be resold to the Association whenever you may so direct.

I have already spoken to three members of the Association, with reference to this position. This notice will give you all time to consider the subject, with the view of selecting my successor. In thus withdrawing I desire to add that I will always do what I can for the best interests and future prosperity of the Association, which now numbers over 160 members, and is now regularly though slowly increasing. Trusting that each of you will do what you can to augment the membership and thanking you individually and collectively for the confidence you have shown me I beg leave to remain

Yours respectfully,

CINCINNATI, May 29, 1885. J. E. BLOOM.

Editor Forest and Stream:

As an addendum to my open letter (dated May 29) of notification of resignation to members of the National Gun Association, permit me to add the following:

The objection that the Association is conducted in the interest of the Ligowsky target must be plainly met and overcome by the resignation of the undersigned as general manager, and of the two other directors hereabouts who have been supporting him as the executive committe. (I hereby guarantee tnese resignations will be tendered at the Philadelphia meeting or sooner if substitutes can be found.) A new general manager must be chosen with two other directors to compose a new executive committee of three. This committee shall be composed of men entirely uninterested in any target company or in any industry or business connected with the gun. This committee shall draft the programmes and arrange matches for all targets which they deem worthy. The $500 worth of stock to which the Ligowsky Clay-Pigeon Co. has subscribed shall be placed in the hands of the new general manager, to be divided or sold to the companies or individuals manufacturing said targets, and who will thus be contributing equally to the financial suppor of the Association, and be therefore equally entitled to the fair consideration of the officers and members of the Association. This course will be executed, beginning with the Philadelphia tournament, the programme for which will only be finally arranged at 8 P. M., June 30, at the meeting at the Girard House, to which all manufacturers of targets are hereby invited with the view of accepting and at once executing the above offers. All fair-minded men will admit that this should remove the present objections against the Association, the membership of which now numbers over 160, and against whom no base thoughts should be harbored. In this I came to impress it upon their brother sportsmen who have not yet joined their ranks, that they desire to be "fair and square" to every one, that they seek only the common good, that they guarantee an impartial trial and hearing to all who ask the same (which no one has as yet asked), and that they propose to keep their organization and ask all sportsmen to lend their assistance thereto; they ask all sportsmen to bear it in mind, above *all* things, that the bickerings and rivalry of target manufacturers must not be allowed to disrupt or destroy the existing organization (the attempt to form which was made years ago when one target only was in the field) and which has a scope so extensive, that eventually the question of targets will be a side issue merely. I thank you in their name for the sincere support you have thus far given their common object. J. E. BLOOM.

CINCINNATI, June 1, 1885.

The third inter-state tournament of the National Gun Association will be held at Macon, Ga., Aug. 10, 11 and 12. Judge M. R. Freeman, Second Vice-President for Georgia, Manager.

THE MINNEAPOLIS TOURNAMENT.

MAY 26.—The second annual tournament of the Minneapolis Gun Club opened this morning The weather throughout the day was most favorable, the grounds are pleasantly and conveniently located, and the shooting was, on the whole, very good, and in some instances, remarkable. There were 30 entries for the first event of the tournament, for which $150 were put up in purses of $60, $45, $30 and $15. The leading scores were:

W H Skinner	1111110—6	R B Wadsworth	1111100—5
R W Ramaley	1111100—5	P W Dorlan	1110111—6
H Kruetz	1011011—5	B White	1011101—5
L Van Fleet	1111011—6	C W Budd	1111011—6
H Durant	1111001—5	J R Stice	1111111—7
J Pfister	1111011—6	J Mills	1110101—5
J A Duncan	1111100—5	J C Kimble	1011101—5

J. R. Stice won first. W. H. Skinner, J. Pfister, P. W. Dorlan and C. W. Budd divided second. Tie for third shot off at 3 singles: Barnaby 1, Krueger 2, Durant 1, Duncan 3, Wadsworth 2, White 3, O'Brien 1, J. C. Kimble 1. Duncan and White divided third money. Tie for fourth shot off at 3 singles: Kennedy 2, Steer 3, Mills 2, James 1, M. Hitchcock 0. Steer won fourth.

Much interest was manifested in the second event, in which three pairs of Peoria birds were let go. The prizes were a purse of $120, divided in purses of $48, $36, $24 and $12. The score was:

Budd	1 1 1 1 1—6	Hitchcock	1 0 1 1 1 0—4
Ramaley	1 0 1 0 1 1—4	Lawrence	1 0 1 1 1 1—5
Kennedy	1 0 1 1 1 0—4	Thomas	1 1 1 0 1 0—4
Wadsworth	1 0 1 0 1 1—4	Kimble	1 0 1 1 1 1—5
White	0 1 1 1 1 0—4	Dorlan	1 1 1 1 0 1—5
James	1 0 1 0 1 1—4	Harris	1 1 0 1 1 0—4
Duncan	1 0 1 1 1 0—4	Stice	1 1 1 1 1 0—5
Van Fleet	1 1 1 1 1 0—5	Myers	1 0 1 0 1 1—4
Skinner	1 1 1 1 1 1—6	Russell	1 1 1 0 0 1—4
Colby	0 1 1 1 1 0—4		

Budd and Skinner divided first. Tie for second shot off at two pairs, won by Stice. Tie for third shot off at two pairs, divided between Duncan and Thomas. Tie for fourth shot off at two pairs, divided between Kimble and White, omb.

Third event—15 blackbirds:

Skinner	111110001011111—11	O'Brien	001111010011111—10
White	111101111110110—12	Duncan	101011111101111—12
Thomas	111011001110110—10	Dyer	101111100010110—10
Sexton	111001111100011—11	Pratt	100111101001011—10
Budd	100111101111001—10	Steer	111100111101111—11
Stice	111100111111011—12	Ramaly	011011001111111—11
Krueger	011111100101111—11	Dorland	111110000111011—10
Rockey	011110110111110—11	James	101111110111101—12
Kennedy	101111101101001—10	Hitchcock, G H.	110111101111111—12
Kimble, F	111111110111111—14	Russell	011111111111110—13
Kimble, J C	111111111011111—14	Myers	111010011111010—10
Van Vleck	110101110011111—11		

F. Kimble and J. C. Kimble divided first. Russell won second. Tie for third is out-off at 3 singles. White, Stice and James made three straight, and on shooting off Stice killed every bird, winning third. Tie for fourth shoot-off at 3 singles: Won by Van Vleck.

Fourth event—Six singles and two pairs:

White	001101 11 11—7	Van Vleck	011111 01 10—7
Kennedy	010101 11 11—7	Budd	000111 11 10—6
Krueger	110111 01 11—8	J C Kimble	011111 11 11—9
Perkins	110111 10 10—7	F Kimble	111011 10 00—7
Rockey	111111 10 00—7	C M Skinner	110110 10 11—7
Stice	111111 10 10—9	Thomas	100101 11 10—6
James	011110 11 10—7	Penfield	111111 11 01—9
Sexton	001101 11 01—6	Wadsworth	001001 11 11—6
Duncan	010111 10 01—6	Harrison	011101 10 10—6

On the shoot-off, Stice first, Krueger second. Tie for third shoot-off at two singles and one pair, Kennedy, Rockey and F. Kimble tied. On the next shoot-off Kimble won. Tie for fourth won by Wadsworth. The shooting was all at 18yds, rise for singles and 15 for doubles. In the forenoon H. C. Lawrence was referee, and in the afternoon Lewis Shepley. W. P. Ives was scorer, and his assistants were C. W. Skinner and M. T. Matson. The managing committee were L. Harrison, W. H. Skinner and C. H. Russell.

May 27.—The second day of the tournament was even more successful than the first. Some of the contests were close, and in many instances remarkably good shooting was done. The day's sports opened with a contest with ten Peoria blackbirds, for a prize of $180. The following was the score: Skinner 7, Van Vleck 10, Kennedy 8, Budd 8, "White Robert" 7, Krueger 5, J. H. Hitchcock 5, Stice 10, Duncan 8, Rockey 7, Corey 6, Dorland 6, Lyon 7, Jones 9, Lawrence 7, Penfield 7, Dyer 8, Wadsworth 8, O'Brien 7, J. C. Kimble 7, F. Kimble 9, Sexton 7, Perkins 6, M. Russell 5, G. H. Russell 6. Where ties occurred the money was divided.

There were twenty entries in the second match, which was for fifteen Peoria birds. There was a purse of $240 hung up. The score was: Dyer 12, Van Vleck 12, Stice 14, Perkins 10, Paine 10, Krueger 10, Jewell 10, Duncan 12, J. C. Kimble 11, F. Kimble 15, Koran 10, Jones 14, White 13, Rockey 13, Penfield 10, Lyons 11, Lawrence 12 Ramaley 10, Skinner 10. L. Harrison 11, Russell 11. In the shooting off F. Kimble won first money, Stice and Jones divided second, Rockey and White divided the third, while Duncan and Fisher secured five birds each, and then divided fourth money.

The third event of the day was to have been a contest at 10 singles and 5 double clay-pigeons to each man, in teams of 5 each. This match was to have been for the Ligowsky State badge, now in the possession of the Red Wing Gun Club. This club was not represented by a team, however, and a match at 10 clay-pigeons was substituted. The following were the leading scores: J. C. Kneible 7, Budd 7, Pfister 4, Stice 6, Skinner 5, Penfield 5. The prizes were divided among those making ties.

In the fourth event, where seven Peoria blackbirds were exposed, there were 35 entries, and the following varied record was made: Stice 7, James 4, White 6, Cassidy 5, Legg 5, Krueger 5, Skinner 5, Kimble 6, Corey 6, Winship 5, Van Vleck 6, Wadsworth 5, Kennedy 5, Macomber 6, Duncan 7, Phoeler 6, Penfield 7, Hablitt 5, Lyons 5, Russell 5. Mr. Stice, who made the whole number of birds, took the first money, and in the shooting off for second prize White and Van Vleck again tied, finally dividing the purse. The ties for third money were also shot off. Legg and Wadsworth finally dividing it. Rockey secured fourth money, after a spirited nine-handed shooting-off contest.

The last contest of the day was a sweepstakes match, with three pairs of birds, $2 entrance fee and eighteen entries. The following was the score: Van Vleck 5, Wadsworth 4, Stice 6, Martin 5 Penfield 5, James 5, Skinner 5, Budd 6, Paine 5, Russell 5, Harrison 6, Rockey 5. In the shoot-off Budd took first money, Van Vleck and James divided second, and Skinner third money. "Wadsworth" is none other than R. B. Organ, president of two different Chicago gun clubs.

May 28.—The concluding day of the tournament was crowded with interesting events. The attendance of spectators was quite limited, however, and the conditions were less favorable than on the two previous days of the tournament. The first event was a shoot at 15 Peoria blackbirds, 5 of them being from traps, 4 straightaway, and 3 pairs. The purse guaranteed to $300. There were nineteen entries, and the score was as follows: Duncan 14, Skinner 10, Van Vleck 13, James 13, Kennedy 13. Rockey 12, Kimble 13, Stice 13, Wadsworth 13, White 10, Harrison 14, Pfister 12, Paine 10, Russell 14, Steer 10, Lawrence 13. The prizes were divided.

A sweepstake match followed, the entrance fee $2. The score was: Van Vleck 8, Krueger 8, Wadsworth 9, Paine 9, Kennedy 9, Budd 7, Duncan 9, Rockey 7, Pfister 9, James 9, White 7, Penfield 8, Kimble 10, Lawrence 9, Harrison 9, Russell 8, Stice 7. James and Wadsworth, after a shoot-off, divided second money, and Stice and White fourth money.

At the conclusion of the above match there was a demand for more sweepstakes, and an equal number of entries were received. The birds were 6 singles and 3 pairs. The score was: Stice 9, Krueger 9, Kneible 9, Van Vleck 8, Wadsworth 8, Kennedy 7. Paine 6, White 6, Lawrence 9, Budd 6, Harrison 7, James 6. Russell 9. The three men making 9 bird's shot off for first money, which finally went to Stice, Krueger and Van Vleck divided second money, Kennedy and Harrison divided third money, and Budd, after a shoot-off, won fourth money.

Probably the most animated match of the day was the shoot at 15 blackbirds. The purse offered was $300, and, as will be seen by the following score, there was more than the usual uniformity about it: Stice 14, Kember 12. Skinner 10. Budd 13, Krueger 10, Duncan 13, White 13, James 11, Pfister 11, Macomber 13, Wadsworth 13, Rockey 10, Kennedy 10, Penfield 10. Russell 11, Van Vleck 10, Harrison 14, Lawrence 12, Badger 11, Parker 11, Winship 10, Legg 11. Duncan won second money in the shoot off and Pfister fourth.

The contest for the State championship badges followed. The contestants were teams of six, representing St. Paul and Minneapolis. The St. Paul team embraced a number of substitutes from other points. The contest was at twenty blackbirds for each man, and the individual scores were as follows:

St. Paul Team.	
Kennedy	1 1 1 1 1 1 1 1 0 1 1 1 0 0 1 1 0 1—16
"Yandis"	1 1 1 1 1 1 0 0 1 0 0 1 0 1 1 1 0 1—13
Pfister	0 0 1 1 0 1 1 1 1 1 1 0 1 1 0 1 1 1—15
Paine	0 0 0 1 1 0 0 1 1 0 0 1 0 0 0 0 0 1 0— 7
Paul	1 1 0 1 0 1 0 1 1 1 1 1 1 1 0 1 0 1—15
Budd	0 1 1 0 1 1 0 1 0 0 1 1 1 0 0 1 1 0 1 0 1 1 0—11—77
Minneapolis Team.	
Kimble, J C	1 1 1 1 1 1 1 1 1 1 0 1 1 1 1 0 0 1 1 1 0—16
Russell, Chas	1 1 0 1 1 1 0 1 1 1 1 1 1 0 1 1 0 1 0—15
Harrison	0 0 1 1 1 0 0 1 1 1 0 1 1 1 1 0 0 1 1—14
Rockey	0 1 1 0 1 1 1 1 0 1 1 1 1 0 1 0 0 1—15
Shinner	0 0 1 1 1 1 1 1 0 1 0 1 1 1 1 1 0 1 0—15
Kruger	0 1 1 0 1 1 1 1 1 1 1 0 1 0 0 1 1 1 1—16—91

CARTERET GUN CLUB, May 30, Bergen Point, N. J.—Cup shoot, handicap rise, at 10 birds each:

Williams, 23yds	1111111111 —10	DeBarry, 26yds	1111110110w— 7
Burd, 25yds	1011111110w— 7	Stone, 26yds	000w.
Haven, 26yds	1011111110— 8	Lee, 27yds	1111111111 —10

Ties—Lee 1, Williams 0. Cup to Lee with first money added, Williams second money.

Match at double birds, 3 pair, 25yds.:

	First Match.	Second Match.	Third Match.
Haven	10 00 w—1	10 10 10—3	10 11 10—4
Jervis	10 10 11—4	10 10 10—3	10 00 w.—1

Fourth match, at 5 pair each, 25yds.:

Haven ..... 11 01 10 11 10—7 Jervis ..... 10 11 00 10 10—5

	First Sweep.	Second Sweep.	Third Sweep.
Stone, 27yds	110w—2	110w —2	11111 —5
DeBarry, 26yds	00w —0	11111—5	
Williams, 25yds	11101—4	11111—4	00w —0
Burd, 25yds	10111—4	110w —2	10w —1
Haven, 27yds	00w —0	10w —1	1110w—3
Clements, 26yds	11110—4	11111—5	0w —0
Jervis, 26yds	11110—4	10w —1	11110—4
Edley, 26yds	11111—4	1110w—3	0w —0
Clark, 26yds			00w —0

First sweep—Williams, Burd, Clements, Jervis and Edley divided. Second sweep—DeBarry and Clements divided. Third sweep—Stone won.

	Fourth Sweep.	Fifth Sweep.	Sixth Sweep.
Burd, 25yds	11110—4		
Haven, 26yds	11111—5	110w —2	11111—5
Stone, 27yds	010w —1	11111—5	000w —0
Clements, 26yds	110w —2	0w —0	
Edley, 26yds	10w —1	10w —1	10w —1
Jervis, 26yds	110w —2	11111—5	10w —1

Fourth sweep—Haven won. Fifth sweep—Stone and Jervis divided. Sixth swep—Haven won.

	Seventh Sweep.		
Haven, 26yds	01111—4	Clements, 25yds	11100—3
Stone, 27yds	1100w—2	Jervis, 26yds	10110—3

Seventh sweep—Haven won.

GREENWICH GUN CLUB.—The second monthly of the Greenwich (Conn.) Gun Club took place on May 13, at Ten Acres, Greenwich, when the competition for the Rendle prize Greener gun was resumed with the following result, 18yds. rise, three traps, twenty-four glass balls:

Finiels	010101100000111101—10	W Mead	110010011100101010—10
Miner	010100100111111101—13	E Mead	110010110101101111O—13
Brush	000010010300000000100— 3	Buffington	111000100101101111100—11
C Merritt	000000000010000001100— 3	Tracy	000000101110000010111— 7
Foote	111010101111010101000—12	Selleck	001000000010000000110— 4
Contoit	010000000000000000010— 2	F Merritt	000010010100000101O— 6
White	110001100111010100100—10	Marshall	011110101010110110101—13
Ritch	111100001100010110111—11	Rendle	001001110111101111111—14

The special prize donated by Mr. Louis Contoit (picture of cocker spaniel) was won by Arthur E. Rendle.

GRAND MANOR, Pa.—Match of Grand Manor Gun Club, revolving trap, screened, one barrel only, 10 clays, 18yds. rise:

MacMillan	1101101111—8	Torbert	0011010100—4
Lorah, M	1010111111—8	Stauffer	0001010000—2
Clark	1110011101—7	Kleckner	0000011100—3
Lorah, J	0010111111—7	Lorah, A	1000100110—4
Lorah, G	0101100111—6		

BRUNSWICK, Ga, May 22.—At a meeting of the Glynn Gun Club, Mr. A. J. Crovett was elected president, Mr. S. C. Littlefield Secretary and Treasurer, Mr. Wm. M. Berryman Captain of first team, Mr. R. W. Thiot Captain of second team. The club is in a flourishing condition, with twenty-five members.

TOPSHAM, Me., May 30.—Match between A. S. Alexander and W. K. Purinton, both of Riverside Club, for the State glass-ball championship badge, Alexander challenging. The match was at 40 balls, 20 singles and 10 pairs. Following are the scores:

Alexander	11 11 11 11 11 11 11 01 11 11—38
Purinton	11 11 11 11 11 11 11 00 01 10 11 11—36

First event, 5 clay pigeons: A. Q. Goud 4, Purinton 4, Keene 3, Alexander 4, Lanergan 3, C. Goud 3. Purinton first, Hall second. Second event, 5 clay-pigeons: Alexander 4, Keene 4, Hall 4, Lanergan 4, Purinton 3, Goud 5. Goud first, Lanergan second. Third event, 5 clay-pigeons: Purinton 5, Lanergan 4, Hall 5, Keene 4, Goud 4. Purinton first, Goud second. Fourth event, 7 glass-balls: Purinton 6, Lanergan 6, Hall 3, C. Goud 1, A. Q. Goud 6. Purinton first, Hall second. Fifth event, 3 pigeons and 3 balls: Purinton 4, Lanergan 3, Hall 4, Goud 4. Hall first, Lanergan second.—CHAS. GOUD, Sec'y.

ATHENS, Pa., May 30.—May meeting of the Athens Gun Club. The rain in the first part of the day made the shooting bad, as it was done from the door of a large tent. First match, 7 glass balls, Cara's rotary trap, 1eyds. rise:

Davis	1110101—5	Park	0101111—5
Marks	1110111—6	Middaugh	0101111—4
Fuller	1111111—7	Knasboro	0110011—4
Sheridan	0111111—6	Rogers	0001111—4
Kendall	1001111—5		

Fuller won the prize rod. Second match, same conditions:

Marks	1110100—4	Armstrong	1111011—6
Fuller	1010100—3	Rogers	1111101—6
Davies	1011100—4	Gee	1100001—3
Knasboro	1100101—4	Kendall	0111101—5
Middaugh	1001001—3	Crockett	0011110—4
Sheridan	1000111—4		

Armstrong and Rodgers divided the prize, ton of coal.

Third match, 5 balls, 15yds. rise:

Rogers	11101—4	Edgerton	10110—3
Marks	00010—1	Goodwin	01010—2
Crockett	00111—3	Davies	11101—4
Gee	11101—4	Middaugh	01110—3
Armstrong	00101—2	Sheridan	11111—5
Wells	11101—4	Corby	00000—0
Kendall	11100—3	Fuller	11001—3
Park	10010—2	Knasboro	11111—5

In the shoot off, Sheridan won owl, Rogers cigars.

Fourth match, 10 balls, 18yds. rise:

Brock	1101011011—7	Gee	1110101101—7
Kendall	1111101111—9	Sheridan	1111011111—9
Marks	1011001110—6	Fuller	1111110010—7
Park	0111111111—9	Knasboro	0100111011—6
Davies	0111111101—7	Rogers	1110111111—9

In shoot off, Sheridan won prize owl, Fuller prize cigars, Marks third.

Fifth match, 5 balls, 18yds. rise: Prize, silver cup, won by Sheridan. Sixth match, 5 balls: Prize, box shells; Davies and Sheridan divide after tieing five times.

These were followed by other matches, single and double balls shooting, also a walking match at glass balls, which was quite amusing; in this Fuller won first, Davies second.—P.

CINCINNATI, May 21.—The Independent Gun Club had a good attendance of members at their shoot to-day. The shooting was at clay-birds. Miller is credited with the fine score of 19 out of a possible 20, the best score made in a club shoot on the Independent grounds at the tongueless bird. He is shooting now in fine form. Wick's score on doubles has not been excelled. The score is as follows:

Miller	11111111111111111110—19
Norwood	11110111111101101110—16
Wick	11010111011101101011—14
Hades	10101110011001110101—12
Wenning	11001001100110110101—11
McDuffie	10001010101110100110—10
Bradley	00001010101100101110— 9
Captain	10110100100000101001— 8
Robinson	11010110010000010100— 9
Maynard	00010001100000010110— 7
Bauer (one arm)	00010101001100001010— 7
Kessler	10101000010110100100— 8

Five pair doubles:

Wick	11 11 11 11 01—9	Captain	10 01 00 10 11—5
McDuffie	11 11 10 11 10—8	Dorman	00 10 10 01 10—5
Miller	10 11 10 01 10—6	Brady	11 01 01 10 00—5
Wenning	01 01 10 10 11—6	Bauer	00 11 01 10 00—4
Hades	11 10 01 01 10—6	Kessler	00 11 01 10 00—4
Norwood	11 01 10 10 01—6	Maynard	00 00 10 01 10—3
Robinson	00 11 11 00 10—5	Hart	01 00 10 00 01—3

The Independent Gun Club will, in all likelihood, give a large clay-pigeon shoot in June or July. This club has somewhere in the neighborhood of 150 members.

EVANSVILLE, Ind., May 23.—A closely contested shooting match took place at Athletic Park this afternoon, the participants being W. B. Lacy, Jas. A. Mackey and F. M. Gilbert. The match was at 10 single and 5 double Ligowsky clay pigeons, 18yds. rise. The score was very fine, from the fact that the trapping was done by Mr. Will Durnam, who gave the shooters the most difficult birds he could trap, no two—even in the doubles—being in the same direction, and all from the fourth notch. Score:

Mackey	0111111111	11 01 10 11 01—15	
Lacy	1111111111	11 10 10 00 10—14	
Gilbert	1110111111	11 01 01 01 11—16	

The Evansville Gun Club is now in working order for the season and has already commenced the clay-pigeon trap-shooting. They will practice one day each week, though members have the privilege of shooting whenever they wish, the birds and traps being always at their service. They will furnish either one or two teams, of five men each, to accept any challenges sent to the president, F. M. Gilbert. All matches this season will be at 10 singles and 5 pair of doubles, 18yds. rise, for 10 bores, and 15 for 12.

NEW YORK STATE ASSOCIATION.—Syracuse, May 30.—The New York State Sportsmen's convention will be held in Syracuse, N. Y., commencing June 22, and continue one week, under the auspices of the Onondago County Sportsmen's Club. Programmes will be ready about June 10. All manufacturers and dealers that wish to contribute prizes can co respond with—JOHN STEDMAN, Sec.

SAN DIEGO, Cal., May 23.—It is with considerable gratification I write you that we have at last organized a sportsmen's club here. A number of the boys got together yesterday, and by noon the San Diego Gun Club was fully organized, and has for its bore and sinew the membership of every sportsman in town. We have so far received the hearty co-operation of some of our best citizens who desire the game laws of our State to be protected, and we feel very much encouraged by the number of members now, and the applications of membership that we have received to-day are nine. The officers elected for the ensuing year are: President, Col. Chas. A Loud; Secretary, A. B. Pearson; Treasurer, Geo. A. Merritt. Executive Committee—D. B. Hinman and E. H. Weegar. Although we are a young organization, we propose to have a trap shoot every week, and will have a tournament as soon as possible.—A. B. P.

SAN FRANCISCO, May 16.—Last year the Alameda Sportsman's Club shot a match against the Gun Club of San Francisco, ten men a side, at twelve single birds thirty yards rise. Burlingham rules, for a handsome trophy. It was won by the Alameda team by nine birds. To-day the rival clubs met at Bird's Point, Alameda, to again fight a friendly battle for the supremacy and a handsome silver pitcher valued at $100. This work of art was designed by Fred Butler, of the Gun Club. The top is of beaten silver, and around the neck of the pitcher are a series of medallions, each representing some game bird or quadruped. The body is of frosted silver, with litelike representations of pigeons in various lines of flight, chased in gold. The conditions of the match were exactly similar to those of last year, though the same men did not shoot. Butler made two splendid shots with his second barrel and had the ill-luck to have two birds fall dead just outside the one hundred yards boundary. The Alameda team won eventually by seven birds. The best two out of three wins decides the ownership of of the valuable trophy. Judge Hale Rix acted as referee for the match and George Bird, Jr., pulled and retrieved. There was but little wind, and the birds were not in consequence very fast, though all good strong flyers. The following are the scores:

Alameda Club.		Gun Club.	
Adams	101111101101— 9	Butler	111101101001— 8
Crellin	111110101101— 9	Ewing	100111111110— 9
Haskell	111111110111—11	Emmett	111011100111— 9
Hopkins	110111111101—10	Babcock	101111101111—10
Norton	111111101110—10	Gordon	010111111110— 9
Reed	011011111100— 8	Fuller	001111111111—10
Bennett	111111110111—11	Black	111111110111—11
Mayhew	111111011001— 9	Wilson	011101001110— 7
Williams	110111001110— 8	Hansen	000011001111— 6
Knowles	111011110111—10—95	Orr	111011111111—11—88

SHOOTING NOTES.—The newly organized Miami Valley Camping and Fishing Association of Cincinnati entertained their friends at Price Hill Pavilion the evening of May 30th....The Knoxville, Tenn., and Louisville Ky., gun clubs shot a telegraph match May 21. The scores stood 244 to 238 in favor of Louisville, out of a possible 300.... The Manitoba Gun Club, of Winnipeg, elected the following officers: President, J. H. Hubbard; Vice-Presidents, J. H. Mulvey and J. C. Walker; Secretary, J. A. Smith.. .The Western Shooting League of North America will give a rifle tournament at Indianapolis, Ind., June 16 to 21. The aggregate in prizes amounts to $10,000.. The Des Moines, Ia., Rifle Club is a new organization. The officers are: President, G. L. Eason; Vice-President, Webb Sowers; Secretary and Treasurer, James O. Hume; Range Committee, Jas. P. Forrester, J. A. Ricker and W. T. Rickards. A range has been secured and butt and target frame erected....The Bogardus—Meaders match will take place at Chicago June 10. They will shoot for stakes of $250 a side and the silver cup which Bogardus brought back from England; the cup to become the personal property of the winner at the expiration of two years' time, provided he defends it against all comers during

that time, he having the privilege to refuse to shoot for it oftener than once every two months. Live birds will be used in the match, each man to shoot at one hundred birds—fifty at single and the same number at double rise.

SEND ten cents for handbook of The National Gun Association to F. C. Bishop, Secretary, Box 1292, Cincinnati, Ohio.

TESTIMONIALS:

"The very best and most complete rules."

Canoeing.

FIXTURES.

June 8 to 10—Canadian C. C., First Spring Meet.
June 24—Vesper Boat Club, Annual Regatta.
June 25—Jersey City Y. C., Regatta. Special Class for Canoes.
June 27—Eastern Meet, Merrimac River.
July 18, 28—Western Meet, Ballast Island, Lake Erie.
July 24 to Aug. 8—A. C. A. Meet, Grindstone Island.

AMERICAN CANOE ASSOCIATION.

SECRETARY—C. A. Neidé, Schuylerville, N. Y. Candidates for membership must forward their names, with $2 for initiation fee and first year's dues, to the secretary, who will present the names to the executive committee. Money should be sent by *registered letter* or money order.

SUGGESTION TO REGATTA COMMITTEE, A.C.A.

AT the '84 meet the sailing race for Class B canoes, no limit of sail and ballast, brought out the largest number of entries, some twenty in all. The prospect for this year is that the entries for this race (No. 6) will be still more numerous. Starting the canoes all at one time, no matter how their positions at the start are fixed, cannot work fairly for some of the canoes, as was discovered last year. This race is a test of canoes and men, not a gamble for position or flukes. Over such a course as is laid out on Eel Bay not over six canoes could start in such a race and have equal chances of winning.

This event is one of the most important, if not the most important, on the programme to a majority of those taking part in the races. If there is a good breeze on the day of the race it would be much better, in my opinion, to make the race six miles instead of three—two rounds—in which case ten canoes could be started at a time with fairness. I should also suggest, in any event, to divide this race into heats—as many as the number of entries warrant; the winners of the heats then will be pretty sure to be good boats and sailors, and a final heat of six miles, contested by five or six of the crack boats at the meet, would be an event to be remembered. This would be a better way than taking the time of the canoes over the course, as it is impossible then to tell till long after the race who has won. I should be pleased to hear inofficially from members of the committee on this point. C. B. VAUX.

HARVARD C. C. RACES.

THE third regatta of the Harvard C. C. was held on May 27, and was the most interesting of the three which have been held by this infant club. The course was round a triangle of a third of a mile or more on a side, in the lower basin of the Charles River, starting from the house of the Union Boat Club in Boston. The following canoes were entered in Class B: Genesta, quondam Giroüe (Springfield), F. I. Proctor; Beatrice (Racine Shadow), Commodore T. Dunham; Gretchen (Nautilus), G. A. Webster, and Pilgrim (Racine Shadow), R. F. Coombs. Class A: Phyllis (Stella Maris), E. K. Dunham, and Germaine (Stella Maris), A. G. Webster. The Class A boats were started after the Class B, the times of starting being: Class B., 11:04 A. M.; Class A, 11:07. The large canoes continued bunched together until they rounded the first buoy, in the following order: Pilgrim, Beatrice, Genesta, Gretchen. The windward work then began, and Genesta and Beatrice passed Pilgrim, while Gretchen fell to the rear. In the meantime, in Class A, Phyllis had passed Germaine but after rounding the buoy and getting on the wind, Germaine quickly walked past Phyllis, and drew up on the big boats. By making a long tack Germaine gained a whole tack on the Class B boats Scraping barely round the buoy, she squared away before the wind and completed the first mile, a third of a mile ahead of Class B.

Genesta and Beatrice were having a lively scrimmage at the second buoy, Genesta getting around first, while Gretchen had fallen out of the race. During the second mile, Germaine getting out into the force of the strong ebb tide, Genesta began to gain the lost ground, having drawn far ahead of Beatrice. Phyllis gave up on the first mile. It now became interesting to see if Germaine could hold her own against the ninety feet of canvas of the other two boats. Genesta and Germaine made the two miles in the same time, but on the third lap the tide took Germaine into a mudscow, and she again lost a tack through over-confidence in rounding the buoy, and Beatrice caught up. Beatrice and Germaine finished the three miles in the same time to a second, seven and a half minutes behind Genesta, which won in Class B, and Germaine in Class A. All three carried the Mohican rig.

	Genesta.	Beatrice.	Germaine.
Start	11 04	11 04	11 07
First mile	11 34	.. ..	11 31
Second mile	11 59	.. ..	12 02
Third mile	11 22½	12 30	12 33

The paddling race was replaced by an upset race, by Gretchen, Pilgrim, ex-Giroüe, and Germaine. Won by Germaine. The best boat in the club, Tarantula, was unfortunately not in the race on account of the illness of her captain, the vice-commodore.

The club hopes to have several canoes in the canoe race at the City of Boston yacht races on July 4, and hopes to have a larger deputation than last year at Grindstone. GERMAINE.

PITTSBURGH, C. C. RACES, MAY 30.

OWING to the rain only one race was sailed on Decoration Day by the Pittsburgh C. C. The course was on the Monongahela River, one mile to leeward and return. The starters were Marguerite, G. H. Singer, 14×30, balance lug rig of 85ft.; Whiffler, W. E. Woodwell, 14×30, and Katrina, R. W Bailey, 14.6×31, both Mohican rig, of about 75ft.; Tiger, W. W. Lawrence, and Freyja, C. F. Holdship, both 14.6×30 and both Mohican rig of 46ft.; Ariel, T. H. Childs, 14.4×30, and Lady Jane, B. C. Bakewell, 14×26, both lateen rig of 30ft. The first three carried dandies, the others mainsails alone. Lady Jane entered against the larger boats, because the only Class A canoe present, and this was her sole chance to race; also, every point made counts on the record. Freyja and Ariel are novices, sailing for the first time, and the others had not sailed since last season. At the start Lady Jane and Katrina got over the line together, though on opposite sides of the river, the others being badly strung out, with Freyja at the tail end. The Class A canoe carried away her deck-tiller just as the second shot was fired, but contrived to sail the race out with the foot gear. Marguerite lost the use of her rudder at the start, the yoke turning loosely upon the round rudder-stock until the crew went aft and tightened the thumb-screw.

On the run up Lady Jane made much the best time and was first to turn the buoy. Katrina, reefed, second, with Marguerite, Whiffler (reefed) and Tiger in a bunch at her stern; and finding the race so close, both Katrina and Whiffler shook out their reefs as they began the windward work. Lady Jane was again in trouble, breaking the fulcrum of the lever at aft end of her Atwood board and starting quite a bad leak, but sailed the race out to the end. Marguerite was knocked down by a puff and shipped enough water to cover her floor, which she carried through the rest of the race, in which she secured second place, Katrina winning in 38m., while Lady Jane got in third, with Freyja, Whiffler and Tiger following. Whiffler was caught by a passing steamboat or would have been one or two places better. Ariel did not finish. Katrina was using her last season's rig throughout while all the other skippers were more or less unfamiliar with their new gear. Marguerite and Lady Jane deserve much credit in view of their several mishaps, the latter especially, as competing with much more powerful boats than herself, as also Freyja, who sailed her novice race under the disadvantage of a very bad start. The contest for the record cup to be decided by the result of all races sailed this season, thus starts with Katrina, 7 points (one for each starter), Marguerite 6, Lady Jane 5, Freyja 4, Whiffler 3, and Tiger 2.

THE NEWBURGH MEET, MAY 29-31.

MOST of those who were present at Camp Nate Smith last year, were glad to be back in the old spot on Friday morning for another three days' camp. The Mohican, New York, Knickerbocker, Rondout, Amsterdam and Middletown clubs were all represented, with the younger clubs, the Newburgh Dockrats, Shatemuc, of Sing Sing, and Brooklyn C. and S. Club. The camp this year was a little further up the beach and nearer the spring, and most of the tents were pitched along the shore, only a few being up in the old fort. The Commodore's signal floated under the A. C. A. flag, and on either side were the signals of the various clubs. A number of canoeists arrived at Newburgh on Thursday night, and proceeded down to camp against a strong southerly wind that made paddling very difficult. Tents were pitched and fires made and all soon settled down to the ordinary round of camp duties.

Friday morning broke clear and cool, bringing a number of additions to the camp from up and down the river. Com. Oliver and Secretary Neidé, the latter just back from a winter in New Orleans, were both present, but the soldierly figure and pleasant countenance of Fior di Liçé, remembered by all at last year's camp, were missing. The tent of the Kit Kats, with its novel cipher, was absent; but the Hiawatha and her skipper came down on Friday afternoon. All arrangements had been made in advance by the Newburgh C. C., and the steam launch of Commodore Bartlett was on hand to bring down canoes and to follow the races.

A special feature of the meet was the presence of half a dozen new canoes, whose performances were looked foward to with more than ordinary interest. The flagship Marion B., a Mohican No. 2, represents the latest in canoe model and fittings, and much was expected from her. She is one of the most completely fitted canoes yet present at any meet, and does great credit to the ingenuity of her owner as well as to her builder. Her rig is a Mohican settee, of course ornamented with a large figure, a sun with the letter M. in the center. Another new model that has excited no less interest this season is the Sunbeam, illustrated in FOREST AND STREAM of Jan 29, of which three specimens, the original of the name, Inertia and the Sea Bee were present. Two of these only entered the sailing races. Both of these were fitted with the new balance lugsails of a peculiar cut, the invention of Mr. Vaux. The four spars, boom, yard and two battens, are all of the same length, the portion of the sail above the second batten being almost an equilateral triangle, the cloths running parallel to the leech, which is a broken line, making a peculiar looking sail, but a very effective one. In other respects it is a balance lug of the usual rig, with reefing gear. The rig of the Sea Bee and Inertia consists of a mainsail of 75ft., a mizzen of 35it, and a small storm mizzen, used when the large mizzen is set forward. This arrangement gives a good area of sail for racing and a snug rig for heavy weather or easy cruising. Many of the boats present were fitted with the new metal drop rudders and clamping deck tillers, and all of the new ones had the Radix board. Of the old boats Snake has discarded her jib and shifted her mast forward and came out in a handsome suit of new sails, a Mohican settee of 60ft. and lateen of 15ft. Each of these is provided with a bonnet of 20 and 10ft. respectively, fitted with spars that hook on to the booms for light winds. Both Guenn and Tramp were on hand, but arrived too late for the first day's race. The former has been reduced in size to the A. C. A. limits, and the latter has received a new after centerboard during the winter, a new mainsail of 105ft. and a roller mizzen of 40ft.

Two causes have operated to mar the very interesting series of races promised. Many had ordered new boats and sails late in the season and were not yet fully prepared, while the late spring had prevented all who were ready from practicing with their new craft, and the first race was, in reality, a trial trip for several boats.

On Friday afternoon the wind was southeast and the tide was just falling when the first races, for classes A and B, sailing, were called. The course laid out by Mr. Smith on the ice, was a three-mile triangle, one side across the river, and was marked by large white flags. The entries were:

CLASS B.

Snake	R. W. Gibson	Mohican C. C.
Marion B.	Com. Oliver	Mohican C. C.
Thetis	P. M. Wackerhagen	Mohican C. C.
Arno	R. C. Cushman	Mohican C. C.
Sea Bee	C. B. Vaux	New York C. C.
Inertia	E. W. Brown	Knickerbocker C. C.
Minx	M. V. Brokaw	Brooklyn C. C.
Iolus	W. Van Dalfsen	Newburgh C. C.

CLASS A.

Dido	Grant Edgar	Newburgh C. C.
Helena	Grant Van Deusen	Rondout C. C.

The judges, Messrs. Lloyd Thomas, Mohican C. C., W. P. Stephens, N. Y. C. C., and T. J. Hand, Jr., Shatemuc C. C., with Dr. Neidé as starter, followed the boats on the Commodore's launch. At 3:16:30 P. M. the first whistle was blown, and one minute later the starting signal. Sea Bee held the best place at the line, and by good judgment went over it quickly just as the whistle blew, securing a good lead to windward. Marion came next, with Snake close behind. Across the river was a reach, and all went along merrily for first turn. Meanwhile the A boats had been started at 3:22:30, Helena going off with a good lead in the wake of the loiterers of Class B. Sea Bee was first to jibe around the mark in a good breeze at 3:30:15, with Marion at 3:30:35, Snake 3:31 and Inertia 3:31:10. When Iolus's turn came she jibed and went over at the same time, and hardly had a crew gone to her help in a rowboat before Arno, after rounding well and running a short distance, followed suit and capsized, owing to her Mohican boom slipping from the mast. Dido came round at 3:35:30, with Helena so close that it was difficult to time the difference. Down the wind soon made a regular procession of the fleet, which reached second buoy with Sea Bee well ahead, Inertia a dozen lengths astern, and the others spaced at the same distance from each other. The times were, Sea Bee 3:44, Inertia 3:44:30, Marion 3:45:10, Snake 3:45:22, Thetis 3:47. The leader stood out into midstream on starboard tack, but the others broke tacks as they pleased. Dido turned at 3:55:20, and Helena at 3:56:15. The beat home was very interesting as the boats changed places on the various tacks. Sea Bee held her place for some time, but was finally passed by Snake. The times of finish were:

	Start.	Elapsed		Start.	Elapsed
Snake	4 07 50	50 20	Inertia	4 10 36	53 06
Marion B.	4 08 20	50 50	Dido	4 20 45	58 15
Sea Bee	4 08 30	51 00	Helena	4 22 08	59 38
Thetis	4 09 00	51 30			

The prize for Class B was a pennant offered by the Shatemuc C. C., and that for Class A a pennant offered by the Mohican C. C.

A little rain fell during the latter part of the race, and, as it continued for a time, the spectators rapidly disappeared. After supper a large camp-fire was kindled on the beach and all the canoeists gathered about it. A motion of thanks was passed to Mr. Verplanck for his loan of the grounds to the canoeists, and others to the Newburgh C. C. for their work in preparing for the camp, and to Commodore Bartlett and his sons, who kindly placed their fast launch at the service of the racers. Saturday morning broke with clouds and mist over Storm King, but soon cleared away. A number of canoeists and visitors arrived, and by the time of the races the shore was well crowded. The first race called was for Class 4, paddling, one half mile down the beach, before a good breeze and against the flood tide. The entries were:

Daisy	G. O. Totten, Jr.,	Newark, N. J.
Snake	R. W. Gibson	Mohican.
Chum	H. S. Crispell	Rondout.
Sunbeam	W. P. Stephens	New York.
Minx	M. O. Brokaw	Brooklyn.
Tiptop	R. J. Wilkin	Brooklyn.

The start was made at 11:31:30, and the race was very close throughout, the boats finishing well together. Daisy won in 6min., with Snake lapping her and Chum third. The next race, for Class 2, was for one mile with turn and brought out

Pixie	F. B. Smith	Newburgh.
Day Dream	H. L. Thomas	Mohican.

Pixie won after a closely fought race. The start was made at 11:47:30, the time being 13min. 30sec. The prizes were flags offered by the Rondout and Brooklyn clubs respectively. The judges, Messrs, N. S. Smith, Newburgh C. C., and W. M. Walsh, with the timekeeper, Dr. Neidé, accompanied the racers in a rowboat.

The main event of the meet was a sailing race between representative models, intended to be a test, but fluky winds and calms deprived the race both of interest to the spectators and of value to canoeists. The four leading models of the previous day were entitled to enter, and the Guenn and Tramp were also allowed in, as they would have raced on Friday but for a delay in getting down their racing gear. The full list was:

Name.	Dimensions.	Model.	Owner.	Club.
Snake	14.6×30	Mohican.	R. W. Gibson	M.
Sea Bee	15 ×30	Sunbeam	C. B. Vaux	N. Y.
Marion B.	15 ×30¾	Mohican No. 2.	Com. Oliver.	M.
Thetis	14.6×30	Lansingburg	P. M. Wackerhagen	M.
Guenn	15 ×31¼		Wm. Whitlock	B.
Tramp	14 ×33.	Pearl No. 6.	C. J. Stevens	N. Y.

The Snake, Marion and Thetis carried Mohican sails, the Sea Bee her new lugs, and Guenn and Tramp each a balance lug of 105ft., the latter with a roller mizzen. The Snake has an Atwood board, the Marion, Sea Bee, Thetis and Guenn all have Radix boards, and the Tramp has an iron plate of 45 pounds and a brass afterboard of 8 pounds.

At 2 P. M. on Saturday the weather was clear though rather cool, with a light northeast wind in Newburgh Bay, inducing all to start with full sail, the Snake hooking the bonnet in her mainsail. At the same time vessels coming up the river in the narrow reach below Storm King, hardly a mile away, were winged out before a strong, southerly breeze, which left them just below Pollapel Island. The tide was at a standstill, the ebb just being felt inshore, with a flood running in the center.

One whistle was blown at 2:42:35 and a second one a minute later, and all started off, Snake being first away, with Guenn, Sea Bee, Marion, Thetis, all on starboard tack, the order being to leave all buoys to starboard, so as to gain as much help as possible to windward from the decreasing flood tide. Sea Bee soon struck out for open water and, tacking, ran through Guenn's lee, for the windward berth, and all went off on port tack, the wind still holding northeast. After a short time Snake was well ahead, Sea Bee and Tramp next, then Marion and Thetis, while Guenn seemed to have lost ground. Snake wisely contented herself with making all she could to windward in midstream. Marion and Thetis tried a similar course, but with less success, and Sea Bee, followed closely by Tramp, reached far to the eastward side, looking for the last of the flood and the long expected south wind visible in the lower reach, while Guenn broke tacks and started boldly on an apparent wild goose chase well over toward the west bank, so that the fleet was well scattered. The wind, still very light, had gradually shifted to northwest, and under it Snake worked up, thanks to her kites, while Guenn also improved her chances amazingly. Snake jibed round the north mark and ran for the east buoy, with Guenn after her, while the wandering ones to the eastward caught a taste of what they were looking for and began to come up, as did Marion and Thetis. The times at the buoy were: Snake 3:29, Guenn 3:31:05, Marion 3:34:30, Thetis 3:38:45, the others not being timed.

Snake was first at the second mark, Guenn gaining 5 seconds on her in the mile run, and tacked around, running off into a calm streak at once, Guenn, close behind, profited by her fate and kept to the north, holding a little wind, but both waited a short distance from the mark until the pack came up. The times were, Snake, 3:44:15; Guenn, 3:46:15; Marion, 3:54:40; Sea Bee, 3:54:50; Thetis, 3:56:20; Tramp, not timed. Snake fancied a squall coming from below and doused her bonnet, just as at 3:56 the first puff of the south wind struck Guenn, then a few yards ahead of her, and while all the rest lay idle, the big ship started off as though with a screw under her, for the last leg. Snake hooked on her bonnet and waited for some time until a fresh puff struck her too, when off she went in a hopeless chase. Guenn came in but crossed the line from the wrong side, and had gone some distance before she discovered the mistake and recrossed, losing several minutes, by which time Snake was so close that the chances were about even; but a quick jibe threw Guenn across, the leader by 20 seconds. Meanwhile the rest of the fleet were almost becalmed, and an inopportune tow shut one off altogether, so that none were timed. The times at the finish were, Guenn, 4:09:50; Snake, 4:10:10. The judges and starter were the same as the previous day. The flag won by Guenn was presented by the Knickerbocker C. C. It was a great disappointment to all that the lack of wind should so spoil a race where all other conditions were so favorable, good weather, smooth water, little tide, and an accurately measured course, and where so many representative boats were entered.

At night the big fire was lighted up in the old fort, and though a light rain was falling, it did not penetrate the trees. The prizes were presented to the winners, after which Commodore Oliver spoke of the growth of the Association and of the necessity at an early date of such a reorganization as would induce additional members from the West and permit of a Western meet, mentioning the plan lately proposed by him in the FOREST AND STREAM. A motion was passed to the effect that the canoeists of the Hudson River recognized the importance of a reorganization and extension of the American Canoe Association to allow it to include all Western canoeists; and that, provided the canoeists assembled at Ballast Island in July would form a Western branch, they would recommend the adoption of such a scheme as should be most agreeable to all by the Association at the Grindstone Island meet.

Sunday morning broke with a rain that lasted until nearly noon, after which time it cleared up, and by 3 o'clock the last man of the visitors had packed and set sail, some for the south, but most of them for Newburgh, where they placed the canoes on steamers for Albany and New York. That the meet was in every way pleasant and enjoyable, was mainly due to the energy of the Newburgh C. C., who have worked hard to lay out courses, arrange landing and other details, and who have won the thanks of all present. The success of the spring meets is now well assured, and they will take place at one point or another every year. A small meet next fall at Rondout is also talked of. The races were marked throughout by the absence of fouls or disputes of any kind, or by any violations of the sailing rules, which are now becoming generally known and observed. The new rule for placing the Commodore's number on the A. C. A. lists in the peak of his mainsail was generally observed, enabling spectators to place the boats at any time, and by no means detracting from the appearance of the sail.

CRUISE OF THE LAKE ST. LOUIS C. C.

THE Lake St. Louis C. C. had a cruise up the Chateauguay and English rivers as far as Howick, about thirty miles from their club house at Lachine, on Saturday, May 23, when the following fell into line behind the commodore: Shawinigen, Rintoul (Commodore) and T. Stewart; Marchioness, Brock and Phillips; Marion, Auldjo and Robertson; Iona, Stewart and Henderson; Lachine, Shearwood and Harrison; Viva D., Mitchell & Lockwood; Viva D., Kohl Bros.

The first camp was made at the foot of the first rapid, it being then about 9 o'clock, and the portage being over very heavy ground. Next morning at 5 A. M. we had our first experience of portaging, being the longest throughout the whole trip. Above these rapids the scenery is perfect, and we had a run of about two miles before striking our next rapid. People from every house along the river came out to see us pass, and show us the easiest way up some of the rapids. We arrived at St. Philomene at 9 o'clock and Ste. Martine about 11:30, where we dined at the hotel, and proceeded to Howick, about twelve miles higher up, and situated on the English River. We went about a quarter of a mile below the town and struck camp, and in half an hour had the villagers around us to the number of about fifty. They made themselves quite at home, lying around on our blankets, inspecting canoes and tents. Many had never seen a canoe before.

Leaving Howick next morning, we ran all the rapids (six) and one mill dam in safety, except the Lachine, which came to grief in the last rapid but one, owing to the stupidity of some men fishing who gave her crew the wrong course. She struck a sunken rock, which caused her to turn broadside, and before she got her head round the current brought her broadside on another rock; she then filled. When we went to help the crew out we found the rock protuding through her bottom. Some of the canoes having gone down ahead of the Lachine, the Marion and Iona had to divide up the two blankets and rig of the Lachine, and managed, by tying a rubber sheet round her bottom, to get her down the remaining rapid, and towed her down to the steamboat landing at Chateauguay, and from there she was brought to Lachine.

We had numerous wettings in the rapids, the Marion being upset while the crew were poling up one rapid, and great praise is due the Iona, she having run up one of the fastest rapids in the river, a feat which no other canoe has succeeded in accomplishing. At St. Martine we passed some brother canoeists on their way to Ormstown and exchanged greetings.

We all arrived at Lachine on Monday evening well pleased with our first cruise, and have planned one for next Saturday to St. Anns. MARION.

READ "CANOE HANDLING"—A marked improvement in the general average of sailing is visible every year. At each meet there is a larger number of fairly good sailors who make a hot fight for third or fourth place at least, and a man who would win must make use of every possible advantage. How to do this is told by an old racer, in "Canoe Handling," and should be carefully studied by all canoeists before visiting the meets this year. The value of the advice there given was well shown in one of the races at Newburgh, where a canoeist, who evidently had not read the remarks on page 132, went far off his course in search of wind, only to find none. Had he followed the advice given the result would, no doubt, have been quite different, and would have well repaid an hour's study of Mr. Vaux's excellent hand book.

GRINDSTONE ISLAND.—Shortly before his death, Mr. Delaney discovered a deposit of very fine granite on the island, and the indications are that valuable quarries will be opened there. On May 17 ice 25ft. thick was running in the river, and had carried away the buoys marking the courses. Last fall, Dr. Neidé sunk a keg at each point 10ft. below the surface, but all have been carried away. Com. Oliver, with Dr. Neidé and Mr. Gibson, will visit the island next week and decide on a number of matters connected with the meet. New courses will be laid out further from shore. A large number will be present this season and many preparations will be needed for their accommodation. The camp at Squaw Point will be larger than ever before. Dr. Neidé will visit Ballast Island in July, and proceed from there to Grindstone.

JERSEY CITY Y. C.—CANOE RACES.—The course for the canoe race to be held on June 25, under the auspices of the Jersey City Yacht Club, will be as follows: From a stakeboat off the club house, to and around the spiles near the southeast corner of "Black Tom," thence to a stakeboat anchored near Ellis Island, and to starting point, around the course twice. A silver cup, presented by Mr. S. B. Crane, will be awarded to the winning canoe. Allowance one minute to the foot. Canoes may be left at the club house the day before the race and the janitor will take care of them.

RACES AT BROCKVILLE.—The first of the series of fortnightly regattas of the B. C. C. took place May 28. The sailing races were over a triangular course of 2½ miles, twice around, making a distance of five miles. Sailing—Canoes: Class B, B. W. Richards, canoe Grebe. Skiffs: 1st, Geo. Troutbeck; 2d, Noel Saurè. The wind was very poor and uncertain. Paddling Races—Single: No race. Doubles: 1st, W. S. Clouston and Edw. Pitt; 2d, John E. Chrysler and R. Junkin; 3d, Willis Chipman and Fred Burt. There is great interest being taken in canoeing matters this summer.—FRANCIS M. TURNER, Sec. Regatta Com. B. C. C.

FROM LAKE ERIE TO THE MISSISSIPPI.—A correspondent asks whether a small boat or canoe can be floated from Detroit to the Mississippi by any other route than via Cleveland. Can any of our Western readers give the required information, and also, in the case of a canoe, the shortest practicable route and length of carries?

THE ASSOCIATION BADGE.—*Editor Forest and Stream:* The A. C. A. badge will be ready for shipment the latter part of this or the early part of next week. All orders for the badge must be sent to me, when they will be forwarded to the manufacturers.—DR. C. A. NEIDÉ, Schuylerville, N. Y.

CONNECTICUT RIVER MEET.—The Hartford and Springfield canoe clubs held their regular spring meet on May 30-31, particulars of which have not yet come to hand.

Yachting.

FIXTURES.

June 6—Larchmont Y. C., Spring Pennant Regatta.
June 6—Quincy Y. C., First Club Race.
June 8—Quaker City Y. C., Annual Spring Regatta.
June 9—N. J. Y. C., Annual Regatta.
June 9—Atlantic Y. C., Annual Regatta.
June 11—Brooklyn Y. C., Annual Regatta.
June 11—New York Y. C., Regatta.
June 13—Boston Y. C., First Club Race.
June 13—S. C. Y. C., Annual Regatta.
June 13—Winthrop Y. C., Sweep-takes Race.
June 16—Harlem Y. C., Annual Regatta, Oak Point.
June 17—Quincy Y. C., Review.
June 17—East River Y. C., Annual Regatta.
June 17—Pentucket Y. C.
June 17—Dorchester Y. C., Open Regatta.
June 18—New Haven Y. C., Annual Regatta.
June 20—South Boston Y. C., Annual Regatta.
June 20—Boston Y. C., Second Club Race.
June 20—Hull Y. C., Pennant Matches.
June 21—Quaker City Y. C., Review and Harbor Cruise.
June 25—Jersey City Y. C., Annual Regatta.
June 25—Oswego Y. C., Ladies' Day.
June 27—Brooklyn Y. C., Opening Regatta.
June 30—Eastern Y. C., Annual Regatta.
July 3, 4 and 5—Quaker City Y. C., Corinthian Cruise and Regatta.
July 3—Knickerbocker Y. C., Annual Cruise.
July 3—Quincy Y. C., First Championship Race.
July 3-13—Newark Y. C., Annual Cruise.
July 3—S. C. Y. C., Squadron Cruise.
July 4—Carolina Y. C., Regatta.
July 4—Larchmont Y. C., Annual Regatta.
July 4-11—Pentucket Y. C., Annual Cruise.
July 8—Beverly Y. C., Nahant, First Championship Regatta.
July 11—Hull Y. C., Cruise.
July 16—Boston Y. C., Third Club Race.
July 16—Cleveland Y. R. A., Annual Regatta.
July 16-17-18—American Y. C., Cruise and Races.
July 17—Cleveland Y. R. A., Cruise to Ballast Island.
July 18-28—Camp at Ballast Island.
July 18—Hull Y. C., Club Race.
July 25—Hull Y. C., Ladies' Day.
July 25—Pentucket Y. C., Club Race.
July 25—Beverly Y. C., Marblehead, Second Championship Regatta.
July 30—L. Y. R. A., Cruise to Niagara.
July 31—Quincy Y. C., Second Club Race.
Aug. 1—Hull Y. C., Club Race.

THE RACES NEXT WEEK.

THE programmes for several of the races next week have been sent out to all who are likely to enter. On July 9 the Atlantic Y. C. will sail their 20th annual regatta, starting from Bay Ridge at 10:25. The courses will be around Sandy Hook Lightship and Scotland for the larger boats, around Scotland only for Class E, and around a stakeboat off Buoy 8 for the others. Entries must be made by 5 A. M on Saturday to W. T. Wintringham, 36 Pine street, N. Y. On the same day the New Jersey Y. C. will hold its annual regatta over a course from Bedloe's Island to Buoy 13. On Saturday, June 14, the Seawanhaka Corinthian Y. C. will hold their annual regatta, over the usual courses, starting at 11 A. M. from Fort Wadsworth. The races are open to yachts of the New York, Atlantic, Larchmont, Eastern, New Bedford, Knickerbocker and New Haven yacht clubs. On June 11 the New York Y. C. will sail their annual regatta over the club course.

OPENING OF THE SEASON.

NEWARK Y. C., MAY 30.

On Saturday morning a calm with a light fog prevailed on Newark Bay, giving poor promise of a race. The yachts were gathered at Greenville, the course being from a stakeboat off Uldrich's Pavilion, thence to a stakeboat off the mouth of the Hackensack, thence to a stakeboat off Maple Island Creek and home, 10 miles. The start was at 10 A. M., with very little wind, and the entire race was slow and tedious. The times were as follows:

FIRST CLASS—CABIN SLOOPS.

	Length.	Start.	Finish.	Elapsed.	Corrected.
Gray Eagle	27.10	11 09	3 30	4 21	4 21
Sunny C	26.10½	11 00¾	3 18½	4 17	4 16½
Winnnifred	26.10½	11 02	3 22	4 20	4 19

SECOND CLASS—JIB AND MAINSAIL OVER 18FT.

Rambler	24.02	10 57¾	3 10	4 13	4 13
Cloud	21.11½	10 57	3 16	4 19	4 17
Just Woke Up	21.11	11 11	Withdrew.		

THIRD CLASS—CATBOATS.

Shadow	20.02½	10 51	2 29	3 38	3 28
Ripple	20.04½	10 51½	3 28	4 37	4 37
Triton	18.10½	10 50	Withdrew.		

FOURTH CLASS—JIB AND MAINSAIL UNDER 18FT.

Eddie	16.05	10 55	3 28½	4 33½	4 33½

DORCHESTER Y. C. FIRST RACE.

The Dorchester Y. C. opened the season on May 30 with a race over the following courses off Dorchester:

Third class—From starting line, leaving Farm Bar buoy No. 3 on starboard, Cow Pasture buoy No. 6 on port, Thompson's Island on starboard, Sound Point beacon on port, around Little Fawn Bar buoy No. 4, leaving it on starboard, Sound Point beacon on starboard, Thompson's Island on port, Cow Pasture Buoy No. 6 on starboard, Farm Bar buoy No. 3 on port, to and across the line between judges' boat and flagboat, 10½ miles. Limit of time 3½ hours.

Fourth and fifth classes—From line between judges' boat and flagboat leaving Farm Bar buoy No. 3 on starboard, Half-tide Rock buoy on port, Old Harbor buoy No. 4 on port, Farm Bar buoy No. 3 on port, Half-tide Rock buoy on port, Old Harbor buoy on port, Farm Bar buoy on starboard, to starting line, 7¼ miles. Limit of time 3 hours.

The race was only open to third, fourth and fifth class yachts, the sizes being over 20ft. 6in. and not over 28ft., over 18ft. and not over 20ft. 6in., and 18ft. and under. All starts were flying, the classes being 5 minutes apart, at 11:15, 11:20 and 11:25 A. M. In third class Banneret was first over, then Thelga, Queen Mab, Saracen, Muriel, Greta, Majel, Kitty and Juniata. Banneret and Queen Mab were soon well ahead and fighting hard for first, the latter gradually gaining and then passing the Banneret, until she took and held first place. Kitty, in fourth place, lost her bobstay. Spinnakers were set for the run home, the leaders keeping their distance. Unfortunate Kitty dropped her spinnaker overboard, and lost some time. The start in fourth class was also very close, Waterwitch being first over, then Scamp, Mabel, Pansy and Elf. Scamp and Mabel took the lead and made a good fight for first, Mabel finally winning, Pansy did not finish. In the fifth class Mirage started first, leading throughout. Nonpareil and Guenn were evenly matched, but neither could overtake the leader. Summary:

THIRD CLASS—KEELS.

	Length.	Actual.	Corrected.
Banneret, J. F. Brown	24.07	2 10 33	1 36 23
Saracen, W. P. Fowle	24.08	2 21 13	1 45 57
Thelga, A. P. Thayer	23.09	2 24 50	1 47 31
Kitty, E. H. Tarbel	23.07½	measurement not allowed.	

THIRD CLASS—CENTERBOARDS.

Queen Mab, Burwell & Litchfield	22 03½	2 07 38	1 30 36
Muriel, A. C. Neil	22.07	2 17 10	1 40 42
Greta, W. S. Hill	23.01	2 17 55	1 41 48
Majel, J. P. & C. E. Loud	20.08½	2 27 30	1 47 14

FOURTH CLASS.

Scamp, F. Gray	18.04½	1 20 00	0 51 20
Mabel, G. R. Howe	20 01	1 18 45	0 51 57
Water Witch, T. W. King	19.05½	1 23 05	0 55 38
Elf, W. T. Barker	19.11	1 25 10	0 58 12

FIFTH CLASS.

Mirage, A. J. & I. M. Clark	17.05½	1 25 50	0 56 05
Guenn, W. L. Dearborn	17.07½	1 27 53	0 58 21
Nonpareil, Edwd. Lanning	17.05½	1 28 16	0 58 31

The prizes were: Banneret, first, $15; second, $10, not yet awarded; Queen Mab, first, $15; second, $10, not yet awarded; Scamp, first, $12; Mabel, second, $6; Mirage, first, $10; Guenn, second, $5. Greta entered a protest against Muriel for shifting ballast, and also for fouling Cow Pasture Buoy, which protest is not yet decided. Kitty and Saracen have to be remeasured. The judges were L. M. Clark, George S. Forbush, Erastus Willard, P. Fowle, H. B. Callender and Chester Guild, Jr.

ATLANTIC Y. C. OPENING RACE.

THE race arranged for Saturday was hardly a success, owing to the weather, but it was at least an improvement on the usual aimless Decoration Day sail. The wind was light from northeast, with rain and mist when the fleet started at 11 A. M., on an ebb tide. The course laid out was around the Scotland Light, for all but the smaller boats, but just before the start it was shortened to 22 miles, around buoy No. 8. The tug E. Luckenback, with the judges, Messrs. R. S. Church and J. F. Van Wyck, and a number of guests, gave the signal to start at 11:10 A. M. The proposed maneuvers were dispensed with owing to lack of wind, and the fleet started across with hardly wind to move them. Agnes was the first over, then Daphne, Fanita, Thistle, Athlon, Grayling, Bertie, Gracie, Rover, Viola, Enterprise, Speranza, Crocodile, Lesbia, Romeyn, Orion, Kaiser and Republic. All dritted down before a light northeast wind, until off the forts, when a southeast breeze met the fleet and carried them on, gradually shifting to the eastward. Daphne and Fanita held the lead, the order at the buoy being, Fanita, Athlon, Daphne, Grayling, Viola, Romeyn, Gracie, Crocodile, Bertie, Thistle, Speranza, Orion, Agnes and Lesbia. Further up the Bay the big ones began to take their places. Gracie and Grayling had a bout for the first place and the former won, leading the fleet home, Grayling being second, and Fanita third. The full times are as follows:

CLASS A—SCHOONERS.

	Start.	Finish.	Actual.	Corrected.
Republic	11 24 00	4 09 34	4 45 34	4 45 34
Grayling	11 15 40	4 05 05	4 49 25	4 43 40
Speranza	11 20 10	4 21 10	5 01 00	.. .. ..

CLASS B—SCHOONERS.

Haze	11 10 00	4 24 35	4 14 35	5 14 35
Agnes	11 10 00	4 25 09	5 15 07	5 11 58

CLASS C—SLOOPS.

Gracie	11 16 20	4 03 00	4 46 40	4 57 10
Athlon	11 14 00	4 07 37	4 53 37	4 53 57
Thistle	11 13 40	4 20 53	5 07 13	.. .. ..
Lesbia	11 29 00	4 34 45	5 05 45	.. .. ..

CLASS D—SLOOPS.

Orion	11 26 10	4 23 45	5 16 35	5 16 35
Bertie	11 16 00	4 22 10	5 06 10	.. .. ..
Daphne	11 10 50	4 12 17	5 01 27	5 03 49
Fanita	11 13 15	4 06 03	4 52 48	.. .. ..
Viola	11 17 35	4 26 35	5 09 00	.. .. ..
Rover	11 17 10	4 38 08	5 20 58	.. .. ..
Enterprise	11 18 20	4 25 50	5 07 30	.. .. ..

CLASS E—SLOOPS.

Crocodile	11 20 00	4 12 23	4 52 23	4 53 43

CLASS F—SLOOPS

Romeyn	11 23 30	4 26 03	5 02 33	5 02 23
Kaiser	11 29 47	4 35 45	5 05 58	.. .. ..

The prizes in each class were a set of gig flags, ensign, club and private signals. Agnes and Athlon being flag officers' yachts, do not retain their prizes, which go to Haze and Gracie.

FALL RIVER Y. C., MAY 30.

A regatta, open to all yachts under 30ft., was sailed on Mount Hope Bay, under the management of the Fall River Y. C., on Saturday last. The yachts were divided into four classes: First class, sloops under 30ft.; prizes, silver pitcher, value $26, and cash, $10. Second class, catboats, 21ft. and over, silver cake basket, value $18, cash $10. Third class, catboats, 17 to 21ft., prizes, marine glass and cash $3. Fourth class, catboats under 17ft., prizes, marine glass and cash $6. The length of the course was 4½ miles, the first three classes sailing 4 rounds and the fourth class 2 rounds, or 18 and 9 miles. The full summary of the race is as follows:

FIRST CLASS.

	Length.	Actual.	Corrected.
Tabena, C. S. Williams, Fall River	22.06	4 12 21	4 11 00
Mystery, W. H. Allen, Bristol	23.01	4 21 53	4 21 53

SECOND CLASS.

Ideal, W. Simmons, Dighton	21.07	3 27 28	3 19 22
Kickamint, C. Barker, Warren	24 09	3 31 51	3 40 41
Annie G. Hindle, G. Hindle, Fall River	22.05	3 47 25	3 41 16
Barbara, Clunny Bros., Fall River	21.09	3 49 30	3 41 51
Minnie, Bence Bros., Fall River	21.06	3 53 52	3 45 34

THIRD CLASS.

Unknown, E. Young, Swansea	17 08	3 54 22	3 49 12
Nellie, E. Haggerty, Fall River	17.08	4 07 04	4 01 44
Hope, J. Norris, Fall River	19 06	4 04 32	3 04 32

FOURTH CLASS.

Bertha, A. S. Marble, Somerset	16.11	1 55 15	1 55 15
Florrie, L. P. Davis, Somerset	16.03	1 56 45	1 55 38
Zara, Gladhills, Providence	16.00	1 59 25	1 59 50
Wide Awake, Simmons, Dighton	14 05	2 09 40	2 05 04

Weasel, R. Calvert, Fall River	16.01	2 11 08	2 09 35
Romp, T. Wood, Fall River	16.07	2 11 06	2 10 38
Charm, W. S. Wood	12.01	2 26 11	2 16 01

SEAWANHAKA C. Y. C. OPENING RACE.

Like their neighbors across the bay, the S. C. Y. C. members decided to have an impromptu race on Decoration Day, regular prizes being offered in each class, and all boats being considered as entered. The course was from Tompkinsville dock around Buoy 10 and return, and the yachts were divided into second class schooners, first second and third class cutters, and third and fourth class sloops. Starting at 11 A. M. the fleet drifted down, Oiva going over first, followed by Albatross, Gaviota, Maggie, Isis, Bedouin, Mist, Clytie, Kelpie and Yolande. Outside a better wind from the southeast was met with, carrying them down to buoy 10 at about the same time as the Atlantic yachts were there. Isis rounded first at 1:23:15, Clytie, 1:23:40; Oriva, 1:25:05; Bedouin, 1:26:08; Gaviota, 1:28:09, Maggie, 1:34:34, no others being timed. The breeze continued and brought the fleet home as follows: Clytie, 4h. 6m. 59s.; Isis, 3h. 53m. 56s.; Oriva; 4h. 23s.; Maggie, 4h. 22m. 33s. The prizes were $25 in each class. The prize for second class cutters cannot be awarded until Isis is measured.

SOUTH BOSTON Y. C. FIRST RACE.

Saturday was the day set for the first of a series of five races to be sailed by the South Boston Y. C. Early in the day there was little wind, but by 11 A. M. a fresh southeast breeze was blowing. A delay occurred at the start, but finally all got off at 11:30 A. M. The classes were four, as follows:

First class—Keel yachts over 24ft. and not over 30ft.; centerboards over 20ft. and not over 30ft.

Second class—Keel yachts, 24ft. and under; centerboards, 20ft. and under.

Special class—All yachts over 30ft.

The courses were:

Special and first classes, keels and centerboards—From judges' boat to the Black Spar Buoy No. 1, west of wharf on Thompson's Island, leaving it on the port, thence to Can Buoy No. 6, lower middle, leaving it on the port, to judges' boat, leaving it on the port; thence Black Spar Buoy No. 1 again, leaving it on the port, to Can Buoy No. 7, off Fort Independence, leaving on the port back to judges' boat, passing between it and the flagboat. Distance, 7¼ miles.

Second classes, keels and centerboards—From judges' boat to Cow Pasture Spar Buoy No. 6, leaving it on the port, thence to Red Spar Buoy No. 2, north end of Thompson's Island, leaving it on the port, to judges' boat, leaving it on the port; thence to Black Spar Buoy No. 1, west of wharf on Thompson's Island, leaving it on the port, to judges' boat, passing between it and flagboat. Distance, 5¾ miles.

The following is a summary of the race:

SPECIAL CLASS.

	Length.	Start.	Finish.	Actual.	Corrected.
Violet, H. J. McKee	34 06	11 32 00	12 41 42	1 09 42	0 53 06
Maggie, H. Huney	32.08	11 35 00	12 47 00	1 12 00	0 54 27
Lizzie Warner, T. Sutted	31.06	11 35 05	12 51 10	1 16 05	0 53 54

FIRST CLASS CENTERBOARDS.

Diana, H. Burgess	24.06	11 45 50	12 43 10	0 57 20	0 37 45
Brunette, W. C. Cherrington	23.11	11 46 40	12 46 50	1 00 10	0 40 12
Vera, M. J Carter	20 08	11 45 00	12 50 00	1 04 00	0 41 32
Nereus, W. L. Nichols	23.06	11 28 03	12 57 17	1 19 15	0 58 14

The judges were Messrs. John C. Merry (chairman), C. McKenna, Thos. Christian, William Morris, T. F. Christian.

KNICKERBOCKER Y. C. OPENING DAY.

The Decoration Day sail of the Knickerbocker Y. C. was a success, both for the racing men and their friends on board the Sirius, which accompanied the yachts, in spite of the disagreeable weather. Thirty-seven boats started, divided into eight classes, cabin sloops 32ft. and over, cabin sloops under 32ft., open jib and mainsails 25ft. and over, ditto 21ft. to 25ft., ditto under 21ft., catboats of 21ft. to 25ft., ditto 17ft. to 21ft., ditto under 17ft. The prizes offered in the various classes were a clock, yacht gun, lamp, compass, side and anchor lights, compass, side and anchor lights and a yacht glass. A prize was also offered for the best time over the course, while another leg of the A. W. Mott prize for the best time over the course was to be won. The course for seven classes was around the Gangway buoy, twenty miles, while the eighth class rounded Fort Schuyler buoy, ten miles. At 10:40 A. M., when the race was started, a good northeast breeze was blowing, making a lively race for all. The full times are as follows:

FIRST CLASS.

	Start.	Finish.	Actual.	Corrected.
Wacondah	11 08 40	3 28 13	4 19 33	4 15 23

Kitty B	11 01 17			
Katie D	10 56 01			

EIGHTH CLASS.

Jean	11 01 24	1 46 00	2 45 36	2 45 36

The Lizzie R. sailed alone in her class, but made the best time, winning the club signal and a second leg for the Mott Cup. Protests against their measurement were entered by the Nettie Thorp and Rosetta A.

WILLIAMSBURGH Y. C. ANNUAL REGATTA.

On Monday last the Williamsburgh Y. C. held their fifteenth annual regatta over a course from Greenpoint to the Stepping Stones and return, with a fresh northwest wind and pleasant weather. Seventeen boats started in the four classes, the first going over at 10:50. The steamer General Sedgwick, carrying the members and guests of the club, followed the yachts up through the Gate. Topsails were carried for some time, and when in the Sound spinnakers were set to port. The times at the mark were:

E. Preston	12 59 10	Minnehaha No. 2	1 12 38
Carrie Van Voorhies	1 01 59	W. R. Goodenough	1 12 52
Sorceress	1 02 40	Narrioch	1 15 04
S. S. Free	1 06 02	Lancer	1 14 54
J. Tregarthen	1 06 35	Lettie	1 15 21
Susie B	1 11 46	Bulldozer	1 15 34
Armenia J. Foster	1 12 35		

The wind was fresh enough on the beat home, and ballast soon went to windward, the sloops clewing up their topsails. The tide by this time was with them and helped by it a quick run home was made. The full times are as follows:

CLASS A—CABIN SLOOPS.

	Start.	Finish.	Elapsed.	Corrected.
Carrie Van Voorhies	11 05 26	3 09 31	4 04 05	.. .. ..

SANDY BAY Y. C.

This new club, whose headquarters are at Rockport, now numbers nearly fifty members and twenty-five yachts, while their club house is well fitted up with a reading room, etc. The officers are: Commodore, L. M. Haskins; Fleet Captain, Howard H. Paul; Secretary and Treasurer, Charles F. Mills; Measurer, L. H. Clarke. Regatta Committee—H. H. Paul, G. T. Margeson, C. E. Cunningham, G. Butman and W. Hale. The first race was sailed on Friday last over a course of eight miles, at the mouth of the Annisquam River. At 11:30 A. M. twelve yachts started, the prize being a silk pennant. The entries and times were:

	Elapsed.	Corrected.		Elapsed.	Corrected.
Black Cloud	1 54 30	1 06 54	Petrel	2 25 40	1 30 32
Hestia	2 18 21	1 21 10	Roldan	2 20 30	1 32 12
Spark	2 29 00	1 30 12			

Jalma, Kittiwake, Ella, Fleetwood, Eliza, Tarquin and Callie did not finish.

LYNN AND WEST LYNN CLUBS.

A race was sailed on Friday at 11 A. M., between the Daisy D., A. Martin, Lynn Y. C., and the Alice, P. Lynch, and Crescent, T. M. Alley, of the West Lynn Y. C., over an eight mile course in Lynn Harbor. The wind was fresh from the east. Only working sails and fixed ballast were allowed. The times were:

	Actual.	Corrected.		Actual.	Corrected.
Alice	1 39	1 04 35	Daisy D	1 43	1 11 34
Crescent	1 42	1 06 43			

NEW HAVEN Y. C., May 30.—This club opened the season by a sail over the new course lately adopted, from Suddington's Rock buoy southeast eight miles to a stakeboat and return. The following yachts took part in the sail: Rajah, Com. James G. Beecher; Ariadne, of Norwich, W. L. Osgood; Rival, W. W. Converse. Wayward; Wild Duck, Alexander Lutz; Portchester, C. B. Warner; Wild Pigeon, Frank Wheeler; Vixen, C. W. Rawson; Endeavor, ex-Com. Billard; Zephyr, Vice-Com. Geo. E. Dudley; Sea Bell, H. A. Seamour, Washington; Starlight, C. M. White; Acme, ex Com. C. W. Scranton; Mascotte, J. Jacobs; Molly Pitcher, Capt. McNeil, and Alice, Capt. Smith. Two of the fleet lost their topmasts.

NEW JERSEY Y. C.—The club sail to Fort Lee on Decoration Day was made much more interesting by a race for a club signal, presented by Commodore Longstreet. The starting signal was given at 10:30 A. M., and Meteor was first away, with Dare Devil, Growler and the remainder of the fleet astern of her. A beat against a light wind from northeast followed, the Dare Devil leading and coming in at 12:15:45 with Meteor at 12:31:55, Growler at 12:30:45, and Gleam 12:44, thus winning the prize. The return race was started at 4:15 and was won by Growler, the time being 1h. 37m. Meteor was close astern and Dare Devil a good third.

GANANOQUE Y. C. REGATTA.—The Gananoque Y. C. held a regatta on May. 25, in which the Minnie C. won first prize, Mabel second and Merlin third.

BROOKLYN Y. C.—The yachts of the Brooklyn Y. C. were out for their opening sail on Saturday, the fleet including the Fern, Vida, Circle, Loretta S., Carrie May, Surprise. Carrie and Ripple.

JERSEY CITY Y. C.—The fleet sailed down to Coney Island Point on Saturday, returning in the afternoon.

CATAMARANS.—THE JESSIE—IRIS MATCHES.

DURING the past winter several matches have been made between the older boats and those then building, the most important ones being a series of five between the well-known Jessie, Mr. Fred Hughes, and the new boat Iris, built by Fearon for Mr. Robert Inman, the stakes being $250 a side. Iris is a keel catamaran, 42ft. 6in. long, while Jessie is but 40ft., and has a centerboard in each hull. The first race was sailed on Monday, June 1, the course being from Bedloe's Island to and around Buoy 8½ and home, a distance of thirty miles, Mr. M. R. Schuyler, S. C. Y. C., was the judge, and Commodore Longstreet, N. J. Y. C., was timekeeper. At 11:20 A. M. the whistle blew and at 11:24:31 Iris, steered by her builder, stood over the line, with Jessie 38sec. later, handled by her owner. The wind was south of west and blowing a wholesail breeze, while the tide was ebbing, and the boats went down very quickly on starboard tack, Iris holding a slight lead until outside the forts, where Jessie crept up. From here to the turn the pair were evenly matched, each leading and falling back from time to time. The time at Buoy 8½ was: Iris, 12:42:35; Jessie, 12:43:02

The judges' tug Lyndhurst was soon far astern as the racers ran for home, the wind now being southerly. Iris held her lead for a time, but finally fell to second place. Both were tossed about on the lumpy water, diving and pitching at a lively gait. As the wind freshened they each rolled in a reef and came along easier, Jessie still gaining, until at the finish she was three minutes ahead. The times were:

	Start.	Turn.	Finish.	Corrected.
Jessie	11 25 12½	12 43 02	1 52 40	2 24 57½
Iris	11 24 34½	12 42 25	1 55 10	2 31 05½

The second race was sailed on Tuesday over the same course in a strong northwest wind. The Jessie was first off under full sail, but Iris reefed both mainsail and jib. The former led easily over the entire course, the weather being too heavy for Iris. The times were:

	Start.	Turn.	Finish.	Corrected.
Jessie	11 32 17	12 30 25	2 35 10	3 00 32
Iris	11 34 16	———	3 07 52	3 32 36

ATLANTIC Y. C. LADIES' DAY, JUNE 2.

THE weather provided for Ladies' Day would have served for the more important races of next week, as there was more wind than the ladies wanted, and enough for a quick race over the outside course, rather than for the short sail in the harbor, which constitutes the main feature of this event each year. The wind was very fresh from northwest, with a clear sunny sky, but a chill in the air that felt little like June. The guests of the club assembled in the afternoon at the club house, where a band was in attendance, and at 4 o'clock some of the ladies ventured on board the yachts, while others remained to witness the race from the club house. The course was from the breakwater to a stakeboat off Tompkinsville, thence to a stakeboat off Oyster Island, and home, 8 miles. No racing canvas was allowed, which did not matter much, as all were content to reef. The fleet started at 4:49, Grayling going over first, leading from start to finish. The fleet, large and small, soon dropped into a procession in her wake. The wind blew pretty heavily at times during the afternoon, but not enough to spoil the enjoyment of the ladies who formed part of the crew. The entries and times were as follows:

	Start.	Finish.	Actual.	Corrected.
CLASS A.				
Grayling	4 49 40	5 35 00	0 45 20	
Clytie	4 49 45	5 46 05	0 56 20	0 54 45
CLASS B.				
Agnes	4 52 00	5 47 45	0 55 45	0 53 59
Haze	4 52 00	5 52 54	1 00 54	1 00 54
CLASS C.				
Athlon	4 51 10	5 42 50	0 51 40	0 51 40
Thistle	4 49 47	5 45 55	0 56 08	0 58 00
Lesbia	4 51 45			
CLASS D.				
Enterprise	4 53 10	5 45 48	0 52 38	0 52 35½
Daphne	4 51 35	5 44 38	0 53 03	0 53 03
Viola	4 56 55	6 04 05	1 07 10	1 06 54
Stella	4 53 25	6 01 08	1 07 43	1 06 52
Rover	4 54 00	6 01 05	1 07 05	1 06 48½
CLASS E.				
Crocodile	4 53 20	5 50 07	0 56 47	0 56 47
Phantom	4 54 17	5 54 20	1 00 03	0 59 45½
Wilful	4 54 05			
CLASS F.				
Romeyn	4 53 25	6 01 40	1 08 15	1 08 15
Tourist	4 57 00	6 07 30	1 10 30	1 09 32

Grayling, Agnes, Athlon, Enterprise, Crocodile and Romeyn win in their respective classes, and prizes were given to each of the ladies in their crews. After the race an entertainment was given at the club house in the evening.

THE RACING SEASON ABROAD.

THE Channel matches, from Harwich to Southend, were sailed on Saturday, and were notable from the first appearance of Galatea as a racer. The course was forty miles free with a southwest wind, with a reach of six miles and four miles of windward work, making fifty miles. The starters were Galatea, Irex, Wendur, Lorna, Anemone, Clara, Marguerite, Tara, Marjorie and Fairlie. Galatea lost some time on the start, Wendur and Irex being first off, but down wind the new one picked up, and when half way over the course she led Irex and was second. On the wind her new sails did poorly, but she finished first, Irex beating her on allowed time.

The following telegram to the New York *Herald* gives an account of Galatea's second race, in which she appeared to less advantage. It is too soon yet to form an accurate judgment of her merits, as a few alterations may remedy the defects attributed to her below:

Harwich Harbor, June 2, 1885.—The greatest interest in yachting circles centered yesterday upon the second match of the Galatea, consequent upon the knowledge that she will probably contest for the America's Cup. The race to-day was looked upon as a better test for the Galatea than Saturday's race, being over forty miles on a triangular course. At the first the Galatea started off before the wind at a great speed, her most dangerous rival, the Irex, being sagely blanketed by the Marguerite and the Lorna successively. For some time things looked like a runaway race for the Galatea, till the large yawl Wendur settled down into form and managed to get on terms with the leader in a most exciting chase. Meanwhile the Irex, freeing herself from the Marguerite and Lorna, steered a judicious course to southward, and before reaching the first lightship found herself on level terms with the two larger boats.

From this point a most exciting race ensued. The breeze, which had hitherto held fairly, fell perceptibly, and the sun coming out strongly, it died away almost entirely. Spinnaker sails and larger topsails were tried by the Galatea without effect, till the freshening breeze was seen to be bringing up the Irex into an enviable position, she being able for the first time to study the Galatea's bows. From this moment the Galatea seemed to lose all life. With clouds of canvas spread she appeared to be utterly unable to overhaul the more sprightly Irex, and from this moment, about half the journey over, she kept losing way. Presently the breeze freshened more, and a broad reach was made, which resulted in favor of the Wendur, which in her turn passed the Galatea, whose mainsheet here got over her counter, which added to her discomfiture. At the lightship the Wendur came in abreast of the Irex; but the latter boat, by skilful handling, managed to come in first. She did not receive first prize, however, as this was allowed to the 40-tonner Tara on her time allowance. The Wendur passed the committee boat second, and the Galatea came in two minutes after the Irex, to which she is supposed to be able to give a minute and a quarter.

The result revealed several serious defects in the Galatea, which is undoubtedly oversparred. That extent of spar and sail which her advocates have been so proud of proved a source of detriment all through the day. It was evident that her spars were so large as to preclude neat handling. Over and over again the Irex sailed away from the Galatea, merely owing to neat and rapid handling, while the Galatea at critical moments appeared to be helpless—at one time with the top mast stay block gone, at another with mainsheet over her counter. Her crew did not appear to work in unison, and showed none of that calibre vigilance and vim which is a chief forward of success. The Galatea appears to be unable to reach or to go before the wind, and yesterday she was shown to be unable to go fast to windward as she has too much weight to carry. After to-day's show no doubt a considerable amount of her lead will be removed. One of the most successful captains of the fleet said to your correspondent: "If she don't alter from that she has no right to represent us in America." An old skipper added, "Well, with those timbers I would not be an A. B. on board the Galatea for double wages."

GENESTA AND GALATEA.

BY THE following from *Land and Water* of May 23, it will be seen that the cabled report of Genesta's departure was incorrect, and that she had not, up to that date, sailed for America, so we need not expect her or Galatea for some time yet. Beyond the particulars given below, the English papers contain no news of the racers:

"Racing vessels pure and simple—or what, according to the classification newly adopted by the Yacht Racing Association, will be known as Class A—may not make up an imposing squadron; but some stirring sport will, in all probability come out of the contests the heavy-weight division engage in, and although the Genesta's red and black banner may not be sported in the home waters, and the Galatea's cut in be of but little longer duration than a butterfly day, it is well to know that the first class fleet will be up to the average in point of numbers. Not the least interesting feature of the season's racing will be the Wendur's presence at all the leading regattas round the coast, and we hear that the steel yawl left the Clyde yesterday for the Thames, so that she may jog along easy, and yet have plenty of time for a trial stretch or two on the river before setting out on the New Thames match from Southend to Harwich. In the light weather —of which there was an almost unbroken sequence—on the Clyde last season the Wendur ghosted along in a really startling way, and she was then certainly handicapped, her mainsail being quite played out, in fact 'twas like a hammock directly there came a capful of wind. Mackie has put on the considering cap this winter about his charge, and Wendur may show herself a much improved vessel. Her mast and bowsprit have been lightened, but not cut, and a longer topmast will be pointed. The loose ballast inside has been made to stow close, but she will be sailed on the same loadline. She has new gear and sails fore and aft, and it will not be for want of a racing fit out that she will miss prize winning. Wendur is painted black this year to the waterline and white below the loadline, and her flyaway look will doubtlessly fetch Thames yachting critics not a little. She will be top weight of the fleet, sailing at 100 tons reduced tonnage for yawl rig, but the new time scale, based on the 6th root of the Yacht Racing Association tounage, will abate the allowances she will have to concede the cutters and Lorna. By way of comparison it may be said that last year, over a fifty-mile course, Wendur had to give Irex 4min. 2sec., Genesta 5min. 33sec., Marjorie 9min. 35sec., Marguerite 12min. 41sec., and Tara 22min. 43sec.; while under the new table she will allow Galatea 2min. 16sec., Irex 3min. 31sec., Genesta 4min. 53sec., Marjorie 8min. 35sec., Lorna 8min. 35sec., Marguerite 11min. 25sec., and Tara 21min. 10sec. The Irex was hurried in her outfit last year, and was far from having the racing finish O'Niell would like to have given her. She was out of trim and unhandy at Liverpool, but was better after being docked at Greenock, and having nearly four tons cut off the lead keel. Still she was far from right in the early Clyde matches, but after being trimmed more by the stern she reached like a mad horse round the Royal Northern course, and then sailed well up to Plymouth regattas. She then set up entirely, but stepped off once in a match inside the Wight; still, it may be said that from first to last she failed to realize expectations. Her copper was stripped off after she was hauled up in the fall, and the hull has been smoothed and new cold rolled put on, so that the friction surface will this season be glass-smooth, and with new sails Irex reappears in far and away better racing fettle than she was at any time last year. She showed wonderful bursts of speed when going free, but never did anything startling when by the wind, and O'Niell is not likely to sweep the coast with her as he did with Annasona and Samoena. Thus Genesta may be given a racing stretch in the Clyde opening handicap matches before taking her departure for New York, and a pretty shrewd guess can then be made whether the alterations effected since lying up are satisfactory or no. She has had nearly ten tons more lead fixed on her already ponderous keel, and the hull has been smoothed and recoppered. The sail plan has been altered consequent on the mast being lengthened 3ft., and the bowsprit being put further outboard, but the boom, gaff and topmast are the same The alterations seem to have been thoroughly well thought out, and Genesta should be an improved vessel. She will leave the Clyde for Boston early in June, and cross the western ocean under jurymast and winter bowsprit, carrying a large trysail. Her racing spars will be sent over in one of the liners, and as she is a fine high-sided vessel and good sea boat she should go across comfortably enough. John Carter, who was skipper last year, will mate her in the international matches, and he has the same smart crew with him. Every effort will be made to get the Galatea round from the Clyde in time to take part in the "Down Swin" match from Southend to Harwich on the last working day of this month, and there is but little doubt at present that the new steel clipper will sail her maiden race on that occasion. There is not much risk in prophesying that the Galatea will prove the fastest cutter ever built. Genesta is exceptionally close-winded, but does not reach so well after the rate; Galatea, however, has a longer forebody and is finer under water, and should go like flying with checked sheets. She is a bold sided, noble-looking craft, and is not rounded up in the counter so quickly as Genesta, and this alteration in the model gives the new ship a very powerful appearance. Lemon Cranfield, who has been pining for a cutter, is likely to have a craft under his feet that will be able to make the whole fleet hull, and he will have the pick of the Miranda's crew with him. The Galatea will be sailed across the Atlantic, according to report, some time in July, and it is anticipated will have a busy season on the other side."

NEW BRITISH YACHTS.

UNLESS war is declared between England and Russia, the yachting season in England promises to be a lively one, as although few new racers are building, and two at least of the fleet will race in American waters, the new classification will bring many of the cruisers and ex-racers to the line. Miranda will not fit out this season, Genesta and Galatea will be away on business, Erycina and Samcena have joined the yawls, as Silver Star did last season, and both of them will race in the new class B as "ex-racers," and no new ones will take their places. Besides Galatea, who will do little racing in British waters, two new yawls will be added to the fleet. Ventura, 96 tons, from designs by Beavor Webb, for Mr. R. Heard, and Constance, 119 tons, designed by Dixon Kemp, for Mr. C. Prescott Westcar. The latter is 98ft. 2in. over all, 87ft. stem to sternpost, 83ft. waterline, 18ft. beam, 12ft. draft; displacement, 138 tons; area of lower sail, 4,220 sq. ft.; lead keel, 25 tons; inside ballast of iron. Forward of the saloon is a large stateroom and toilet room, and abaft of the saloon is the ladies' cabin and four staterooms. On one side of the saloon, the walls of which are finished in cretonne, is a sofa and a cabinet, and on the other a sideboard and set ee. The deck fittings will be of teak, and the companions and cabin of oak. Messrs. Payne & Sons, Southampton, are the builders. At Fairlie, the elder Fife is building a 60 tonner, with more beam and less keel, having but 11 tons outside her greenheart keelson. She is 72ft. 7in. on deck, stem to sternpost, and 14ft. 7in. beam, very strongly built, with steel angle floors, oak frame, teak planking above and elm below. Her deck is laid with very narrow plank without butts, with teak fittings.

At Bray's, Southampton, beside Mr. Warren's Stranger, a fine 40-tonner 70ft. O.L. long, is building for Mr. Geo. Moir, from Mr. A. Richardson's designs. She is 63ft. on loadline, 12ft. 4in. beam, and 11ft. draft. The keel is of iron, 15 tons, the frames of angle steel, and the planking of elm and teak. Below she has a saloon 11ft. long, a ladies' cabin 7ft. 6in. long, with toilet rooms aft, owners and guests' staterooms, pantry, galley and forecastle for her crew of five. She is only intended for cruising. A fine type of cruiser is also building by Payne & Son., from designs by Mr. G. L. Watson. A yawl of 35 tons, 60ft. waterline, 11ft. beam, 9ft. draft, and some 25 tons of lead outside. Below she will have fine accommodations for owner and friends. A cruising yawl of the same tonnage is building at Shoreham, by Stow & Son. She is 58ft. on deck to sternpost, 12ft. 9in. beam, and 8ft. 6in. draft, with seven tons of lead only on keel. The headroom below is 6ft., saloon 7ft. long, owner's room, cabin with beds, and ladies' cabin. Her owner is Mr. Isaac Watt, who has named her the Asperia. Another cruising yawl built at the same yard this winter is the Vesper, 22 tons; 40ft. 6in. stem to sternpost on deck, 12ft. beam, 5ft. 6in. draft, with 6ft. 3in. headroom. Below she has a saloon 9ft. long, five berths, two toilet rooms, sailroom, pantries, galley and forecastle.

Still another cruising yawl, the Harebell, is building at Dartmouth for Capt. Percy Hewitt. She is 62ft. 6in long, 15ft. 4in. beam, and 10ft. 6in. draft. One of the smaller craft, a five of new model by her owner, is building here by Simpson & Dennison, her spars being made by Luke, of Itchen Ferry. She is of composite build, with 7 tons under her. Another addition to the same class is building on the Clyde, at the yard of the Allan Line her owners being Messrs. Allen. She was designed by Mr. G. L. Watson, and exceeds in proportion his previous boats, being 43ft. long over all, with 5ft. 7in. beam. Her keel is of English elm, lead keel of 7 tons below, and frames of oak, sawn and steamed alternately. The deck is of yellow pine, with mahogany fittings, and the scuttle is fitted with brass screws like a decklight to secure it tightly. A small cockpit gives an easy entrance to a companion, while below there is good headroom. Inside the planking and frames are not ceiled over but merely varnished. The rig of the Doris will present several novelties, the mast will be very short, with a long boom and low wide sail, while the forestay is double, the working and balloon foresails each being hanked to its own stay. Another flyer which Mr. Watson has added to the small classes is the Queen Mab, lately launched by Camper & Nicholson for Mr. Thomas West. With a beam of 7ft. 3in., she has an over all length of 55ft., with a le d keel of 12 tons, quite an advance since the days of Madge.

Mr. Paton also contributes a successor to Olga by the same builders and for the former owner of the famous, but unlucky five. She will be 33ft. 4in. long and 5ft. 8in. beam, with more displacement than Olga. In the length classes Mr. C. P. Clayton has designed a 30-footer, the Cursey, for Major Foster, and a 25-footer, the Siren, for Captain Davenport, both building by Payne & Son, while White, of Gosport, and Luke each have a 30-footer on the stocks. Mr. Dixon Kemp has also designed a catboat, the Bangle, for Mr. C. Prescott Westcar, which Stockham & Pickett have built. She is 25ft. on waterline, 11ft 4in. beam, and 8ft. draft with centerboard, displacing with crew 3 6 tons. The smallest of the new ones is a one-tonner building by Mr. G. Watson, of Plymouth. She is 18ft. 6in. on waterline, 24ft. 6in. over all, 3ft. 6in. beam, and 5ft. draft. The keel is of iron, the stem and sternposts being mortised into it and strongly bolted. The frames are of oak, alternately steamed and sawn, with galvanized angle floors, lead being cast on top of the iron, until the entire weight of the keel is 2 tons. The boat will be decked, with a well for two persons, and will have one large balance lugsail and will be named Elfie.

TEST OF A SHARPIE.

Editor Forest and Stream:

The statement having been often made that a yacht of narrow beam, light displacement and little draft of water cannot be noncapsizable, it gives me pleasure to state, and may interest some of your readers to learn that within the past week a 60ft. Nonpareil sharpie has been practically put to the test and proven to be absolutely non-capsizable.

The boat referred to is just finished and belongs to a member of the Atlantic Y. C. She has a full schooner rig, with masts respectively 49ft. and 47ft. in length by 9½in. diameter, and topmasts 19ft. extreme length. The dimensions of the yacht are as follows: Length 59½ft.; beam at waterline, 10ft.; beam on deck, 13½ft; depth of hull amidships, 5½ft.; draft of water of hull, 2½ft.; extreme draft, including keel, 4½ft.; least freeboard. 3ft.; total weight of ballast 4½ tons. Her sails being bent and all spars in position, the mode of trying the experiment was as follows: She was moored opposite and broadside to a wharf. Tackles were run off from her mastheads to the wharf, and with the assistance of seven men she was hove down on her beam ends until her cabin windows were under water, and her keel was its entire length partly out of water. When in this position she was practically as stiff as when planksheer to, and in fact, when lying down with masts nearly parallel to the water's surface, the united strength of seven men, aided by two tackles, and an additional watch tackle, was required to hold her down. This yacht has a centerboard as well as keel and is unsinkable also.

MAY 27, 1885. THOMAS CLAPHAM.

NEW ENGLAND YACHT RACING ASSOCIATION.—At a meeting last week the N. E. Y. R. A. resolved to adopt stringent measures to prevent shifting ballast in any of their races. The following amendment was proposed, and will come up for approval on June 10: "Any yacht may request the judges of the race to place a man on another yacht, and on such yacht requested refusing it shall be forever debarred from entering any future race. In case two or more requests should be made it is left to the discretion of the judges as to appointing one or more men to represent two or more yachts on the same yacht." An amendment to the by-laws was also passed, by which all yachts whose clubs are not members of the Association will be debarred from entering any races given by its members. The Association have in view a large regatta, open to any yacht whose club belongs to it, the expenses to be defrayed by the Association. It is not at all creditable that such a rule as the above is necessary, but unfortunately it is, and if followed out it will prevent the practice of shifting ballast in fixed ballast races, than which nothing is more dishonorable in a yachtsman. The N. E. Y. R. A. is doing a good work for Eastern yachting and deserves the support of all clubs and yacht owners in its efforts.

OLSEN'S AMERICAN YACHT LIST.—The edition for 1885 is ready this week, and will be welcomed by yachtsmen, to whom "Olsen's" has become as indispensable as compass or glasses. The present list numbers 1,797 yachts compared with 1,531 last year, while the number of the clubs has increased from 57 to 69. Among the new additions we find the two new sloops Pur tan and Priscilla, the latter being laid down the same as Sybil. The usual matter, deed of gift of the America's Cup, list of international signals, tide tables, etc., are found, with signals of all the leading yachts and other interesting matter. The present edition of "Olsen's" is no less valuable as a reference than as an index of the growth of American yachting, which is shown more plainly each year in its pages.

THE SCHOONER CAMBRIA.—It is nearly fifteen years since Cambria made her first appearance in New York waters, a few hours ahead of the Dauntless, after a race across the Atlantic, after which, in the same season, she sailed a number of races here, among them the first ones sailed for the remaking of the America's Cup. Last week she anchored again off Staten Island, having run in from Bermuda, and curiously enough, a couple of days before, her old owner, Mr. Jas. Ashbury, arrived in New York from San Francisco. Cambria is now owned by Mr. Paul A. Ralli. From New York she will proceed to Halifax. On Tuesday she left for Newport.

WINTHROP OPEN RACES.—The entries for these races on June 13 promise to be large, as 29 boats have already entered. The measurement will be waterline plus 1-5 overhang, and the start will be made from one gun at 11 A. M. Entries must be made to Mr. Chas. C. Hutchinson, 126 Commercial street, before 12 M. of June 12. The fees are $3 for the larger class, 18 to 25, and $2 in the smaller class, under 18ft.

LARCHMONT Y. C.—The spring pennant regatta will be sailed on Saturday, June 6, at 10:45 A. M., off Larchmont, all yachts in the club being considered as entered. The winner in each class will be awarded a pennant to be held for the rest of the season unless challenged for; the pennant being awarded if only one boat in a class starts. Commodore Munroe also offers a special prize of $50 to the winner in each class in which there are four starters.

TRIPLE EXPANSION ENGINES.—A new steamer, Salamander, lately launched in England, has been fitted with cylinders, 7¾, 15 18-1 and 22⅞ins. × 15in. stroke, the working pressure being 500 pounds. They are on the Perkins system. The yacht is 130ft. 6in. over all, 20ft. moulded beam, 10ft. 6in. hold. She will be rigged as a topsail schooner.

A CRUISING COMPANION WANTED.—A yachtsmen, contemplating a cruise in a small yacht from Lake Superior to Montreal, would like to meet with a companion. Letters may be addressed to H. K. W., care of the FOREST AND STREAM.

MAGGIE.—This well-known cutter, formerly owned by Mr. Geo. H. Warren, of Boston, made her debut in New York waters last week in the opening race of the Seawanhaka C. Y. C. She is now owned by Mr. W. A. W. Stewart of that club.

AMY.—After a voyage of six months to China, Japan and India, Mr. Morgan's steam yacht Amy reached Southampton on May 22, having steamed 25,000 miles. She will leave for Newport as soon as some repairs are made.

BOSTON CITY REGATTA.—A regatta will be held at Boston on July 4, the prizes being offered by the city. The judges will be M. J. Kiley, C. F. Loring, Wm. Morris, F. W. Pray, J. A. McLaughlin and Chester Guild, Jr.

LARCHMONT Y. C.—A meeting will be held at the club house, June 6. Eight new applicants for membership will be balloted for.

STRANGER.—Mr. Warren's cutter was stripped last week of her racing gear, including mast, and will come out under small rig.

ECLIPSE Y. C. REGATTA.—The race of May 31 was abandoned for lack of wind. It will be resailed on June 7, at 11 A. M.

OSWEGO Y. C.—In the annual cruise of the Oswego Y. C., on May 30, the sloop Ethel won the prize pennant for first boat in.

QUAKER CITY Y. C.—The annual spring regatta will be sailed on June 8, on the Delaware River.

Black Bass Four-Multiplying Reel.

Designed and made expressly for the "Standard Henshall" Black Bass Rod, which has the reel above the hand. This Reel has our new Lever Drag (patent applied for), as shown in the engraving, by which the line can be stopped when casting at any point in an instant, simply by the pressure of the thumb. And also when the fish is hooked the tension can be regulated by the thumb from a free running to a light drag, or a heavy drag to a complete stop. This Reel also has an Adjustable Drag and Adjustable Click. It is made of the very best of German Silver, has steel gears and steel pivots throughout; is handsome, substantial and well made in every way. This Reel is warranted just as represented, and if not satisfactory can be returned and money will be refunded. Price 15.00.

OUR HEXAGONAL SPLIT BAMBOO

"Standard Henshall" Black Bass Rod,

Which has the endorsement of Dr. Henshall, and from the large number of orders received this season, proves it to be the black bass anglers' favorite. Length 8ft. 3 3-10in.; weight 8oz.

HINDS'
BLACK-FLY
CREAM,

For Repelling

Flies, Mosquitoes, Midges and other Insects, and protecting the Skin from Sunburn, Irritation and Infection.

No Tar. No Stain.

GLENS FALLS, N. Y., June 15, 1884.

Mr. A. S. Hinds, Portland, Me.:

DEAR SIR—I have not sooner acknowledged the receipt of box of "Black-Fly Cream," as I desired to first test it; this I have now done on two fishing trips where I found the Mosquitoes, Black Flies, Punkies and Moose or Deer Flies in great abundance. Although all these pests swarmed about me, I found the *Cream a perfect preventive* against their bites when it was applied to face, hands, ears and neck. For many years I have sought after *the* insect repellent, and have tried all manner of compounds, but yours is the most thorough, at the same time cleanly and not disagreeable.

Yours truly, A. NELSON CHENEY.

Price, 25 Cents, Postpaid.

"FOREST AND STREAM SERIES."

DEER HUNTING.

BY JUDGE JOHN DEAN CATON.

BY and by it will be time to hunt antelope and deer. It is always time to read about them. Judge Caton's book on the antelope, elk, deer, moose and caribou of America discusses in a readable way the life history of these animals and the methods of their capture. It is the work of an enthusiastic sportsman who has nad a wide experience and has devoted the leisure of years to studying these interesting game animals. The volume is very fully illustrated, and is a perfect storehouse of information and entertainment. The first edition was sold by the Boston publishers at $4. Price $2.50.

WOODCRAFT.

BY "NESSMUK."

A COMPACT pocket handbook of condensed, boiled-down, concise, clear, comprehensive, sensible, practical camp gumption. "Nessmuk" has been "in the woods" in Michigan, New York, Pennsylvania, and South America, and this is a book for outers, wherever they kindle their camp-fire. The author believes in "smoothing it." He has learned how; now he tells others. It is much easier to learn from "Nessmuk" than from Dame Experience. We should not be surprised if "Woodcraft" completely revolutionized the methods of camping out. If you are going to the woods, read "Woodcraft" before you go. It may add to your trip a hundred fold. Price $1.00.

DOG TRAINING.

BY S. T. HAMMOND.

HE was a promising puppy, and when you turned him over to the breaker to be educated, you thought he was bound to make "the best dog in the world." And you'll not soon forget how disappointed and disgusted you were when the dog, the breaker and the big bill—all three turned up together, and you saw that the animal's spirit was broken and it would take a steam calliope to make him mind. Now, this could not have happened if you had been wise enough to buy a copy of Hammond's book, and in your odd leisure moments *train* the dog yourself, instead of having him *broken* by some one else. We are selling edition after edition of this book, and it is revolutionizing the system of preparing dogs for work in the field. Price $1.00.

SHORE BIRDS.

A PAMPHLET for those who "gun" along the shore. Tells of: I. Haunts and Habits—Where the bay birds live and what they do at home. II. Range and Migration—Where they go to breed and where to spend the winter. III. A Morning Without the Birds—An episode of shore shooting. IV. Nomenclature—A list of our American species of *Limicolæ*, with a description of each specie-. V. Localities—Where to go to shoot them. VI. Blinds and Decoys—How to shoot them after you have reached the grounds. 45 pp., paper. Price 15 cents.

ANGLING TALKS.

BY GEORGE DAWSON.

AS a political writer of conceded power, Mr. Dawson wielded a trenchant pen; when he turned from the conflict of parties to the praise of the favorite pastime of "simple wise men," his essays, limpid as the crystal streams, are aglow with the soft summer sunlight and melodious with the songs of birds. When angling was the theme, he wrote from a full heart and in closest sympathy with the scenes and pursuits described. These "Talks" are brimful of manly, wholesome sentiment; there is in them all not a particle of cant. Their sincerity and overflowing spirit at once win the reader, and he perforce shares the author's enthusiasm. The effect is magical, like that of the mimic players in Xenophon's *Memorabilia:* he who reads, if he be an angler, must go a-fishing; and if he be not, straightway then must he become one.—*Extract from Publishers' Preface.* Cloth, price 50 cents.

CANOE "AURORA."

BY DR. C. A. NEIDÉ.

A CHARMINGLY written and always entertaining account of a canoe cruise from Lake George, New York, down the Ohio and Mississippi Rivers to the Gulf of Mexico, by the Secretary of the American Canoe Association. To read the cruise of the "Aurora" is the next best thing to having made it; and the reading is decidedly more pleasant than would have been participation in some of the misadventures related. 216 pp., cloth. Price $1.00.

HUNTING!

This boot will give better satisfaction for all-round work than any covering yet invented for the feet. Double uppers, water-tight tongue at instep, snug adjustment at top, giving symmetrical application to conformation of foot, ankle and calf, and contributing thorough comfort, protection and warmth. Will not chafe the heel or ankle. The seams are rubber cemented before being stitched; the tongue is thoroughly waterproofed; bottoms put on with welt and hand sewed; no screw-nails used as in the cheap imitations. Thorough work and fit guaranteed.

CANOE HANDLING.

By C. B. VAUX ("DOT").

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners; and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

Hornbeam Rods

A SPECIALTY.

W. HUNTINGTON,

WILTON, CONN.,

Makes a specialty of the manufacture of FINE HAND-MADE RODS of Hornbeam for fly fishing. Every fly-fisher should have one of these rods, for whatever preference he may have these are the only thoroughly reliable rods, secure against breakage and capable of real hard usage. With one of these rods a sportsman may venture into the woods for a season and take no other rod, and be fairly sure of returning with it in a serviceable condition. As made from wood of my own cutting and seasoning, they are powerful, easy in action and full of endurance. For circular send to WALLACE HUNTINGTON as above.

3-Piece Fly Rod, Brass Click Reel,

100ft. Linen Trout Line, 6 Flies, 6 Hooks to gut and Leader, complete, by express, $4.50; by mail, postpaid, $5.00. 3 Sample Flies, by mail, 25 cts. GLOBE FLIGHTS

PERFECT TARGET.

The Globe Flight consists of a pasteboard disk, 5¼ inches in diameter, the center cut out to admit a rubber ballon 2¼ inches in diameter, when inflated; 100 can be carried in a coat. There is no rubbish. They may be thrown from any C. P. Trap or by hand. They present a perfect mark, as the balloon is red in color and quickly attracts the eye. A single pellet of shot will puncture the balloon and it collapses instantly. Its use will obviate all causes for dispute. They are all perfect, and fly from the trap perfectly. They will not break unless hit. Every Flight guaranteed perfect, and full count. Packed in small packages, 500 each. For sale by all dealers in sporting goods. Price $20 per thousand. We will pay $2.50 per 1,000 cash for the Pasteboard and Tape in perfect condition at either of our offices.

Samples sent free. Send 4 cents for postage.

For Sale.

SALMON FISHING

IN CANADA.

Fly-Fishing for Salmon, Grilse and Sea Trout to let in rivers discharging into the Gulf of St. Lawrence, during 1885 season, from about 10th June to 1st September. Rents from $50 to $1,000 per river.

The undersigned will receive offers for the Fly-Fishing in the following rivers, situated in the Seigniory of Mingan, on the north shore of the St. Lawrence, from the mouths of said rivers to a distance of six miles inland in a direct line.

	Rents.
Manitou	o—Great falls near the sea; untried.
Sheldrake	$100—Good pools, with salmon; untried.
Thunder River	o—Good pools, with salmon; untried.
Magpie	$125—Good pool; falls near the sea.
St. John	Reserved—Large river; good pools.
Mingan & Manitou	$750—Large rivers; good pools; plenty salmon. Rented.
Romaine	$1,000—Large river; splendid pools; large salmon.
Corneil	$125—Small river; good pools; plenty salmon.
Pashasheeboo	o—Small river; untried.
Nabisippi	$100—Good pools; plenty salmon; untried.
Aguanus	$150—Fine river; good pools; plenty salmon; untried.
Natashquan	$1,000—Large river; splendid pools; plenty salmon. Rented.
Kegashka	$100—Fair sized river; plenty salmon; untried.
Musquarro	o—Great fall near the sea.
Little Musquarro	o—Small river; plenty salmon
Washeecostai	$250—Fine river; fine pools; plenty salmon.
Olomansheebo, Coacoacho, Etamamu, Netagamu, Mecattina, Ha! Ha! St. Augustine, Esquimaux, Blanc Sablon,	Each $50. These rivers so far as known have never been tried with fly-fishing, and only partially explored, but are reported by the Hudson Bay Company's officers to be fine rivers, with good pools, abounding with salmon and sea trout.

The first twelve rivers on the above list can be reached by a coasting steamer from Quebec, or by a mail carrying schooner leaving Gaspé the 1st and 15th of every month; the others are accessible only by a yacht or hired coasting schooner, obtainable at Quebec at $6 per day, including crew, who find themselves in provisions.

Stud Fee, $25.00.

STUD FOX-TERRIER
Champion Raby Tyrant,
(K.C.S.B. 11,179.)

Pupped October, 1880. Weight 16½ pounds.

Raby Tyrant is a white dog, with an even marked rich black and tan head. He is a thoroughly game and stylish terrier, possessing a beautifully shaped long punishing head, with perfect drop ears, small eye, rare neck and shoulders, deep chest, well ribbed and muscular quarters, short, straight legs, excellent feet, great bone and substance, with an exceptionally hard and dense coat.

Raby Tyrant is without doubt one of the most successful terriers of the present day. He has been exhibited 67 times, 33 different judges having adjudicated upon him, and has won 47. First 10 cups and specials; 12 second and 2 third prizes. His breeding is undeniable, combining as he does the choicest and most valuable blood that can be obtained. At the stud Raby Tyrant is proving himself eminently successful.

Fee, $15.00.

JOHN E. THAYER, Hillside Kennels, Lancaster, Mass.

ENGLISH CHAMPION
BULLDOG
GLADSTONEKOFF.

ANSWERS TO CORRESPONDENTS.

SPENDING THE PRINCIPAL.

THIS spring, as every other, the coast has re-echoed to the reports of the guns which kill the fowl and the shore birds which are passing north on their way to their breeding grounds. Dissection of the birds taken at this season of the year shows that they contain eggs in an advanced stage of development. It is a well-ascertained fact that many species are paired before they leave us. For every bird that has been killed the sportsman is deprived of at least three, and more often six, which would return in the autumn. The supply of game is thus enormously diminished. It is generally conceded by intelligent men that it is desirable to protect our grouse and quail in the spring in order that the supply of breeding birds may not be destroyed, and the only reason advanced for leaving fowl and shore birds without protection is that they do not breed within the United States. If this were true it would be no good reason. What difference does it make to the sportsman, who finds plenty of birds, whether these were hatched in Maine or in New Brunswick? Protective laws are enacted to increase the supply of game, and there is no reason why the accident of a bird's nesting to the north or south of a political boundary should be taken into consideration in framing such laws. But as a matter of fact, a large proportion of those species, which are now without protection, do nest in the United States, and were it not for the continual shooting during the spring, a far larger number would do so. Time was, and not so very long ago either, when great numbers of fowl and shore birds reared their young along the Atlantic coast. Nowadays, however, the spring shooter and the hat-bird collector has put an end to that. They scour the sand beaches, the islands and the marshes, and if by chance a pair of birds look about for a spot in which to build a nest, one or both of them are soon shot.

There is no good reason why all birds except the few that are considered really injurious should be killed after the first of February. There should be in the mind of every one who uses the gun a dozen good reasons why they should be jealously preserved. We have not been weary in urging upon the public the necessity of the absolute prohibition of spring shooting. The subject is one which becomes annually more and more important in view of the rapid diminution of all our birds. To continue our present reckless course of slaying many species of birds whenever and wherever they can be found can have but one result—that of practically exterminating them. It should be the effort of each one who shoots to do what he can to preserve the supply of breeding birds. They may be called the capital on which the sportsmen must depend. The increase is the income of this capital, and we ought to limit ourselves to this, and not by short-sighted greediness make away with principal as well as interest.

WHO ARE THE SKINNERS?

WHO are the lumbermen whose operations are consuming the forests of the St. Regis region of New York? Are they natives of the North Woods, cherishing in their breasts the affection for the old mountains—a sentiment always possessed by those who were born within sight of the blue Adirondack peaks? Are they residents of the county, ever mindful of home interests? Are they residents even of the State, and as such possessed of the instincts of true citizenship?

They are neither natives nor residents. They have no sentiment which might prevail to stay the axe and the steam-saw. They belong outside of the St. Regis, outside of the county, outside of the State. They have regard for nothing but the almighty dollar. The lumbermen who are despoiling this part of the Adirondacks are capitalists who have come there from a like work in Michigan. Of the three companies—Hurd, Hoskiss & Whipple; McFarlin & Ross, and Torrence & Ducy—late lumbermen in Michigan, now lumbermen in the St. Regis region, the heads reside in Bridgeport, Conn. When these concerns first appeared in the St. Regis country the people there were so innocent as to believe that in some way the proposed conversion of the trees into timber and lumber, of saplings into hoe-handles, and of branches and sprouts into firewood—that all this was to be of benefit to them. Now, with their woods disappearing, the streams drying up, and a wilderness desolation covering the face of the country, they are finding out their mistake.

Who are the forest skinners? They are capitalists who are taking away for a mess of pottage the birthright of the people. Who is responsible for the people's loss? First, the people themselves; and second, the men sent by the people to Albany to take care of the people's interest. Where and when will the work of destruction stop? Probably when there are no more God-given forests to be hewed down and transmuted into gold for stuffing capitalists' pockets.

THE YACHT RACING SEASON.

REGATTA week opened well this year with a rattling race of the Atlantic Y. C., sailed in quick time with a strong northwest breeze. The most important class at present, the large single stickers, were represented by Mischief and Thetis, Gracie hardly being in it through delay at starting, though she sailed well all day, and made up part of her loss. The big new boat had her best weather, a breeze in which she carried a topsail and whole lower sail, and smooth water, while her competitor, Mischief, was handled very tenderly, not carrying on in the blows, and having a reefed mainsail most of the time. Under these circumstances Thetis failed to save her time from Mischief, or to outrun her, notwithstanding the advantage she had in size of spinanker. At the Lightship the former looked a little higher, but in the main they pointed pretty evenly, and as to stability, they heeled to nearly the same angle, Mischief, as noted, carrying less sail. If the latter were in her old shape we could form a definite idea of Thetis's powers, but the result of Mischief's alterations in rig and ballast are yet unknown. From the show she made on Thursday we should say she was little, if any, slower than before; and as Thetis, with the advantage of weather and water, has been unable to take care of her, it is hardly likely that she will prove a new wonder. Had there been any sea, it is not likely that her time would have been as good. To-day she sails again with Bedouin, Mischief and Gracie, and a better estimate may be formed of her qualities. A new boat that promises to make her mark is the Daphne, a deep centerboard sloop, with lead outside. Thus far she has disposed of the invincible Fanita, and will, no doubt, make a good fight with her for first in future races.

SPRING IN THE NATIONAL PARK.

THE reports which come to us from the Yellowstone Park all speak of the great abundance of game which is found there this spring. The efforts to prevent hunting within the reservation, though often feeble and intermittent, have not been without effect, and the game, quick to appreciate it when there is a spot where it is not incessantly harassed, has crowded into the Park for safety. A person who recently made the journey from the Mammoth Hot Springs to the Falls, reports the Hayden Valley as literally full of game. Elk were very numerous, there were some bison, and antelope. In one band thirty buffalo were counted, and in another place quite a large bunch was seen. Late last month a small band of from fifteen to twenty crossed the East Fork, and went up on Specimen Mountain. There are, or were very recently, plenty of elk to the south and east of Soda Butte. Deer are pretty plenty, and of course small game is abundant. Bears are reported as numerous.

The roads from the Mammoth Hot Springs to the Geyser Basins are in fairly good condition. Three gangs of Lieut. Kingman's men are out and at work on the roads along the Gardiner River or bridge building in the Gibbon Cañon.

The season opens favorably.

RED PEPPER FOR SPARROWS.—Housekeepers put red pepper down into rat holes to drive the rats away. A Pennsylvania genius adopted the same remedy, the other day, to rid his premises of English sparrows. A quantity of red pepper was sprinkled on the vines where the sparrows were congregated, and when the dose was thoroughly sifted through their hiding places they started for the equator. This is much simpler and more feasible than the steam fire engine warfare, once advocated in these columns by the late Wilson Flagg. The sparrows are in many localities now considered vermin and shot with shotgun and rifle. An Arizona correspondent, whose note is printed in another column, suggests that the sparrow infliction would be mitigated if small boys fitted the birds with artificial melody. But it would be much more sensible if the cooks of the country should set their wits to work to devise a variety of sparrow dishes. If some of our correspondents, who profess to be aggrieved because the sparrows have routed the songsters, are desirous of providing a remedy, let them experiment with the sparrow as a table delicacy, and send us the results of their successful ventures for the instruction and emulation of others.

TECHNICAL FRAUD.—The unfortunate occurrence at the meeting of the Missouri State Sportsmen's Association, noted under our trap news, is to be especially regretted since it is quite evident that there was no intention of fraud, and that the victim of the protest, while nominally guilty of violating a rule, is really an entirely innocent party. Shot measures by bulk are at best very unreliable affairs, and it is to be hoped that we may have such a thing as a standard, and only one standard. At present there are the old and new measures, and no end of confusion, and as we have seen in this case, downright injustice results, and while everything was perfectly regular too. The National Gun Association may do something toward bringing about that uniformity, without which much that is written becomes useless and misleading, because the same term does not convey the same meaning to every mind.

LAKE GEORGE BASS.—We understand that the county judge of Warren county, N. Y., has expressed an unofficial opinion that the words "other fish," in the bullhead clause, hocus-pocused into the Lake George law, should be held to apply only to fish not already mentioned in the laws, and hence cannot be held to apply to lake trout. We have also seen a letter on the same subject written by Gen. R. U. Sherman, to Mr. A. N. Cheney, of Glens Falls, in which the writer states: "Taking all the laws into consideration and reconciling incongruities as far as possible, I hold that the provision does not apply to salmon trout, and I shall so hold to the game and fish protectors should they appeal to me." From this it appears that the enterprising Lake George landlords may after all not reap the fruit of their trickiness.

MASSACHUSETTS.—The vicious game law passed by the Massachusetts Senate should not be permitted to go any further. The provision permitting grouse and quail to be sold at any time of the year is outrageous. The Boston game dealers simply want free license to gather in all the birds in Massachusetts. The Fish and Game Protective Association naturally protest against having any such law, and in its place they have drafted a better one.

The Sportsman Tourist.

ROUGHING IT FOR HAY FEVER.

THE happy effect of camp life upon the health of a delicate woman, so pleasantly described by her husband in a late number of the FOREST AND STREAM, impels me to contribute something of a like experience. All over the land there are sufferers from hay fever, an insidious, exasperating, treacherous and menacing disease, which has become alarmingly prevalent and severe of late years. It attacks persons in the better walks of life, who are actively engaged in the pursuit of wealth, professional standing, or higher culture, making sad inroads into the time of year when summer wanes and the autumn promises a rich fruition. "It loves a shining mark," and so many persons prominent in political, social and literary life are afflicted annually, that the disease is considered by those not afflicted something to be proud of, like the gout or a coat of arms. It finds its victims in the larger cities, where civilization is most intense, and the burning streets, contaminated atmosphere, close dwellings and offices, hurried and improper meals, and the telegraph, telephone and electric light, conspire to excite, aggravate and destroy the nervous system and the machine of which it is the motor.

I suppose most men will go on in the same mad race for wealth and fame they are running, as a flock of sheep follow the leader over a precipice, breaking and defying the laws of nature and God, taking niggardly holidays at lightning speed, devoting hours to business and moments to friends and family, until the grave swallows them and they awaken beyond the veil to mourn their folly. Not so the writer. He was awakened painfully to a conception of the preciousness of life and its frail tenure by the death of several collage mates with whom he was racing to conquer the world of knowledge, and slowing up, concluded the years were going fast and holidays were to be taken now or never. Above all should hay fever patients thus resolve, for their overwrought and exhausted nervous systems will find balm in the wild woods and nepenthe by the sounding sea, for this disease, caused by civilization, may be cured by barbarism.

Some years ago, in search of a prophylactic or a panacea for hay fever, I saw a statement that Dr. Dio Lewis had cured himself of the disease by becoming a farmer. He abandoned the high pressure life of the city, lived plainly and abstemiously, worked in the broad sunlight in contact with forest and fields, and recovered.

Experience has abundantly demonstrated that medicines merely palliate in this disease, and amelioration of symptoms comes from change of location to the sea shore or the mountains. Yet the relief is only partial. A long sojourn from home and business is necessary to prevent the accession of severe symptoms, and sufferers are ever groping for other means of relief. Many persons seek it upon the shores of New Jersey, because they are easy of access and have hundreds of seaside hotels. The flat lands, the frequent land breezes loaded with spores and mosquitoes, the hot, shining sands, the glaring lights and brass bands, are exceedingly aggravating to the nervous sufferer, and he gets only a modicum of comfort.

The White Mountains are a favorite resort for those suffering from a severe type of disease, and considerable relief is obtained by a summer residence there, but the majority of patients cannot spare so much time, except when they are too sick to do anything, and then the region is so far away from the Middle and Western States that it is torture to travel to it. A gentleman who suffers from hay fever and asthma of a terrific type, and who had been everywhere in search of relief, told me, "Bethlehem, N. H., was a good place if one would go there early and remain until hoar frost had swept the lowlands, but if a warm spell occurs after a return home, the disease will come on like an army with banners. An annual trip to Europe it now my panacea."

Neither the sea nor the mountains cure, but a trans-Atlantic voyage will, provided one is careful abroad, and not return till October. This is too expensive in time, if not in money, for many to enjoy, and so the hegira continues to sea-side and mountain house every season. Hay fever is a disease—an asthenia of the nervous system, with its main citadel in the digestive organs. All sufferers from it are good feeders, but they should rigidly abstain from table indulgence during prevalence of the disease. The summer hotels are little favorable to recovery of nervous energy, and the profuse array of tempting food leads patients to continuous overfeeding. The sufferer should turn his back upon civilization and return to the primitive ways of a nomad. He must seek that part of the sea shore fringed with massive ledges and carpeted with the salt-glistening kelp. He must build his camp among the stunted spruces and pines that crown a bluff overlooking an arm of the sea where his single-hand yacht lies at anchor, and build his camp-fire by the rules of "Nessmuk." He must take an ocean bath before breakfast, do some part of the camp work, sleep much, live upon plain food, banish or greatly limit the use of stimulants and narcotics, pitch quoits, dig clams, shoot at target, hunt game, fish the island waters and salty havens, row and sail, make trips and visits along shore and to neighboring islands, study botany and natural history, and read the FOREST AND STREAM. The camp should be the base of supplies and operations, and the surrounding land and sea the region of forage and frolic. Yacht life alone will not do. There is too much desire to be on the go, thus depriving of exercise on land, and too many temptations to visit other yachts and grand hotels and to indulge in feasts and dissipation. Camp life alone is monotonous, and one soon tires of the same scenes and the daily routine. The union of yacht and camp life makes perfection for the invalid outer, and the sterile rocky coast and the briny deep furnish those elements of health and strength which the highest authorities recommend to the debilitated and the sick. I am sure a month of such life at the appropriate season will vanquish hay fever and restore depressed energies for the balance of the year. I have proved it upon many summer campaigns and I wish to raise other sufferers from the "slough of despond" by this article. I had the primary stage of hay fever one day and left Baltimore upon a steamer the next. We reached Halifax, N. S., in four days, and the disorder had ceased. I went through Acadia on the train and sneezed all day. Then crossed the Bay of Fundy and spent three weeks along the coast, from St. Johns to Rock land, without a sympton. Then I went to the White Mountains, via Portland, and the disease came on severely, only to disappear when I arrived in Boston. I journeyed to New York and to Philadelphia, where the trouble immediately began, and returned to my inland home and a sick bed for three weeks.

One summer I made up a party, chartered a yacht, piled in stores, and made sail for Penobscot Bay, where we camped and cruised among the islands a month. We slept upon the ground, had many hardships by field and flood, endured some privations, but every one was robust and brown and not a sneeze or a cold was heard of among us.

Are not these facts sufficient to convince every one that camping and cruising on the coast is the one thing for hay fever patients? I am convinced, anyhow, and I am having a small yacht built for part of my sanitarium. Before the spores ripen, my duffle and kit will be aboard and I shall sail for the Happy Islands, there to enjoy a semi-barbarous, health-giving life awhile. If there is any sufferer from hay fever which begins in August, who values health above wealth and would like to go along, I offer a board and a blanket, and promise immunity from disease and a royal good time.

956 PENN AVE., Pittsburgh, Pa.

THE BUCKTAIL IN FLORIDA.

VII.

NOW, there be campers and camps, and there are outers and outings. The campers often suffer much discomfort through lack of skill in organizing and running the camp. And those who go out from towns and cities for an outing are not always outers. "Laying off" in the cool verandas of woodland resorts, and summer boarding houses, or seaside hotels, may be beautiful, restful, and pleasant withal. But it is not outing; inning rather, I should say. I like the good old Scotch terms, outing and outers. As modern American terms they include about all there is of outdoor recreation, from the steam yacht to the ten-pound open canoe; from the bare-footed urchin with pin-hook, bow and arrow, intent on minnows and chipmunks; to the wealthy tourist with costly outfit of modern rifles, shotguns and rods of price.

I am sorry to say that the leading thought, the one indispensable element of outing seems to be slaughter. Those who go down to the sea in yachts, they who skim the calm waters of rivers and lakes, and those who tote the rifle and knapsack over leg-breaking mountains, each and all seem, like Lear, imbued with a frantic desire to kill, kill, kill. This is not as it should be. Killing humanely, in reason and in season, is eminently right and proper; for an outing wherein the rod and gun did not play a pretty prominent part would be, to most men, a dull affair. But we are a little apt to overdo things when game is plenty or the fish are biting freely.

For instance. Last winter, or early in spring it might be, a party of four left the Tarpon House for a day's fishing at the Sawyer place, some five miles distant. It was a good day, the fish were plenty and "willin'," and the party took 260 pounds of channel bass and sea trout. Dr. A. Ferber was one of the party, and as I considered him a fair, though eager sportsman, I asked him what he could do with so many fish, and why he caught so many anyhow. He said, "Well, we used all we wanted, and gave anybody the rest who would take them away. You see, there was a lady in the party who caught over sixty pounds, and you wouldn't like to be beaten by a lady, would you?" "Yes, I am willing to be beaten by any one, man or woman, who shoots or fishes for slaughter." In justice to the Doctor I must say he was a cheery, industrious sportsman, who enjoyed his outing hugely, and shot and fished fairly for the most part. His best hold seemed to be 'gators, which he pursued zealously and with fair success. I think he was a little astonished to find that a 'gator with the top of his head shot off and his brain-pan demolished was capable of reviving and taking charge of the boat, driving the crew overboard in undignified haste.

As for mine own part, I am almost surprised when I think how little I have shot and fished since I began to cruise the Bucktail on Florida waters. But the shooting was almost out of season before I was established in camp, and although I fished a good deal at first, there were other things that interested me quite as much. The whole country was novel to me, the fauna and flora of the land were, to a great extent different from anything I was familiar with, and the possibilities of canoeing were far beyond what I had looked for. You could cruise for weeks without going over the same ground twice (except in descending rivers), and without making the rough, tedious carries, so frequent in the far-famed Adirondacks. And a camp supply of the finest fish, with beach birds *ad lib.*, could usually be had for the taking. I found myself in a region where clear bright lakes and rivers were more plenty than I had ever found elsewhere. I could find in a morning's walk a group of eighty lakes, all comprised in a six-mile square, and well stocked with black bass, bream, and other fresh-water fish; or, if I preferred salt-water fishing, a cruise of three miles would take me to the Keys, where sea trout, channel bass, snappers, etc., were both plenty and large; in fact, apt to be too large for any ordinary tackle. And there was also the finest sea bathing, with model camping grounds and abundance of oysters for those who like them fresh from their beds. It was a new situation, this fishing in waters where, instead of brook trout so small that one-half the catch must be returned to the water, you were in constant dread of hooking a fish that would start straight away for the open gulf, towing the canoe at the rate of three knots an hour and taking the line off the reel steadily to the end. Then, without a hitch or halt, snap the best Cuttyhunk line, and stand out to sea with your best spoon in his mouth.

It was a little exciting at first, but the excitement soon wore off or gave place to disgust.

It was not sport to feel that you had some sort of a sea monster at the end of your line that you were destined never to see even. Shark or channel bass, ravallia, grouper or drum; maybe a miserable gar—it was all one. There was nothing for it but to sit sulkily in the canoe and hold hard. When it comes to the final crash, count up your remaining spoons, see by how much your line was shortened, and try again. In the case of the channel bass or redfish, it often will happen that he can be checked at the end of 150 or 200 feet of line; that is, if he be of ten to fifteen pounds' weight. But one never can tell with any certainty the difference between a redfish of ten pounds and one of forty pounds until it comes to the final test—at the end of the line. He does not leap, and his fight consists of hard pulling and a straight-away run. His first wild rush is the best of his fight. Once checked, he is soon handled. But he is such an uncertain quantity. You are liable to meet him in the tidewater of moderate rivers up to twenty-five or thirty-five pounds, and outside much larger. Between three and seven pounds he is a fine game fish and good on the table. I do not like him much heavier than that, either for food or fun. Captain Kendall ("Tarpon") succeeded in landing one of thirty pounds in the bayou just below the springs. He was using 100 yards of fine line, and the fight was a lively one, lasting nearly two hours. A local fisherman, who witnessed the capture, says it was excellent sport for the spectators. He says, "The Cap'n jumped overboard in shoal water and corraled that fish by driving it into the ma'sh grass with a club. He had about thirty acres of ma'sh festooned with Cuttyhunk, and it took him over a half a day to untangle it."

I like the sea trout better. His game qualities are of a high order, and I think his rank as an article of food is very near the head of the list; scarcely inferior to the brook trout and quite equal to the Spanish mackerel. When first hooked he makes better play than the speckled trout, but does not hold out as long. In his leaps he does not spring wildly out of water and tumble back clumsily on his back or tail, but glints and gleams in and out of air or water in graceful, go-ahead curves, unless checked by a taut line, when he dives and darts about frantically until the strain is relieved, then resumes his leaping again. "Tarpon" says "A sea trout of five pounds can make more fuss and flurry than a redfish of three times the weight; but he don't take you out to sea."

As for myself, when I want a day's sport with the rod I prefer to go up the river or over to Lake Butler and try the black bass, with either fly or spoon. I can hook as large fish in either place as I can handle. It was at the south end of Lake Butler that I hooked—and lost—the largest black bass I ever saw in my life. I could have saved him with clear water and fair weather; but winds and waves were driving me into a cypress swamp, it was difficult to stay right side up, and the fish was bent on getting afoul of roots. I dropped the rod, seized the line, and hauled in hand over hand. The last I saw of him he was within ten feet of the canoe, with head and shoulders above water, shaking the spoon as a terrier shakes a rat. Then he made a rush for the cypress roots; I held hard, and the strong line snapped like a fiddle string. When it was over my hand shook with the unwonted excitement; and perhaps that was worth the excellent spoon he carried off in his capacious mouth. May he live to get the cruel hooks out of his mouth and give me another chance, in clearer water and lighter winds. As for the supernatural wit and keen sarcasm called forth by the fact that it is the "big ones" we always lose, it does not deserve an answer. Any fool knows that a three pound bass cannot break a linen-laid Cuttyhunk line that will stand a strain of fifty pounds; and any sensible angler ought to know that a lively game fish, on a rush for life, can pull several times his own weight. The bass alluded to above snapped a line with which I could have thrown a seven-pound fish clean over my head. No matter what he weighed. A lady caught one on the same day, with a trolling line, that weighed fifteen pounds. I saw my customer fairly several times, and I think he was about as large as they grow in Lake Butler.

But I fish very little and shoot less. "Tarpon," who is fond of the angle, does most of the fishing for both camps. He goes down the river about twice a week with the big rod and rag canoe, and he never comes back empty-handed. The catch is usually from three to six fish running from two and one-half to twelve pounds. Earlier in the season the sea trout preponderated. Now it is the redfish (channel bass). About three of the latter to one sea trout. Last week he took an afternoon down the river and came back with one sea trout of two and one-half pounds, two redfish of about five pounds each, two redfish of eight and nine pounds, and the head and shoulders of one that must have weighed near twenty-five pounds when alive. But a shark had snapped the best half of it. You are liable to such mishaps in these waters.

Perhaps, from what I have written above, some sort of answer may be inferred to the question that is often asked me, "What luck hunting and fishing in Florida?" I did not come to Florida especially to hunt and fish, or even to cruise, though each and all of these out-door pastimes were not without their influence. The leading idea was to try a long, persistent outing for health, and I have pretty well carried out the idea so far as I have gone. I took possession of an open camp on Ook Point on the 6th of February, and lived there until March 24, when I moved to my present camp, which I have occupied until the present time, just sixteen weeks to-day. The result has been most satisfactory, the gain in health decided, and the life a pleasant one for a man of my habits and peculiarities. Only once during more than six weeks that I camped on Oak Point did I have a visitor, save when the Captain and Mrs. K. came up to chat around the camp-fire, which they sometimes did, and I was never lonely. I never am when alone in the woods or cruising in a country new to me.

Changing from Oak Point to Oak and Pine camp was taking a new life, so to speak. The road leading over the only available bridge on the Anclote runs for fifty rods in sight of my camp, and the Crackers have come to know the little canoe man from Pennsylvania, and that he has some hunting and fishing duffle, new to them, and that he is friendly withal, and not stuck up or "highfalutin." Also he buys freely, in a small way, of the produce they bring to the Springs in their two-wheeled carts, drawn by a hardy, wire-grass pony with a saddle on his back, on which the Cracker doth delight to ride, for he seldom rides in the cart. He will tell you, "the pony pulls easier with a man on his back." Now, the carts that come from the north side of the Anclote can save a bit of travel by making a bee line across a bend in the road right by the corner of my shanty and striking the road again eighty rods below. And thence it happens that there is a pretty well-worn road between the black pine stub and my camp-fire.

As there is scarcely a pleasant morning on which one or more carts do not halt at the camp I am able to get a good deal of information on all points connected with the raising of fruits, vegetables, eggs, beef, pork, etc., not forgetting fishing and hunting, and some of these Crackers are most successful hunters.

I am pretty well acquainted with one, George Gause by name, who is called the most successful deer and turkey hunter hereabouts, and am rather proud to know him. A straightforward, simple-minded, candid man, who says what he means and means what he says; kindly and free with that he has, and a most deadly shot with that single-barreled, rusty old muzzleloader of his. He is a man who has hunted from boyhood to middle age, and killed dead loads of the best game in Florida, in the antiquated belief that it only takes one bullet to kill one deer or bear—a belief that is fast disappearing, along with the game. Alas, I am growing old; but I have a faint hope that, before my rickety old head

rests at the roots of the oak and pine, I may see a modern rifle that will "meet all the requirements of a sporting arm;" a rifle of "low trajectory" and "immense penetration," that will fire 637 shots so rapidly that the nicest ear cannot separate them by sound. Then I want to see the whole business go, with the vanished deer,

"Like the tenants that left without warning,
Down the back entry of Time."

It is decidedly the off season for shooting. The turkey, the quail and the deer are all oppressed with domestic cares and tropical heat. But the season will come, and then Gause and I are to pack a pony cart with two weeks' supplies, saddle the pony and strike out for a hunt. I am to have a chance in the saddle, which is better than packing a heavy knapsack over steep mountains covered with shin-hopple and low laurel. We can drive wherever we like in these open woods, and are to hunt cahoots. NESSMUK.

P.S.—The lordly tarpon has arrived—the silver king. Boyer, our tarpon fisherman, killed four within three miles of the Springs day before yesterday. The largest weighed 126 pounds. I send you a few scales, and am going to see about it soon. N——K.

BOYHOOD REMINISCENCES.

V.—MONKEY CAPERS.

DID you ever own or have a partnership interest in a monkey? If you never have, then don't. You may have missed some pleasure, but you have escaped much annoyance, and saved yourself you don't know how much money.

One of my boyhood mates was Eugene Knapp, son of the celebrated Baptist evangelist of that time, so famous for his pulpit eloquence and revival successes. Gene did not always follow the precepts of his pious father; neither, I am afraid, did the undersigned, whose sire was also of the same profession, also persuasion. We were almost inseparable, Gene and I, fighting fiercely one day, the best of friends the next. We brought in the first trout of the season; found the first birds' nests and strawberries; caught the first young crows; were the first to meet the circus down the road, and among the foremost to crawl under the canvas when the clown commenced. We got more "whalings" from our parents and other parties than all the other boys in the village; and yet I think we were popular. Ah, Gene, he got the fever in '49 and was off to the golden sands, and I have heard naught of him since.

Well, we came into possession of a monkey, I do not remember now just how; but we were halves. It was one of the larger kind, with side whiskers, and with a very wise, innocent cast of countenance like a Greek professor. He would be domiciled one week with Gene in the village, then he sojourned at our house on the hill.

Talk about the connecting link—all the arguments in the world could not persuade me that Jock had not a mind and a very intelligent one. Instinct, fiddlesticks. He could reason from cause to effect and *vice versa*, as well as you or I, and did. But all his reasoning and calculation were in the line of mischief and destruction; he never did a good nor praiseworthy deed while I knew him. His proper place in fair weather was on a limb of a small tree in the yard, some six feet from the ground, with a long chain that would allow him to come down for his food and water. He was naturally a source of great interest to all the children the country around. He could take my track, I believe, as unerringly as a hound, for often as of a summer forenoon, with windows open, we sat in the recitation room at the college some quarter of a mile distant, going through our *Penna, pennæ, penna*, or *Omnis Gallia divisa est*, a titter would run around the room and upon looking up Jock would be seen scratching himself on the Professor's desk with a countenance plainly saying "Here I am. When is my turn?" Then the Professor would say in such a hurt tone, "Mr. ——, will you please remove this animal?" How sheepishly I felt as I led the rascal back to his perch. He was generally quiet on his limb when anybody was near, but let the coast be clear, and like a flash he would have that brass padlock open, and be away off on some expedition of mischief.

Jock fervently hated angleworms and could not be persuaded to touch one, but after a warm rain when the walks were covered with thousands of the wrigglers, with a sharp stick he would follow along and dance with delight as he punched off their heads.

After a punishment, or when he had been caught *in flagrante delictu*, Jock would take refuge in a large hemlock tree. Far up in the tree in a fork was the remnant of an old crow's or hawk's nest, into which he would go and hide himself for hours, and there of course he was safe. I had long desired to explore that nest, but it was too high and the tree was too large to climb. Our next neighbor, the Latin professor, on his grounds had a very early apple tree which bore a delicious fruit several weeks ahead of all others. Jock had found that out, and he had the very first apples (and he never picked one that was not thoroughly ripe). One day, upon looking out from my study, I saw Jock was loose and off full bent on all fours for the apple tree. The day before, with help from some of the boys, we had brought over the college ladder, and now was our time to investigate the nest and break up the refuge. Up went the ladder, and upon reaching the fork we found a large nest (about the size of a bushel basket), well thatched over and pretty well lined, for in it were two Mexican quarters, a Spanish sixpence (money in vogue in those days), two silver teaspoons, the loss of which mother had so worried over, a bright new pair of scissors that had not been missed, and a large number of pieces of broken china with gilt edges—the fashion when company came to tea. We removed these; and, having previously procured something like a half peck of angle worms from the garden, we placed them in newspapers, with holes profusely punched in the package so that the worms could be coming out about the right time, we placed it in the nest and awaited developments. Soon Jock was seen coming hobbling home, an apple in his mouth and one in each hand. He knew he was guilty, for as soon as I halloed he dropped the two apples and made for his retreat, and never shall I forget the scene that ensued as he thrust himself into the nest. He gave one screech, threw himself backward and came down a-whirling, touching neither limb nor bark, forty feet; but like a cat his feet struck first, and away he went and was not seen for days. After that nothing could ever tempt that monkey to ascend the tree. His ark of refuge was gone.

The weeds had grown rather high among our young cabbages in the garden, and I had been at work an hour or so one day pulling up the weeds, shaking off the dirt and throwing them to one side. Jock's perch overlooked the garden, and I had noticed that he had been watching me rather closely. Having finished my task, and every country boy knows what sort of work weeding garden is, I repaired to father's study and was attending to my lessons, when, upon looking out of the window, my father discovered Jock's absence. "There, George, that imp is gone and in some mischief, sure as you live, go find him." Going out I heard something strike against the garden fence, and looking over there, I saw the rascal rapidly pulling up the cabbage plants I had so diligently weeded, shaking off the dirt and throwing them one side. He had pulled up more than sixty. I think he really intended a good thing (the only time I ever knew him to), for he did not show the culprit and run off chattering as usual when caught, but seemed to think he ought to be praised. I hadn't the heart to scold, and he escaped censure.

He was very fond of candy, sugar and other sweets, and we used to put a little in a package with several folds of paper around it, which he would seize with great avidity, rush up to his perch, and there deliberately open it, throwing down carefully the different wrappers until the treasure was reached, and this he would dispose of with a peculiar cry of enjoyment. One of our boys was a big, red-headed fellow, and hair long at that. He was not a pleasant companion, rather a bully and a torment, disliked by all of us. Knowing the monkey's antipathies, he slyly procured some earth worms, and having done them up in several wrappers handed them to Jock. I told him to stand away, and warned him that he would rue the day he ever tried the trick. "Pooh," he retorted, "suppose I am afraid of an ape?" Jock clutched the parcel, reached his limb, and with pleasant eagerness depicted in his countenance, began his investigation. Upon reaching the end he gave one just such a cry as he did when he came down from the nest, but this time there was vengeance in it, as with one jump he landed on the big boy's back, and seizing his auburn locks, tugged and pulled and swung back and forth, giving forth that peculiar cry of rage. Well, how that boy yelled too, but he couldn't help himself, for as he put his head back Jock bit him unmercifully. It was a long time before we got Jock off, and ever after he remembered that red-headed boy.

But I might go on much longer with Jock's history, and describe fun with a tame woodcock we had, also his hatred of our tame crow. They were always "jawing" one another; they were both thieves, and I don't know which got the best of it.

The Latin professor will recall, I am sure, the day Jock jumped upon their dinner table while he was asking the blessing. As all present sat with bowed heads, he was not seen until they raised their eyes and discovered him helping himself to the best; and then, when upon being put out, he mounted the lightning rod, came down the chimney, and all soot and dirt as he was attempted an attack upon the sugar bowl. But Jock got his mischievous fingers into some green paint, and then I suppose into his mouth, and he was very sick. "Looks like a sick monkey." Well, that is a strong expression, but it falls far short of a graphic description. It cannot be described. All vivacity and impudence gone, for hours the poor thing would sit with his head upon one of his hands, his whole attitude intensely human—like a little old man with a splitting headache. When I took him in my arms and carried him around he would look up into my face pleadingly and moan in his pain, the same as saying, "Am I not a poor, sick child, and can't you do something for me?" Finally Jock pulled through. It is only the good that die young. We thought that after the severe lesson he would be a more honest and a better monkey, but far from it, he was a greater rascal than ever.

And now for the last, the hair that broke the camel's back—or rather, Jock's. The university was about quarter of a mile from our house. One day one of the higher class students returning from a recitation found his room in "a terrible state." He knew he had locked his door after him an hour before and everything was in order; but he found his papers in confusion, his Greek translation (to do which had taken hours and much midnight oil) torn into bits and scattered over the floor, and worst of all, a large gilt-edged illustrated volume of Shakespeare, which he was positive was closed when he left, now lying open with the contents of the inkstand poured over it. Who could be mean enough to do such a dastardly thing? The student was popular and had no enemies. There was no clew to the perpetrator until some one remembered seeing our Jock—our monkey—coming out of the window and down the lightning rod. Father paid the student $16 for the book, and Jock found an owner in the proprietor of the next circus that came along.

JACOBSTAFF.

Natural History.

THE BIRDS OF MICHIGAN.

BY DR. MORRIS GIBBS.

(*Continued.*)

42. *Dendræca æstiva* (Gmel.) Baird.—Yellow warbler; summer yellowbird.

This species is well distributed and abundant. It arrives in late April or early May. I once observed it by the 19th of April, while another year it did not reach us until May 13. This year I saw the first on April 10, a very tardy spring. The average arrival may be placed about May 5. The birds appear first in pairs or singly, but within a short time after the first is seen a great many are observed and the haunts are full of them. I call to mind one locality, the banks of a small stream noted for its fine trout, where great numbers of these birds build their nests each season. There among the willows, alders, elderberry bushes and small trees, the habits of this interesting and vivacious species may be studied. The birds begin pairing upon their arrival and many little skirmishes are observed during the first half of May. While trouting on the brook, where good catches are always made, I have often seen the little yellow beauties within a very few yards of me and have had excellent opportunities to notice their peculiarities. Few of us are aware of the advantages of occasionally sitting down quietly in the woods and awaiting developments. It is not always best to dash through the fields and forests; in fact it is never the correct way of collecting, unless you are intent on reaching some distant point. Some of my best discoveries have been made when quietly seated in a retired spot, and occasionally after ransacking the country for specimens in vain, deciding to return home, I have had great success in quietly watching a common bird of whose habits I knew but little.

The summer yellowbird is one of our most graceful species, and its elegance of movement, combined with its agreeable song, endear it to the hearts of all admirers of our birds. Years ago, when the advantages afforded by works on ornithology were unknown to me, and at a time when the names of many, nay nearly all of the feathered friends, were catalogued in my memory by names of my own coinage, or worse, perhaps, learned from older fellow collectors, this bird was called the "blossom eater," and to this day I prefer the name because of early associations: the remembrance of the times when I watched with childish wonderment the trim graceful creatures feeding from the catkins of the willows and other shrubs, or searched in the thickets around the old cow pastures for the handsome, well-formed nests.

The song of this species is thrilling in its sweetness, and though not a warble, approaches as near to it as the notes of any member of the family. Why the members of the family *Sylvicolidæ* are known to us as warblers is a point upon which I have been unable to satisfy myself. In no instance can we term a song of any of these birds a perfect warble. In the song of the ruby-crowned kinglet and warbling vireo, we have true liquid warblings. The vivacity of our friend's song is quite pleasing, however, and I know of nothing more agreeable to the ear than the notes of this beautiful bird issuing from a willow copse in early morning when the sun is just showing himself and the dew still glitters on the early foliage of the willows. The birds sing throughout the day while mating and building the nests, but when incubation begins, the notes are not heard so often during the middle of the day. In very warm weather the notes are rarely heard excepting in the morning hours and late afternoon. The species is one of the first to make his presence known in the morning, and I have heard them by 3 A. M. while still the whippoorwill was rattling off his monotonous jargon and the bats were wheeling above us in the murky air. During the summer months, when the weather is extremely warm, the notes are rarely heard at midday; but an occasional burst, doubly pleasing from the silence around us, is heard among the dense alder patches or from some thickly-foliaged bush. It is quite common to hear them all summer during the early morning hours; but there may be a period when they are utterly silent. Again in late summer they sing, but not with the vivacity of their vernal efforts. The bird assumes the position of a robin or other thrush in his early bursts of song and while mating, keeping erect and apparently giving his whole attention to his ditty; but in the latter part of May and as soon as he has achieved success in securing a mate, he is not so particular about his position, and though the song is none the less energetic and clear, yet he rapidly gleans among the limbs and twigs, and apparently considers the song of secondary importance, giving the matter of food supply first thought, undoubtedly having in mind the care of a mate and future family.

After mating has taken place the birds begin to look up a suitable location for a nest. Perhaps the position is already chosen, and I have often thought that a proper nesting site is selected before the birds are fully mated. The nest is usually begun about May 20, although many are not started until June is upon us, and some are in course of construction by May 15 or even earlier. I found incubation begun on May 18, 1878, but it was a very early season and the one in which the birds arrived April 19. The eggs are usually laid about May 25, and may be found in numbers by June 5. The nest is usually placed in a small bush. An alder is often selected, a wild rose, small dogwood, rarely a willow or thorn bush. I have taken nests in orchards and gardens, where they are placed in currant bushes, plum and apple trees, and occasionally in a bramble patch of blackberry or raspberry bushes. They are almost invariably placed near the courses of small streams, on the edges of marshes or on low ground where an abundance of willows and alders grow. A few nests are met with on higher ground as mentioned, in the gardens and orchards, and I have found nests at the edge of white oak woods. The structure is usually placed from four to eight feet from the ground, and it is extremely unusual to find one more than ten feet up. In only one instance have I taken the eggs more than fifteen feet above the ground. This nest was in an apple tree. Nests are occasionally found not over three feet up, or even two feet where bushes are stunted and good concealment is not afforded in the higher brush.

The nest if an exceedingly neat little structure, and is not surpassed by many of our birds. It is usually situated in a tritid fork in a small bush, and is so interlaced with the twigs which form its support as sometimes to be detached from its lodgement only by the use of considerable force. The twigs bearing leaves usually at the time when the young appear, look as if they grew through the nest rather than that the nest was built in such a style. Externally the fabric is composed of a substance resembling tow, and of nearly a white color when seen from a distance. The material is tenacious and disposed in circular layers about the cavity of the nest; it consists of fibers or strippings of the milkweed *Asclepias*. The inner parts are of finer materials and quite soft in texture. The downy covering of catkins and other woolly substances packed in firmly make a soft bed for the eggs. I have found occasionally a pink colored cottony substance used as a lining. It is taken from ferns and lends a not unpleasing variety to the appearance of the pretty nest.

The summer yellowbird has a decided peculiarity in leaving its nest for some time after completion, and before laying its eggs. Perhaps he wishes to find out what kind of a neighborhood he is summering in, and in waiting to satisfy himself regarding the desirability of the chosen site. Be that as it may, he often makes a mistake, and in his too great caution and neglect of his home, frequently encounters difficulties from which he only extricates himself at great pains. The cowbird, that villainous plebian of most immoral social views, is ever on the alert for a nest of the absent warbler, and in her anxiety to cast her offspring on the fostering care of the poor overburdened bird, not rarely overdoes the matter, so that the eggs are laid long before the rightful owner of the home is ready to begin housekeeping, or, not so frequently drops her eggs in too great number along with the warbler's eggs, much to the indignation of the legitimate property holder. Perhaps no bird is so abused as the little yellow warbler by the now considered polygamous cowbird, and it is safe to say that no other bird exhibits the spirit of maintaining its rights and ousting its despoiler as does our friend. He does not consider the cowbird as his neighbor, but views him as an interloper, and will not vacate the premises, or at least but rarely, for the aliens. But with great determination he at once begins a second nest directly over the first one, and in a short while entirely covers the objectionable intruders, after which the eggs of the rightful owner are deposited in the second story. Sometimes one or more eggs of the warbler are sacrificed along with the alien eggs. A nest, now before me, exhibits the skill of these thoughtful birds in thus relieving themselves of an unsolicited

addition to their family. The structure is not much greater in depth than an ordinary nest, but it is nevertheless of two stories. It contained three eggs of the warbler partly incubated. The condition of affairs would not have been observed by me, had I not in removing the nest from the bushes accidentally broken an egg of the cowbird by too much pressure on the lower part of the structure, and as it was somewhat addled the discovery was quickly made that bad eggs of that species had occupied a lower section, being cut off from the nest proper and its contents by a very thin partition or floor to the upper story. Birds of such determination were certainly deserving of a better fate than to fall into the hands of the collector.

The eggs are almost invariably five in number, though sometimes four or only three, and in one case in my experience six. They vary decidedly, both in ground color and spots, but are usually readily recognized. The ground color is more commonly a faint greenish white to dirty white, and occasionally with a delicate reddish tint. The markings are of different shades of brown with here and there a dot almost black, and some faint markings of lilac, and even a tendency to pink in rare cases. The blotches are principally collected at the larger end and usually form a ring. Sometimes a ring is found around the smaller end, and quite frequently the eggs are blotched more or less thickly over their entire surface. The dimensions vary exceedingly for such small eggs, but a fair average from a number of random specimens are .66x .51 of an inch. After autumn appears few birds are seen, and if present they rarely show themselves. I have not seen a specimen after September 20.

THE BIG WOODPECKERS.

Editor Forest and Stream:

"Red Wing" wishes some one having acquaintance with the ivory-billed woodpecker (*Campephilus principalis*) to send a note to the FOREST AND STREAM. This bird, now quite rare, was not uncommon in all the large swamps in Florida, from Lake Washington to St. Mary's River. It was more abundant up the Wekiver, a small stream below Sanford, but used to be common about Lake Jessup and all the large swamps on the west coast, but of late so many shooters and bird collectors go South that they have nearly exterminated many very interesting birds.

But a few years ago the little Carolina parrot or parakeet (*Conurus carolinensis*) was very abundant all over Florida. Now they are not seen. The ivory-billed woodpecker is easily found, if you know its note, which it utters continually as it ascends the tree, but I have never heard any sound when flying. As soon as it alights, at nearly every leap commences its loud queer note, repeated three times—*Pate, pate, pate*, and this can be heard a long way, and often leads to its destruction.

I have never taken their eggs. They breed in large high trees and are not easily got at. Capt. Brock, at Lake Jessup, a few years since, told me of a pair he thought were breeding, but a look at the tree and hole was sufficient. We did not get the eggs, but both birds were secured. They were not inclined to leave the tree, and we thought they must have eggs or young; and this was early in March. Mr. Maynard, of Boston, collected seven or eight on the west coast of Florida in the winter of 1883-4, and I had two sent me from near Palatka. A smaller bird of this variety is found in the West Indies and a larger one in Mexico.

GEO. A. BOARDMAN.

CALAIS, Me., May 27.

Editor Forest and Stream:

"Red Wing," of Glencoe, Fla., inquires in FOREST AND STREAM for May 21 concerning the ivory-billed woodpecker (*Campephilus principalis*). I am glad to call attention to a charming article on this very bird, published in the April number of the *Library Magazine* and also in the Elzevir Library No. 149, entitled "A Red-Headed Family," price two cents. John B. Alden, publisher, 393 Pearl street, New York. The author is Maurice Thompson, the naturalist, and also I believe a well-known contributor of articles to the Archery department of your valuable journal some years since.

Richard M. Conway tells me that he killed a number of ivory bills near the Brazos River, in Texas, some years since, and I have myself seen birds of same appearances near the San Marcos and Guadalupe rivers, in same State. There are plenty of the pileated woodpeckers in this section of Virginia. J. M. H.

HOLLADAY, Va.

Editor Forest and Stream:

The pileated woodpecker is not common here, yet hardly a season passes that I do not see or hear one or more. The bird is not mentioned in "Thompson's Vermont," and some old hunters do not know that it exists here. But it breeds in Vermont, and is a winter resident—at least, I have seen and heard it in the depth of winter many times. I saw a pair in East Montpelier, Washington county, Vt., some years ago, and was shown by the owner of the woods, the tree in which he said they had nested. He called them "woodcock."

R. E. ROBINSON.

FERRISBURGH, Vt., May 30.

IN AN ODD SITUATION.—While out botanizing on May 20 within a few miles of our city I came across a small party of young gunners, one of whom had succeeded in killing what he had supposed to be an old horned owl. The bird when first discovered by him was standing upright upon a large roughly constructed nest resembling in appearance that of our hawk, and served by its position as a conspicuous landmark for any passer-by with an eye intent upon the capture or destruction of their kind. I arrived at the very time when this uncouth-looking quarry tumbled down head long from its insecure retreat. It was still alive, and proved to be a nearly full-fledged specimen of the great horned owl (*Bubo virginianus*). The primaries of its wings were about two-thirds developed, and the so called tufts of its ears were already projecting to the height of about half an inch above their surrounding feathery level. The down, which marks so prominently and very late the fledglings of all owls, had almost disappeared, and in a week's time at the latest the bird would have been able to take care of itself. The nest was near the top of a large maple tree about thirty feet from the ground and in as exposed position as could be possibly imagined, as the tree stood in a very open little grove and only within two hundred yards from a principal railroad crossing where great bodies of noisy laborers had been busy all spring laying tracks and making repairs. It was in the very last place which any might have suspected that a bird of such retired solitary habits as the great horned owl would have chosen to raise its brood.—C. L. (Buffalo, June 7).

A MARSH HAWK'S NEST.—On June 6, the discovery of the nest of the marsh hawk (*Circus hudsonius*) was made by Mr. Otto Buser, an enthusiastic young student of our local birds, at Linn Lake, a little village about forty miles from Buffalo. It was found in a small peat bog, which was densely overgrown with an almost impenetrable jungle of shrubbery (*Andromeda*) to the height of about two feet, affording, therefore, a very secure retreat. The nest rested right on the ground, and its lowest layers were thoroughly soaked from being in direct contact with the surface of the wet marsh. It had no lining of any kind, and its contents proved to be four dull white-colored, rather round eggs, looking very much soiled by being spattered all over with dirty spots, which imparted to them a very neglected appearance. The female was sitting, and by being accidentally flushed, revealed the presence of her nest.—C. L. (Buffalo, N. Y., June 7).

ADIRONDACK BIRDS.—Many of the birds are very late. From December to April we did not see a bluejay, but they are now here in great numbers. All the summer birds have arrived, except the cedar bird; when he comes we are "all at home." To-night we hear the booming of the night hawk for the first time.—A. R. FULLER (Meacham Lake, N. Y., May 26).

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN.—Purchased—One whistling swan (*Cygnus americanus*), one bald eagle (*Haliaetus leucocephalus*), and one pine snake (*Pityophis menanoleucus*). Presented—One wildcat (*Lynx rufus*), one raccoon (*Procyon lotor*), one common rabbit, four white rats, one wild turkey (*Heleagris gallopavo*), one loon (*Colymbus torquatus*), one great-horned owl (*Buteo virginianus*), one red-tailed hawk (*Buteo borealis*), two crows (*Corvus americanus*), one sulphur-crested cockatoo (*Cacatua galerita*), one horned lizard (*Phrynosoma cornuta*), one water turtle (*Cinosternum pennsylvanicum*), two gila monsters (*Heloderma suspectum*), six alligators (*Alligator mississippiensis*), and one painted box tortoise (*Cistudo ornata*). Born—One female oryx (*Oryx leucoryx*), one female and two male buffaloes (*Bison americanus*), and five prairie wolves (*Canis latrans*).

Game Bag and Gun.

BEFORE OR BEHIND A TREE?

IN the FOREST AND STREAM of February 12, I saw and read with interest an article signed B. B. Seaman, descriptive of a deer hunt in Grayson county, Kentucky. From the account given, it appears that the writer was told by his conductor to take his place behind a large oak to escape the sight of the deer in case one should happen to pass near him in the forest where he stood, and that when he heard the noise made by the buck in his running, he incautiously exposed his head, which caused the deer to change his course. Notwithstanding all this the game passed within sixty yards of him, and gave him the chance of shooting. I must state some surprise at the location of the stander. It was an unwise and needless precaution. I would have stood in front of the tree and not behind it, so that I would have used my eyes and not my ears entirely for a knowledge of the approach of the deer. With us, deer often pass very near a stander without making much noise, and bucks especially, after they have gained something by experience, are apt to leave their lairs, so soon as they hear the first crying of the dogs, and move cautiously and almost silently beyond the limits of the drive. The wonder with me is that Mr. B. B. Seaman got a shot at all. He could not tell for his life whether the deer was in range, unless he saw him, and see him he could not have done unless he had looked around the tree. If he had put his back against it the deer could not have discovered him by the use of his eyes. I have stood in open ground when the wind was favorable, and have had deer run within twenty yards of me, and I have known them to get within that distance of men on horseback in cultivated fields. If, however, the wind is blowing toward the deer, his sense of smell, which is very acute, will cause him to turn his course, even when he sees not his mortal foe. From this I draw the inference that the vision of a deer is not sharp like that of a turkey, and he depends far more upon his ears and his nose than his eyes for his protection.

One who is uninitiated would be sure, if turkey hunting, to get behind a tree to screen himself against the sight of the fowl. He who has had experience or has learned from others will place his back to the tree and face the game as it approaches. In this attitude, if the sportsman is still, a gobbler will come within twenty yards of him in open woods or even in a field. But if he places the tree between himself and the gobbler and makes the slightest visible movement, he will lose all chances of a shot.

If a deer is running it is clear that his opportunities for seeing are far less than they would be if he was standing and the hunter was running. All, therefore, the sportsman has to do is to select a spot where he can see and keep still. Then if he is on the line of the course of flight and the deer does not smell him, he will get a good chance for game. My opinion is, and it is expressed with all respect, the deer which "B. B. S." killed did not see him at all, but found the route which his knowledge of the topography of the country had taught him afforded the easiest means of escape.

In nothing which I have written above in regard to the position which he occupied has it been my object to criticise the sportsman whose communication I am considering. I do, however, most decidedly impeach the knowledge of Captain Van Nuter and advise "B. B. S." that when he next takes a stand, either in Kentucky or elsewhere, to place himself where he can see, and then keep quiet. I think I speak advisedly when I say that deer rely far more upon their ears and noses than upon their eyes. I recollect quite distinctly that six or eight years ago I was occupying a stand, when one of the dogs trailed a deer within forty yards behind the tree at the base of which I was sitting. Whether the deer passed after or before I took my position I do not know. I kept still, however, for fifteen minutes or more, while the dog had gone beyond my hearing. It was open pine land, where I could have seen a deer, if looking, for more than a hundred yards, in all directions. I got up and went along the trail which the dog had followed, for eighty or ninety yards, with the view of determining the best position to occupy in future hunts. Then I started back, my gun thrown across both shoulders. After walking about thirty yards I heard a noise behind me, and turning, I saw the deer within easy range just changing its course because it saw me. It might have done so, and turned off, without my knowledge, at least a hundred yards away, if its vision had been like that of the Kentucky buck. But, in open ground, with nothing to prevent except an occasional pine, that doe approached me while I was walking within the distance I have stated. It is but just to say that, though I fired one barrel at her, she escaped my gun, only to fall before the surer aim of my companion, Calvin McF., who was several hundred yards off, and near whom she accidentally passed. At another time and near the same place, I saw a large buck emerge from a swamp beyond the range of my gun. I ran toward what I supposed would be the line of his flight until I got where I thought I would be near enough. I then stopped, and to my great gratification he gave me a broadside at forty yards. I fired one barrel charged with twelve No. 1 shot, and saw at once that my aim was correct. He did not change the course which he had selected, nor did he see me, for he paused within thirty yards, and with the other barrel I brought him down. He had nineteen holes in his right side—four by the first barrel and fifteen by the second. That deer never saw me, and yet the woods were open pine lands with no undergrowth. If I had been behind a pine I should not have seen that buck, and to this day would have been in ignorance that one with seven points on each beam and netting one hundred and fifty pounds, could be so fat as to be "kidney curved," with more than five hundred big ticks living upon his blood. Get in front of the tree, keep your body still but your eyes wide open, and take in the whole view.

I shall not find fault with Captain Van Nuter or his companions for using hounds in their hunts. Whether that is a legitimate way of sport depends greatly upon the country. In those sections where there are many places of refuge, that mode of hunting will not exterminate the breed. It has been pursued in this locality for more than three-quarters of a century, and yet we have a fair supply left. The number would be far greater if our wild lands had not been subjected to the demands of commerce for what are called "naval stores." But there are places where the deer can find but few pools of water large enough to elude the dogs, and to these the hunter goes, secretes himself, and is sure of his game, oftentimes without the use of a gun, depending upon his canoe and a heavy paddle. And there are places where the favorite feeding spots are well known, and to these the still-hunter takes himself and kills every one he sees. Hounding is, in my view, quite as sportsmanlike as the last plan, and far more so than the other. WELLS.

DEER IN THE SOUTH.

THE last FOREST AND STREAM announced the passage of the law forbidding the "hounding of deer in the Adirondacks" of the great State of New York. All honor to the gentleman who drafted this law, and to the legislators who voted for it. During the discussion of this law I was under the impression that one of its features was to permit the killing of the hounds should they be caught in pursuit of the deer, and also that the FOREST AND STREAM was in favor of this provision. While I heartily approved the prohibition of "hounding deer," yet I could not sanction the cruelty of killing the innocent hound in pursuit of its natural game. I say natural, for every true hunter that uses hounds knows that the hound will leave the track of a fox, unless he is most thoroughly broken, to pursue a deer that jumps up before him. It is the nature of the young hound to open on the track of the hare the first time he goes hunting, and should a deer appear, or a fresh trail be crossed, the puppy will cease following the hare and take that of the deer.

As I have stated, most sincerely in favor of prohibiting the hounding of deer in the Adirondacks, I was anxious for the act to be passed in order that it could be used as a precedent in urging a similar law for the entire State of Louisiana when the next Legislature convenes.

Not only am I in favor of the law as to the Adirondacks, but I would go further, and most heartily approve it for every State in the Union. Nay, I would go further, that in order to preserve the deer from destruction a law should be passed prohibiting the killing of a deer for the next five years. It is only a question of a short time before the wild deer will become extinct in the several States. It behooves every true and thoughtful hunter at this time to co-operate in securing the passage of acts that will prevent the extinction of the deer, antelope and elk. I have been in deep sympathy with every measure for the preservation of the large game in the great National Yellowstone Park. But I am not in favor of preserving the buffalo in any other portion. I do not think the Indians can be civilized until the game is extinct, and so far from disapproving the slaughter of the buffalo by the pot-hunters or skin-hunters, I have rejoiced to learn they are so rapidly exterminating the bison; regarding the civilization of the wild tribes of Indians as far more necessary than the preservation of the herds of buffalo.

Every hunter is well aware of the fact that hounding of deer causes a more rapid diminution of the species than killing by still-hunting. The does do not breed so fast when kept in constant fear of the hounds—the pregnant ones so often lose their young when they have been severely chased—and so many fawns fall victims to the voracious jaws of the hounds, without the least benefit to the hunter.

In those States where a few deer can be found, the number decreases yearly as railroads traverse the portions of the country they frequent. Unless measures are promptly taken, we shall soon know of the deer as a "myth of the past." In the Southern States, they are now to be found only in the large river bottoms, or on the hills contiguous to them. The great overflows of the large rivers of the South for the last three or four years, have almost caused the entire extinction of the deer. Those that were fortunate enough to escape death by drowning met a more miserable fate from the hands of the merciless human bipeds, who slaughtered them by hundreds as they swam to the hills, too weak to avoid being killed by stones and clubs, or they succumbed to the attacks of the buffalo gnats, should they have succeeded in hiding from their human foes.

In 1850 I traveled over almost the whole State of Texas, south of the Southern Pacific from Fort Worth west. At that early date the deer and antelope were to be seen everywhere by thousands. Now it is a rare thing to find them, except along the hills and bottoms of Red River or in the Pan Handle portion of the State. Three years ago, before the railroad passed through the parish of Webster, in which I live, deer were abundant; now it is difficult to start one with a good pack of dogs. In Bossier Parish, the adjoining one, a good day's sport can be obtained, but I doubt whether a dozen deer will be found in that parish five years hence, unless we can secure an act not only prohibiting hounding of deer, but the killing of them in any manner for a term of years. When the next Legislature of Louisiana convenes I shall get the member from this parish to introduce a law similar to that of New York, to prohibit hounding of deer in the State; and in the meantime I shall correspond with our prominent sportsmen to co-operate in securing the pas-

sage of the act, and shall use every means in my power to get the approval of members before they assemble.

Our game law is now in operation, or at least it is the close season; but unfortunately little attention is paid to it in many of the parishes. Neither grand juries nor judges will cause offenders to be indicted, because they themselves are guilty of breaking the law. It can only be made effective by the most strenuous exertions of all the gun clubs to denounce those infringing the law, and securing the hearty good will of all true hunters to have offenders indicted. A few convictions in each parish would go far to bring about this result. GEO. D. ALEXANDER.

MINDEN, La., May 24.

A WOODCOCK'S DEVOTION.

UNABLE to resist the subtle influence of the balmy south wind of yesterday, redolent with cherry blossoms and forerunner of many such sweet days to come, I was strolling along one of the less frequented roads in the immediate vicinity of the village. My four-footed companion—a satin-skinned pointer, associate of many a happy day, with ruling passion strong, explored every copse and thicket, regardless he of a scratched body and a bleeding tail, could he but gain one whiff of that intoxicating odor, far dearer to him than all the "Sabean odors from the spicy shore of Arabie the blest." After an absence somewhat more protracted than usual, a casual search in the direction I had last seen him revealed him pointing as I expected. The character of the ground, a rough hillock covered with tangled cat briers and white birches and contiguous to a deep alder swamp, left little doubt as to the nature of the game, while the glaring eyes, the quivering nostrils, and the rigid stern left equally little doubt as to the few feet or perhaps inches that separated the educated animal from his natural prey.

While admiring the beautiful picture and hesitating to interfere, a very large hen bird flopped heavily up, clearing the brier with difficulty, only to drop with a sounding thud a yard or two in advance. Almost at the same second the smaller but more vigorous cock bird with the familiar ringing whistle sprang twenty feet into the air and away over the tops of the budding birches, across the brook, skirting a wide meadow, nor pausing nor faultering until with a sudden dart and a turn he wheeled sharply into a copse of alders and swamp maples, quite a different species of bird apparently from his fluttering mate. The latter, naturally shy and retiring bird, appeared to have lost all fear of man or beast in her anxiety for her little family's welfare, each one of whom had doubtless sought shelter at once under some protecting dead leaf at the very first indication of danger. So thoroughly indeed were the little youngsters stowed away that although the rude nest containing the four broken shells was in plain sight, no trace of them did a rather careful search reveal. And now began a series of amusing antics on the part of that devoted parent that must be seen to be appreciated. Around and around the staunch dog she ambled and waddled, feathers distorted, and quacking for all the world like a dusky duck in the gloaming of the autumn evening as he fearlessly prepares to alight on his favorite feeding ground.

After several minutes thus consumed in completing the circles, of which the sorely tempted canine was the interesting center, finding all her wiles fail to move him, other than an agonizing twist of his head upon its axis, she suddenly changed tactics, and with ruffled plumage and open bill boldly charged the intruder, until but a few inches at most separated her from the jaws which there is some reason to believe may be her future tomb. Patience was evidently ceasing to be a virtue on the poor brute's part, and fearing dire results to that little family of innocents in case of a sudden half orphanage, I asserted my share in the tragedy by stepping slightly in advance. As the delighted mother led me step by step away from danger, it was with a peculiar satisfaction I almost fancied I could see in her big expressive eyes the relief it furnished her. Over the hill, back to the road and a hundred yards down the same she gently drew us, and when with an utterly exhausted flap she appeared to alight for the last time, I was not less surprised than pleased to catch a glimpse of her, completely restored as by a miracle, whirling over the dense cedars and tall timber on a hilltop until she reappeared by a long circuit close to the original spot where I first surprised her.

Retracing my steps, there she was sure enough, going through the same old game as before. Calling off the disgusted dog with much difficulty, I left her there and continued my walk—he full of regrets, doubtless at what he regarded as an exceedingly unsatisfactory termination to so much trouble, and his master with "murder most foul and most unnatural" in his heart to marvel at the mysterious working of man's heart, which, while moved to pity and admiration at a mother's love, can at the selfsame moment resolve on the subsequent complete annihilation of not only that mother, but "all her pretty chickens too at one fell swoop." Verily, how all-consuming must be that passion for the chase, which warps our sympathies, and which knows no right but the law of might. W.

ENGLEWOOD, N. J., May 12.

SOME REMARKABLE SHOTS.

Editor Forest and Stream:

Returning from a deer hunt with a deer upon my shoulder which I had carried for some miles, I stood my gun, a large bore muzzleloader, against the side of the house on a back porch. I then proceeded to dress the game, and after doing so returned to get the gun and put it away. I found it had been removed, and upon inquiring of the cook—a Chinaman—was informed that it was in the "store loom." I proceeded to the store room and found it standing in a corner behind a sugar barrel. When I undertook to lift it out it went off. It was loaded for deer at long range and it startled me. It startled me headlong over a sack of potatoes, and convinced me for a time that I was killed. After a while I put my hands to my head—or to the place where I wear my head—to see if there was any of it left of consequence. I was surprised to find that it was, as near as I could judge, all there; further investigation discovered a long red stripe on my cheek, a face powder burnt and a round hole through my hat brim. There was also an ample hole in the ceiling of the store room, one in the roof, and, no doubt, a hole far into the sky overhead.

Again, I was out with a Sharps carbine. It was a kind of a cannon. It was a good gun to shoot, only it shocked; that is to say, jarred somewhat, owing to the amount of powder and lead the cartridge contained. Well, I came to a steep bank. Let the gun, stock down, into some wild grapevines until I could climb down myself. I got down, and as I lifted the gun out there was a big blue flash and an awful explosion. This time I thought I was reduced to fragments and splattered all around like the boy of "Burning Deck" notoriety. When the smoke and consternation cleared away I proceeded to compile a list of the killed and wounded. I finally found myself—I was all right, only partially deaf. Gun was all right. Dog was rushing around trying to find scent of the game which he presumed I had fired at. The bullet had gone.

My last remarkable shot was more serious. Was on horseback. Was riding a favorite horse up a steep mountain trail to a deer lick. A companion was riding twenty yards or so in advance. We both had Winchester rifles. Were expecting to jump deer every minute, and guns both loaded, never cocked. Came to two saplings between which the horse was laboriously climbing on the rocky trail. I held the muzzle of my gun down out of line of my companion ahead. Suddenly a rifle cracked, my horse reared, sprang sidewise from under me, rolled down the mountain a hundred feet and lay quivering in death. Fortunately for me I fell in the trail. I thought it was my companion's gun, until I examined and found it to have been my own discharged. My horse's neck was broken, the bullet ranging into his head, killing him instantly.

Now, perhaps these are not the kind of remarkable shots which are preferred for your columns, but they are truthful accounts, and may serve to show how easily accidents occur, how unexpectedly. I have spent much time in hunting and have handled guns always with great care. ESAU.

SHASTA, Cal.

MEACHAM LAKE.—Meacham Lake, N. Y., May 26.—As the season advances we begin to note the game signs. I once feared that the long, hard winter would kill off the partridges, but on all sides we hear the drumming of the cocks, and the guides and guests of the house speak of seeing many on the roads and about the woods. Everything indicates that as many as usual have gotten through the winter. The spring so far has been very warm, which is favorable for nesting. Of deer signs we see more than usual. Billy, one of our best and oldest hunters, says he has seen more signs of deer this spring than in any spring for ten years. Thirteen deer had crossed the road last Sunday in the five miles between this place and the first house toward Malone; and in a walk of six miles, in the direction of Brighton, one of the guides saw three deer, and said he saw many tracks. They are great wanderers in early spring. From February to April they had very hard picking, as there was a crust on the deep snow. They look thin and rough, but as vegetation starts up they will improve in flesh. They are working around and in the water. Several have been seen in the lake.—A. R FULLER.

NEW ORLEANS, June 2, 1885.—In a letter in your last issue there are some statements I would like to correct. The hunting and fishing around New Orleans in the right season, that is for hunting from September to February, is good. You can get deer, turkeys, ducks, quail and snipe from fifteen to fifty miles of New Orleans. There are numerous hunting and fishing clubs around here. The fishing about this time of the year is excellent for trout or black bass and perch in any fresh water stream, and in the lakes you can get catfish, croakers, lake or speckled trout, redfish, red snappers, sheepshead, flounders, Spanish mackerel and others. I would like you to tell me why you give no accounts in your interesting paper about the rowing club races?—R. R. [The rowing races are outside the scope of the FOREST AND STREAM.]

THE CHINESE PIGEON WHISTLE.—I was wandering about the streets of Peking one day with my boy Chang, when I heard music in the air, and looking up asked Chang, "What is that?" He replied, "That am a pigeon whistle." He darted into a store near by, and bought me about a dozen bamboo sticks fashioned into whistles. They tie them between the tail feathers of pigeons, and as they sail through the air all kinds of music resounds. It might add to the nuisance of the domestic pigeon if American boys would adopt the Chinese pigeon whistle and make "music in the air." It is about Whitsuntide now, and whistles are in vogue. —C. D. P. (Nogales, Ariz.).

THOSE THIRTY DEER.—Appleton, Wis., June 2.—How about the man who wrote an article from some Pennsylvania town about the thirty odd deer he killed all alone in the Upper Peninsula of Michigan last season? What did he do with them? The weather was very mild at that time and the laws about shipping venison out of the State are said to be pretty rigidly enforced. Did any of his venison spoil? There are not very many men about here that kill even half as many deer in one season. Some people are satisfied with five or less. If a man really shot thirty deer in a couple of weeks' time, it don't seem to me to be a feat to boast of. Is it?—F. U. R.

PHILADELPHIA, June 6.—The bay birds have left for the north. The robin snipe turned last of all. Several parties returning from the Cape May Court House region, the middle of the week, with poor showing, and charge their ill luck to the mosquitoes, which, they say, drove them off the meadows. If birds had flown well, and too great a space of time had not existed between shots, mosquitoes might have been put up with, but when it became no shots and more mosquitoes, it was more than human nature could stand.—HOMO.

LAKE GOGEBIC.—Appleton, Wis., June 2.—I was told by an employee of the hotel at Lake Gogebic that killing deer in August with jacklight was one of the amusements. The L. S R. R. Company post notices at all stations declaring their intention of prosecuting violations of the game laws, presumably if the poachers aforesaid don't put up at the railroad hotel.—FUR

CATSKILL PEAKS.—The Albany *Argus* says that the following are the highest peaks of the Catskill range, and the nearest village or habitable valley in their vicinity: Slide Mountain, from J. W. Dutcher's Big Indian, Ulster county, 4,220 feet; Hunter Mountain, Hunter Village, Greene county, 4,052 feet; Black Dome Mountain, Hensonville, Greene county, 4,004 feet; Thomas Cole Mountain, Greene county, 3,975 feet; Black Head, Cairo, Greene county, 3,965 feet; Mount Cornell, Woodland Valley, near Phœnicia, Ulster county, 3,920 feet; Big West Kill Mountain, West Kill, Greene county, 3,900 feet; Vly Mountain, Lexington, Greene county, 3,888 feet; Graham Mountain, Dry Brook, Ulster county, 3,886 feet; Peakamoose Mountain, Watson Hollow, Shokan, Ulster county, 3,875 feet; Table Mountain, Watson Hollow, Shokan, Ulster county, 3,875 feet; Plateau Mountain, Tannersville, Greene county, 3,855 feet; The Wittemberg Mountain, Woodland Valley, Ulster county, 3,824 feet; Sugar Loaf or Mink Mountain, Tannersville, Greene county, 3,807 feet; Big Indian, from Big Indian, Ulster county, 3,800 feet; Kaaterskill High Peak, Haines's Falls, Greene county, 3,800 feet; Panther Mountain, Big Indian, Ulster county, 3,800 feet.

Sea and River Fishing.

CAMPS OF THE KINGFISHERS.

CARP LAKE, MICHIGAN.—II.

BACK in the coach I found Ben and the conductor absorbed in watching the morning slicking up process of nine young Norwegians by their buxom-looking mother. They were having their flaxen locks straightened out by turns, and the comb in the deft hands of the mother paid no attention to kinks, knots and quirls, notwithstanding an occasional vociferous protest from the tow-headed victim. They were an interesting family, graduated in size from a wee toddler up to a boy of 11 or 12 years old, and all looked as healthy as a brood of young ducks on the bosom of their favorite pond. The conductor told us that the woman had come all the from Norway with no companions but her children and was going to join her husband somewhere above Traverse City, where he had fixed up a nest for his wife and little ones and had sent for them to come to him. "The faith and pluck o' woman is past comprehendin'," said Ben, as he moved forward and took a seat on the coal box to muse and smoke. In the hurry and bustle of looking after our traps at Traverse City we lost sight of them but trust the mother found the nest comfortable and large enough for her numerous brood, and that years of quiet and content are in store for them in their new home in the strange land.

We left Traverse City at 7 A. M., taking passage on the steamer Lou. A. Cummings, Capt. George Robertson. The Cummings was bound for Frankfort, and the captain consented to land us at Sutton's. The bay was just ruffled with a gentle breeze, the morning as glorious as ever a summer morning could be, and everybody was delighted with the lovely scenery along the shore, the swift little steamer and Capt. Robertson. A complimentary vote was afterward taken on the genial captain, and if his weather eye ever rests on this he will understand it is a gratuitous "blow off," for we paid our fare.

At Sutton's Bay we were several hours ahead of time, so Ben and I decided to drive over to Provemont, four miles, and send the teams back after the rest of the party, while we hunted up the camp and fixed up a nest for the girls. In fifteen minutes we were sailing out of town in a stifling cloud of dust and fine sand, that managed to keep even pace with us till we turned into the road leading over the hills to Provemont and Leland. The road led us over a gentle rise and into a little gem of a valley, and further on into a deep, dark, hardwood forest filled with sombre shadows with here and there a streak of sunlight struggling through the thick foliage with a glint like a thread of gold. Here, quite carried away by the beauty of the surroundings, we yelled a good old fashioned yell, much to the astonishment of the driver and the little horses.

Further down we crossed a little stream a yard or two wide that went laughing noisily through the tangle, and as it looked very "trouty," Ben and I had of course to get out under pretense that our legs were cramped, but really to see if we could catch a glimpse of a flashing fin, and to get a drink of the limpid waters. We were satisfied with the drink without seeing the fin, and climbing back into the wagon, a bend in the road brought us into another little valley and in near view to a number of charcoal pits looking like immense white bee hives. Here the Leland Mining Company yearly convert acres of the hard woods into charcoal, to be used in making iron in their great furnaces at Leland, near the foot of Carp Lake. But we were anxious to get to Provemont, and a word to the horses sent them along at a good pace over the last three quarters of a mile, and we pulled up at the bridge right at the head of the narrows to take a brief view of as pretty a sheet of water stretching away off up to the left of us as ever gladdened heart of angler. Down to the right led the narrows, connecting really the two lakes, although it is all called Carp Lake. Before the dam was built at Leland, this connection was nothing but a little wandering stream, something like the streams connecting the lakes of the Intermediate Chain, but now it is the "Narrows," about three-quarters of a mile long and generally about five to ten rods wide, with a depth of seven to twelve feet in the channel, as near as we could judge in passing through to the lower lake some days afterward.

We found Provement to be one of the quietest and sleepiest of little places, a place with rest and dreamy summer languor written all over it in the fervid rays of the July sun, in the shadows of the green woods along the low hill just beyond, in the soft air and blue haze hanging over land and water like a misty veil toning the rough points in the landscape into easy lines, in the drowsy droning of a lazy, easy-going "bumble bee" seeking sweets in the flowers of a Canada thistle growing by the roadside—a place where one tired of the noise and bustle and dust and heat of the city might go and forget there ever was an outside world full of cares and battlings and bickerings and strife for place and existence. It was a picture the eye loves to linger on, a scene to fill the heart with a feeling of peace and good will to all men.

Crossing over the long wooden bridge spanning the stream (for it is nothing more than a stream), just high enough above the water to let the smokestack of the little tug go clear, we drove up to Couturier's, a few rods from the end of the bridge, and going in introduced ourselves, much to the surprise of that good man, who was not dreaming that we had yet left Traverse City.

A hasty glance at the surroundings confirmed our good impression of the place. The store, hotel and post office all in one, stands out on a wide grassy common a short distance back from the narrows, and is a large, roomy house, clean and comfortable looking in all its appointments. I don't know of a place in all Michigan that I would rather go to for a summer's rest and sport with the rod than right here at this quiet little village of Provemont, and I would go straight to neighbor Couturier and be sure of getting the best in the land.

We did not waste much time in taking the measure of our neighbor as we wished to find the camp as soon as possible. We only noted that he was a French Canadian, rather over medium stature, and perhaps 48 or 50 years of age, with a rather sharp face. It was a kindly face withal, however, a trifle careworn; but old Ben figured it out as "a kind o' leather complected face that looked a heap like a piece o' dried birch bark." But he was a clever, accommodating gentleman, and we were soon all on friendly terms.

Young Mossman had located the camp on the Horton farm, four and a half miles above. The four boats were up at the camp and no other craft was to be had but a big unwieldly canoe fashioned out of a great pine tree. It was

about eighteen feet long and two and a half feet beam, and a little handier to navigate perhaps than a wood scow, but steady and safe in carrying capacity. We borrowed this, and friend C., seeing us look wistfully at a half dozen long cane fish poles with lines and hooks on ready for work, said if we wanted fish going up to help ourselves to poles, which we did by selecting two of the strongest and longest, about the same length as the canoe, and our cup of happiness was full. Down around the little dock at the narrows where our craft was moored we caught four speckled frogs, two of which were at once hooked on, and shoving out, I took the paddle, and a few strokes sent us under the bridge and out into the lake headed for camp, "two of the happiest old 'coons," Ben reckoned, "that ever went a fishin' in a holler log."

From the bridge the shore sweeps around to the left into a pretty bay fringed with green woods down to the water's edge, reaching out again a half mile or so above to a point that approaches within less than an eighth of a mile of the opposite shore. Above this point the lake widens again, and is from a half to three-fourths of a mile wide clear up to the Horton place where the camp was made. Above the camp it holds an average width of perhaps three-fourths of a mile for a distance of four miles, when it widens to two and a half miles or a little more, and this upper part of the lake, about three miles in length, is one of the loveliest sheets of water in Michigan. From Provemont down, counting three-fourths of a mile for the narrows, the lower lake is about seven miles long, the greatest width being nearly a mile and a half, near Leland, the county seat. Leland is five miles below Provemont, and here the lake has its outlet. Here is a lake eighteen miles long, with an average width of near a mile, affording fine bass fishing, as we found out before breaking camp, which seems to have been little fished and less known of anglers, and one may look in vain for even a mention of it in the guide books—at least I did.

Soon after leaving the bridge we met a sturdy, grizzled old mossback in a smart little boat, and concluding that of course he had been fishing, Ben hailed him to know what luck. "They aint a bitin' much," said the old gentleman, as he stopped rowing and the boats lost headway, "nor haint been for a day or two; must be there's goin' to be a change o' weather 'fore many days."

We noticed, however, that he had a fine string of fish towing alonside, which he explained had been caught the day before. He had lost his only spoon hook, line, float and all. "Do you men belong to that camp up the lake? If you see anything of my float up around there I wish you'd pick it up an' see what kind of a fish it's fastened to. I was trolling along by Horton's Point, a little ways above your camp this mornin' an' all at once a turrible jerk took the float out from under my legs an' away it went a sailin' an' under the water an' that's the last I've seen of it. If you find that float an' a fish on the spoon you'll find a whopper;" and the old grizzly went on his way. A "float" is a narrow piece of board of any convenient length up to a couple of feet, around which the trolling line is wound and paid off as required. Ben and I looked for the old man's float several times, but could never find it, and Ben has not made up his mind yet which was the whopper, the fish or the old mossback's story.

After passing the point we had a fair breeze up lake and had little to do but keep the old dugout straight with the wind, and troll and skitter for pickerel; but we held too far off shore for the long-snouts, and our trolling and skittering amounted to a failure. When we had idled along for perhaps three miles we began to think we ought to get a sight of the camp, and Ben avowed, after his fashion, that "we must hev passed the durned thing, for we've come six mile ef we've come a solitary foot." However, as we rounded the next point two striped tents near the water proclaimed that even Michigan miles have an ending, and a few minutes later the "holler log" was pulled up on the low banks in front of the camp and we were ashore making the acquaintance of Al and taking a view of the surroundings. A scattering row of low trees growing along the bank almost at the edge of the water, among which were a few white birches and a solitary "popple" twenty yards back from the water, were the sum total of the shade trees for the camp. Not a very picturesque place at first glance, but we found it very pleasant after a day or two, and it was a safe camp in case of a hard blow, as we could go to bed without fear of a tree talling and crushing a tent and whoever might be under it. The ground was four or five feet above the water level, sandy soil, perfectly dry and grassy, and stretched back in a level, unbroken field to Horton's house, 130 yards back from the lake. Up to the left an eighth of a mile the field was skirted by a dense, swampy wood that ran back to the road along the foot of the hill, and down to the right lay the rest of the farm, fringed along the lake shore with a narrow belt of swampy woods that came to an end a quarter of a mile below the camp. It was really a pleasant place, and we liked it better the longer we remained, the only drawback being the lack of an adjacent clear, cold spring, which necessitated carrying our drinking water from Horton's well. We prevailed on Al to bring a bucket of fresh water from the well as a sample, and after drinking nearly half of it, Ben and I shed our superficial raiment and went to work with a will to make a nest for the girls, as their comfort had of course to be looked after first. The largest tent, about 9 by 13 feet on the ground, was set up with uprights and ridge pole in the shade of the tree back from the water, and staked down with extra care. The rope running through eyelet holes near the apex, and sometimes taking the place of a ridge pole when ridge poles are scarce, was given a couple of turns around the rear upward and tied securely to the tree a few feet back, and the other end pulled taut and fastened to a stake driven firmly into the ground 15 or 20 feet in front. Two nights after, during a terrific storm, we had reason to feel that the labor expended on this tent had not been thrown away.

Al had procured a load of clean, soft oat straw from the big barn near the house, and we spread this in the tent three or four inches deep, and on top of it laid a rubber piano cover and a couple of rubber blankets, rubber side down, which covered the whole floor of the tent. On top of these the straw was spread evenly to a depth of two feet, and then Ben and I "rolled over" it till packed down to about a foot deep. A thin cotton mattress and a big buffalo robe were spread over all, pillows placed, quilts and blankets properly adjusted, "skeeter bar" hung, and there was a bed fit for the finest lady in the land, not elegant, but restful, and something that would, as Dick Mac might say, "accommodate itself to the 'synopsis' of the frame." A better plan is to place logs or boards at the head, foot and sides to keep the straw from spreading; but we were in a hurry to get the camp in shape, and Ben said, "It was good enough for the Jones family, fur the Joneses never was used to the very best o' everything nohow." And then Ben had a story to tell about the "Jones family," who had suddenly become rich through shoddy or oil, I forget which, and how the old woman and the daughters were always after pap Jones to put on airs and outdo their wealthy neighbors in the matter of fine horses, carriages and things of high tone; but the old man happened to be a plain body with good "hoss sense," who was content with the old things and ways he was used to, and generally squelched their aspirations in the bud with the above quotation. It served many a good turn in camp and afforded endless amusement to the girls, and the older heads too, when properly applied to any case in point.

The rattle of a wagon back on the road announced that somebody was coming, and directly here they came sailing across the field in a spring wagon, Jim, Dan, Mrs. Jim, Bob, and Miss Fanny, but Kit was nowhere to be seen. They explained that she was back on the road somewhere with the lumber wagon, looking after the baggage, assisted by a small boy who was driving the team, and half an hour later they drove up with the horses well jaded, and Kit looking as important as though the whole success of the trip depended on her keeping a vigilant eye on that baggage. On unloading we found our lunch basket had been left behind at the hotel at Sutton's Bay, containing some biscuits, sandwiches, hard-boiled eggs, a huge cake, etc., and a three quart jar of beet pickles that Kit had prepared with her own hands especially for the palate of "Uncle Dan." Dan said he felt a little "sour" over the mishap, but Bob sweetened him up with a hunk of maple sugar, about the first thing she discovered in her preliminary tour of inspection around the camp. (Bob had a wonderful faculty of finding out where the maple sugar was stored away.)

A week later the basket was sent over with the pickles in prime condition, but the biscuits and cake Ben said was "jest about right fur street pavin' purposes; good enough fur the Jones family, though, for the Joneses never was used to the very best of everything nohow." The afternoon was spent by the girls unpacking, arranging, cleaning up and getting rigged up in their fishing clothes, and "we boys" kept on fixing up the camp till everything was in order except the kitchen fly, Dan's tent and the flagstaff, which were left until next morning.

The evening was so lovely and the water below camp looked so inviting and fishy that somebody had to put a rod together and go a fishing, and I remember that when he got back supper was over and his share of two fat mallards that Al had been surreptitiously roasting in one of the stoves all afternoon, had been reduced to a few cold fragments and bones, with not enough left to hazard an opinion as to the original flavor, but we had fish for breakfast.

KINGFISHER.

[TO BE CONTINUED.]

[It should be explained that the nickname Bob belongs to old Ben's niece.]

THE WORCESTER FISH DAY.

THERE has been a good deal of unfavorable comment in the FOREST AND STREAM concerning "side hunts," as they are commonly called, and I am inclined to the opinion that these events, as they are frequently conducted, are open to adverse criticism. Our club has, however, held these contests ever since its formation, and it is only fair to say that as a rule they have been honorably conducted, and the game and fish dinners have been very enjoyable. It would probably be claiming too much to say that these contests have always been entirely free from crookedness, and this year when the meeting was held to make arrangements for "fish day," there were some members who were in favor of doing away with the old plan, invite the members to turn out and fish for the honors of the occasion, and allow each one to pay for his own dinner. But the desire to beat somebody was very strong with a majority of the members, and after a good deal of argument on both sides of the question it was voted to have the affair on the old plan, viz.: choose sides and the defeated side pay the bill, no trout less than six inches long to be counted, no private ponds to be fished, all fish to be taken in a lawful manner and by the members turning them in, and each member placed on his honor to adhere strictly to the rules.

The sides were captained by J. F. Davenport and Samuel Porter, and when the one hundred and thirty-five members were arrayed against each other nearly every one thought the sides very evenly balanced. Thursday, May 28, was fixed upon for the fish day, the dinner to occur on the evening of the 29th. Each of the captains, although pressed with business, spent much time in arranging with their men, and it was very evident that each was determined to use every ligitimate means to win. For several evenings previous to the event it was decidely amusing to drop into "Shattuck's" and notice the wise looks and animated manners of the members as they paired off in different parts of the room to talk matters over and listen to the aggravating remarks one member would make to another of the opposite side. Nearly, or possibly all the New England States were visited on this occasion, and the three biggest catches were made in New Hampshire, Rhode Island and on Cape Cod. It was a very hard day to fish for trout around home, the sky being clear and the water in the brooks quite low, still there were some very fair strings taken within easy drive of this city.

Thursday evening the tired and sunburnt fishermen met at headquarters to turn in their spoils and witness the count. "Uncle" Nathan Harrington presided at the scales and also judged those of doubtful length, some of which looked as if they had been "pulled" just a little to bring them to the required six inches. It was evident, early in the evening, that Capt. Davenport's side had won, his men having turned out more generally than Capt. Porter's. The display of fish was very fine, and a large audience of spectators were present, and watched the proceedings with the greatest interest. There were no pickerel or perch, but several fished for pouts with good success, ex-Mayor Pratt turning in a large bucket full all "alive and kicking." Ten o'clock was the time fixed for closing the count, and when that hour arrived, the secretary opened the telegrams which settled definitely what was already apparent, that Capt. Davenport had won. It should, however, be stated that more than twice the number fished on his side. The defeated party were good-natured, and there were no charges of fraud, and it was agreed on both sides that the affair had been very squarely conducted.

The dinner was served by Mr. John M. White, at the Tourtellotte House, Millbury, and too much cannot be said in its praise. Mr. White is a thorough sportsman and knows just how to entertain such a party, and gentlemen of large experience in such matters declared they had never seen it equalled for real excellence.

After the removal of the cloth the cigars were lighted and President White presented John R. Thayer, Esq., as master of ceremonies. His happy way of presenting the speakers proved him to be the right man in the right place. The speakers were all in their happiest mood and it was late when the last story was told. The night was perfect, the sky being clear with a full moon, and when the jolly party of seventy-five gentlemen took their carriages for a midnight drive of six miles it was conceded by all that the annual fish day and dinner of our club had been a perfect success.

E. SPRAGUE KNOWLES.

WORCESTER, MASS., June 5, 1885.

TORCHING FOR SMELTS.

ON the 21st of April the word went around that the "big smelts" had put in an appearance in the streams the evening before. This was enough to bring over a dozen men and boys to the banks of a certain well-known brook near the head of Long Pond. A part of these carried dip nets, and the most of the others bundles of pitch wood or jacks, although two or three, one of whom was the writer, carried no equipments of any kind, but went "merely to see the fun."

The evening was warm and very still, and a moon nearly at first quarter helped to prolong the lingering twilight. A fire had been kindled at some little distance from the stream, and as it had been agreed upon to keep away from the water until it was fully dark, all hands were grouped around the fire and were indulging in the usual gossip and jokes of such occasions. All at once some one asked, "Where's Amasa?" A glance through the intervening alder thicket brought the answer, for in that direction a figure could be dimly seen standing in the brook and busily plying a long-handled dip net. This was sufficient to send everybody to the water, and jacks were soon flaring at intervals along the banks and showing fish by thousands. And now began the excitement. Those who had nets worked them, and those who came "just to see the fun" forgot that this was their object, and waded into the ice cold water, catching the fish in their hands and throwing them ashore. Boys screamed and men shouted. The air as well as water was full of fish, and the sedate man, regardless of shoes and stockings, was knee-deep in the current, his hands grasping here and there, while the pockets of his overcoat and the crown of his hat were full of wriggling fishes. Two dozen fish, averaging nearly eleven inches in length, were captured with a single sweep of a dip net. The piles upon the bank were fast increasing to proportions far beyond a market stall, when a rational thought seemed to strike some of the cooler heads. "Let's stop this, boys; it's nothing short of murder, for we have all we can make any use of." For once men were reasonable, and boys, as usual, followed in their lead. The fish upon the bank were gathered up, and Rodger's Brook with its swarming waters was left to itself. But in a very short time over three hundred weight of a species of fish that can hardly be surpassed in table qualities were on their way to the village. The express the next morning showed plainly that distant friends had not been forgotten, while a large box placed in front of a store with a "help yourself" attached, was speedily relieved of its contents.

But this was only the work of one evening, and the next night the fish would be even more abundant. The word had spread, and long before dark everything for miles around that could be called a dip net was on its way. In place of a net one fellow carried a large corn popper with an extension lashed to its handle, and another had a tin pan with its bottom punched full of holes and nailed to a pole. Quaint as these implements were, both, it is said, did good service. Through the evening and well into the night dozens of jacks and torches sent their brilliant glare along the stream and into the surrounding forest. No doubt the excessive light frightened the fish and kept many back in the lake, but still hardly an individual went away without fish enough for any reasonable demands. On either this or the preceding night two men, one to carry a light and the other to handle the net, could have filled an ox cart. This last statement, of course, is on the supposition that the two men could have had the stream all to themselves. As it was, the large number of fishermen, especially on the second evening, rapidly scattered the fish and drove the most of them back into the deep water of the lake.

The above is only a partial account of what happened on a single stream, and we hear similar reports from nearly every tributary of the Sebago waters. At Bear Brook, in Harrison, but little more than a mile away, the run has been longer and probably even more fish have been taken.

It would be a work for the scientists to fully explain the different varieties of smelts and their habits. That they belong to the salmon family all agree, but in this particular locality there are three different varieties, commonly called the big, salt-water, and little smelts. The salt-water smelts, *Osmerus viridescens*, are common in all the rivers, creeks and streams along our coast. They are said to bear transferring well, even into waters entirely land-locked and fresh, but always with a diminution in size. The big smelts are like the salt-water variety in some respects, but are larger and darker colored. They are over ten inches in length, and average nearly a quarter of a pound in weight. Many occur much larger than this, and one was weighed here a few years ago that was caught through the ice with hook and line, and turned the scales at eleven ounces. A few are mentioned even larger, but they are rare, to say the least. The little smelts are but miniature representations of their larger relations, weighing less than half an ounce each. Some have thought that these little fellows were only the young of the larger variety, but this can hardly be true, as they seem to be fully developed and are ready to spawn as they descend the streams to their breeding grounds. They do not run up the streams until about a week later than the larger ones, and are much more abundant. They are also found in many localities where the big smelts do not occur. They vary somewhat in size in different places, and are said to be larger in Norway Lake, only twelve miles away, than they are here. In the last mentioned lake no big smelts are found. An idea of the abundance of these little smelts may be had from the fact that a few evenings since three fellows dipped a shorts sack full (about three bushels) in less than an hour. That this party of wholesale fish killers were under the influence of something stronger than brook water was proved by what followed, for tying up the mouth of the sack, they threw it into the stream and allowed it to drift with its contents out into the lake.

No person pretends to know anything about when these waters were stocked with smelts, but in all probability they

were here long before the country was settled. Although they have been ruthlessly wasted year after year, their numbers have been larger this season than at any time previous. With the exception of the ten or twelve days that they are spawning in the spring, no smelts are ever seen in the streams here. They are caught some through the ice in winter and in very deep water almost always. Those caught through the ice, or with hook and line at any time, are generally larger than those taken in the streams in breeding time. On the whole, smelts in these parts are something of a puzzle, and the people who see the most of them simply expect them to put in an appearance at about such a time, kill them by the thousands when they do come, and think no more about them until their next appearance. NORTH BRIDGTON.

NORTH BRIDGTON, Me.

TROUTING ON WILMURT LAKE.

ON June 4 we were on the cool waters of Wilmurt Lake, in the southern part of Hamilton county, N. Y.; taking the finest trout which I ever saw or tasted, and in numbers and size to satisfy any reasonable angler. The lake is some two miles long by about one mile wide and has been rigidly protected for the past fifteen years, only the guests of the owner, the Hon. O. B. Matteson, being allowed to fish in it.

The party which gathered there from different parts on this occasion was Hon. Warner Miller and sons, Hon. Titus Sheard, Mr. E. G. Blackford and wife, Mr. John D. Hewlett of Cold Spring Harbor and wife; Mr. Frank Lincoln, the popular comedian; Mr. John J. Flanagan, of the Utica *Observer* and President St. Lawrence Association; Mr. Amos J. Cummings, of the New York *Sun*; Mr. Morris, of the Utica *Herald;* and myself and wife. We breakfasted at the Bristol House, Remsen. As the landlord knew that we were coming and that we would get trout enough before we left the woods, he had sallied forth and killed a few hams, and, by the way, he is a dead shot on a ham, which with their eggs and some steak and trimmings made a foundation to travel on. We left Remsen at 9 and came in sight of the white tower of Matteson's Mountain Home about 1 P. M., where the owner and his brave little granddaughter, who has a record for rescuing travelers and for snowshoeing over the mountain, greeted us.

The creek, which runs in front of the Home, was too high to fish in, so Mr. Stimson, the business manager of the estate said, and no one tried it; but we consoled ourselves by a visit to the ice house to see the fish taken from Wilmurt Lake the day before, and which were soon to be cooked under direction of Mrs. Stimson. The party were mostly old trout fishers to whom the sight of a lot of s. b's were no novelty, but they all agreed that the fish were the finest ever shown. Even Mr. Blackford, who has trout every opening day from all parts, said the same, and without qualification pronounced them the finest trout he had ever seen, and at table the best he had ever tasted. Later on we examined the stomachs of these trout and found them packed with the larvæ of insects, among which I recognized species of *Ephemera chironomus*, neuroptera (dragon flies and small helgramites), no traces of fish being seen, and it is said that no fish are ever found in their stomachs.

Next morning some of the party started for the lake early, and by the time my companions had climbed the mountain to the lake which lies on its top, some 850 feet above the Home, and about two miles from it, we found that Speaker Sheard and friends, who had been an hour ahead, had twenty fine trout ready for our breakfast. I asked to see the fly on which they were taken, and was horrified to learn that it was with the barnyard hackle. Mr. Sheard excused his crime by saying that he had not been taught to fish with a fly, and that if it had not been for the grovelling worm we would have had no breakfast. The latter extenuating circumstance saved him, and he not only promised reformation, but took some lessons in casting, and by his success and the enthusiasm with which he denounced worm-fishing as a crime which he never would be guilty of again, he was not only pardoned, but admitted into full fellowship to the sublime degree of fly-fishers.

We fished Wilmurt Lake for three days and took over two hundred pounds of trout, which were eaten by ourselves and the ladies at the Home. The ladies came on the lake one day and took some fine fish. I had the pleasure of fishing alternately with Mr. Blackford, Mr. Hewlett and Senator Miller, and of seeing them enjoy the rises, strikes, captures and misses which fell to their lot, and occasionally took a little one by way of intermission, but saw no man who enjoyed it more than Mr. De Graaf, who is an expert, and whose health improved so much that he was loth to leave when the inexorable demands of business called him away on the third day and compelled him to leave the trout to the rest. The trout averaged above half a pound, the largest weighing two pounds, taken by Mr. Lincoln on his first trouting trip. As usual, a novice carried off the honors.

The flies most in use on Wilmurt are red and brown hackles, dressed on large hooks. Mrs. Stimson ties them very neatly, but I prefer to use small flies if possible, and had good success with the Montreal, cowdung, royal coachman, oak fly, and in the evening the white miller and evening dun. On this trip Mr. Matteson entertained the party and sent a relief expedition to the lodge every morning with the necessities of life, and we returned the pack basket full of trout.

The gentlemen slept at the lodge on the lake, and Mr. Lincoln, Mr. Cummings and Mr. Flanagan kept the party in good humor by droll stories which never exceeded the limit of good taste. As for me, it was sufficient to do good missionary work in having a daily class in fly-casting, and one of the pupils, a son of Senator Miller, who had no knowledge of it at beginning, cast the entire line on his reel, some sixty feet, on the third day, when his father, fearing that the boy would excel himself, broke up the school by taking the teacher out on the lake for a little quiet fishing.

The road from the Home up the mountain is a steep one, about as good a two-mile climb as most people want to put their blood in circulation, and a heavy rain had fallen on Friday before a few of us started in the evening. Being lighter rigged than the others, with corduroy knickerbockers and a pair of oil-tanned moccasins, I led the way with Mr. Miller's active boys at a rapid pace in order to get out of the woods before the dark should settle down, and in consequence we accumulated much mountain soil which we washed off before going to the house. Next morning some one placed the moccasins under the stove and cooked them; they were tender, though, but I could not eat them, I prefer them raw.

By Saturday the party had dwindled to seven, and we returned by way of Poland, taking the Herkimer, Newport and Poland Railroad to Herkimer, where we dined with the Senator and left his hospitable roof late in the evening for the train home, after one of the most enjoyable fishing trips which it has been my good fortune to enjoy. I hope to go there again before this month closes, even if the black fly is holding court there.

Speaking of the black fly, it happened that he only made himself obnoxious on one day when there was no wind on the lake, and forbore to annoy the ladies at the Home. I had provided myself with antidotes for the fly in the shape of the two remedies advertised in the FOREST AND STREAM, "Repellene" and Hind's black fly cream, and with my usual forethought had carefully left them down at the Home with Mrs. Mather. They might as well have been at Singapore, and when they massed their forces in column by batallion on the aforesaid day, I remarked to Mr. Hewlett, my companion in the boat, that I thought it cruel to apply lotions to deprive the poor little fly of his food by disgusting him with it, much as the wolverine renders meat unfit for food when he can't eat it, and that I was glad to see the tiny insect enjoy himself and was proud to contribute to his comfort, etc., when he pulled from his creel a box of "Repellene"—and we used it.

"Alas, for the rarity
Of Christian charity
Under the sun."

The flies had my sympathy no longer, and we laughed at their hunger. They were not yet numerous nor as bloodthirsty as they will be before they die, about July 1, but they were just getting up their appetites. Of course trout-fishing is best in June, and the angler risks the flies, and if he does not leave his lotions behind he may defy them. Tar and oil in conjunction is more or less efficacious, but it is disgusting stuff at best. Mr. Cummings had some of the Japanese headache cure, "mentholine," I think it is called, this tallow-candle-looking material, in a wooden box, and he found it also kept off flies to some extent, but required to be continually applied, because there was no body to it to hold the odor. I hope to see the festive fly again soon, for where he abounds the trout lives also, and if the trout will rise freely all the time the fly is out, I move to have the fly kept out all summer. FRED MATHER.

A REMARKABLE CATCH.

THE voracity of the pike has, since Buffon first wrote the nick-name, retained for it the appellation of "fresh-water shark," and many are the dire and terrible stories of its ostrich-like digestion related by the anglers who have greatly fished for this fish. Some time since the writer was in company with a select party of anglers of the loquacious and yarn-spinning order, and had let off one or two stories of more or less truthfulness concerning the funny ways of fishes and fishers, when one of the party—an Englishman, be it said—surprised us by saying, "I saw a pike once which, when it was opened, contained a sow and pigs!"

"Say," said one, after the assertion had fallen with a thud succeeded by a dead silence of some moments, "Did you come to this country to learn to be a fish liar?"

"It is a positive fact," was the answer. "This pike was the talk of the town near ——, where the lake which contained it was situated, and at last, after it had consumed the young ducks of the small farmers located near the water, the keeper determined to net it out. It weighed 38 pounds, and was in magnificent condition."

"But about that sow and pigs," we asked, in accents child-like and bland.

"The sow and pigs—oh! aye—the sow was a guinea sow and she was in pig. The keeper had found her dying and had mercifully killed her, and to avoid his children (with whom she was a great pet) seeing her lifeless body, he had cast it into the water. John Pike had gobbled her up. That's all. She weighed perhaps a pound and a half, pigs and all."

A guinea pig, as my readers may know, is a small rodent resembling a pig in shape, and often kept as a pet in Europe.
J. HARRINGTON KEENE.

MOSQUITOES AT BARNEGAT—Philadelphia, June 6.—Word came to the writer to-day from Barnegat that few, if any, fish of any kind were being taken by the baymen, excepting with nets. This is reliable information and may save disappointment on the part of parties who go down to fish this early, inveigled by false reports from professionals who have merely the leasing of their boats in view. Good fishing at Barnegat and Tuckerton bays need not be expected until the latter part of June or first of July, especially for weakfish. As a part of the pleasures connected with sea-fishing on the New Jersey coast, the season bids fair this summer to be one noted for its number of mosquitoes. A cloud of them resembling a coming storm was observed by a Cape May farmer making their way last week before a southerly breeze toward the upper New Jersey coast line. The insects appeared to have been bred on the eastern shore of Maryland from the direction in which they were coming. Returning sportsmen from the bay shores also state that during the week they were fairly driven from their blinds by the innumerable hordes of mosquitoes that had just arrived. We may depend upon it, we shall have a grand mosquito season. —HOMO.

MOSS FOR BAIT.—Memphis, Tenn.—A paragraph in your last number about shad fishing, calls to mind an incident. Two years ago, at Monroe, La., on the Ouachita River, there was an old wharf boat which had sunk and drifted under the railroad bridge. The roof of the boat was partly exposed above water, and a quantity of fine green aquatic moss had attached itself to the edge of the roof. Schools of fish were constantly playing about this moss. The bridge watchman tried hard to catch them with a baited hook, but no bait he used would induce them to bite. He accidently entangled his hook in the moss, some of which adhered to it, and it was soon seized by a fish, which he caught. After this he had only to hook up some of the moss for bait, when these fish took it quite readily, and a number of them were thus taken. These fish were nearly uniform in size, about a foot long, rather broad vertically, and very thin laterally. They were new to these waters, and were thought to be shad, mainly, I believe, because some shad fry had been previously planted by the Fish Commissioner in the headwaters of the Ouachita.—COAHOMA.

POLLACK IN NEW YORK BAY.—Pollack have made their appearance on the fishing grounds in the lower bay. It is the first time they ever came here, and anglers who have never seen them before are puzzled by them and delighted at the large catch. Their visit is attributed by old salts to the backward season and the cold water.

CHATEAUGAY LAKE, Adirondacks, June 2.—We expected an extra catch of salmon this spring trolling, and although they showed themselves in great numbers after minnows, they failed to take the spoons and baits very freely, six being the most caught in one day by one boat. We have taken some very fine trout, no large numbers, but very good size, weighing from a quarter to two pounds. Our best trouting here, for local reasons, is in July. We have shad here that weigh from one to seven pounds that take the fly from June 20 to July 10, we also chum for them, catch them with bait at the bottom. They afford fine sport, being called by the knowing ones equal to black bass for game qualities. Four or five years ago this lake was stocked with Rocky Mountain trout, and although (owing no doubt to their having different habits from the speckled trout) very few are caught with hook and line, the boys kill them with clubs in brooks. They weigh from two to four pounds. If any of your correspondents will tell through your paper how to catch them they will oblige—R. M. S.

ATHENS, Pa., June 1.—The bass fishing season opened today, and Mr. E. W. Davies and Mr. Frank Fuller took a fine number with the fly, the professor being the favorite. There is good prospects of fine bass fishing here this summer, as the late spring prevented the pot-fishermen doing any damage with seines, as in previous years. Yellow bass weighing eight and ten pounds have been speared before June 1, but the parties kept very quiet about it. This practice should be done away with, as many large bass are taken that way which would have given fine sport with the rod. Rock bass are also plentiful, and not much sport in catching them.—PARK.

CALIFORNIA TROUT IN THE ADIRONDACKS.—Meacham Lake, N. Y., May 26.—Our trout fishing began and has kept up first-rate. The score by guests of the house for seventeen days is 4,113, and all hands have been very particular to return the small ones if unhurt. One day last week Mr. Davis, of New York, caught a California trout eleven inches long, which must have been one of my first cross, three years of age. They were turned out near the house, and this one was caught four miles from the house, in the outlet. When cooked it was tasted by several persons, who pronounced it as good as the brook trout. This has been a question whether they would be worth anything as a table fish. My landlocked salmon have all gone from the boxes into the brook. I hope this season to see some of my three-year-olds.—A. R. FULLER.

HOW TO KEEP LAMPREYS.—*Editor Forest and Stream:* "Giarc" asks to be informed of the best method to keep lampreys. Have him make a box two feet wide by three feet long, and eighteen inches deep. Place in the box nine inches of the silt or mud in which lampreys are found. Bore holes in each end of the box two inches from the top. Have water run in one end of the box and out the other, so as to have a steady flow over the silt. Place the lampreys in the silt and they will not only keep well but will breed.—KEOUK.

TIM AND THE SEVEN PONDS thrust aside their icy coverings about ten days ago. Two parties of sportsmen from Boston with great expectations started for a trip to fill their creels from these waters last week. A party of eleven men with your correspondent "M," at their head, start to-morrow. The reports from the advance corps are good.—J. W. T. (June 3,1885).

WATSONTON, Pa.—The prospects for bass and Susquehanna salmon fishing in this section of country are good. Trout fishing in our mountain streams has not been as good as our expert fly-fishermen would like. In the early part of the season we had cold and snow to contend with, and now our summer showers break in on our dreams of pleasure.—J. R. H.

MOIRA, New York, June 2.—There has been good trout fishing in the streams and ponds south of here during the past three weeks, and many fine strings have been caught. —A.

Fishculture.

PROTECTING AND HATCHING THE SMELT.

[Read before the American Fisheries Society.]

BY FRED MATHER.

THE smelt, *Osmerus mordax* (Mitch.) Gill, is not common on Long Island, and but few streams contain it. In the spring of 1884 I attempted to get eggs from a stream at Locust Valley, on the north side of the island, in Queens county. The fish run up the streams at night to spawn, and on this one I spent one night. There were about twenty men with lights at different points within half a mile using what they called "grab-alls" or "snatchers." These were variously shaped contrivances, some round, some square, and others triangular, but averaging about five inches square, made of wire with frequent cross wires, to which were soldered fish hooks. Imagine a small grill made by bending a wire so as to form a square, each side of which is six inches, with five interior wires one inch apart soldered across it parallel to the handle, and on each of these wires, both interior ones and of the frame, are soldered fish hooks one inch apart, forty-nine hooks in all, and you have one of the most merciless fishing implements that devilish ingenuity has devised. This is the "grab-all," and I have seen many a poor smelt impaled on it when seeking a place to deposit its precious burden of eggs under cover of the night. I tried to buy one of these murderous implements to exhibit at the London Fisheries Exposition, but failed because the owners had use for them that night which I spent in their company. The men who used these implements were, to judge them from their own lips, the most depraved wretches which I ever met. I never fell into worse company as far as language goes.

At Locust Valley there was a scarcity of ripe fish and an absence of milt on the night referred to, and I arranged with Mr. John Cashow, Supervisor of the town, to have one of his men save me some fish taken in nets. The man did so, and picked out, as he told me, "all the nice large ones," which of course were females, for the female smelt is many times larger than her mate. In addition to this judicious selection, he left the fish, some two hundred in number, in a can under the horse-shed all night without attention, and the "nice large ones" were dead in the morning. The season was getting late, and I sent my foreman, Mr. Walters, over there with a fyke-net; but he was threatened with death in several abhorent forms by the men who handled the gentle grab-all if he persisted in taking a smelt in a fyke. He bought half a dozen fish and we tried to take and hatch the eggs, but failed. Milt was scarce and the eggs were not of the best.

The catch has been gradually decreasing for the past few

years, not only at Locust Valley, but on all Long Island streams, a result which may be attributed to over-fishing, and in my opinion there is need of legislation to protect this valuable little food fish Their habit of ascending streams at night and returning to salt water before day renders them liable to capture both ways, and is a habit that, so far as my knowledge extends, is shared by no other anadromous fish, and is not mentioned in any work that I have seen. The fish is well worth protection, for it is a favorite winter fish about New York. It will live in fresh water, and is said to have bred for some years in the lakes of Vermont, where it is reported that its edible qualities are generally unknown, and it is only used as a bait fish. The fish is found in fresh water in New Hampshire and in Sweden, also in Lake Champlain, but whether it remains in the lake all year or not I cannot say. If they do not remain there the fish go higher up in this case than in any that I know of. On the coasts of New York and New Jersey, twenty miles is about the limit of their ascent.

The first report of the Fish Commissioners of Maine, 1867, under a heading of "Fresh-Water Smelt," p. 25, says: "Smelts are scattered all over the State. It seems probable that we have more than one species. Whether either of them is identical with the salt-water smelt we cannot say, but the resemblance is very close. In several localities they attain a large size. Those of Harrison are said to exceed half a pound in weight, and those of Belgrade to measure fourteen inches in length." In the second report of the Maine Commission they say, p. 29: "It is said that at the mouth of a small stream, somewhere above Bay Bridge [on the Androscoggin], where smelts are accustomed to run in the spring to spawn, and where it has been the custom to dip for them, for several years a seine has been used, and tons of them were taken out when nearly worthless for food. Many were shipped to New York and commanded a price that hardly paid for transportation. This is an abuse which should be stopped. We think no smelts should be taken during the spawning season—say from April 1 to June 1. Enough can be taken in the fall and winter, when they are in good condition, and it is wonderful that they can stand the draft that is then made on their numbers." In their third report, 1869, the Commissioners say: "The impression has been quite general that the smelt fishery is overdone, and unless some radical measures are taken, it will soon fall into as great decay as have the salmon and alewife fisheries. * * * * The act 'to protect smelts in the waters of the Kennebec and Androscoggin rivers,' approved March 4, 1869, aims to lessen the catch by prohibiting the use of any implement but hook and line every alternate year, and at the same time allow the fish so ascend those rivers to the points where they were wont to be taken by hook and line. Undoubtedly the first mentioned object would be attained, but whether the latter would is uncertain. It is desirable to substitute for this some act of wider application, and consequently bearing more equally on all who are engaged in this fishery. I suggest whether a prohibition to take smelts except during December, January and February, by any other mode than hook and line, and perhaps dip-net, would not apply well to the whole State."

Under the laws of Maine for 1874, chap. 248, sec. 58, it was forbidden to fish for smelts in any other way than by hook and line or dip-net, between April 1 and Oct. 1. The State of Massachusetts passed a law, approved April 9, 1874, forbidding the offering for sale or having in possession any smelts between March 15 and June 1, and forbade their capture by any other means than hook and line at any time except in the counties of Bristol, Barnstable and Dukes. I am not aware that any smelts are taken with a hook and line within the waters of New York, nor do I know that there is any law protecting them at any season. The numbers caught are quite small, the market supply coming mainly from the Eastern States, yet in view of the fact that the fish was formerly plenty on Long Island and has been gradually decreasing by reason of continued capture at the spawning season, I believe that it would be to the interests of the people and of the fishermen to protect them from Feb. 20 to March 20.

A year passed after the first attempt to get eggs, and late in February, 1885, while looking through Fulton Market, New York, Mr. Blackford told me that smelts were coming in from the south side of Long Island. I sent Mr. Walters down to Brookhaven, a place on the eastern end of the Great South Bay, where the Carman's River, or, as formerly called, the Connecticut River, comes in. I will here digress to say that the Shinnecock Indians are reported to have had a tradition that this river was a continuation of the great river of that name, which, by means of some subterranean passage under Long Island Sound, breaks out again on the island. The Connecticut River of Long Island is about five miles long, and the smelt often run up it in great quantities, but are said not to go further than half a mile from its mouth. They begin to run in about the 15th of February, and the run lasts one month. They are taken with seines and gill-nets, and an average catch for one man is seventy-five per night.

On the 4th of March Mr. Walters returned with one hundred and twenty fish nearly ripe and a fair proportion of each sex. Eight had died on the journey from being caught in gill nets when so nearly ripe, five more died shortly after, and all were more or less injured. From one of the five dead fish I took 30,000 eggs after the fish had been dead fifteen minutes, using a live male. The eggs were taken on a bunch of coarse meadow-grass and suspended in a glass tank with a flow of water from a ⅛-inch cock, and in three days many were dead, and all died at a week old. On the 5th I repeated the experiment with a dying female. In five days three dead eggs showed, the sixth day 100 dead, seventh day one-fourth of the lot were dead. Up to the 17 h, the thirteenth day after taking, there was little change, and on the 20th the eggs were put in a box outside the hatchery in swift water, as they began to show fungus. March 26 about one-half were alive, and these were in b nches covered by dead eggs and fungus. All the outside eggs were dead, and I had little hopes of saving any. On April 3, the fish could be plainly seen in the lower eggs by removing the coating of dead eggs and fungus which had covered them for two weeks. The eggs were again placed in the aquarium and 2,000 hatched on April 11, and on the 16th 9,000 more hatched and the rest were bad. About one-third of the eggs hatched under conditions which seemed hopeless and under which it would be impossible to hatch the egg of a salmon or a trout. When the last ones hatched the mass of dead eggs was rotten and foul. The temperature ranged from 40 to 42 degrees Fahr. In taking the eggs the grass was laid in a milk pan and covered with water. The female was manipulated first, and as the eggs do not stick fast until some minutes after being taken, perhaps after impregnation takes place, they were distributed evenly over the grass with the tail of a fish.

Knowing nothing of smelt hatching, the literature of which is meagre, we determined to try several plans. On March 5 Mr. Walters took about 50,000 eggs from a weak female on stones the size of a man's fist, in water, and placed them outside the building in a covered waste trough which takes the water from the house to the ponds. The current was slow but the eggs washed off, refusing to stick in bunches, as on grass. The consequence was that the stones were covered with eggs only one layer deep. Three days after this they looked well, but in a week were all dead, though no fungus had formed. He tried again on March 8, by taking about 70,000 eggs by the dry method on tiles, letting them stand five minutes before adding water, and then placed them in one of the hatching troughs. On the 16th one-half were dead, and on the 24th they were covered with fungus. On April 7 there had been no change, the eggs underneath the fungus were bright and good, but he went away the next day and did not return until the 12th, when he found the trough empty. The other attendants pronounced them all dead and threw them away. Neither of us saw them on the last day, and we do not feel certain that they were dead, for our experience this year tells us that it requires an expert to judge of this. A mass of smelt eggs all rotten on the outside and covered with fungus half an inch long, should be given the benefit of all doubts, and be carefully examined before condemnation.

On March 9 we obtained 100 more fish which had been taken in seines. The first lot were so badly injured by gill-nets that they were covered with fungus in a few days. On the 12th we got 70,000 eggs on tiles and stones, taken in water, and placed them in a trough which receives the flow from nine hatching troughs, and is consequently carring a swift current. These eggs were evenly distributed over the tiles and stones several deep, and did not flow off as in previous cases. Not until March 22, eleven days after, did we see any dead eggs or fungus. At five days old we could see the formation of the embryo with a microscope, and at fifteen days the fish could be seen with the unassisted eye. At this time fungus had spread all over the outside eggs, but underneath there were but few dead ones. On April 6, when the eggs were twenty-six days old, they were placed in the glass tanks with a flow from above, and a siphon outlet, and four days later began hatching fast, and two days after we had 11,000 fish, all that we obtained, the temperature varying from 37 to 58 degrees, and the time thirty days. The water in all these experiments was pure spring water.

The last trial was in the McDonald hatching jars and was the best of all, producing 60,000 fish from 200,000 eggs. They were taken on March 21 by the dry method, let stand five minutes and added half a pint of water and kept in motion twenty minutes by tipping the pan from side to side and occasionally using the tail of a fish. The object of this was to keep the eggs from sticking together, so that they might be treated as free eggs. After this more water was added and the eggs allowed to rest for twenty minutes. They were then washed twice and placed in a McDonald jar. They were taken at 5:10 P. M., were all loose at 6:30 P. M., and at 7 P. M. next day many were stuck fast to the jar and the tubes. On March 30 those still loose were placed in another jar, and on April 2 a few dead ones were observed, while four days later the eggs grouped together in bunches which increased in size until on April 15 the bunches were of the size of walnuts and covered with fungus. On the 20th a few hatched and on the 21st all that were good came out. From this lot we got 50,000 fish in thirty days with a temperature varying from forty to sixty-five degrees.

The fish are the most minute of any that I have hatched and it troubled us to keep them. A strainer tube inclosing a siphon such as we use for whitefish, was entirely too large, for the fish passed through it with ease. After trying several things and having the aquarium overflow, and the fish go out into the trout ponds, we devised a spiral wire rolled on a stick of four inches diameter and covered with thin muslin; this kept the fish and allowed a small stream to flow out of the siphon which was inserted. I will here say that the lower end of such siphon should be placed in a jar of water in order that it does not suck dry. The difficulty with siphons as outlets is their tendency to empty faster than the inflow, and in consequence they empty themselves and then decline to start again. Placing their lower end in a fruit jar overcomes this failing; they will suck no lower than the top of the jar holding the lower end. I used this plan in the New York Aquarium in 1876, but do not claim to have originated it. Of the eggs remaining attached to the first jar and its tubes in a single layer, not one hatched, most of the fish came from eggs which were in masses surrounded by fungus. This year's experience upsets that of my eighteen previous years which taught me that the egg of a fish should be clean and free from fungus. I now except the smelt from the rule and think it possible that the embryo smelt must be protected from too much oxygen and good water by a coating of decayed eggs and fungus. Perhaps this is what gives the adult fish its peculiar cucumber odor.

On April 17 we turned out in the hole below the waste flume of the mill pond, near the hatchery, 20,000, and 30,000 in a small spring run in the meadow of Mr. W. E. Jones, opposite the hatchery, while later 50,000 escaped into our ponds by the overflow of the tanks which were ordered by Commissioner Blackford to be sent to Mr. R. W. Howe, Rigdewood, Long Island. The fish are so minute that muslin strainers were required, and an extra flow of water clogged them and the tanks overflowed, so that all our 100,000 fish will get into the harbor through three channels.

I have said that the literature of smelt hatching is meager. Mr. George Richards, of New Jersey, has experimented with these fish for several years and has hatched some, but has published nothing to guide others. A search of my library, beyond which I have no knowledge of what may have been done, reveals the following:

Bulletin of the United States Fish Commission, Vol. I., p. 428 (1881, Charles W. Harding, King's Lynn, England, writes Prof. Baird for information, wants to know if the English and American smelt are identical and if the eggs are hatched in fresh water, says: "Smelts spawn in this river (Ouse) from April to beginning of June, and I am anxious to know if it is possible to obtain the ova either from the fish direct, or from the spawning ground, and hatch it out in gauze trays or troughs, and whether fresh water will do, or is it necessary to have the water partly salt."

Norris, "American Fish Culture" (1868), p. 200. says that here and in England the smelt has been naturalized in fresh water lakes, "although an interference with their anadromous habits produces generations of smaller and, perhaps, less palatable fish." I note the caution with which the careful Norris, whom I am proud to call my old angling friend, and whose book gave me some hints when I had started in as a novice in fishculture nearly eighteen years ago, says "perhaps" the fish are less palatable. The adverb shows that while he did not know it to be so he recognized the fact that no fish which lives in fresh water is as good for the table as if it dwelt in the sea, a thing well known to all who live near salt water, but "Uncle Thad." gives us no hint as to smelt hatching.

Jerome Von Crowninshield Smith, M.D., the most absurd and ignorent writer on fish that I know of, says ("Natural History of the Fish of Massachusetts," 1833, p. 148): "An attempt has been made to acclimate the smelts in a fresh-water pond, but they have soon degenerated, becoming first emaciated, and disappeared, by degrees, till they probably all died." This is my experience with adult fish, although I have now about thirty male fish alive in fresh water, all the females having died.

Mr. Charles G. Atkins, "Report U. S. Fish Commission," 1879, p. 742, says: "November 6.—This forenoon early Mr. Munson found a great run of smelts at the spawning shed (above the dam). He said he could have dipped any number if they had not been so shy and quick. As it was he dipped 150 or 200, which I have preserved. They are mature, showing clearly spawn and milt through their transparent bellies. [These smelts are among the most diminutive of their genus, averaging in length but little more than two inches. They are found in several if not all the Schoodic Lakes. In one of the tributaries of the 'Upper Dobsey' Lake (Indian name, *Systadobsis-sis*) they are wont to spawn late in the month of February." See also a series of questions by Mr. Atkins, "Report U. S. Fish Commission," 1880, p. 44.

The best report on smelt hatching is contained in the report of a Commission of Fisheries of Maryland (Thomas B. Ferguson), 1878, pp. 41-94, by Prof. H. J. Rice. His field of operation was at the City of New Brunswick, about eight miles from the mouth of the Raritan River, N. J. Prof. Rice alludes, p. 44, to experiments of Mr. Atkins with the landlocked smelt which I do not find, but which was "not favorable to the handling of this species of adhesive spawn, and if I [he] mistake not, Mr. Atkins's conclusions were that it would not pay to handle it." Prof. Rice states that Mr. Atkins hatched some eggs which were exposed to the full force of running water, "in fact, that spawn only hatched which remained attached to grass, twigs, or other articles situated in a direct raceway, and where the water rushed along very furiously. The spawn seemed to require, at least for its artificial culture, a constant and furious change of water, differing, undoubtedly in this respect, very widely from its requirements when deposited by the fish upon its natural spawning grounds. The fish the Commission had to deal with, on the contrary, anadromous, and we had no rush of water in which to deposit the spawn."

Prof. Rice used the Ferguson hatching jars. He records the use of glass, untwisted rope-warp, gauze, etc., and says: "The greater portion of these dead eggs were upon the grass, rope, moss and twigs already mentioned, and the greater portion of fish came from those eggs which were taken on trays covered with gauze, and those eggs which were massed together in the bottom of the jars, in the strength of whatever current there was." He says, p. 52, "This fungus covering the eggs must have a very deleterious effect upon them, and I do not think it would be very wrong to ascribe to it the death of a goodly portion of the eggs." I read this some years ago and agreed to it because not only my own experience, but that of every other fishculturist agreed that fungus meant death to all fish eggs. My lessons this winter seem to prove that with the eggs of the smelt a rush of water or rather an excess of oxygen which is brought by it, means death, and the outside eggs meet it first and by the bulwark of their dead bodies those inside are preserved. I am aware that this is not only a new view to take of the development of a fish egg, but one that is liable to assault from many sides. Still, with only one season's experience, I launch it as my present belief, subject to change as the fugitive *Tempus* discloses new facts or brings forward new experiences. I have never feared to hold unpopular beliefs or to stand by what I thought to be right, and now only wish that the smelt had yielded more eggs, which might have been tried in all degrees of flow, from moderate to almost stagnant water. Certain it is that all the fish we hatched came from eggs protected from rapid change of water by a coating of dead eggs and fungus, which, by the time the interior eggs were hatched, was a most foul and filthy mass, really unfit for a visitor to look at, for he would not have believed that a fish could issue from it.

To complete this experience it will be necessary to say that Mr. Ricardo wished to try an experiment in transporting smelt eggs, and one morning brought to Mr. Blackford some twenty thousand eggs, taken on grass sewed on muslin stretched on a wire frame, and packed in moss. This lot was placed in a hatching trough in swift water the night after receiving, and when removed at about the time of hatching to a glass tank, some twenty fish came out, a result not encouraging to that mode of packing. He afterward sent me eighty thousand fry by express in a ten-gallon can, which was twelve hours on the way without attention, but they arrived dead. It is his belief, and I understand that it is shared by Prof. Rice, that the fry need no change. I am not prepared to accept this view, which if true is singular, for the fish hatch in swift brooks.

MR. LYMAN—The results of Mr. Mather's experiments regarding the protection of eggs against the action of the water, appear to me somewhat novel. Perhaps some gentleman would like to make some observations or relate experiments of a kindred nature which he may have conducted.

MR. H. J. RICE—In regard to the work of Mr. Atkins and myself it may be well to state that just before beginning operations at New Brunswick a letter was received from Mr. Atkins detailing briefly his method and amount of success in his work in Maine, and my work at New Brunswick, followed to a certain extent his experiments, modified very largely, of course, by the different conditions of our more southern locality. Some of his methods for gathering and holding the spawn I found to answer very well, but I misunderstood some of his writing and was under the impression that he had not been successful, but found out afterward in conversation with him that he had hatched out quite a large number of the eggs with which he was experimenting and he thought that his experiments, taken as a whole, should be considered as fairly satisfactory. As to my own experiments since 1876 and 1877, the result serves to show greater success in hatching smelt in comparatively stagnant water than in any other manner. The smelt appears to be a peculiar fish among fish, and is at present no longer considered as one of the *Salmonidæ*. Young smelt will live in the same water for nine days, and fishculturists will at once recognize the vast difference in this respect, between these minute embryos and those of some of the *Salmonidæ*, where a constant change of water is absolutely necessary. Again, the warmer the water the better smelt appear to thrive. If you take the smelt out of this bottle (pointing to a bottle of young smelt on the chairman's table) and put them in cold water, they will die. Place them near the stove and they will become more lively than ever. I do not know the limits of heat and cold which will respectively produce activity or death with these fish; but I do know that if water containing smelt be cooled to a temperature in which trout would enjoy themselves, the smelt would die. With regard to the effect of fungus upon the fish, I think that, while in some cases it proves fatal to them, yet in others, as Mr. Mather has suggested, it forms a protection for the fish which are inside of the bunch. Last year and also this season experiments have been in progress to ascertain the feasibility of hatching young smelt in comparatively stagnant water. So far this plan appears to be successful. Large numbers have been hatched out and with comparatively little trouble. This corresponds in a great degree with what Mr. Mather has said, and I am inclined to think that eventually we shall find that the less cold water we use, the larger will be the number of eggs hatched out. It may possibly be necessary to kill the fungus by the use of salt mush.

MR. LYMAN—I recollect in 1867 or 1868 trying to hatch some of the large variety called Belgrade smelt. I put them in running water, somewhat swift, in which I kept my trout eggs, but none of them hatched. The smelt is, of course, a very interesting fish, and is one of the first species by which the fact was demonstrated that quantity might be increased by good laws. As you will all recollect, some twenty years ago or rather more, in Massachusetts the smelt fishery had greatly declined. It was supposed to be due to the capture of the fish by means of nets stretched entirely across the brooks, which prevented the fish from ascending the stream. The law to which Mr. Mather has referred was passed on the recommendation of the Fishery Commissioners of Massachusetts. In two or three years the catch of fish was very greatly improved, so much so, that bays and streams which had been nearly depopulated, once more became filled with valuable fish. Ever since then, we have had a pretty good supply of smelts in our State. I was very much interested in the reference of Mr. Mather to Dr. J. C. Smith, as being the most ignorant man that had ever written about fish. It illustrates the theory that in order to succeed one should always be profoundly ignorant of the subject. He took up the matter of naming American fishes, and for this purpose he used the Latin names that corresponded to European fishes, which bore the same English names as did American fishes. In this way he often stumbled on the right nomenclature. At that time it was supposed that the same species of fish were not to be found on the two sides of the Atlantic. Since then, however, many of these species have been proved to be identical, so that Dr. Smith was one of the first persons accidentally to recognize a prominent scientific fact which has only been attained by years of hard study.

SHAD FOR ILLINOIS.—Springfield, Ill., June 5.—The 1,200,000 Potomac River shad provided for planting in Illinois rivers by the United States Fish Commission have all been distributed by Secretary Bartlett of the State Fish Commission. The shad were placed in the Illinois River, at Peoria, in the Rock River, at Rock Falls, and in the Kankakee River, at Kankakee.

PROF. S. F. BAIRD, U. S. Commissioner of Fish and Fisheries, and party left Washington on Monday last for Wood's Holl, Mass., where the summer investigations will be carried on as usual.

The Kennel.

FIXTURES.

BENCH SHOWS.

Sept. 22, 23, 24 and 25.—Dog Show of the Milwaukee Exposition Association. John D. Olcott, Superintendent, Milwaukee, Wis.

Oct. 27, 28 and 29.—Twelfth Dog Show of the Western Pennsylvania Poultry Society, Pittsburgh, Pa. C. B. Elben, Secretary.

FIELD TRIALS.

Nov. 16, 1885.—Seventh Annual Field Trials of the Eastern Field Trials Club, High Point, N. C. Entries for Derby close May 1. W. A. Coster, Secretary, Flatbush, L. I.

Dec. 7.—Seventh Annual Field Trials of the National Field Trials Club, Grand Junction, Tenn. Entries for Derby close April 1. B. M. Stephenson, La Grange, Tenn., Secretary.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2382, New York. Number of entries already printed **2386.**

"THE PITTSBURGH PIECE OF PAPER."

Editor Forest and Stream:

The fact that my time has been very fully occupied must be my apology for failing to acknowledge ere this that I had been guilty of an inaccuracy in asserting that Mr. Mason had never won a first prize with a pointer of his own breeding, and I now freely admit that I was wrong.

Mr. Mason did win one first prize at Birmingham with Viscount, a pointer bred by himself. He furthermore won one first prize at Belfast, Ireland, with Lady Godiva, a pointer bitch bred by himself.

His name does appear several times in the English Kennel Club Stud Book, and the first mention of it is in connection with the pointer bitch Pride; born 1871, bred by Mr. Lort, with which said Pride Mr. Mason won first prize at Belle Vue, Manchester, in 1872. The first volume of the E. K. C. S. B. embraces the years 1859 to 1874 inclusively, and to the uninitiated Mr. Mason's statement that his "name runs through the stud books from the first volume (1859 to 1874) down to 1881," would make it appear that he was a pointer breeder as early as the former date, but in reality it was, as the record shows, in 1872 that he first found himself famous as the owner, not the breeder, of a first prize winner, and it was then that his "name first appeared in any book." He will probably endeavor to show that I am in error, but I will wager that I am correct in stating that first prize at Birmingham with Viscount and first prize at Belfast with Lady Godiva, were the only first prizes mentioned in the E. K. C. S. B. that Mr. Mason ever won with pointers which he had himself bred; that is to say, that from 1872 to 1881 he succeeded in breeding one dog with which he won one first prize at Birmingham, and one with which he won one first prize at Belfast, a small show, where the total number of entries were 359 only.

One, or even two swallows do not make a summer, and the fact of having, in a period of nine years, bred two dogs which were qualified to win one first prize each, scarcely warrants a man in posing as a successful breeder and exhibitor, neither does it justify him in forcing himself upon the breeders and exhibitors of this country, either as a critic or an authority on any breed. Once more I quote: "Englishmen should at all times learn to be modest before they begin to spread their opinions broadcast. If they know sufficient and can write sufficiently well they can find plenty of employment in their own country, and by the time they become authorities their opinions will be quoted in foreign countries, but to commence in another country is an intolerable piece of egotism, etc."

Mr. Mason's vague attempt at denial of the facts connected with the proposed raffle of the bulldog Blister is so weak that comment is almost unnecessary. The real estate agent, who "one day found himself the owner of a billiard and wine room," is the veritable individual who was the proprietor of the identical old "Kennel" on Broadway, where Mr. Mason's notorious raffle came off in 1883, and he had merely moved to Eighth avenue to facilitate his busines, taking his sign "The Kennel" with him. Mr. Mason refuses to discuss either "tumble-down liquor or bar-tenders," whatever that may mean; but as most of his transactions have been in bar-rooms, which, from their publicity, are especially adapted to the getting up of raffles, I may be pardoned for again reverting to this objectionable feature.

Mr. Mason thanks me, and hugs the delusion to his breast, that I have, as he has heard, told people that he was "much the best judge in America." I don't know that I ever told any one precisely this, but I certainly was very much impressed by the many plausible stories of his doggy experience, with which he used formerly to entertain me, and I may have said even so much. My confidence, however, in his capabilities as a judge of dogs has been rudely shaken by more recent developments, notably by his claiming worthless dogs at catalogue prices, by some of his awards at the Washington show, 1883, and more particularly by the absurd fact of his competing with the mastiff Nevison against Bonivard for the special prize for best non-sporting dog at the New Haven show, 1884.

But, Mr. Editor, you will doubtless head this as you did my last infliction on your readers, "The Pittsburgh Piece of Paper," and Mr. Mason will accuse me of irrelevancy, so I must needs return to his letter of the 14th ult. As usual, he indulges in his unmanly sneer at me as the employe of the Westminster Kennel Club, and as it is plain that he does not know how to conduct a controversy in a temperate and gentlemanly manner, to say nothing of his inability to confine himself to the subject matter under discussion, but must offensively allude to the gentlemen by whom I have the good fortune to be employed, I am compelled, most reluctantly, to abandon a correspondence wherein I might have asked Mr. Mason some pertinent questions regarding some of his more recent transactions that have been, to say the least, peculiar. I might have asked who, when Mr. Mason in his pointer protest prated about the wrongful entry of the pointers Meteor and Vanity, was the owner of Princess Phœbus when she won first and special prizes at the New York show, May, 1884? How Mr. Mason arrived at the pedigree of the greyhound Friday Night? Who is the real—but hold up, I have resolved not to do this, and must unwillingly leave the subject.

I cannot, however, let this opportunity pass without sincerely condoling with him over the defeat of his poor little Napoleon at the late Philadelphia show. His disappointment and grief are so vividly depicted in your report that my sympathetic heart is touched. I never turned up poor little Nap's ears to "see if the under sides had the necessary markings!" No, I never did, neither did I turn up his tail nor look at the roof of his mouth. Poor Mason's poor little Napoleon. It was too bad. Dog shows become a farce exactly at the point where Mr. Mason's dogs fail to win first prizes, and, Mr. Editor, dog show reports are a farce when prejudiced and unprincipled exhibitors are allowed to mislead readers by writing criticisms on judging and puffing reports of their own dogs.

Now, the winning toy spaniel in the miscellaneous class at Philadelphia, to my mind, is better in skull, better in stop, in eye, body, legs and feet, coat and symmetry, and was in infinitely better condition than Napoleon; and the only points in which the latter excelled were in size—he is probably a pound or two less—and is a trifle, a mere trifle, shorter in face than the winner, and I am morally certain, from its formation, that poor little Nap's nose and the cruel mallet have been made more closely acquainted than the rules of Mr. Bergh's society would permit. The readers of your valuable paper, especially the admirers of the toy spaniel, will be immensely indebted to your able reporter and doubtless remember that the "toy spaniel should not resemble the Irish water spaniel," and will ever be mindful of the stupendous fact that "a toy dog is a little dog." JAS. MORTIMER.

NEW YORK, June 8.

THE MASTIFF TYPE.

Editor Forest and Stream:

The remarks on "Mastiff" are most apt and timely, and I rather think there will be little chance of getting up an argument on the subject. The drift of opinion seems to be entirely with him on the question of short face. As an illustration of how wild the craze has run in England, a noted authority there told me that Ilford Caution was the best dog in the late Crystal Palace show, solely on account of his head.

There is one more point that needs attention as well as short face. Wrinkle is a great ornament to a mastiff, adding greatly to the formidable, severe expression so desirable in a watch dog, but wrinkle can hardly be had without throatiness. The former is the result of a superabundance of skin, which must inevitably bring dewlap. The standards call for wrinkle, but deprecate dewlap. What dog was ever seen with one and not the other? The joke about the rage in mastiffs is that the standards all point to a dog good all over, and judged under the scale the crack English dogs are nowhere, because they all fail disastrously in some point; yet by force of a blind bowing to the wretched impostor, Dame Fashion, judging seems to have been reduced to a blind effort to guess her whim for the moment. Anybody can see how this is by taking up the standard of the O. E. Mastiff Club, and mentally comparing the later importations with it.

I suspect that I have got myself into a war on this matter by ridiculing the fashionable dogs of England in the *Stock Keeper*, and I suppose "Aper," Dr. Turner, Mr. Portier, Mr. Evans, etc., will be after me with a hot iron, that is if they think a Yankee worthy of their steel. However, I will have "Corsincon" and "Vale" on my side, if I mistake not, to say nothing of Col. Garnier's deliverance. W. WADE.

HULTON, Pa.

CHICAGO DOG SHOW.

[From a Special Correspondent.]

BAD weather and the proximity of Forepaugh's circus have interfered materially with the gate receipts up to date (June 4), but there is small prospect of a pecuniary loss with reasonably fair weather this afternoon and to-morrow (Friday). The display of dogs is a fair one, and the club and superintendent deserve praise for their efforts to do everything necessary for the success of the show. The D Battery Armory, where the show is being held, is admirably suited for the purpose in all respects save for the want of exercising room for the dogs, but this was remedied to the greatest possible extent by crowding the benches, which were of the old-fashioned pigeonhole order, into the smallest possible space, so that an immense ring, about 100 feet by 60, was left in the center of the hall, railed off to make a parade ground as well as a judging ring. The judges were: Major J. M. Taylor, setters, pointers and Chesapeakes; J. H. Whitman, of Chicago, for cocker spaniels, and J. F. Kirk, of Toronto, for the remaining classes. There are 325 entries present.

MASTIFFS—(MR. KIRK).

Homer, alone and well-shown, took the champion prize. He is a good small dog of correct type and proportions. Hildebert won first in open dogs. He is small in bone, narrow in front, with a fairly good head. Hector, second prize, except for his crooked pasterns, is not a bad puppy by any means. Major, hc., and Spartacus, c., made up the balance of a fair class. Rosalind is a fine characteristic bitch, great in substance and with a proper head. She seemed a little lame behind, and is a trifle undershot. Hebe is small but correct in type. Don, the winning puppy, is large of bone and promising for his age, three months.

ST. BERNARDS—(MR. KIRK).

No entries in champion class. In open class, dogs, there were nine entries. First prize withheld and second awarded to Duke, a young, leggy dog that looks well bred, and if better filled out will always catch a judge's eye. Turk, first prize winner at Cincinnati under Mr. Dalziel, only received an hc. card. Although he is a well-built and handsome dog, as a dog he is wanting in St. Bernard quality. He is badly colored and quite deficient in markings. The bitch class contained three entries. Here, again, first was withheld, and second awarded to Norna, a fine, large puppy of eleven months, weak in face and deficient in markings. Fido, hc., is a small bitch, nicely marked, without dew claws and light in bone. Cleo, a self-colored bitch, of indifferent type and bad temper, suckling puppies, got c. Two nice smooth-coated bitches, Bess and Girola, were shown, and placed in the order named. Bess carried off the specials for best St. Bernard. She is quite a good bitch, of correct type, well marked and of good size. Clio, first in puppies, is a litter sister of winner in open bitch class and very similar in appearace. Second was awarded to Captain Phillips's unnamed puppy, minus dew claws like his mother, Fido, but large in bone and promising if well reared. Vhc. was awarded to a nice pen of young pups belonging to Mr. Hanscom.

NEWFOUNDLANDS—(MR. KIRK).

Miro looks like a well-bred dog. He is on the small side, well built, good coat, though rather soft, weak in muzzle, white toe behind, good length, and carries a good tail. Nine entries in the open class. Pete, the winner, is a fine dog, of good size, a little rough and curly in coat, good in head and style. Mac, second, has dew claws, white breast and narrow head, carries his tail too gaily, otherwise a fine dog. Melai, hc., is a large dog, crooked in tail, enormous dew claws, white breast and pointed in face. The whole class was better than the average.

GREYHOUNDS—(MR. KIRK).

The Landseer Kennels took first in dogs with Snowflight, too large in size, but of excellent proportions and magnificent muscular development well placed. He moves very lightly for such a big dog. His skull is too full across the eyes, and he is a bit thick and short in jaw. Dash, second, is rather leggy, short in body, soft in muscle, and lacks bone. The bitches were a fine class. Beauty, the winner, is a lovely bitch of great quality and elegant outline. She was shown a little soft in flesh. It will always take a good one to beat her. Aunt Lucia, second, is a rangy bitch with good neck and shoulders, trifle slack in loins and shown too soft. Twilight, vhc., was shown in poor condition. She looked flat-sided, hollow in flank, and narrow in the back. If put in good shape she would show to good advantage. She is weak in front of the eye.

DEERHOUNDS—(MR. KIRK).

Oscar, an immense dog of very noble presence, won in the champion class. He is rather tall for his length, and is soft in coat and not in good condition. His breeding is of the best, and he was one of the features of the show. Indeed, Dr. Van Hummell's kennel, as it was arrayed to compete for the special offered for the best collection entered by one exhibitor, made a most striking and handsome display. The special prize was equally divided between Dr. Van Hummell and Mr. Donoghue of La Salle, Ill. In open dogs, first prize and special went to Bras, a grand dog with a splendid long head and good hard coat. Ears not very well carried. He should have been shown harder in flesh, and his feet and ankles might be improved. Duke, a bad-tempered brindle, of good size and style, and with an excellent coat, won second over Whisky, a son of his, but smaller and not so well put up. The bitch class contained four fine specimens. They were placed in the following order: Lady Dare, Cluthan, Lorna and Olga, and they are a grand lot.

GREAT DANES—(MR. KIRK).

Four entries; a nice class. Pluto took first; he is a large handsome, tiger-marked dog. He has a fair good head, badly cropped, grand legs and feet, short in back ribs, and a trifle weak in hocks. He has a bad mouth for a 20-months old pup, and looks older. Second went to Belle, a blue bitch of fair type; shortish in head and muzzle, forelegs and feet good, a little lame behind, recently had puppies. Nero was given hc. He is a large blue dog, short in head, heavy in muzzle and has a poor tail. He is rather weak behind and knuckles over in front. C. was given to Lady Jumbo, a small tiger-marked bitch with china eyes, feet bad, back hollow.

ENGLISH SETTERS—(MAJOR TAYLOR).

Paul Gladstone struck me as being an uncommonly well-built little dog, with grand legs and plenty of substance, ribs beautifully sprung, looks a trifle too short-coupled, carries a sickle tail and is bitchy-faced in front of the eye. Royal Ranger was looking very well. He is a little flat-ribbed and narrow across the loins, and his head wants better chiseling out below the eye; an excellent dog otherwise. Queen Alice, a lovely bitch, shown in grand shape; perhaps a shade long in the waist. She has a beatiful clean cut head and fine expression. Pendragon, a very good-looking young dog, not yet fully furnished. Laverack Chief's Clyde, rather weedy looking yet, weak in face. British Chief, an excellent young dog, good all over, but rather plain in face, wants better stop. Gladstone's Boy, big, heavy-boned dog, rather heavy in head, light in middle and trifle leggy. Stanton, small in bone, inclined to dish-facedness. Pride of Dixie, a good dog and very taking to the eye, but his tail is not just right. London (Coleman's) in poor condition, rather plain head, good forelegs, straight in stifles, ribs might be better sprung. Blue Phanton, a little throaty and thin over back. Blue Spark, a pretty bitch, weak at pasterns and small in bone, rather straight in head. Juno A.'s all black head rather spoils her expression, but her head is very well cut; beautiful body and legs; an elegant bitch. Would do with more coat and feather. Jo Jo Gladstone is a nice bitch. Lady Rock, washed-out color, excellent body and legs, bad ears and somewhat homely head, short of coat and feather; a bitch of fine proportions. Jessica, good bitch, light eye. Dot W., a heavily marked bitch with good legs; body rather narrow and weedy. O. K., wide chest, officer-toed, short head, poor ears. Spray, promising four months old pup, butterfly nose. Monty, a capital small bitch of good type, tail damaged.

GORDON SETTERS—(MAJOR TAYLOR).

Gem, a fine dog in good condition; Royal Duke, excellently shown and a good dog. Dan, except his tail which is too long for a Gordon, is a very good one. Gypsey Queen, small-boned and weedy; Pattie, a nice pup, small in bone. Except the above, the Gordons were indifferent.

IRISH SETTERS—(MAJOR TAYLOR).

Brush, shown too fat, but a really good specimen; Book, shown all right but his head, which is all wrong. It is heavy enough for a Gordon setter. Prince Rufus, Jerry and Dick are fair dogs. Zella Glenduff is a nice bitch, color not just right. Megora is better in color and very pretty. Lorraine is also quite a pretty bitch. Irish Boy and Irish Girl are a handsome pair of puppies, shown a little rough in coat. Larrie, Duke and Carlo are fair.

POINTERS—(MAJOR TAYLOR).

Prince, good type, little wide in front, trifle wedgy in front of eye. Lady Croxteth, good bitch, pretty head. Rapp, a nice young dog, stylish but not a flyer. Roy, a fine-headed pointer, butterfly nose, wide in front, hare feet. Tim, a grand, large dog of good quality, too long from back ribs to hips. Sweep, a handsome black, good style, looks well-bred. Black Bird, fat, good quality, quite a pretty bitch. Renie, very plain and short in head. Rickie and Minnie Faust are both rather common-looking in head. Luna Faust is a smart-looking little bitch, rather washed out as to color. Zola Faust has a thick head, and Lulu Faust has not a good ear. Flora is a fair bitch, dish-faced. Lady lacks depth of chest, otherwise a nice, small bitch. Rebel looks small and weedy. Rex has a black head which spoils his expression, and he has poor pasterns. Mr. Donner's unnamed pup by Meteor, is quite handsome, a trifle inclined to throatiness, but in other respects a remarkably promising youngster.

IRISH WATER SPANIELS—(MR. KIRK).

An uncommonly excellent lot. Twenty-three entries and nearly all good specimens. Count Bendigo, coat not in good shape, short of topknot, a very fine dog. King Slash, a hard nut to crack, first-class dog, excellent type, perfect in color, grand coat, typical in face, topknot, eyes and ears, of excellent size, not too large, he ought to improve for another year yet. Tim O'Connor has the faults of his sire, Dan O'Connor, as to coat and topknot; the former is too soft and open, the latter too wiggy; his ears are not very well set on, but his color and shape are good although he was shown too thin. Larry O'Connor, trifle undershot, faded in color, short and rather coarse in head, eye light. Mack, coat good but rather faded, ears well hung, shown in poor condition; looked long in back and thin across loins; if well shown this is quite a good Irish water spaniel. Juda, smart little bitch, soft in coat, good color, face, eyes, tail and legs. Irish Nell and Queenstown, given equal second, very much alike, same type, and that a good one, cobby built and strong, both faded in color. Young Swan, bad mouth, shelly in build, out of coat, small piece of white on chest. Irish Queen, good color, soft in coat, short in ear and face, a fair good bitch. Maggie B., bad topknot, long in tail, legs not right, but not a bad one. Little Sioux, good, useful looking bitch of fair type. Mollie, good coat and color, light eye, good type. Young Drake, coarse in tail, looked rather coarse and slouchy, but may furnish up into a good dog. Young Breda Girl, bad coat and badly shown.

CHESAPEAKE BAY DOGS—(MAJOR TAYLOR).

Your correspondent has hitherto, on examining the specimens representing the breed sent to the dog shows, concluded that they had been very carelessly bred and showed no common type or style. On the present occasion, however, I was pleased to see a really good class exhibited by Messrs. Poyneer and Kierstead. Gowrie, Monday and Maryland, all out of the same parents but different litters, are really good-looking dogs, strong and useful, and with an air and appearance of breeding about them. I hope to see this useful breed encouraged.

FIELD SPANIELS OVER 28 LBS.—(MR. WHITMAN).

Bob, Jr., won from Hornell Eva, who is short in back, high on leg and small of bone.

COCKER SPANIELS UNDER 28 LBS.—(MR. WHITMAN).

Hornell Jock, short in back, high on legs, ears set high, weak in muzzle, won from Black Silk, who was shown terribly curly in coat. Black Graf, shown in greatly improved

form from his appearance at Toronto, although somewhat heavily built and large-headed for a little one, was about as good as either; but I noticed this morning, after all the judging was over, that he had on a wrong tag, one belonging to a liver bitch which was wearing Graf's number, so it is likely the judge never saw Graf in his proper class. In bitches Juno W., also much improved from her Toronto form, easily won from Hornell Belle III., who is a fair little bitch, but toy-headed.

COCKER SPANIELS UNDER 23LBS.—(MR. WHITMAN).

To be judged by International Cocker Club standard. In these classes were a few dogs and bitches that were evidently intended for competition under the American Cocker Club standard, among others Obo, Jr., Woodland Queen and Pansy. Naturally these got no attention from the judge. Mr. Whitman, who is an honorable, fair-minded gentleman, will not, I am sure, imagine that I intend any reflection in the slightest degree on the *bona fides* of his awards, but I merely state my opinion that the three cockers just named were the only ones in those classes that had any appearance of ability to work.

BEAGLES—(MR. KIRK).

Dandy is a smart beagle a trifle wide in skull. Looks like a good working hound. Cornet, wide in front, open feet, weak in front of eye, tail docked, useful-looking stamp. Una, a very nice bitch, good legs and feet, might be better in muzzle. Bonnie, small and pretty, rather long-waisted, throaty. Solo, small on good legs, good body, straight tail. Scioto, bad legs and feet. Daisy, heavy in whelp, fair bitch, not just right in legs and feet.

DACHSHUNDE—(MR. KIRK).

Waldman II., a very good black and tan, excellent character, long, low, loose, level; looks a little out at elbows, but would not show himself to advantage. Prince, another good one, somewhat short in body. Gretchen, entered as five years old, and as having won prizes in 1876. A very excellent bitch, getting too fat and thick through skull; capital forelegs and feet, good skin. Waldine III., deficient in crook, short in head and muzzle, good long body and plenty of skin. Lina L., not yet developed; snipy and weak in front of eye, half crook, small in bone. Waltexie, black and tan, short in body, high on leg, harsh and tight in skin.

FOX-TERRIERS—(MR. KIRK).

No good ones. One fairly good pup.

COLLIES—(MR. KIRK).

Some very good ones. Gordon is a handsome son of Robin Adair, excellent in every way, will be heard of again. Prince Charlie, full of character, rather soft in coat, and gets his tail up in the ring. Kelp, good-looking dog, with rather helpless-looking ears. Boss, too full in eye and short in head. Lady VI., a very handsome bitch and well bred. Gyp, very close to the winner, a good bitch. Juno II., more than a fair collie. Two handsome pups out of Lady VI. had things all their own way in the puppy class.

BULL-TERRIERS—(MR. KIRK).

Young Bill was the only one with any show of good breeding, and his head was in a dreadful mess, from a recent accidental scrimmage, it was alleged.

BLACK AND TAN TERRIERS—(MR. KIRK).

Olivette is by no means what she should be to win in good company, and Tricksy, the six-months' puppy, may turn out a better one. Jack had no coat.

HARD-HAIRED SCOTCH TERRIERS—(MR. KIRK).

Heather, although a little weak in jaw and a trifle too long in coat, is an excellent type of the real terrier. Kirsty Glen will be another good one. Her ears are just a little large. Rosie and Scotland Yet, entered not for competition, are both good, especially Rosie, who just wants a little more bone and a little less ear to make her perfect.

DANDIE DINMONTS—(MR. KIRK).

Bonnie Briton and Pansy are both excellent, the former excelling in color and quality of coat, the latter in jaws and teeth, length and muscular development. She is a remarkably fine specimen, and was awarded the special for best dog or bitch in the show entered by a lady.

YORKSHIRE TERRIERS—(MR. KIRK).

A fairly good class. No cracks.

PUGS—(MR. KIRK).

Bo-Peep had a walk-over in champion class. Pudgie, last year's winner, a very good pug, although too large, beat Punch, the dog placed first at the October show in New York last year, but which was subsequently disqualified for having had his white breast stained. I understand Mr. Dalziel put this same dog over Bradford Ruby at New York this spring. Now, if this dog stood on straight legs in front, and was minus his white shirt-front, he would be an extraordinary good one, but those faults were just sufficient to allow Pudgie, who is undoubtedly a fine pug, to beat him. Another Punch got a vhc., a nice dog, but small in head and eye. Josephine, a puppy of considerable merit, beat Mollie, grossly fat and smutty in color.

TOY TERRIERS—(MR. KIRK).

This was one of the best classes at the show, and the competition was most exciting. I have never seen a finer lot, and the winners, Duke, Jr., and Topsey, are real beauties.

ITALIAN GREYHOUNDS—(MR. KIRK).

A young undeveloped pup, already too large, took second prize, first being withheld.

KING CHARLES AND BLENHEIM SPANIELS—(MR. KIRK).

The winning black and tan is a good one except as to his tail.

POODLES—(MR. KIRK).

Some fair dogs in this class.

MISCELLANEOUS—(MR. KIRK).

Three prizes were offered in this class and awarded as follows: English foxhound puppy Lady Stewart, a remarkably nice puppy of correct type. Leo, a large German mastiff, of rather dubious breeding I should think. Flora II., a fair English retriever, not shown in good coat. There was nothing else in the class worthy of consideration. * *

CHICAGO, Ill., June 4.

AWARDS.

MASTIFFS.—CHAMPION—1st, Winlawn Kennels' Homer.—OPEN—*Dogs:* 1st, Winlawn Kennels' Hildebert; 2d, Winlawn Kennels' Hector (Nevison—Venus). High com., A. J. Pierce's Major. Com., E. N. K. Talcott's Spartacus (Nero—Ruby). *Bitches:* 1st, Winlawn Kennels' Rosalind (Crown Prince—Lady Rowena); 2d, Winlawn Kennels' Hebe (Cato - Queen II.). *Puppies;* 2d, E. N. K. Talcott's Don (Spartacus—Beauty II.).

ST. BERNARDS.—ROUGH COATED—*Dogs:* 2d, Capt. A. Phillips's Duke (Monk—Nun). High com., H. Weinhardt's Turk. *Bitches:* 2d, Mohawk Kennels' Noma (Cantoni—Mora). High com., Capt. A. Phillips's Fido. Com., P. L. Hanscom's Cleo (Monk—Nun).—SMOOTH-COATED—1st, Dr. E. J. Bermingham's Bess (A.K.R. 1808); 2d, H. J. Clapham's Girola (Cæsar—Daphne II.). *Puppies:* 1st, Mohawk Kennels' Cleo (Cantoni—Mona); 2d, Capt. A. Phillips's unnamed (Duke—Fido.

NEWFOUNDLANDS.—CHAMPION—1st, S. S. McCuen's Miro.—OPEN—1st, J. F. Dagley's Pete (Barney—Vic); 2d, Paul Mondon's Mac. High com., Fritz Moritz's Melai.

GREYHOUNDS.—*Dogs:* 1st, Landseer Kennels' Snowflake (Son of Misterton—Bonnie Lass); 2d, C. Henning's Dash (Sport—Flora). *Bitches:* 1st, H. A. Warkentien's Beauty; 2d, Dr. G. I. Boyce's Aunt Lucia (Chief—Fleet). Very high com., Landseer Kennels' Twilight Quicksilver—Stratagem).

DEERHOUNDS.—CHAMPION—1st, Landseer Kennels' Oscar (Morni—Morna).—OPEN—*Dogs:* 1st, Landseer Kennels' Bras (Bruce—Maida); 2d, Landseer Kennels' Duke. *Bitches:* 1st, Landseer Kennels' Lady Dare (Oscar—Olga); 2d, Landseer Kennels' Cluthan (Oscar—Olga). Very high com., Landseer Kennels' Lorma I. (Wallace—Lorma). High com., Landseer Kennels' Olga (Bruce—Whitman's imported bitch).

GREAT DANES.—1st, P. Merker's Pluto (Rolf—Cora) 2d, J. W. Eliel's Belle (Lord—Nora). High com, E. Lewis's Nero. Com., H. Oelerich's Lady Jumbo.

ENGLISH SETTERS.—EXTRA CHAMPION—Memphis & Avent Kennels' Paul Gladstone (Gladstone—Lavalette).—CHAMPION—*Dog:* H. Hartley's Royal Ranger (Royal IV.—Novel). *Bitch:* H. Hartley's Queen Alice (Druid—Cubas).—OPEN—*Dogs:* 1st, Dr. G. G. Ware's Gladstone's Boy (Gladstone—Sue); 2d, W. Fisher, Jr.'s, Pride of Dixie (Gladstone—Countess Druid). Very high com., A. C. Waddell's British Chief (Laverack Chief—Queen Alice); C. F. Louden's Stanton (Gladstone—Frost). High com., Dalliba & Munhall's Pendragon (Count Noble—Floy). Com., Lake Shore Kennels' Coleman's London (Gladstone—Clip); T. Donoghue's Laverack Chief's Clyde (Laverack Chief—Gypsey); John Watson's Porter's Don (Rowe—Ella). *Bitches:* 1st, Memphis & Avent Kennels' Juno A. (Druid—Ruby). Very high com., T. Donoghue's Blue Spark (Hornet—Daisy). Com., T. Donoghue's Blue Phantom (Brussels—Jenny Lind); E. S. Bond's Jo-Jo Gladstone (Gladstone—Lavalette); Lake Shore Kennels' Dot W. (Fashion—Maud). PUPPIES—*Dogs;* 1st, J. S. Cusson's O. K. (Glen Rock—Queen); 2d, C. Harms's Spray (Christo—Purity). *Bitches:* 1st, A. C. Waddell's Monty (Penn—Monty I.).

GORDON SETTERS.—CHAMPION—Chas. R. Taylor's Gem (Dexter—Belle).—OPEN—*Dogs:* 1st, A. Ryerson's Dan (Shot—Slave; 2d, E. Maher's Royal Duke (Bob—Nell). *Bitches:* 1st, withheld; 2d, C. R. Taylor's Gypsey Queen (Grouse—Fanny). *Puppies:* 1st, J. Bardwell's Patti (Duke—Topsy).

IRISH SETTERS.—EXTRA CHAMPION—J. A. J. Sprague's Brush (Elcho—Rose).—OPEN—*Dogs:* 1st, withheld; 2d, J. DeKoven's Prince Rufus (Berkley—Flora). Very high com., G. W. Short's Book (Glencho—Mollie). High com., F. Silcox's Dick (Yatch—Mary Ann). Com., E. M. Hawley's Jerry (Mike—Nell). *Bitches:* 1st, H. E. Chubb's Zella Glenduff (Glencho—Daisy); 2d, J. A. J. Sprague's Megora (Elcho—Rose). Very high com., J. A. J. Sprague's Lorraine (Elcho—Noreen). *Puppies:* 1st and 2d, T. Donoghue's Irish Boy and Irish Girl (Brush—Queen). Very high com., F. B. Rice's Larry (Elcho—Noreen). High com. and com., S. Johnston's Duke and Carlo (Duke of Wellington—Martha).

POINTERS.—CHAMPION, ANY WEIGHT—*Dogs:* 1st, A. C. Waddell's Prince (Clipper—Dove). *Bitches:* 1st, B. F. Seitner's Lady Croxteth (Croxteth—Lass).—OPEN—*Dogs:* 1st, A. C. Waddell's Tim (Lake—Daun II.); 2d, A. C. Waddell's Sweep (King—Lulu). Very high com., B. F. Seitner's Rapp (Croxteth—Lass). *Bitches:* 1st, W. Werner's Luna Faust (Faust—Spottie Bow); 2d, B. F. Seitner's Lulu Faust (Faust—Ruby).—PUPPIES—*Dogs:* 1st, W. B. Stafford's Rebel (Prince—Nellie); 2d, R. H. McCormick's Rex (Roy—Rose). *Bitches:* 1st, J. O. Donner's unnamed (Meteor—Accident); 2d, W. A. Thompson's Queen Faust (Faust—Venus).

IRISH WATER SPANIELS.—EXTRA CHAMPION—1st, T. Donoghue's Count Bendigo (Whitman's Bob—Olcott's Bridget).—CHAMPION—1st, C.B. Rodes's King Slash (Pat—Tide).—OPEN—*Dogs:* 1st, H.D. Gardner's Tim O'Connor (Dan O'Connor—Queenstown); 2d, Excelsior I. W. S. Kennels' Mack (Mike—Juda). Very high com., H. D. Gardner's Larry O'Connor (Dan O'Connor—Molly McGuire). *Bitches:* 1st, Excelsior I. W. S. Kennels' Juda (Barney—Juda); equal 2d, H. D. Gardner's Irish Nell (Patsey—Jess), and Queenstown (Barney—Irish Nell). Very high com., C. Blaidsell's Little Sioux (Pat—Daisy). High com., R. W. Stafford's Irish Queen (Barney—Crickett); H. D. Gardner's Young Swan (Sam—Swan); Dr. E. L. Mayo's Maggie B. (Neptune—Daisy). *Puppies:* 1st, Excelsior I.W. Spaniel Club's Mollie (Barney—Catchily); 2d, H. D. Black and Tan Terriers—Best shown by lady, Miss M. Lucas's Tricksy.

Bull-terriers—Best, C. R. Taylor's Young Bill.

Fox-terriers—Best, W. Fenchert's Chip.

Dandie Dinmonts—Best, Mrs. J. H. Naylor's Pansy; also prize for best bitch, any breed, shown by lady.

Foxhounds—Best puppy, J. H. Naylor's Lady Stewart.

Italian Greyhounds—Best, J. L. Locke's St. Elmo.

Great Danes—Best, Paul Merker's Pluto.

Best Collection of Sporting Dogs—Divided between T. Donoghue and Dr. Van Hummell.

Collies—Best, Miss L. Downey's Gordan.

Irish Water Spaniels—Best, C. B. Rodes's King Slash.

Dachshunde—Best, W. Loeffler's Waldman II.

Chesapeake Bay Dogs—Best, G. E. Poyneer's Gowrie.

Beagles—Best, E. B. Weston's Una.

Yorkshire Terriers—Best, J. Parker's Charley.

QUALIFICATION FOR EASTERN FIELD TRIALS DERBY.—*Editor Forest and Stream:* "Free Lance" makes a very good argument for changing the rules for the puppy stakes, but if he had read his FOREST AND STREAM more carefully he would have noticed that the rules have been changed by the Eastern Field Trials Club. It could not be made to apply, however, to the Derby of this fall, as the event had already been advertised and many puppies were in training before the change was made. Next year, however, it goes into effect. In publishing the running rules of the Eastern Field Trials Club you failed to notice the amendments made in the table of merit to be found among instructions to judges. Instead of 25 to pace we give 30, and instead of 10 for retrieving we give 5. I inclose you a corrected copy of the rules and should be obliged if you would reprint the table in your next issue.—ELLIOT SMITH.

Pointing: Nose	25			
Staunchness	10	35		
Style in Pointing	5	40		
			75	
Ranging	15			
Pace	10	30		
Quartering	5		35	100
Style in Same	5			
Obedience and Disposition	10			
Backing	10	25		
Retrieving	5			

BREEDING FOR SEX.—Boston, June 5.—*Editor Forest and Stream:* My Chesapeake Bay bitch Ripple has just had a litter which I think is unusual enough to warrant putting on record, *i. e.*, nine puppies, all dogs. Two of them were either born dead or died shortly afterward, but the other seven were strong and healthy. As I did not want to have the bitch out of condition for this autumn's work I had one killed, leaving six for her to bring up. They are all true to color, a dark sedge brown, and as both sire and dam are thoroughly broken for retrieving on land and water, and have respectively for five and four seasons, given evidence of wonderful nose, endurance and intelligence, it almost seemed a pity to kill one of the litter. With regard to the question of breeding for sex, the bitch was served twice at about the middle of her heat. I do not believe that by any system of breeding we can have any influence whatsoever on the sex of the progeny. The proportion between the sexes will be found to be about the same, on the whole, whatever theories in breeding may be acted on.—F. B. GREENOUGH.

RED IRISH SETTERS AT PHILADELPHIA AND NEW YORK.—*Editor Forest and Stream:* In your report of the late Philadelphia dog show, you say that Elcho, Jr., with Bruce, competed for the special for best setter with one of his get, and was among the defeated ones. Permit a correction: Elcho, Jr., and Bruce are litter brothers, and Elcho, Jr., did not compete for any stock prize. Will Mr. Callender kindly state the breeding of the bitch that won third prize in open Irish class at the late New York dog show. I am of the opinion that the prize lists and marked catalogues are wrong.—WM. JARVIS.

WRONGLY ENTERED.—The entries (as printed in the catalogue) of a number of the prize winners at Chicago last week were not in conformity to the rule of the A. K. C. which says that the names of sire and dam must be given when these are known.

NEW JERSEY KENNEL CLUB.—A meeting of the executive committee of the New Jersey Kennel and Field Trial Club has been ordered for this evening, Thursday, June 11, at Taylor's Hotel, Jersey City.—A. P. VREDENBURGH, Sec'y.

KENNEL NOTES.

NOTICE TO CORRESPONDENTS.

Kennel notes are inserted in this column free of charge. To insure publication of notes, correspondents MUST GIVE the following particulars of *each animal:*

1. Color.
2. Breed.
3. Sex.
4. Age, or
5. Date of birth, or breeding or of death
6. Name and residence of owner, buyer or seller.
7. Sire, with his sire and dam.
8. Owner of sire.
9. Dam, with her sire and dam.
10. Owner of dam.

All names must be *plainly* written. Communication on one side of paper only, and signed with writer's name.

NAMES CLAIMED.

☞ *See instructions at head of this column.*

Maida. Black, white and tan setter bitch, 7½yrs. old (Dick—Clio), owned by Dr. S. Fleet Speir, Brooklyn, N. Y., from blood tumor.

Daisy Zulu. Liver cocker spaniel bitch (A.K.R. 381), owned by I. M. Dewey, New Haven, Conn., May 23.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

E. F. M., New Haven.—I wrote you some time since in regard to my St. Bernard pup, and received a very full and courteous reply, for which accept my thanks. From the time of my writing my pup grew rapidly worse. She seemed to have lost control of the muscles, and her body continually twitched and her head was shaking more or less all the time; her eyes looked very bad, and a stringy saliva ran from her mouth and hung in strings. I followed your instructions and she grew a little better for a few days, but for the past week I cannot see any improvement; her appetite is good and she is very fond of being noticed, she barks if anybody comes into the yard; but she can scarcely get on her feet, and when she does she staggers a good deal behind, her head shakes some and she drools some. Ans. Your dog should have a certain amount of stimulation. Give her a teaspoonful of sherry wine in every teacupful of milk or broth. The discharges should be kept free from eyes and nose, and inhalations given once or twice a day of carbolic acid solution or permanganate of potash in strength of one grain to the ounce of water, atomized, and administered by means of a large paper funnel held over the face, are very beneficial. Get the following prescription: Tincture of the chloride of iron, one-half an ounce; tincture of nux vomica, one-half an ounce; simple syrup, one ounce, and water enough to make four ounces. Give a teaspoonful of this four times daily. Keep the bowels free with laxative foods, liver and oatmeal are recommended, or an injection, if the above is not sufficient. Distemper is a self-limiting disease.

BEAGLE, Cleveland, O.—I have an English setter dog 6yrs. old. He has got deaf. I at first suspected canker, but could not see or smell anything until last Monday, when he happened to strike his head between the gate and post, which made him howl. The left ear commenced to discharge and smell. His appetite is not exactly what it should be; his hair seems rough and dry, otherwise he is lively enough but keeps shaking his head at intervals. What shall I do for him? Some time ago I gave to him santonine and purged him afterward with castor oil, thought he had worms on account of his slimy passages, but could see none. Passage not so bad now. I also have a cocker bitch that has no hair on her tail and very little on her rear, is continually sliding along on her rump; have dosed her for worms and have relieved her of some, otherwise lively as a cricket; has puppies now. What shall I do for her? Ans. Your English setter has canker. Cleanse the ears carefully with soft sponge and carbolic soap. After drying drop a few drops of the following carefully into the ears. Bromo-chlorali, 1dr.; tincture of opium, 1dr.; water, 6dr. Give your cocker bitch three drops of Fowler's solution of arsenic each day, and increase daily one drop up to ten drops and then drop to three and stop. This may be given in the food. Get some oxide of zinc ointment, and after washing the parts with carbolic soap, rub in the ointment morning and evening. The bitch has one form of mange.

C. B P., South Britain, Conn.—For some two or three months my dog has had the appearance of being very fleshy, though eating but little, and his coat has been rather rough, but he seemed in good spirits and lively as usual. About two weeks ago a swelling appeared under his throat, which I thought would break, but it went away without. He also had one on the front leg, but not as large as the other; the bowels were also very constipated, but I have got them in very good condition by the use of physic and injection. Four or five days ago he was taken with a cough and has coughed nearly constantly ever since, except when lying perfectly still, when it seems to get better. Ans. Your dog seems to have contracted asthma. As good treatment as any to be followed is to put the dog in a close small room and burn stramonium leaves twice daily. You may also give him two drops of dilute hydrocyanic acid in sweet water three times daily. Keep his bowels free and give him very little meat.

SUBSCRIBER, London.—About September last a spot commenced come on the muscle of my pointer's thigh, and was at the time treated for mange; the spot has enlarged to the circumference of four or five inches, with slight puffiness and an occasional discharge of matter. It does not appear sore to the touch, nor is it particularly sore looking, as the surface is dry, with several small holes through which matter discharges. The dog has plenty of exercise, and is apparently in good condition otherwise. Ans. Your dog has an ulcer. The cause seems obscure. If the bottom of the sore is yellow and unhealthy, poultice with flaxseed until it cleans up and becomes red. Then get some oil and of the balsam of Peru, and, after cleansing the sore with warm water and castile soap, apply night and morning. Allow free exit for the discharges.

NAVILLUS, Washington.—Having sent my setter puppy down the country a month ago, I saw her for the first time yesterday. The party keeping her says she had the distemper, and he gave her two doses of castor oil. She is well of distemper, but has what I would call the jerks, except that it is continuous when she is on her feet. I told him to give her one-half pint milk twice daily until I heard from you, with teaspoonful of whisky in each half pint. Ans. Your dog has chorea. Give her three drops of Fowler's solution of arsenic twice daily, and increase a drop daily up to six drops, and then come gradually down to two drops. Also get some pills of the valerianate of zinc made. Each pill to contain two grains, and give one morning and evening hidden in a piece of meat. Keep bowels free. Report result.

Rifle and Trap Shooting.

RANGE AND GALLERY.

INTER-CLUB CONTESTS.

Editor Forest and Stream:

In your last issue (June 4) the article on "Inter-Club Contest" has attracted my attention, and I fully indorse the plan set forth; but have one suggestion to offer, viz., that the terms of contests should not call for ten men, but should be made five or six. My reason is, that there are many clubs who could not shoot so many men with any chance of winning, while if a less number be allowed the number of teams that would enter the contests would be much larger. If a club have ten men, allow them to shoot them all in teams of five each or as many teams of five as they wish to enter.

This seems to me to be fair for all and shuts no one out of a chance to compete. CHAS. E. DWIGHT.

WHEELING, W. Va., June 5.

THE CALIBER .22.—An article by Ralph Greenwood recently appeared in FOREST AND STREAM, concerning the new cal. .22 made by the Massachusetts Arms Company, Chicopee Falls. I consider it to be the duty of every sportsman to make public the merits and demerits of any new invention offered to the craft. With this end in view, I carefully tested the new centerfire cartridge, 10-45 naked bullet, and found it to shoot fully 50 per cent. better than any rim-fire cartridge, at distances above 25yds. The admirers of the little .22 are truly indebted to this enterprising company for at last producing a cartridge as reliable as those of large caliber. An extra barrel is made for shooting rimfire cartridges for any who wish to do so, it being impossible to use both kinds in the same barrel, owing to the difference in diameter of the shells. Fair results, however, up to 25yds., may be obtained by using the centerfire shell with 3 grains powder and a TTT shot, cal. .22.—W. L. CARPENTER.

HAVERHILL, Mass., Rifle Club, June 6, a good day and fair attendance.

J Busfield	4456545444—44	R Griffin	4444554434—41
J Manners	4544444455—43	H Poor	4434454444—40
W Pillsbury	4454444454—42	E Bray	4454444433—40
W Worthen	4444544441—41	F Merrill	4434444444—38
J F Brown	5444444441—41		

SPRINGFIELD, Mass.—The Rod and Gun Rifle Club had a splendid day for rifle shooting June 6, at their Lake Lookout range. There was a very poor attendance. The club are looking out for a new range, the present one being too far from the city and the marksmen don't like to have to walk so far before and after shooting. The first class marksman's badge was won by L. De Clair, with the very fine score of 112; the second class marksman's badge was won by T. T. Cartwright, whose score of 102 points raises him to the rank of a first class marksman. E. T. Stephens and S. K. Hindley shot a rest match which was won by Stephens. The scores were:

L De Clair	10	10	10	12	11	12	12	12	12	11	—112
E T Stephens	11	10	9	12	11	11	12	8	10	11	—105

Cartwright had a walk over for the second class, his score was:

T T Cartwright	9	10	11	11	10	10	11	11	11	8	—102

The scores made in the rest match were:

E T Stephens	11	11	12	12	11	11	11	10	12	11	—113
S K Hindley	11	12	11	11	12	11	10	9	9	8	—104

The club has voted to challenge the Brattleboro (Vt.) Rifle Club to shoot a match here July 4.

JAMESTOWN, N. Y., June 1.—Inclosed find "maiden" effort of gun club on the American decimal target, 200yds. off-hand, wind very divers from 11 o'clock, but three men put in an appearance for shooting. The score stood:

"Pinacenter"	10	9	8	8	10	8	10	7	8	10	—88
Moore	7	3	9	6	8	5	8	9	7	8	—70
Kapple	9	6	7	6	9	6	2	4	0	5	—54

BOSTON, June 6.—The attendance at the Walnut Hill Range to-day was small, probably owing to the numerous spring meetings which have recently been held in New England. During the day a team match was shot between the gentlemen present. The scores are appended; at 200yds. in all cases:

Creedmoor Match.

J Halsey, B	4	5	5	4	4	4	4	5	5	5	—45
C W Hodgdon, A	2	5	4	5	2	4	4	5	4	4	—42
A White, A (mil.)	4	4	5	5	5	3	4	5	4	3	—42
J E Darmody, A (mil.)	4	3	4	4	4	4	3	5	5	4	—40

Decimal Match.

W Charles, A	6	8	9	9	10	9	9	7	10	8	—85
J B Fellows, A	10	7	8	9	8	8	8	9	10	3	8—80
R Reed, A	8	4	10	8	10	10	7	8	9	7	—76
D Davis, D	5	10	3	4	9	5	9	7	10	9	—71
J N Frye, D	0	10	2	10	9	10	5	7	5	9	—67
J P Bates, C	10	8	9	9	3	2	4	7	6	4	—62
H White, A (mil.)	4	2	2	2	8	8	10	10	6	9	—61

Rest Match.

S Wilder, A	9	10	8	9	10	10	10	9	10	10	—95
J Halsey, A	10	9	10	9	9	8	9	9	10	10	—93
S Winchester, A	9	10	10	9	8	8	8	9	9	10	—90
J Hurd, A	10	8	9	9	10	9	10	9	7	7	—87
W Kirkwood, A	10	10	6	8	9	7	7	9	9	10	—85

Capt. Charles's Team.

W Charles	6	8	9	9	10	9	9	7	10	8	—82
J Halsey	5	10	7	2	6	7	8	6	8	6	—65
J Francis	9	9	5	3	5	3	5	10	9	5	—62
White (mil.)	4	2	2	2	8	8	10	10	6	9	—61
J N Frye	7	5	8	4	9	4	6	4	6	0	—53
R Davis	6	3	3	2	6	2	9	7	5	6	—49—376

Capt. Fellows's Team.

J B Fellows	10	7	8	9	8	8	9	10	3	8	—80

C W Hodgdon	4	4	3	2	4	4	5	5	4	2	—37—350

HARTFORD, Conn., June 3.—The Franklin Rifle Club of Hartford gave a prize shoot to-day at Union Grove, which proved a success, as the attendance was large and some fine scores were made on the German target, off-hand, any rifle, out of a possible 75. The ties were decided by the best middle shot, and if those were the same, then the last shots were examined and the best was given the leading place. The following were the scores:

H Andrus	22	25	24	—71
J D Marks	25	23	23	—71
S J Lyons	22	24	24	—70
I DeClair	22	24	24	—70
W W Tucker	24	24	22	—70
F En le	25	23	24	—70
O B Hull	24	23	23	—70
E P Whitney	24	21	24	—69
E H Williams	23	22	23	—68
Wm Halm	23	23	20	66
D E Carl	22	21	23	—66
J A Wilson	24	21	21	—66
D Seymour	25	21	20	—66
E A Folsom	22	20	23	—65
H M Pope	22	25	17	—64
A H Merriman	22	23	19	—64
M W Bull	25	16	23	64

On the bullseye target, the shot to count a bullseye must strike within 1¼in. of the exact center.

CREEDMOOR, June 6.—The second champion marksman's class match of the season was shot to day at Creedmoor. The wind was rather uneven in the morning, but in the afternoon it steadied down and some fine scores were made. Lieut. E. I. Zalinski was the executive officer. The following were the winners:

J H La Croix	22	25	—47	
W A Robinson	21	23	—44	
J F Klein	23	21	—44	
F Van Lennep	20	23	—43	
T S Shepherd	22	22	—43	
G W Munson	22	21	—43	
C F Robbins	21	21	—42	
I A Bartley	18	23	—41	
H H Speis	21	19	—40	

In the *Army and Navy Journal* match T. J. Dolan and T. S. Shepherd each made 33.

OTTAWA, Ont., June 5.—The following have been selected for the Wimbledon team of 1885: Private Cook, Color Sergt Dalrymple, Capt. Corbin, Private Kimmerly, Staff Sergt. Asball, Assistant Surgeon McLaughlin, Corp. Hilton, Corp. Minor, Staff Sergt. Allan, Sergt. Carson, Staff Sergt. Wynne, Capt. Thomas, Lieut. Patterson, Lieut. Sherwood, Private King, Lieut. Jameson, Sergt. Short, Private Morris, Capt. McDonald and Lieut. Kirkpatrick. They will report for practice on the 22d inst. at Ottawa, and will sail on the Parisian on the 27th.

ST. LOUIS, May 31.—The Laclede Rifle Club to-day held its first outdoor shoot at their range at the Red House. The shooting was at 200yds., off-hand, and out of a possible 50. The following scores were made:

J E Hurt	4545445445—44	G Woesner	4453444544—40
M Gibbons	5554455454—46	A Bengel	3455554555—45
M Billmeyer	4454435544—43		

THOMASTON, Conn., June 6.—The weather conditions on Bridgemoor Range to-day were a bright light with a strong 3 o'clock wind:

G P North	11	11	10	12	12	12	8	11	9	10	—106
G A Lemmon	12	8	9	10	10	11	11	12	15	10	—105
I L Ailing	10	9	10	11	11	9	11	9	10	10	—100
W H Dunbar	7	11	11	10	11	11	11	10	9	8	—99

C F Williams	8	10	10	10	6	8	12	12	10	7	—93
F Carr	10	10	10	7	9	7	8	8	11	11	—91
A Fox	10	9	9	12	7	8	11	9	6	6	—87
G Smith	9	11	9	3	6	9	6	6	10	4	—73

THE TRAP.

Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

THE MASSACHUSETTS STATE GLASS-BALL ASSOCIATION will hold its sixth annual summer shooting tournament on the grounds of the Boston Gun Club, Wellington, Mass., June 17 and 18, matches open only to members of the association. The grounds of the Boston Gun Club will be open for practice on the 16th of June. All organized clubs throughout the State are invited to join the association immediately, that their members may be eligible to the matches of this tournament. Application for membership should be made to the secretary, of whom all information may be obtained. The annual meeting of the delegates to the State Association will be held at Young's Hotel, Boston, at 8 o'clock P. M., on June 17, 1885, to elect officers for the ensuing year.—CHAS. HARTWELL, Secretary (Worcester).

TRAP SCORES should be received at the FOREST AND STREAM office on Monday.

BROWN'S DRIVING PARK, L. I. May 27.—American rules, handicap rise. 50 birds a side: Allan Nichols, 30yds., 49; John Goodwin, 25yds. 46 (41st bird fell dead out of bounds. May 30.—Handicap rise, 80yds. boundary, H. & T. traps, Long Island Gun Club rules: Allan Nichols, 28yds., 48; Parke Griswold, 26yds., 45; Mr. VanDyke, 26yds., 44; Doctor Mitchell, 25yds., 41.—W. SANFORD, Referee.

HARTFORD, June 4.—Match of Colt Gun Club, 15 clay-pigeons, 18yds. rise, traps fourth notch:

E A Folsom	111101101111111	—13	
M Cook	110111010000100	— 7	
J Howe	101000100010110	— 6	
J Peard	010000000011010	— 4	
George Best	101011000100000	— 6	
W Johnson	010010001010010	— 6

J Alger	000100101110111	— 7	
A C Collins	110000010000010	— 4	

Ties of 8, 21yds. rise: E. O. Howe 1, J. Cook 0; ties of 7, M. Cook 0, J. Alger 1, M. White 0; ties of 6, J. Howe 1, George Best 0, W. Johnson 0, D. Strong 0. Shoots hereafter will be held every two weeks.

WASHINGTON HEIGHTS VS. ALGONQUIN.—New York, June 4.—Live pigeon match at the grounds of the Algonquin Club, Weehawken; teams of 10 men each, 25yds. rise, rules of the National Gun Association:

Washington Heights.		Algonquins.	
Fountain	1101111010 — 7	Dunseith	0100001111 — 5
Harrison	0111011001 — 6	Cromwell	1010101111 — 7
P Disbrow	1111100111 — 8	Hanna	1111111001 — 9
Moore	0000011101 — 4	Male	1100100110 — 5
Appiegate	1111101011 — 8	Lordly	0010100000 — 2
J H Terwilleger	0101110001 — 4	Brenner	1010100010 — 5
W W Disbrow	1111111111 — 10	Sauer	0110000100 — 3
C R Terwilleger	1101010111 — 7	Van Schaick	1011111111 — 9
Roe	1010010101 — 5	Greig	1111111100 — 8
Snook	1101101100 — 6—63	Radzinsky	0000011110 — 4—57

NORTH SIDE GUN CLUB.—Woodside, L. I., June 3.—Match at five birds, Eberhardt 28yds., score 1 and withdrew; the rest 25yds.:

Manning	0111111	—6	
Lyon	1001110	—4	
Winholz	1110111	—6	
Tapken	1111110	—6	
Barlow	1010110	—4	
Siemo	0011001	—3	
Helmken	0111111	—6	
Dr Franz	0101010	—3	
Terrett	0110001	—3	
Grau	1101001	—4	
Wahlen	1111110	—6	
Kroger	1101011	—5	
Evers	0101101	—4	
Dowling	1111111	—7	

Dowling did not compete for badge. Ties of 6, 22yds.: Manning, Winholz, Tapken and Wahlen 3 each; Helmken 2, Second tie, 29yds.: Manning, Winholz and Wahlen 3; Tapken 2. Third tie, 30yds.; Winholz 3, Manning and Wahlen 2.

FLATBUSH, L. I., June 4.—Match between two members of the Flatbush Rod and Gun Club and two members of the Seawanhaka Gun Club of the same place, at 12 clay-pigeons apiece, trap first notch, 18yds. rise:

Seawanhaka Gun Club.		Flatbush Rod and Gun Club.	
W S Smith	111100110111 — 9	H Balzer	111111111111 — 12
W A Coster	111110101111 — 10 — 19	A Ba zer	100100110111 — 7 — 19

Tie at 30yds.: Smith 2, Coster 3—5; H. Balzer 2, A. Balzer 1—3.—SEAWANHAKA.

SOUTHERN ILLINOIS ASSOCIATION.—The next tournament of our Association is to be held at this place. The following officers were elected for the ensuing year: President, C. A. Hobbs; First Vice-President, Joseph Victor; Second Vice-President, A. C. Reuss; Treasurer, Dan Oustott; Secretary, C. P. Richards; Board of Directors, J. J. Jennelle, J. M. Cline, George Crosby, A. C. Tanner and Dr. M. Hughes.—C. P. R.

IOWA STATE SPORTSMEN'S ASSOCIATION.—The convention and tournament will be held at the fair grounds, Atlantic, Ia., June 23, 24, 25 and 26. The association will offer breechloading guns, sportsmen's goods of every variety, and many valuable cash prizes. There will also be the team contest for the State trophy and the individual contest for the State badge, and also a contest for the championship badge of the Northwest, offered by the State Association. All matches open to the world, except three and five, Association rules to govern. Copies of rules can be had of the secretary at Atlantic.—S. W. W. STRAIGHT, Secretary.

EAST SAGINAW, Mich., May 30.—A combination match is now in preparation, in which the participants will be obliged to shoot glass balls, clay-pigeons, live pigeons, and a new half-ball gyro, the substances all being forced from a new trap made expressly and combined to answer for all kinds of shooting. Mr. Robert A. Haebner, the inventor of this trap, who has lately left New York city, says that this match will beyond any doubt be held in the State of Michigan some time about the first or early part of September, during which time he will receive entries for the match at East Saginaw, Mich.

BARCELONA SPORTSMEN.—Sunday afternoon is a season of gayety in this old Spanish city, and a writer in a recent letter tells of one method of getting so-called sport with a gun. As the Sabbath afternoon advances the correspondent says: "A general move is made to the San Pedro Martir, a hill, at the top of which overlooking the town and harbor and laid out with tea gardens, etc., is the great attraction 'il Tiro a los Polomas,' or pigeon shooting. Seated around a huge open area are fifty shooters, while in the middle is a large cage full of unlucky pigeons, which are released one by one and rapidly riddled by the numerous and eager shooters. Each 'sporteman' has a dog of some description, and when the pigeon falls a general rush is made by one pack to secure the quarry. At times the whole fifty shooter discharge their guns at one bird, making a terrific noise. Further down the hill another popular sport is carried on; that is 'El Tiro a los Pollos e Coneco,' the chicken and rabbit shoot. This is a strange sight. Hung by the legs from a string, head downward, about 120yds. from the shooters is a live rabbit, while about 20yds. on either side are two roosters suspended in the same position, and last of all, there is a white rabbit, which is tied by the leg and takes as much exercise as a tether, 10ft. long and a ball of bullets will warrant. Here in a reserved space, some 250ft. from her quarry, sit a varying number of ones, whose anxiety is to exterminate the pending victims, which eventually succumb, one by one, and are victoriously carried away by the lucky marksman. A hit is always visible from the kicks given by the unfortunate animal."

ST. LOUIS, Mo.—The State shooting tournament of the Missouri State Sportsmen's Association, opened on the 2d inst. at the Compton Avenue Park here and has been a very enjoyable affair in many respects. There was no end of sweepstake matches and almost every part of the State was represented. The majority of the shooting was at live birds and they were of a very good class. The main match of the meeting was the competition for the State medal in teams from clubs. This was shot on the 3d, and afforded opportunity for an unpleasant occurrence, from which, however, trap-shooting in general, and that of Missouri in particular, may reap some benefit. By the terms of the tournament shooters were restricted to the use of one ounce and a quarter of shot. The winners of the prize last year were the Keystone Club, of Cameron Mo., and they were in the lead on the 3d until the seventh round, when Mr. A. Caldwell of Norborne, but of the Keystone also, stepped up to the mark. As he did so, Mr. Riley, of the Kansas City Club, challenged his shell, and President L. D. Dozier at once demanded it of the shooter. It was taken from the breech and handed over to the judges, Messrs. S. C. Edgar and C. A. Penrose, who, on drawing the top wad, measured the contents by a Dixon's standard measure, No. 1,107, and thought at first that it was overloaded. The Keystones did no more shooting, and when they left the field it was generally understood that they would take no further part in the tournament. A committee, appointed by the judges, however, investigated the matter more thoroughly during the evening, and came to the conclusion that the Keystones were not so much in the wrong after all. They had been using an old style of the Dixon measure, but le used of late, but still a perfectly legitimate one. They had been using it for twelve years, and it was only a very little larger than the new measure of the same make.

The conditions of the State medal match made it open only to one team of four men from each club belonging to the State association. Five birds at each of 21, 23 and 31yds. rise; ties, three singles at 31. Entrance, $20 a team; $100 to go to the club last holding the medal, the balance to be divided in 40, 30, 20 and 10 per cent. The first money, 43.60, was divided between the Kansas City and the St. Louis Game and Fish Preserve Association; the Excelsiors of St. Louis took second money, $32.70; the Carondelet third, $21.80, and the fourth money, $10.30, was walked off with by the club from Mexico, Mo., which also annexed a special prize of $25, donated by the Kansas City Club. The score was as under. Fifteen birds at 21, 23 and 31yds.:

Kansas City.		St. Louis Central Gun Club.	
Fredericks	111111111111111	—15	
Underwood	111101101101111	—12

Higgins	0000000000100000001	— 5									

FOUNTAIN GUN CLUB, June 3.—At Prospect Park Fair grounds to-day some good shooting was done by the members of the Fountain Gun Club. The sport was under the club's rules, five traps, 5yds. apart, 80yds. boundary. The handicap was divided into classes—A, B and C. The member with the best record in his class at the end of the season receives a handsome trophy. Out of the twenty-eight birds shot at in Class A only three got away, and they were badly hit. A. Eddy won after tieing Dr. Wynn, both shooting at 30yds. In class B J. Rathjen, from the 26-yard mark, killed 7 straight birds and won, and Dr. S. P. Leveridge won in class C by killing 5 out of 7. He also won an extra sweep, killing three straight, and C. W. Wingert broke 3 clay-pigeons and won another sweep. The scores were as follows:

Class A.

A Eddy	1111111	—7	H McLoughlin.	1011111	—6
Dr Wynn	1111111	—7	C W Wingert	1101101	—5

Tie—Eddy, 110. Wynn, 100.

Class B.

J Rathjen	1111111	—7	P Sheridan	1101011	—5
R Grace	1111010	—5	L Duryea	1111000	—4

BROCKTON, Mass., June 2.—The Worcester Sportsmen's Club came here to-day to contest with the Brockton riflemen for the championship and the State team badge, now held by the home club. The high wind interfered somewhat with the shooting, but the scores made were creditable. Worcester won the badge by the narrow score of 81 to 80. The score:

Worcester Club.			Brockton Club.		
Holden	1111111111111111111	—19	Allen	1111111111111011110	—18

		81			80

WELLINGTON, June 6.—The fine weather of to-day drew a good attendance to the Malden Gun Club shoot. The events resulted as follows: 1. Five pigeons, Papanti and Evans divided first. 2. Three pairs pigeons, Shumway first. 3. Five pigeons, Snow first. 4. Five pigeons, Spencer and Snow first. 5. Seven pigeons, Parker and Snow divided first. 6. Five blackbirds, Spencer and Evans divided first. 7. Three pairs pigeons, Stanton first. 8. Seven pigeons, Pratt and Shumway divided first. 9. Medal match, 10 pigeons—Evens 10, Snow 9, Parker 8, Ellsworth 8, Stanton 7, Scott 7, Sanborn 7, Pratt 7, Spencer 7, Papanti 7, Shumway 6. 10. Ten pigeons, Evans first. 11. Five pigeons, Spencer first. 12. Three pairs pigeons, Henry first. 13. Five pigeons, Papanti and Evans divided first.

WASHINGTON HEIGHTS.—Regular monthly glass-ball shoot of the Washington Heights Gun Club, May 6:

Hunt	10 01111110111111111101—20
C R Terwilleger	10111101110110100101101—15

Fountain	11111111000100000010000001—11

GALVESTON, June 2.—The gun club's shoot, under the auspices of the Galveston Gun Club, closed to day. The attendance was light. The shoot to-day was for special prizes. In the special shoot this morning, Messrs. Pettitt, Dorsey, Fant, Garland and Leicht scored ten straight birds. On the shoot off Pettitt took first, Lucas second and Wimberly third money. In shoot No. 5, donation prizes, 10 single Peoria blackbirds, 15yds. rise, Downey 10 straight birds, took first prize, a Colts revolver, valued at $30; Fant, 9 birds, second, 500 loaded shells, $20; Pettitt, third, a box of tobacco, $15; Harris, fourth, a box of cigars, $9. The sixth shoot was also for special prizes. This closed the shoot, which was highly satisfactory to those engaged in it, but was not patronized as its merits deserved.

SAN FRANCISCO, May 27.—To-day James V. Coleman and Dr. Shorb met at Bird's Point, Alameda, to shoot a match for $100 a side, at 24 pigeons, 25yds. rise, Hurlingham rules. The match was a most exciting one from start to finish, both men being on their mettle and doing some excellent shooting on fast, strong birds, many of which had just enough life left in them to clear the 100-yard boundry before dropping dead. T. Ewing acted as judge and referee for the shooters, and also held the collaterals. Below are the scores:

Dr Shorb	110110101010111011110111—17
J V Coleman	100111111010110110111111—18

Taking into consideration the quality of the birds the scores were very good.

GALESVILLE, Wis., June 6. Following is the score made to-day by the Galesville Gun Club at 10 Peoria blackbirds, 18yds. rise: Ira S. Farrand 8, Aaron Kribs 8, Alfred Kellman 4, Charles Farrand 6, Charles Arens 7, W. S. Luce 7, G. S. Luce 6, G. T. Shrake 4, C. C. Smith 2, Joseph Jensen 3.

THE JERSEY CITY HEIGHTS GUN CLUB has made arrangements to hold a union shoot every Saturday afternoon, on their grounds at Marion, N. J., during the summer season. These shoots will be open to all members of clubs and their friends, in and around New York, and you are invited to attend. To make these shoots attractive, and to afford the best and most varied practice, Ligowsky clay-pigeons, American clay-birds, Knoxville and Peoria blackbirds and globe flights will be used in rotation. All sweepstakes will be at 7 or 10 birds, 50 cents entrance, birds 3 cents a piece. New rules of the National Gun Association to govern in all matches. Parties not wishing to participate in sweepstakes can shoot for birds only. The eastern officer of the National Gun Association, Mr. J. Von Lengerke, will be in attendance and receive propositions for membership, etc. Trains will leave foot of Cortlandt street, New York, to Marion, at 12:20 and 2:30 P. M. Horse cars every 5 minutes. Cartridges loaded on the grounds, 4 cents a piece.

NATIONAL GUN ASSOCIATION.—Eastern office care of Von Lengerke & Detmoid, 14 Murray street, New York.—The second Inter-State National Gun Association tournament will be held at Pastime Park, Philadelphia, Pa., July 1, 2, 3 and 4.

TRAP NOTES.—The tournament of the Iowa State Association for the protection of game and fish will be held at Atlantic, Iowa, June 23 to 25....The California Rifle Association will hold their spring meeting at Shell Mound on June 14; eight matches will be shot off.

SEND ten cents for handbook of The National Gun Association to F. C. Bishop, Secretary, Box 1292, Cincinnati, Ohio.

TESTIMONIALS:

"The very best and most complete rules."
April 3, 1885. (Signed) GANCHO.

"Very satisfactory comments from different parties."
April 13, 1885. (Signed) GLOAN.

"We want a national law and national officers to enforce it."
April 27, 1885. (Signed) ALMO.

"Fairly started and its future success depends entirely upon the manner in which the sportsmen throughout the country respond."
April 18, 1885. [*Adv.*] (signed) C. M. STARR.

Canoeing.

CANOEISTS *are invited to send us notes and full reports of cruises club meets, information about canoeable waters, and other communications of interest.*

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses with name, membership, signals, etc., of their clubs, and also notices in advance of meetings and races, and reports of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

June 24—Vesper Boat Club, Annual Regatta.
June 25—Jersey City Y. C., Regatta. Special Class for Canoes.
June 27—Eastern Meet, Merrimac River.
July 18, 28—Western Meet, Ballast Island, Lake Erie.
July 24 to Aug. 8—A. C. A. Meet, Grindstone Island.

AMERICAN CANOE ASSOCIATION.

SECRETARY—C. A. Neidé, Schuylerville, N. Y. Candidates for membership must forward their names, with $2 for initiation fee and first year's dues, to the secretary, who will present the names to the executive committee. Money should be sent by *registered letter* or money order.

THE BALLAST ISLAND MEET.

THE Cleveland C. C. have issued a handsomely-printed circular, entitled "Bulletin of the Canoe Meet at the Lake Erie Islands," which gives full information about the camp and races. The programme is as follows:

Saturday, July 18—Formation of camp.

Sunday, July 19—Church service, 10:30 A. M., in assembly room.

Monday, July 20—General cruising and visiting among canoers and yachtsmen. At 7:30 P. M., assembly for business in the assembly room; appoint committees to name next place of meeting, to report Friday evening.

Tuesday, July 21—Regattas of the yachts and pound boats. In the evening at 8 o'clock, grand ball at Wehrle's parlors.

Wednesday, July 22—Canoe races: Race No. 1—9:30 A. M. Class I., one mile; paddling. Race 2—10 A. M. Class III., one mile; paddling. Race 3—11 A. M. Class II., one-half mile; paddling. Race 4—1:30 P. M. Class B, three miles; sailing; no limit to ballast or rig. Race 5—3 P. M. Class A, three miles; sailing; no limit to ballast or rig. Race 6—4:30 P. M. Classes I and A, 300ft.; upset race.

Thursday, July 23—Canoe races: Race 7—9:30 A. M. Class C, three miles; sailing. Race 8—11:30 A. M. All classes, three miles; sail first mile, paddle second, sail third. Race 9—2 P. M. Class V., one mile; paddling. Race 10—2:30 P. M. Class IV., one mile; paddling. Race 11—3 P. M. All canoes, two miles; sailing; open to men who have never sailed a canoe before '85. Race 12—4 P. M. Hurry scurry race: run 100yds., swim to canoe and paddle 200yds. At 8 P. M., grand banquet at Beebe House.

Friday, July 24—Canoe races: Race 13—10 A. M. Sailing race for open canoes not over 18ft; three miles; decked canoes barred. Race 14—11:30 A. M. Paddling race for novices who have never paddled a canoe ten days previous to race; half mile. Race 15—2 P. M. Sailing race, any class, for prize winners of sailing races only; three miles. Race 16—3:30 P. M. Paddling race, any class, for prize winners of paddling races only; one mile. Race 17—4 P. M. Upset race, open to all. 8 P. M.—Meeting for presentation of prizes, to receive report of committee on next place of meeting, and to elect officers for the ensuing year. Saturday, Sunday, Monday and Tuesday, July 25, 26, 27 and 28, general cruising and visiting to neighboring islands.

Classifications, Paddling.—Class I. Length not over 16ft., and beam from 26 to 30in. Class II. Length not over 18ft., and beam not under 30in. Class III. Length not over 18ft., and beam not under 24 and not over 28in. Class IV. Open canoes, single or double-bladed paddles. Class V. Tandem canoes.

Sailing Classes.—Class A. Length not over 16ft. and beam not over 28in. Class B. Length not over 18ft., with a limit of 28½in. beam for that length. The beam may be increased ¾in. for each full 6in. of length decreased, Class C. Length to be not over 18ft. and any beam allowance of 6sec. per foot per mile, length measurement. Open or decked canoes.

The races will be held under the rules of the American Canoe Association, so far as they are applicable to certain changes in classification, etc. Tents will be pitched to the liking of each individual or club under direction of the superintendent of camp. Entries for the race must be made with the chairman of the Regatta Committee not later than half an hour before the time of starting. A branch post office will be established at headquarters. Mail should be addressed to care Canoe Camp, Ballast Island, via Put-in-Bay, Ohio. The camp will be under the continuous surveillance of a watchman. Invitations to the banquet will be restricted to yachtsmen and canoers and their immediate friends. The number of invitations will of necessity be limited, and it is especially requested that all who expect to attend will procure their invitations on or before noon of Wednesday. No one will be admitted without an invitation. Invitation to the banquet and tickets to both banquet and ball can be secured of L. C. Secretary or of the committee. Tickets to banquet, $1 each; tickets to ball (ladies free), $1 each. A caterer will provide regular meals for a small price for those who do not desire to cook in camp. Ballast Island can be reached from Sandusky, Detroit, Toledo and Cleveland by regular boats, which leave those cities every morning at 8 A. M. The ways of reaching those cities by railroad are too well known to be enumerated here. Camp supplies can be obtained at Put-in-Bay Island at moderate prices. Canoes will be carried free of cost on the steamers running from the above mentioned ports, provided the owners of said canoes are with them.

The committee have arranged everything for the convenience of the campers, and have done all possible to make the meet a success; the remainder rests with the canoeists and yachtsmen of the West. The opportunity to organize permanently is offered to them in a way that it never has been before, and may not be again for some years should they neglect it and not attend in sufficient numbers to make it a success. A little effort on the part of Western canoeists and yachtsmen will give such foundation to their respective sports as will place them on an entirely new basis, and add greatly to the rapidity of their growth. It is desirable that as many as possible shall attend this year as there is much business to be attended to, and the coöperation of all is needed, and it is also desirable that each shall give some consideration in advance to the subjects to be discussed, in order that they may be able to take an active part in the business. The question before the canoeists will probably be whether to unite with the present A. C. A. or to form an independent body, and each canoeist who will be present will do well to study carefully the constitution and rules of the Association, and to make himself familiar with them. There is always much detail about work of this kind, but much time may be saved if all are familiar with the work to be done and are prepared to take part in it. A generous programme of races has been provided, the only fault, we fear, being the number of events, as more or less delay is inevitable. We regret that the committee have formulated a new set of measurement rules instead of following those in use by the Association, both because we believe from experience at other meets that those given above will not prove satisfactory, and also because two systems must necessarily clash. Canoeists and builders generally have lately become well acquainted with the A. C. A. rules, and are building all canoes to fit them, while the terms Class 2 or 3 and Class A or B are well understood. The new classification given above applies the same terms to totally different classes and is sure to make confusion. The arrangement is only for this meet, however, and can be retained or rejected at the pleasure of those present, for the future. Canoeists who intend to be present will aid the committe by sending their names at once to G. Harry Gardner, Cleveland.

SAILING AND PADDLING RECORDS.

Editor Forest and Stream:

In reading over the different letters, which appeared about a year ago, in favor of giving record prizes, I find all the writers considered that it would result in ascertaining what was the best all-round canoe. In fact these words are used by the regatta committee in their report. No one seems to have taken the canoeist into consideration. A is a first-class sailor and has a good all-round canoe, but is physically unable to compete with B in paddling. B is as good a sailor, and his muscle enables him to paddle a canoe—not a good all-round craft—faster than A. His (B 's) score will always be, putting luck aside, the highest. The Mohican Club appear to recognize this view, for I notice they are going to give average prizes in sailing and paddling separately.

It should be understood in future that the men winning the record prizes are the best all-round canoeists, and that their canoes may or may not be the best all-round craft. I use the word canoeist advisedly, for it is not by any means likely that in future any member will be able to win a record without doing some sailing. The second prize was won last season by a man who did not sail in a single race. The canoes which won both prizes cannot be accepted as the best all round craft.

The report of the regatta committee for 1884 was a very instructive document, and will bear a lot of looking into. The final record is especially interesting. I have made an analysis of it with a view of ascertaining whether the record prizes really stimulated entries, as you, Mr. Editor, seem to think it did. I find first forty-three canoes recorded. As Johnson used three and Gould two, it leaves just forty canoes and canoeists to be taken into account. Of these seven paddled and did not sail, twenty-eight sailed and did not paddle, and only five both paddled and sailed. These five hailed: two from Peterboro, one Ottawa, one Toronto, and one Lake George. Can a better show be made this season?

BOREAS.

[It must always happen that the different personal qualifications of the men will greatly influence the results, but in the main a fair average will be reached, both of men and boats. To give separate prizes for sailing and paddling would effect just the end which it is desired to avoid, the development of special boats, to the exclusion of the all-around cruiser. It is, perhaps, best that the odds, if any, are in favor of the paddler, as the tendency of canoeing is toward larger and heavier boats, sacrificing portability and paddling qualities, and a slight premium to the paddler will tend to check this. The fact that the second prize was won by a man who did not sail has little bearing on the question, as the record was a new experiment, hardly known or understood by the majority, and but few entered the races merely to make a record. Besides this the "one man, one boat" rule will limit the paddling record this year. The second prize was awarded for a score of only thirty points, a very low one, and with men preparing to enter specially to make an average this year, we may expect much higher scores. The entries were very good last season compared with those of previous years, but it was no test of the value of the "average record" system as an incentive to enter. This year matters are very different, men are preparing to go in for points, whether they win any class prizes or not, and we anticipate full entries for all the events.]

CANOEING ON THE PACIFIC.

Editor Forest and Stream:

Since my last I have investigated the wind question. I find that this matter was very freely discussed in the columns of the FOREST AND STREAM a year or so ago. The U. S. signal service was enlisted in the observations, and compilations made from the records. They embrace a range of two years and a half, covering a sufficient period to show the averages, and the highest average winds occur generally in July. The summer winds blow at a speed of about twenty-four miles per hour, and from that up to thirty-two miles. The observations are taken at the Merchants' Exchange, California street, San Francisco, and it is probable that an increased speed prevails in places where the wind has a clean sweep, as in the Channel and San Pablo Bay. I quote from the volume containing the constitution and by laws of the S. F. Y. C. Our summer breezes start in gently in the morning, ranging perhaps seven to ten miles an hour; by 1 o'clock rising perceptibly, and from 2 to 5 P. M. blowing a young gale, then dies out to the gentlest of zephyrs. This season we have had unusual winds. Morn, noon and night it has puffed and blowed entirely regardless of precedent and of consequences. I am told, and I'd like you to verify it for me, that your average breezes are from seven to twelve miles an hour; just nice for canoeing, I should say.

I have ascertained that every yacht and sailboat brought here from the East has been compelled to cut the sail area down about one-third. I read the *American Canoeist* and the FOREST AND STREAM and your valuable book on "Canoe Building," and took in all the points on sails and gear, until I fancied I was competent to design a sail to just do for this latitude. Our winter winds are moderate in fair weather, and my new Mohican mainsail, about sixty square feet, was to send the canoe along in grand style. Since this season opened, however, as I have mentioned, the winds have been dancing along

"At a madcap galloping pace
Raising a commotion in every place."

I have a reef of about 9sq. ft., which is wound in a gasket close to the boom; then a reefing gear, which takes out about 15ft. more. I have not yet had any desire to spread the whole area, and since a little experience a few days ago have less curiosity than ever on that subject. My friends and neighbors have enjoyed it as a good joke, and why shouldn't you.

A friend, whom I will call Charley, accepted an invitation for a spin up the creek to East Oakland, there to take lunch, and then a nice sail homeward. On our way back we met a skiff, a common skiff, with a centerboard, lots of sail and a mariner who knew his biz at the helm. On a previous occasion this same party had caught me when I had three persons in my boat and at a disadvantage as regards trim, etc., and gave me a fine exhibition of his heels. "Now," said I, "Charley, here's a chance to get even," and we squared away for him. My boat has about 7in. of keel, and held on finely to windward. Well, it was a close race, but we managed to keep ahead. Meanwhile the wind had been gradually increasing, and I continually had to caution my comrade to "sit up to windward." One squall bit us pretty hard and I luffed. Charley slid down to the lee side, and in a moment the lee rail and combing went under the briny, and behold us scrambling on to the bottom of the craft and astride of the keel. Fortunately, a small boat was near to render assistance, and our competitor soon came up and also gave a helping hand. We soon got the masts and sails out, towed the boat ashore, emptied the water and renewed our journey home, wiser and wetter men.

The air-tight compartments proved a delusion. It is not very easy to investigate under the decks of a canoe after she is finished, and not until this mishap did I find that my safety valves would fill almost instantly. The round deck had simply warped away from the bulkhead, and a crevice about one-eighth of an inch across the top had let in the water. But for the presence of the rescuing boats, I fancy we soon should have sunk like a canoe, as the wood is heavy and not very buoyant. I am now in doubt whether I had not better cut out the bulkheads altogether. But there is no doubt that boating men should be cautioned against putting any confidence in such water-tight compartments as mine.

Two of the canoeists from the Oakland Club—Pixley and Cooper—in the Talisman and Undine, are cruising and camping down the Sacramento River. They took their canoes in the steamboat to the head of navigation, Marysville or Butte City, and are making their way down by easy stages. Letters from them give glowing accounts of the hunting and fishing, and of their enjoyment generally. Doubtless they will give you a full account of their trip on their return. They will travel some three or four hundred miles in the canoes before they get back to Oakland, and will have been absent about two weeks.

On the 17th of May, the first contest between the yawls of the Mosquito fleet for the champion pennant took place. The start was made at 2 o'clock. The course up Oakland Creek about a mile and a half, with a good strong breeze astern and a flood tide. The entries were: Yawl Ella, Capt. Montague; yawl Ripple, T. Evans; yawl Burrito, Capt. Moody; hunting skiff Mosquito, Wm. H. Byrnes; canoe Mystic, W. W. Blow; all keel boats except the Mosquito, which has a new Radix board. An even start was made. The Mystic soon gained the lead, and at the stake was about 150 yards in advance, her length giving her considerable advantage in running free. Turning the stake they had to face a strong tide and about an average summer wind. The Ripple was second around the stake, the Burrito third, the Mosquito and Ella going around nearly in company. From this point the Mosquito commenced to gain, sailing many points closer to the wind than any of the others, and fairly outsailed the fleet, coming in first, the Mystic being about 100ft. astern. The rest of the fleet was left some distance behind, the Burrito coming in third, the Ripple fourth and the Ella last. The Mosquito is entitled to fly the pennant until the 14th of June, when the next contest will take place.

The canoe race did not take place, only one of the fleet being ready, most of the others away cruising, etc. Doubtless at the next race they will all be on hand, as this race was greatly enjoyed by the participants, and they are all likely to brace up and make strong efforts to catch that Mosquito. MOSQUITO.

[The average velocity of the wind as given at the U. S. Signal Service Station, N. Y., is about 8.5 miles per hour in January, and 6 to 8 miles in July. The highest average is in October, November and December, when it reaches 12 to 14 miles.]

THE ROYAL C. C.

THE first match of the season, at Hendon, was sailed on Saturday last, but, unfortunately, was spoiled by the wind dying away to a calm at the end of the second round. The match was of considerable interest, in that of the six competitors four were new canoes, and the other two were both celebrated craft, viz., Pearl No. 6, and Nautilus (now called Gladys), the winner of last year's challenge cup. Of the new craft two were untried, Mr. Church's and Mr. Leech's sailing their maiden race. The Pearl of 1885 and the Nautilus of 1885 were also new, and practically sailing their maiden race, in that the one race that they have been in on the Thames was a mere drift in a light air. Mr. Leech's and Mr. Church's canoes are full-sized powerful craft, with very heavy center plates and large sails. The old Pearl and Gladys are also full size, and of the heavy-weight class, whereas the new Pearl and Nautilus are of light weight for second class, though of first class size. The start was a flying one, and a heavy black looking squall coming up the lake just before the "gun" gave promise of a heavy wetting, which, however, did not result. Nautilus, between the guns, pulled down her first reef for the squall; Pearl 6, with Tredwen, Jr., aboard, took good position for the line, but did not go for it before the gun; Nautilus, on the other hand, was rammed down full speed for the line, reached along it for a couple of seconds, and then, with the gun, luffed across with a clear lead of some thirty yards to windward of the next canoe. They all carried balance lug mainsails, but mizzens were of the fancy breed, including "rollers," "Nautilus rig," sprits and lugs. The first mark was rounded after a beat-out from the start to the headland and a reach in to the buoy. Nautilus had here increased her lead to about double her start gain, Pearl 6 was sailing well, and got away from the others. The heavier, the new Pearl and Gladys, being all together, for some time pegged steadily down to windward to the western buoy. The wind softened down, and Nautilus, which had run half up the lake by the time the others got to the west buoy, was brought aback by a change of wind, and then stood over, apparently for no reason, to the northwest shore, but soon filled off on that shore with a light N. W. breeze, with which she completed first round about one-third of a mile ahead of the others. Pearl, 1885, worked up into the front of her companions, and seemed to go better in the light breeze; but there was little chance, bar flukes, of her getting on terms with Nautilus, who was successfully catspaw hunting all over the lake.

The wind, after waking up again for a few minutes, died off nearly to a calm, but as far as could be judged it was never quite dead with the leader, as she always seemed moving by the land, and her flag was on the flutter. During the second round Messrs. Church, Leeds, Tredwen, Jr., and Knowles gave up, but new Pearl kept on to the end, Nautilus finished second round (the two rounds four miles in all, having taken three and a half hours to sail), and waited about near the raft while the officer in charge of the match was deciding whether to postpone the match or shorten the course; Pearl arrived within some two hundred yards of the buoy eighteen minutes after Nautilus had rounded. The match was then stopped and ordered to be resailed, Considering the sailing of the first round, and that the second round was successfully completed, however slowly, there is no doubt that a fair sailing match took place; and, putting the squall sailing of the first half round out of the question, the performance was certainly a test of speed in light weather, and success was dependent to a considerable extent on the careful working for, and taking advantage of, the shifts of wind.

For the light weather part so far, considering the Thames race at Easter, Pearl and Nautilus are quits; but the manner in which Nautilus turned to windward while the wind lasted debars attributing her lead entirely to flukes. Of the new heavies little can be said till they have been seen in a good blow, but then they have Gladys and No. 6. Pearl to tackle in addition to the two new light-weights. On the whole, some rare good sailing should result.—*London Field, May 9.*

A CRUISE ON THE UPPER MISSISSIPPI.

MR. WILLIS D. MAIER, of Fort Wayne, Ind., made a cruise of two weeks last month in company with his little daughter Bertha, Dr. G. A. Ross, and Mr. Chas. McLain, in three canoes, Idlewild, Terrapin and Lotusflower. Going by rail to Clinton, Ia., on May 5, they launched at 2 P. M. on May 6, and started down the river against a strong head wind, increasing to a gale, while the weather was quite cold. The next two days were spent in camp, while the gale blew steadily with rain on the night of the 8th. At noon next day they launched and started down stream in rough water and with head winds, reaching Moline, Ill., at 7 P. M., where the canoes were stored in the house of the Moline Boat Club, and the party went to a hotel. Next morning the weather was unchanged, but the cruise was resumed. The chief incident of the day was the swamping of the Idlewild on the shore by the swells of a steamer.

On May 11 the weather was very hot; a start was made at 7:30 and Muscatine was reached at 11 A. M. That night the canoeists slept in their boats, as the banks were low and marshy. On the 12th, 39 miles were made in very hot weather with no wind, Burlington, Ia., being reached at 6:20 P. M.

On May 13 two of the party left to return by steamer, Mr. Maier and his daughter also taking a steamer for Louisiana, Mo., 100 miles below, which place they left on May 15, still having head winds and rough water, with rain, camping opposite Hamburg, Ill. Next day was spent between low clay banks on both sides of the river, while the wind and sea made any progress very difficult. It was only after much trouble that the crew landed for dinner, starting again at 1:50 P. M. and reaching Cape St. Gris at 8 P. M., after a hard pull in the rain. Next day, in spite of rain and wind, forty miles were covered in less than seven hours, and camp was made at Clifton, Ill., at 8 P. M. The river had proved so discouraging, with rough seas, low, marshy banks, unfitted for camping, and long stretches of mud where no landing was possible, that the canoeists determined to abandon the cruise, their conclusion being that with time and in the proper season a pleasant cruise could be had, but with the winds and weather encountered, the Mississippi was not a pleasant river. On May 18 they reached Alton, and stored the canoe to be shipped home. In spite of the severe weather and many hardships, the little girl enjoyed the cruise and was greatly benefitted in health by it.

BROCKVILLE C. C. RACES.—The Brockville C. C. have arranged a series of races to take place every two weeks for canoes and skiffs, open to club members only, and sailed under A. C. A. rules. Prizes will be given at the end of the season for the highest average. The canoes are all class B, and the skiffs are limited to 48in. beam. The annual meeting of the B. C. C. was held on the evening of Monday, June 1. The following are the officers for the ensuing year: Commodore, Neil McLean; Mate, Geo. G. Lafayette; Secretary-Treasurer, Allan Turner; Executive Committee, Commodore, Mate, Secretary-Treasurer, I. I. Belle and Francis M. Turner. The club is in good condition this year, having about thirty active members, nearly all of whom are owners of canoes.—EMILY.

HARRISBURG C. C.—A camp-fire was held at Harrisburg, Pa., recently, and a canoe club organized with fifteen members. The following officers were elected: Commodore Chas. Snyder; Vice-Commodore, John Small; Secretary-Treasurer, Frank Newby. Great interest has been awakened here, and many canoes are being built. There is also talk of forming a new club. About July we expect to make a two-weeks' cruise up the Susquehanna as far as Northumberland.

HARTFORD C. C.—Com. Jones visited us last week and reports that the club are now in their new house, with which they are much pleased. They are in a very prosperous condition, and expect a good season. Many of the members are using boats from 33 to 36in. wide and outside of the A. C. A. limits, but races will be provided for them this season.

DESERONTO C. C.—On June 3 a race was sailed for the silver cup offered by Com. Rathbun, over a triangular course of 1½ miles. The entries were Alpha, Ripple, Star, Lou, Topsy and Wych. The wind was very light throughout. Wych took the lead and held it, winning easily, and the cup was presented to her owner, Mr. E. Walter Rathbun.

A NEW CLEAT.—We have received from Mr. J. H. Rushton a sample of a new canoe cleat made by him. It is in one piece, screwed to the deck, but the lower sides are so shaped as to jam the line as in a rocker cleat, while they are less costly than the latter. The cleat is low and out of the way of the hands in paddling.

Yachting.

FIXTURES.

June 11—Brooklyn Y. C., Annual Regatta.
June 11—New York Y. C., Regatta.
June 13—Boston Y. C., First Club Race.
June 13—S. C. Y. C., Annual Regatta.
June 13—Winthrop Y. C., Sweep-takes Race.
June 13—Toronto Sailing Club Race.
June 16—Harlem Y. C., Annual Regatta, Oak Point.
June 17—Quincy Y. C., Review.
June 17—East River Y. C., Annual Regatta.
June 17—Peatucket Y. C.
June 17—Dorchester Y. C., Open Regatta.
June 18—New Haven Y. C., Annual Regatta.
June 20—South Boston Y. C., Annual Regatta.
June 20—Boston Y. C., Second Club Race.
June 20—Hull Y. C., Pennant Matches.
June 21—Quaker City Y. C., Review and Harbor Cruise.
June 25—Jersey City Y. C., Annual Regatta.
June 25—Oswego Y. C., Ladies' Day.
June 27—Brooklyn Y. C., Opening Regatta.
June 27—Toronto Sailing Club Race.
June 30—Eastern Y. C., Annual Regatta.
July 3, 4 and 5—Quaker City Y. C., Corinthian Cruise and Regatta.
July 3—Knickerbocker Y. C., Annual Cruise.
July 3—Quincy Y. C., First Championship Race.
July 3-13—Newark Y. C., Annual Cruise.
July 3—S. C. Y. C., Squadron Cruise.
July 4—Carolina Y. C., Regatta.
July 4—Larchmont Y. C., Annual Regatta.
July 4—Toronto Sailing Club Race.
July 4—Toledo Y. C., Second Club Regatta.
July 4-11—Pentucket Y. C., Annual Cruise.
July 8—Beverly Y. C., Nahant, First Championship Regatta.
July 11—Hull Y. C., Cruise.
July 16—Boston Y. C., Third Club Race.
July 16—Cleveland Y. R. A., Annual Regatta.
July 16-17-18—American Y. C., Cruise and Races.
July 17—Cleveland Y. R. A., Cruise to Ballast Island.
July 18-28—Camp at Ballast Island.
July 18—Hull Y. C., Club Race.
July 25—Hull Y. C., Ladies' Day.
July 25—Pentucket Y. C., Club Race.
July 25—Beverly Y. C., Marblehead, Second Championship Regatta.
July 28—Toledo Y. C., Annual Regatta.
July 30—L. Y. R. A., Cruise to Niagara.
July 31—Quincy Y. C., Second Club Race.
Aug. 1—Hull Y. C., Club Race.
Aug. 2—Quaker City Y. C., River and Harbor Cruise.

YACHT BUILDING ALONG THE JERSEY COAST.

SAMUEL P. CRANMER, builder, of West Creek, Ocean county, has just launched the following cat-rigged yachts: The Insie, N. H. Bishop, of Tom's River, N. J. Length of keel, 20ft.; beam, 9ft; draft, 15in. For A. Parker, of Atlantic City, N. J., a fine yacht, 24×11ft., 20in draft. For Jervis Rider, of Tuckerton, N. J., a yacht, 29×10ft., 18in. draft. For Capt. John Holmes, of Waretown, N. J., a yacht 28×9ft. and 2ft. draft. All centerboards.

Yacht building in Ocean county has increased rapidly within a few years at Tom's River and West Creek, while the sneakbox is slowly but surely approaching a great degree of perfection for a small single-hander. John D. Gifford, of Tom's River, Ocean county, has just completed a 14ft. by 52in. sneakbox for N. H. Bishop, which has been fitted with a balance-batten-lug sail, and is now being thoroughly tested. A colonel in the British army has just ordered a duplicate of Mr. Bishop's boat for Halifax waters. The novelty in Mr. Gifford's improved sneakbox is the utilizing of the rower's seat for a portable galley, in which an East Lake coal-oil stove is snugly packed. An improved 13ft. "box" and a 12ft. gunning sneakbox are now being built for an old member of the American Canoe Association.

TOM'S RIVER, Ocean county, N. J., June 3. SKIPPER.

LARCHMONT Y. C. PENNANT REGATTA.

THE annual spring pennant regatta of the Larchmont Y. C. which was sailed on June 6 was, to a great extent, spoiled by a lack of wind, the race being largely a drift. The prizes were a pennant in each class, and Commodore Munroe's prize of $50 to the winning yacht in any class in which four yachts entered. The courses sailed were No. 2 for classes 1 and 2, and No. 3 for the others, the former being from the anchorage to Execution Light, thence to Matinecock buoy, thence to Captain's Island and home past Execution, 22 miles; the latter being the same except that from Matinecock the yachts turned a mark off Constable Point, and thence to Execution and home, 17 miles.

The entries were:

Class 1—Athlon, Dr. J. C. Barron; Eclipse, E. H. Wales; Fanita, Geo. J. Gould. Class 2—Schemer, Augustin Monroe; Hope, F. B. Benedict. Class 3—Nora; Brenda, F. M. Scott; Gannet, Oliver Adams; Dart, A. H. Buck. Class 5—Lorna, E. J O'Gorman. Class 6—Cruiser, A. B. Alley; Fairy, F. E. Towle. Class 8—Skibbereen.

The wind had fallen by 11 A. M., and when the signal was given at 11:27 it was still very light. Kites were set and all were for a beat to Execution, the order being Hope, Dart, Gannet, Skibbereen, Athlon, Nora, Fanita, Schemer, Brenda, Eclipse, Lorna, Cruiser and Fairy.

The times at Execution were: Cruiser 1:56:00, Fanita 1:07:30, Lorna 1:18:22, Eclipse 1:19:58, Schemer 1:20:23; the others were not timed.

The yachts ran for Matinecock with booms square off to port, turning as follows: Fanita 2:38:45, Eclipse 3:12:20, Fairy 3:13:26, Cruiser 3:16:18, Hope 3:45:00, Schemer 3:46:50. Here the boats parted company, some making for Captain's Island and others for Constable Point. Fanita jibed about the mark at 4:10:00, Eclipse 4:28:50. By this time the breeze had freshened a little and coming from the south. No time was taken at Execution but the final times were as follows:

CLASS 1.

	Start.	Finish.	Elapsed.	Corrected.
Athlon	11 32 06	.. .. ..	.. .. ..	.. .. ..
Eclipse	11 31 26	6 51 00	7 15 34	7 15 34
Fanita	11 32 35	6 28 30	6 55 55	6 53 31

CLASS 2.

Hope	11 31 16	7 30 15	7 58 59	7 58 59
Schemer	11 33 55	.. .. ..	.. .. ..	.. .. ..

CLASS 4.

Nora	11 32 24	.. .. ..	.. .. ..	.. .. ..
Brenda	11 33 46	7 46 05	8 12 29	8 11 40
Gannet	11 31 26	7 39 30	7 58 04	7 54 58
Dart	11 31 22	.. .. ..	.. .. ..	.. .. ..

CLASS 5.

Laura	11 58 57	.. .. ..	.. .. ..	.. .. ..

CLASS 6.

Fairy	11 37 00	5 46 00	6 09 00	6 09 00
Cruiser	11 36 56	5 56 00	6 19 04	6 16 46

CLASS 8.

Skibbereen	11 31 31	.. .. ..	8 18 00	.. .. ..

Fanita, Hope, Gannet and Fairy won the class pennants, and Gannet wins the Munroe prize in her class.

SAVANNAH Y. C., ANNUAL REGATTA.

ON May 15 the Savannah Y. C. sailed their annual regatta over the Thunderbolt course, from the club anchorage at Thunderbolt to red buoy off Cabbage Island spit and return, 20½ nautical miles, with a 15 mile course for third class, around a markboat off Tybee Cut. The entries were as follows:

FIRST CLASS—30FT. AND OVER.

Mamie	Schooner	R. M. Demere
Claude	Sharpie	T. P. Bond
Etta	Sloop	F. L. Kinsey
Skidaway	Sloop	J. K. Munnerlyn
Whitewing	Sloop	H. W. Palmer

SECOND CLASS—20FT. TO 30FT.

May	Sloop	T. P. Bond
Naomi	Sloop	F. C. Wylly
Jennie S.	Sloop	R. M. Demere
Zinga	Sloop	J. H. Deers
Zanoni	Sloop	J. W. Schley
Wave	Sloop	W. D. Johnson
Kate Curtis	Sloop	J. N. Johnson

THIRD CLASS—SHADBOATS AND BATEAUX.

Uncas	H. C. Claghorn
Sunny South	T. P. Bond

The allowance in the first and second classes was 2m. 3s. per foot length, and in the third class 1½m. The prizes were: first class, $50; second class $50 and $25; third class, $25. The steamer Ethel accompanied the yachts, carrying members and guests. The first class was started at 12 M., the second at 12:10, and the third at 12:15. Near the start the Naomi ran aground and capsized, later on the Jennie S. was struck by a flaw and filled, but was bailed out again, and the Whitewing grounded and lost her mast. The yachts finished as follows.

FIRST CLASS.

	Start.	Finish.	Corrected.
Claude	12 07 00	3 24 08	3 10 59
Mamie	12 01 22	3 26 23	3 25 01
Etta	12 05 44	3 37 16	3 12 03½
Skidaway	12 01 54	3 42 44	3 21 21½
White Wing	12 04 31	Did not finish.	

SECOND CLASS.

May	12 11 34	3 20 30	3 08 56
Jennie S.	12 12 35	3 27 37	3 12 49¼
Zinga	12 12 55	3 27 58	3 13 00
Zanoni	12 13 38	3 29 21	3 13 52¾
Wave	12 11 51	3 35 11	3 15 49
Kate Curtis	12 11 01	3 51 54	3 39 51½
Naomi	12 12 25	Did not finish.	

THIRD CLASS

Uncas	12 16 13	3 17 00	3 00 47
Sunny South	12 16 39	3 25 55	3 09 01

The Claude, winner in first class, is a Clapham sharpie 47×12ft. with Roslyn yawl rig. The annual cruise will start on June 15, from the club house, thence to St. Catherine's Island, returning on June 20.

THE JESSIE—IRIS MATCHES.

AFTER winning on Monday and Tuesday of last week, the tables were turned on Wednesday, and Jessie lost the third race of the series. At 12:39 P. M. the starting signal was given and Jessie crossed first with Iris 39s. astern. A south wind was blowing and the tide was nearly up, when they began to beat down in company, Iris getting rather the best of the work, and doing still better as the wind freshened. She led at buoy 8½, and held on all the way home, finishing at 4:59:18. Messrs. Schuyler and Ogden, the judge and timekeeper, sailed in the catamaran Duplex over most of the course. The times were:

	Start.	Finish.	Elapsed.	Corrected.
Iris	12 41 41	4 59 18	4 17 37	4 17 37
Jessie	12 41 02	5 06 31	4 25 29	4 25 59

Thus the Iris wins by 4m. 22s.

On Thursday the fourth race was started in a very light wind, at 12:26, but after three hours' drifting it was abandoned off Staten Island. The fourth and last race was sailed on Friday in half a gale from the west with a heavy squall thrown in. It was 12:25 when the starting signal was given, and both boats went over nearly together, the Jessie with all canvas set and Iris with a reef in. In the Bay the water was very rough and Iris behaved badly, throwing her hulls out of water and steering wildly. Jessie was well ahead and doing well under whole sails. Off Tompkinsville Iris gave up and made for shore. In the Narrows Jessie wound up a reef and headed for Buoy 8½, which she turned successfully at 2:48:19. On the way home a very heavy squall struck her, but she kept on her way, only letting up a little. The times were 3.29.12 elapsed, and 3.26.42 corrected. The race was a most severe one, and does great credit to the skillful sailing of Mr. Hughes. This ends the series, Jessie winning the purse of $500. It is too soon yet to condemn the Iris, as she is a new boat, and probably will require changes and alterations to get her speed out of her. On some occasions she showed great speed, and will be likely to make her mark yet as a fast boat. Jessie has long been known as a fast craft, and when the skill of her skipper is taken into account, it will require a very smart craft to beat them. It is interesting to compare the performances of the keel and centerboard, but they really have but little bearing on the question which has so long vexed sloop and cutter men; the conditions of single and double-hulled boats being so widely different.

GENESTA AND GALATEA.

BOTH of these cutters were with the fleet of the Royal Northern Y. C. on May 23, the spring cruise. The *Field* speaks of them as follows: "Among the cruisers lay Genesta and Galatea under their mainsails, and these added to the interest of the day. Genesta had shipped her racing spars somewhat longer than those she previously carried, and Galatea's rig was as heavy as any 90-tonner could well carry. By contrast to Vanduara, lying alongside, both cutters seemed quite oversparred; but the summer's racing will test whether or not the limit has been reached. * * * * * Galatea's new mainsail was not hauled out on the boom by a foot or two, and with her canvas hanging over her, she could not be showing to advantage. Genesta was taking a lead on her line. Under the circumstances no opinion could be formed. It seemed probable that with Galatea's mainsail in form, Genesta would be in want of her extra spread of cloth, and the additional weight given to her spars. Galatea looked uncommonly well, but the counters of both cutters are cut away rather fine to please the eye."

TOLEDO Y. C., MAY 30.

THIS club sailed a race on Decoration Day, in which six yachts sailed over a triangular course. The steamer Chief Justice Waite, with the judges, Messrs. A. P. Crane, M. H. Parmelee and J. W. Hepburn and a number of guests on board, was at Turtle Light at eleven A. M., and shortly after the signal was given, the Kate Graham went first over. The wind was light and kites were set, but before the first mark was reached a squall came up, causing all to take in kites, after which a fresh breeze continued. The Scud was first around the stakeboat, followed by Stella, Oberon, Kate Graham, Crescent and Osprey. On the second leg the wind fell to a calm, which was succeeded by a second squall, after which came a good breeze to the end. At the second mark Scud still led, with Oberon second, Kate Graham third, and Osprey, Stella and Crescent. This leg was the most exciting part of the race, the finish being very close, but Scud finally won. The summary is as follows:

	Start.	Finish.	Actual.	Corrected.
Scud	11 31 40	3 22 10	3 50 30	3 55 40
Oberon	11 29 10	3 26 15	3 57 05	3 59 03
Osprey	11 29 00	3 31 55	4 04 55	4 04 43
Kate Grahan	11 24 12	3 23 40	3 59 28	3 55 58
Stella	11 29 23	.. .. ..	.. .. ..	.. .. ..
Crescent	11 17 45	3 03 22	3 45 37	4 09 52

The times of the same boats in the race of last August, compared with the times last week, over the same course, are given below:

	Aug. 22. Corrected.	May 30. Corrected.	Difference.
Scud	3 39 00	3 55 40	00 16 40
Oberon	3 52 11	3 59 03	00 06 52
Kate Graham	4 27 31	4 04 43	00 12 48
Osprey	3 45 33	3 55 58	00 10 25
Stella	4 09 25	Not home.	
Crescent	4 05 20	4 09 52	00 04 32

ATLANTIC Y. C. ANNUAL REGATTA, JUNE 9.

THE entries for the annual regatta were this year specially interesting from the presence of several new boats, as well as from the fact that they were the first races of a season that promises to be particularly brilliant, and several of the yachts that are supposed to be casting envious eyes at the honor of defending the Cup, were to make their first appearance this season. Twenty-seven yachts were entered as follows, the length being on waterline:

Class A, schooners 72ft. and over—Republic (keel), 94ft., Wright Duryea; Grayling, 81ft., L. A. Fish; Speranza (keel), 76ft., H. W. Collender; Clytie, 78ft. 3in., A. P. Stokes.

Class B, schooners under 72ft.—Haze, 60ft., Hogan Bros.; Agnes, 53ft. 11in., H. H. Hogins; Vidette, 51ft., E. A. Williams; Leona, 46ft., E. C. Sterling.

Class C, Cabin Sloops, 55ft. and over.—Gracie, 69ft. 9in., J. P. Earle; Mischief, 61ft., J. R. Busk; Thetis, 64ft., Henry Bryant; Thistle, 50ft. 7in., Wm. Ziegler; Athlon, 51ft. 2in., J. C. Barron.

Class D, Cabin Sloops, 43ft. and under 55ft.—Annie, 46ft. 7in., J. Wilson; Daphne, 46ft., J. R. Maxwell; Enterprise (keel) 43ft. 9in., G. B. Moffat; Fanita, 44ft. George J. Gould; Rover, 41ft. 8in., F. C. Swan; Stella, 41ft. 11in., J. C. Mersereau.

Class E, Cabin Sloops, 35ft. and under 43ft.—Crocodile, 39ft., J. G. Prague; Phantom, 38ft., L. A. Smith; Amelia, 38ft. 1in., Stephen Loines.

Class F., Cabin Sloops 30ft. and under 35ft.—Romeyn, 32ft. 10in., W. R. Vermilyea; Nomad, 32ft., H. C. Wintringham; Ilderan, 29ft., W. Southwick; Tourist, Louise.

Republic is practically a new boat, having been changed from centerboard to keel and also lengthened 15ft. amidships since last season, and with new outfit she proposes to hunt for a place this season. Speranza was launched last summer, and has cruised a good deal since but never has raced. Vidette is the new centerboard-lead keel sharpie whose test of stability we lately described. She is 59ft. over all, 51ft. waterline, 13ft. 5in. beam, 4ft. 5in. draft, and in addition to her centerboard has a 4½-ton lead keel. She is schooner-rigged, and throughout the race carried no topsails. Mischief comes out this season with wings slightly clipped, 3ft. off her hoist and 4 tons out of her hold, and those who have watched her successful career since 1879 are anxious to see the effect of the new changes. The "dark horse" of last season and this, the new and much talked-of Thetis, though launched early last season, had never raced or given any public demonstration of the qualities her friends claimed for her; but now in improved trim, she too proposes to have a shy in the trial races, and to that end arrived in New York on Saturday last and entered for the Atlantic race. Thetis is in all respects a compromise between sloop and cutter. Her dimensions are: Over all 70ft., waterline 64ft., beam 19ft., draft 8ft. (with board 18ft.), lead keel 15 tons. As at the anchor before the race she showed a high, well-rounded side, fair sheer, and a rather handsome overhang, though somewhat short for her other features. With a housing topmast she has a heavy standing bowsprit painted black to the end, and one big jib laced to a club. Thistle has been twice altered within two years, once lengthened and once deepened, but the value of the changes has not yet been tested in racing. Athlon is little altered from last year, but has set up her forestay again, as when she first came out; in fact, a trip through the fleet at anchor any day off Bay Ridge, discloses so many with forestays coming down on bowsprit, as well as the more adventurous ones who lead direct to stem head, that it looks as though ere long the big jib must go from its last stronghold. Daphne, Mr. Maxwell's new sloop, has done so well in the two preliminary sails, that much was expected of her on Tuesday, and her friends were not disappointed. She is one of the most shapely boats that Mr. Mumm has yet turned out, and promises to be among the first and a worthy rival to Fanita, so long head of her class. Phantom has also been rebuilt this season, and comes out with a real "Buttercup stem," a clipper bow bending fairly into her bowsprit, and a stern to match. Ilderan, though an old boat, has also succumbed to the rage for innovation, and apparently with good results. Her side was raised 12in. last winter, and no doubt she felt the value of it down the bay on Tuesday.

The courses for A, B, C, and D were from the Basin around a stakeboat of the Hook near buoy No. 8, thence leaving Scotland and Sandy Hook lightships to port and home, keeping to westward of the Romer Beacon. Class E went over the same course, except that they only rounded Scotland and not the Hook Lightship. The other classes rounded the stakeboat off buoy 8 and returned. Beside the Livingston memorial prize for the first sloop home in class D, without allowance, prizes were offered in each class, a first prize for two starters, second prize if four started, and a third if seven started.

The young blizzard reported from the northwest on Sunday came on Monday night in the shape of half a gale from that quarter with a quick fall in the thermometer, and on Tuesday morning the weather was more suggestive of October than June, cold and windy. A sea was tumbling the fleet about at their moorings and sending spray over the tug Luckenback as she lay at Bay Ridge with the judges, Messrs. W. W. Beebe and R. S. Church, on board. Near by was the iron steamer Sirius, with the members and guests of the club.

Reefs were tying in and topmasts coming down on a number of the yachts in expectation of a lively dusting outside. At 10:54 the first gun was fired from the bluff, and at 10:59 the start was signaled. Thetis came down steaming, heeling down rail under, with one reef in, sending up topsail just on the line. Her new sails were drawing finely, but the club on her jib savored more of Fulton Market slip than of Bay Ridge. Republic came next, followed by Mischief with two reefs in, then Agnes with topmasts housed and single reef in mainsail, Grayling, with close-reefed foresail, Vidette, Leona, Haze, Athlon, Romeyn, close-reefed with bobbed jib, Daphne with two reefs, no topmast and big jib; Nomad with three reefs, Fanita with two, Enterprise, Ilderan and Rover, each with staysails set and topmasts housed; Crocodile and Phantom with two reefs, and last of all Gracie, detained for some of her crew, and badly handicapped. Both Crocodile and Phantom were also handicapped. The other entries did not start. All the boats were provided with numbers in the mainsails by which they were easily distinguished at some distance. It would be an improvement in numbering if the numbers 3 or 5 were omitted, as they are always confusing from their resemblance. By the time that Gracie had crossed and the Luckenback started in shore, the fleet were well in the Narrows, and while at the start any canvas was enough, now reefs were coming out and kites going up. The tide was ebbing and with a good breeze they ran for the mark off the Hook, Fanita, Mischief and Thetis setting spinnakers to port when once around, while the schooners winged out. Thetis carried an immense spinnaker, alongside of which Mischief's looked a mere rag; but she could not shake off the iron boat. The times at the Hook were:

Grayling	12 00 50	Vidette	12 13 45
Republic	12 02 25	Daphne	12 15 22
Thetis	12 05 00	Leona	12 16 55
Mischief	12 05 16	Gracie	12 17 26
Haze	12 05 20	Fanita	12 17 46
Athlon	12 08 43	Enterprise	12 18 42
Agnes	12 08 44	Rover	12 22 40

The first four were soon well ahead bound for Scotland Light. Athlon was pegging away steadily, but gaining nothing, the small schooners were having a race of their own, and Gracie was making up much of her loss. Daphne, deep and with lead keel, was still going easily under lower sails and topsail, having no spinnaker, and easily eluding Fanita, in spite of the latter's spinnaker. Meanwhile the Class F boats had turned and started home, Ilderan losing her topmast. The times at Scotland were:

Grayling	12 41 16	Agnes	12 49 30
Republic	12 42 16	Haze	12 49 30
Thetis	12 42 32	Gracie	12 52 30
Mischief	12 42 36	Daphne	12 56 00
Athlon	12 46 28	Fanita	12 57 22

Luffing to the wind all reached for the Hook lightship, with booms on the starboard quarter. Mischief set a big balloon jibtopsail, while Thetis showed only jib and jibtopsail. Republic sent aloft a big maintopmast staysail, but still Grayling led her. The times at the Sandy Hook lightship were:

Grayling	1 02 33	Haze	1 14 40
Republic	1 04 55	Gracie	1 15 32
Mischief	1 07 22	Daphne	1 20 16
Thetis	1 07 43	Fanita	1 21 42
Athlon	1 14 13	Vidette	1 22 24
Agnes	1 14 25	Leona	1 24 26

Grayling came by the wind on port tack and was quickly away. Republic followed, and was hardly around before her jibboom was off at the cap and her topmast threatened to follow, but the latter was saved and the wreck soon cleared away. Mischief settled balloon jib just above the mark and doused topsail, being handled all through the race a little tenderly. She still carried one reef in her mainsail. Thetis had her rail well down, but still clung to her topsail for some time. Both came in on the main sheet close together, Mischief's crew working on her quarter, while the men of the Thetis walked away forward with theirs. By this time the day was warm and pleasant for the spectators, with a good breeze for the yachts. Athlon rounded with no topsail, Haze and Agnes were almost abreast, Agnes to windward. At 1:10 Grayling went off on starboard tack, and at 1:14 Thetis followed, still holding to her topsail, and one minute later Mischief came about with topmast housed. Gracie rounded with topmast set, but Daphne had housed her topmast. Vidette was doing well and Enterprise was carrying sail nobly, as she did all day, standing up under topsail when others had all they wanted with topmasts struck.

At 1:35 both Thetis and Mischief were on starboard tack off near the Scotland, and running in for the beach, where Grayling was already working up. A very pretty fight was going on between the pair, and further astern Gracie was hurrying for a place with them, while Daphne and Fanita had a lively duel astern. The tide was running swiftly in and helped all to windward. Republic was virtually out of the race but still kept on. The wind held strong for the beat up the Narrows, and positions were not much changed. By the time that the Luckenback was at the anchorage at Bay Ridge, Ilderan had been in some minutes, and Crocodile was near the line. Some time after the big ones came up one by one, Grayling first, looking very handsome under full working canvas; then Thetis along with Mischief close astern and within her time. The times in the different classes were as follows:

	Start.	Finish.	Actual.	Corrected.
Republic	11 01 15	4 18 22	5 07 07	5 07 07
Grayling	11 02 37	3 36 04	4 33 27	4 30 45
CLASS B.				
Haze	11 03 32	4 53 14	5 49 42	5 49 42
Agnes	11 02 35	4 33 18	5 30 43	5 21 50
Vidette	11 03 02	5 26 03	6 33 01	6 22 48
Leona	11 03 16	5 32 00	6 18 44	5 58 50
CLASS C.				
Gracie	11 04 00	3 52 47	4 48 47	4 48 47
Thetis	11 01 00	3 41 28	4 40 28	4 36 15
Mischief	11 02 10	3 45 57	4 43 47	4 34 26
Athlon	11 04 00	4 19 46	5 15 44	4 57 38
CLASS D.				
Daphne	11 06 24	4 25 31	5 18 59	5 18 59
Enterprise	11 08 00	4 34 31	5 26 51	5 25 14
Fanita	11 07 20	4 31 46	5 24 39	5 22 48
Rover	11 08 40	4 51 25	5 45 59	5 43 37
CLASS E.				
Crocodile	11 09 00	3 31 30	4 24 18	4 24 18
Phantom	11 09 00	3 56 21	4 48 47	4 42 39
CLASS F.				
Nomad	11 07 00	3 26 25	3 19 25	3 19 25
Romeyn	11 05 40	3 49 44	3 44 04	3 37 04
Ilderan	11 08 36	3 49 39	3 39 13	3 17 31

Grayling wins in Class A, Agnes in Class B, Mischief in Class C, Daphne in Class D, taking the Livingston Memorial, Crocodile in Class E, and Ilderan in Class F.

Why the judges' boat at a yacht race always keeps as far from the competing yachts as the course will let her, is a problem never solved, and the course of the Luckenback was no exception. Waiting at Bay Ridge to time three belated yachts at the start, the fleet was hopelessly ahead when she started, and little was seen of the race out on the turning of the Hook mark. Here a wait was made again for the last boat, and the interesting fight of the big ones was again lost. On the run home was a hot battle to windward between the cracks, Mischief, Thetis, Gracie, Fanita and Daphne, with a journey down the Bay to see, but the judges' boat left it all to run home and time the two boats in Class E, afterward waiting an hour for the fleet to arrive. By this course nothing was seen of the small boats but the start, and at the same time the best of the race was lost to those on board. Had a man been at Bay Ridge to time the last boats off and the first in, the tug could have gone with the fleet. The times at the Hook should also have been taken by the men in the markboat, instead of being guessed at from the steamer. Coming home the tug could have kept company with the principal boats all the way and the spectators would have seen a fine battle to windward.

QUAKER CITY Y. C. REGATTA, JUNE 8.

THE race was over the regatta course, the following yachts starting at 11:10:30 A. M.: First Class, over 40ft., Venitzia, Sunbeam, Minerva. Second Class, under 40ft., Consort, White Wing, Florigar, Julia, Fountain, Rosetta; Vim in same class did not start. Third Class, 35ft. and under, Nahma, Thomas, Tillyer; Ariel, Douglass, same class, out. Fourth Class, 30ft. and under, Elwell went over the course alone; Pratt, Pierson, Minerva, Esther, Clee Brothers, same class, out. Fifth Class, Au Revoir, Richmond, Spratt; J. Galliger, F. Galliger, Skillon, Bianca, Pauline, same class, out. The wind was from the S. W., blowing hard and freshening. At the "Shoe" the Venitzia went to the fore, and had a walk over. The Sunbeam sprung her mastheadand went out of the race. At the same time the Thomas fouled the Spratt, the latter boat having a good lead in her class, and both retired from the contest. Reefing was now in order, save in the first class. When the Venitzia turned the lower buoy, some of the small fry were out of sight. The sea was very heavy, and they had a hard fight to reach the lower buoy.

The home stretch was against a strong ebb tide all the way and the big ones with kites spread fairly flew. It was the Venitzia's first race since joining the club, and she has made a splendid record. The White Wing, contrary to all expectations, got away with the Consort beating down, and gave the Minerva a close tussle for the buoy. In the run home the Consort set her spinnaker, a sail almost unknown on the Delaware, went up stream like a steamboat, and collaring the White Wing off the Monument went to the home buoy well arush. The Nahma with her low, wide sails, iron on keel, and long fantail, went through the sea like a big one, very much to the surprise of hired help and old shellbacks. Mr. Ferry sailed his own boat. So the trophy goes to Trenton, where other prizes will be likely to follow. It is but just to state the Nahma outlooked and outfooted the Thomas in a masterly manner before the latter boat went out of the race. In short she was a dead beat boat as soon as the boats were 'pon wind at the Shoe. Eight seconds won't do this time, and holds my argument good that every yacht owner, like Ferry, is or should be capable of handling their own yacht for prizes or in any emergency.

The Richmond did some splendid sailing, having fouled her buoy at the start, lost several minutes, and for a long time was last boat. Ex-Com. Hannigan, a late stayer, by the way, gamely held on, beating the Elwell, the smartest boat in her class (fourth), 4min. 13sec. to the

ower buoy. As these boats approached the home stake boat they came in almost together, with but 20sec. difference in favor of the Elwell, the larger boat. The An Revoir also meeting with a mishap, having carried away her rudder band, went over the course, and came home but 1min. 55sec. behind the Richmond, making it a good stand-up fight all around. The Bristol boat people certainly deserve great praise. The third class cabin yacht Stella (old name), that delighted to sail on her cabin top, capsized, and is now a receptacle for eels. She was not in the race, but one of the old stand-bys of the club. This, perhaps, will set some of our "sand draggers" to thinking. The regatta was a complete success, and the fastest time but one ever made over the course—really the fastest under the conditions of tide and wind. The Olga, built by Mr. Lowder, a second class cabin, though not in the race, went along comfortably with ladies sitting in the cockpit, and getting away with boats in her class. So much for low rigs and iron on keel.

	Start.	Chester Buoy.	Finish.	Elapsed.
FIRST CLASS CABIN.				
Venitzia	11 10 30	1 13 40	3 02 32	3 52 02
Sunbeam	11 10 30	Out of race.		
Minerva	11 10 30	1 23 50	3 23 05	4 12 35
SECOND CLASS CABIN.				
Consort	11 10 30	1 45 22	4 04 08	4 53 38
White Wing	11 10 30	1 37 25	Did not finish.	
THIRD CLASS CABIN.				
Nahma	11 10 30	1 51 45	4 25 19	5 14 19
Tillyer	11 10 30	Time not taken.		
Thomas	11 10 30	Ruled out.		
FOURTH CLASS OPEN.				
Elwell	11 10 30	2 01 23	4 34 18	5 23 48
FIFTH CLASS OPEN.				
Richmond	11 10 30	1 57 10	4 34 38	5 24 08
An Revoir	11 10 30	1 58 50	4 36 33	5 26 03
Spratt	11 10 30	Fouled by Thomas.		

The Commodore's Cup will be sailed for in July. R. G. W.

NEW JERSEY Y. C. REGATTA JUNE 9.

THE New Jersey Y. C. sailed their annual regatta on Tuesday, over the new courses from Bedloe's Island, that for class 1 being to westward of Robbins Reef buoy, thence around bouys 9, 16 and 13, and home by Robbins Reef, twenty miles; that for class A, B and C being around buoy 13, keeping west of Robbins Reef buoy on each leg, fifteen miles, and for class D around Fort Lafayette. The following yachts were entered:

Class 1.—Catamarans—Duplex, Longstreet and Ogden; Nemesis, Everson and Reed.

Class A.—Hattie, J. Curtin.

Class B —Charm, E. W. Ketcham; Meteor, E. Jeanneret; Lily R., T. H. Rogers; Dare Devil, W. H. Dilworth; Growler, J. Bell; Minnehaha, R. F. Rabe.

Class C.—Rambler, J. H. Shorne; George B. Deane, J. L. Dunbacher; Sophia Emma, C. E. Korf.

Class D.—Cate Cate, Fred Barr; Truant, C. & E. Zimber.

Before the start the Emily M. capsized, but her crew were picked up by a tug. All were reefed down as the wind blew heavily from northwest. The steamer Blackbird accompanied the yachts with guests and judges on board, the usual delay occurring, so that the fleet was far in advance when the steamer started. At 11:10 the signal was given, and the boats crossed the line in the following order:

Cate Cate	11 13 30	Truant	11 19 30
Mistake	11 14 00	Hattie	11 19 35
G. B. Deane	11 16 10	Lily R	11 19 45
Duplex	11 17 05	Dare Devil	11 20 00
Sophia Emma	11 18 00	Growler	11 20 00
Meteor	11 18 10	Rambler	11 20 00
Charm	11 18 25	Nemesis	11 20 00

Down the wind the pace was hot with Duplex ahead. Nemesis withdrew off Staten Island. The run was soon made to buoy 13 which was turned as follows,

Lily R	12 15 39	Dare Devil	12 19 30
Meteor	12 15 48	Hattie	12 20 30
Charm	12 16 50	Growler	12 21 29
Minnehaha	12 17 00	Rambler	12 21 32
G. B. Deane	12 18 20	Sophia Emma	12 24 33

The Duplex was not timed, as she went off alone to Buoy 9, nor were the little ones at Fort Lafayette. Home lay dead to windward, and all started for it with more wind than they wanted. Lily R. soon parted her bobstay, but rigged a jury one She also made an error in the course, and went out of her way to round Fort Lafayette, as was formerly the custom, thus losing ground. As the flood tide met the wind howling out of the Narrows a lively sea was kicked up, but the little boats went through it safely. Lily R., in spite of her mishap, was far ahead, and won easily. The times were as below:

	Start.	Finish.	Elapsed.	Corrected
CLASS 1—CATAMARANS.				
Duplex	11 17 05	3 08 30	3 46 25	3 46 25
Nemesis	11 25 30	Withdrew.		
CLASS A—CABIN BOATS.				
Hattie	11 19 35	3 03 36	3 43 51	3 43 51
CLASS B—OPEN BOATS.				
Lily R	11 19 45	2 02 35	2 43 00	2 41 22½
Growler	11 20 00	2 21 10	2 01 10	2 58 30
Dare Devil	11 20 00	2 20 22	3 10 22	3 07 37
Charm	11 18 25	Withdrew.		
Meteor	11 18 10	Withdrew.		
Minnehaha	11 14 00	Withdrew.		
CLASS C—OPEN BOATS.				
G B Deane	11 16 10	2 44 30	3 28 20	3 23 05
Sophia Emma	11 18 00	Withdrew.		
Rambler	11 20 00	Withdrew.		
CLASS D—OPEN BOATS.				
Cate Cate	11 13 30	1 46 00	2 32 30	2 32 30
Truant	11 19 30	2 07 45	2 48 15	2 46 17½

The winners were Duplex, Lily R, Geo. B. Deane and Cate Cate.

The judges were Thos. P. Rogers, Theophilus Butts and Geo. E. Gartland.

AMERICA.—The schooner America was hauled out last week at East Boston and her bottom planed off and recoppered, 3,173lbs. being used. Her present spars are as follows: Foremast 77ft. 6in., topmast 31ft., mainmast 79ft., topmast 33ft., foreboom 28ft., gaff 27ft., mainboom 66ft., gaff 28ft., bowsprit outboard 17ft., jibboom 18ft. Gen. Butler is still anxious to have America in the races, but no steps have yet been taken toward changing her rig.

COMMODORE BENNETT'S NEW STEAM YACHT.—We learn from *Le Yacht* that the new steel steam yacht Hassan, built at Delftshaven, on the Meuse, in Holland, for Commodore Bennett, N. Y. Y. C., was launched on May 16. After completion the Hassan will go by canal to Paris, which will be her headquarters. Her length is 98ft. 6in.; beam, 17ft., and draft, 4ft. She was designed by a French engineer, M. Récopé, for service on canals and river.

MIGNONETTE NO. 2.—Over a year ago we published the lines of a little keel sloop, the Mignonette, then building for Dr. E. G. Loring, by Wallin & Gorman, which boat her owner used all last season, and was so well pleased with her as to model that, desiring a larger boat, he sold her last fall and ordered from the same builders a larger yacht of very nearly the same model. This boat, modeled by Mr. Gorman, and also called Mignonette, was launched last week, and will be completed in a few days. Her dimensions are, length over all, 32ft. 6in.; waterline, 27ft.; beam, 9ft.; draft, 5ft. On her keel she has 4,600 pounds of iron, and inside the same weight of lead, moulded to 8ft. The keel is of Ohio white oak, sided 8in., moulded 12in., with stem sided 4½in. The oak frames are 2×4 at heels and 2×2¼ at heads double, and spaced 12in. Oak clamps and bilge clamps are all through-fastened. The deck is of Oregon pine 1½×1½in. The general arrangement is similar to the previous boat, but with more room. Forward is a berth for one man, with room for stove, etc. At the fore end of cabin is a large closet at each side, and the same aft, with large lockers between. The head room is 5ft. 6in. with a width of over 8ft. The cockpit is quite large with coaming set out on deck, and has ample locker room aft and on the sides. A 30-gallon water tank is placed in the run. The finish inside and out is pine and mahogany varnished, and the appearance is very neat and handsome. Forward is a handsome pair of locust bitts, keyed below deck. The rig is that of a cutter with housing topmast, and the outfit of sails, by Sawyer, will be very complete. The heel of the topmast is fitted with Brown's patent spring fid, a neat and simple contrivance easily fidded or tripped from deck. The dimensions of the spars are: Mast—Deck to hounds 27ft., 6in., head 4ft., diameter in partners 8½in., distance from stem 10ft.; topmast, above upper cap, 16ft.; topsail yard, 20ft.; bowsprit outboard, 15ft. 9in. Mainsail—Hoist 21ft. 6in., foot 26ft., head 20ft., leech 37ft. 6in. Staysail—Luff 23ft., foot 11ft. 6in. Jib—Luff 32ft., foot 16ft., leech 25ft.; storm jib, foot, 9ft. 6in. Like her predecessor, Mignonette will be largely used for cruising.

QUINCY Y. C.—The Quincy Y. C. opened their season on Saturday with a race for first, second and third classes, in which 13 yachts entered. The start was made at 3:07 for first class, 3:17 for second class, and 3:23 for third. The wind was so light that three yachts only finished. The entries and times were:

	Length.	Actual.	Corrected.
FIRST CLASS.			
Queen Mab, Burwell	22.08	Not taken.	
Davy Crockett, Putnam	21.08	Not taken.	
SECOND CLASS.			
Tartar, F. L. Dunne	19.11	3 08 38	2 41 40
Herald, G. F. Smith	20.09	3 26 15	3 00 07
Imogene, M. R. Wendell	19.00	Not taken.	
Wildfire, H. A. Keith	18.01	Not taken.	
Spray, H. M. Faxon	19.04	Not taken.	
Pet, J. McFarland	20.01	Not taken.	
Diadem, Lem Haywood	18.07	Not taken.	
Parole, H. T. Bowers	18.10	Not taken.	
THIRD CLASS.			
Flora Lee, H. D. Lincoln	17.03	2 45 30	2 19 57
Elsie, C. F. Hardwick	16.09	Not taken.	
Mirage, A. J. Clark	17.10	Not taken.	

The judges were Colonel George A. Ordway and ex-Commodore George W. Morton.

OSWEGO Y. C. DECORATION DAY CRUISE.—The third annual cruise of the Oswego Y. C. took place on May 30, from Oswego to Sodus Point, thirty miles distant. The champion pennant won last year by Katie Gray was the prize sailed for, to be held subject to challenge. The entries included seven yachts. Cricket, Com. John L. Mott; Katie Gray, Vice-Com. W. B. Phelps, Jr.; Ethel, L. C. Kenyon; Ella, N. S. Stone; Laura, Allen Ames; Fascination, T. C. Goble; Fannie T., Thos. Farrell. The tug Cornelia carried the regatta committee, Messrs. Fitch, Hart, Radcliffe and Gordon, and also the secretary, Mr. C. A. Worts. The day was rainy and unpleasant, but the fleet started at 8:45 A. M., being timed as they passed the lighthouse. Fascination was off first, with Fannie, Laura, Cricket, Ella, Katie Gray and Ethel in order. The wind rose, soon blowing heavily, and when two miles out the Cricket lost her topmast and sustained other damage, being taken in tow by the tug. When off Three-Mile Creek Ella broke her board and gave up, also taking a line from the Cornelia. By 10 A. M the rain ceased for the day. Ethel led the fleet in spite of the loss of her topsail, coming in ahead at Sodus Light in 3h. 05m. The corrected times were: Ethel, 3.05.32; Laura, 3.11.32; Katie Gray, 3.13.48; Fascination, 3.17.49. In the afternoon the pennant was presented to the Ethel. The fleet remained over night and returned next day.

LEAD KEELS IN GERMANY.—On May 3 the Hamburger Elb Sailing Regatta Association had their opening sail, which, notwithstanding the unfavorable weather, was well attended. Two new boats, Frieda and Elbe, attracted considerable attention. The latter *Wassersport* says: "The Elbe, a decked keelboat, was built by the owner, Mr. P. Hansen. Her dimensions are: Length 25ft., beam 3ft. and draft 4½ft. In the heavy weather encountered during the sail the boat found it hard work to keep up with the rest, notwithstanding the 1,300 kilos ballast and lead keel of 700 kilos. She proved 'cranky' to such a degree that her mainsail laid nearly flat on the water." On another page of the same paper we find the following: "The lead period has begun in Berlin. Lead, having been slyly substituted for the miscellaneous ironware which heretofore served as inside ballast, has been successfully applied to the keel of several yachts. Namenlos having made the change very quietly, as well as Roland and Fidelio some time ago, Gerda has followed the example set. She was hauled out at Kothe's on May 1, and will receive about 2,000lbs. of lead."

SEAWANHAKA C. Y. C. ANNUAL CRUISE —The following general order has been issued by Fleet Captain C. C. Deming, S.C.Y.C.: The club squadron will rendezvous at Larchmont, N. Y., on Friday, July 3, for the annual cruise. Captains are requested to communicate with the secretary of the club, Mr. L. F. d'Orémieulx, No. 67 Exchange Place, New York, as promptly as possible, stating whether they will be able to join the fleet or not. The date named has been selected in view of the annual race of the Larchmont Y. C., on July 4, in which yachts of this club are invited to take part. The Larchmont Y. C. has courteously tendered upon this occasion to the members of the Seawanhaka Corinthian Y. C. the hospitality of their club house and the use of their anchorage. Captains will meet on board the flagship on the evening of Friday, July 3, at 9:30 o'clock, unless otherwise notified by signal, and they are particularly requested to note the new rules for hoisting colors, yachting etiquette, etc., and the new signal code as amended to date in the club book for 1885.

GREENWICH Y. C.—This club, just organized at Greenwich, Conn., elected the following officers on June 2: Commodore, Arthur E. Kendle; Vice-Commodore, Chas. J. Hart; Secretary and Treasurer, Henry Asten; Executive Committee, J. M. Tracy and W. G. Foote. The club house is on Ferguson's Point. Com. Kendle has given a cup to be won three times before becoming the property of the winner.

ECLIPSE Y. C.—The race postponed to June 7 was not sailed, but goes over another week.

YONKERS Y. C. ANNUAL REGATTA, JUNE 8.—The weather on Monday was very severe for river sailing, and brough grief to many of the yachts of the Yonkers Y. C., as only five out of fourteen finished. The course was from the club house at Yonkers to a stakeboat off Eighty-sixth street, New York, and return, the small class rounding a mark at 155th street. The wind was strong from southwest and the ebb tide was running against it, coaming up quite a sea. The boats started at 10:48 A. M., Rambler crossing first, Comfort, Racket, Cutty Sark, I. D. V., Inez, Fanny, Kitty N., Carrie A., Spray, Jr., Mabel, Daisy and Uncle Jake. Three boats capsized and some others gave up the race. The times of two were taken at Eighty-sixth street as follows: Rambler, 1:50 P. M.; Comfort, 2:00 P. M. The Cutty Sark turned the upper mark at 12:35 P. M. The run home was easier, and was quickly made, the finish being as follows:

	Start.	Finish.	Elapsed
Rambler	10 48 12	2 42 30	3 54 18
Racket	10 51 06	3 21 10	4 30 04
Comfort	10 48 27	3 08 36	4 20 03
Cutty Sark	10 48 36	1 46 20	2 57 44
I. D. V.	10 52 11	2 12 00	3 18 49

The winners are: Class 2, Racket; Class 3, Rambler; Class 4, Comfort; Class 5, Cutty Sark.

BRUNHILDA.—Mr. J. J. Phelps's new schooner is now lying at New Haven preparing for a cruise of two or three years around the world. Besides her owner, a party of his classmates of Yale '83, Messrs. H. H. Strong, C. E. Halsey, K. Mitchell, T. Hilliard and A. E. Simington will accompany him. The route laid out is first to England, then via Suez to India and China, San Francisco, and Cape Horn to New York.

DR. WINSLOW'S SLOOP.—The yacht now building for Dr. Winslow of Pittsburgh, by Williams, of Boston, is not a cat but a sloop. She is 24ft. over all, 20ft. waterline, 7ft. beam on deck, 6ft. 3in. beam at loadline, and 4ft. 3in. draft, with 1½ tons on keel. Her cabin will be fitted for four persons, with all appliances for cruising and living on board. She will be used along the coast from Boston to Mt. Desert.

BAYADERE.—Mr. Forbes's new cutter was launched on May 16 at the Culzean Works, Scotland, and towed up the Clyde without her keel. She was shipped on an Allan steamer and arrived in Boston last week. She is now on Lawley's ways, where her 21-ton keel will be put on. Her length on waterline is 45ft. and beam 10ft.

YALE Y. C.—On June 3 this club held their opening sail to Brantford Point and return, the yachts Starlight, Com. Van Buren; Outvie, Vice-Com. Jennings; Endeavor, Mr. Newberry; Vivian, Mr. Phelps; Clover, Wild Bird, Fearless, Avenger, Hylas and Charm, all taking part. A spring regatta will be sailed soon.

DORCHESTER Y. C.—At the meeting held on June 6 the treasurer reported a cash balance of $892.73. The clause in the sailing rules relating to measurement was amended by the insertion of the word "aft," so that it now reads "waterline plus 1-5 overhang aft," thus leaving the overhang of stem unrestricted.

THE NEW CRAMP STEAMER.—The steam yacht now building by Cramp & Sons, builders of the Corsair, Stranger and Atalanta, is 152ft. on waterline. Her cylinders will be 17, 24 and 40in. by 22in. stroke, and boiler 13ft. 6in. diameter, of 1⅛in. steel.

RECEPTION OF THE BARTHOLDI STATUE.—The American Committee have extended to the New York and American Yacht Clubs an invitation to take part in escorting the steamer Isere up the bay on her arrival with the statue this week.

TORONTO SAILING CLUB.—The opening of this club will take place on June 20 at 4 P. M. The dates set for the spring races are June 13, 27 and July 4. A cup has been presented by Vice-Com. Macrae.

PURITAN.—This sloop will be delivered to her owners this week, and will make a trial trip at once. Her first race will be on June 30, Eastern Y. C. regatta, and she will probably be here for the trial race in July.

NEW CATBOAT.—Burgess Bros. are now building a catboat for General Paine from designs by Mr. Edward Burgess. She is 22ft. over all, 18ft. waterline, 7ft. beam, and has 2,900lbs of lead on her keel.

WINTHROP SWEEPSTAKES RACE.—Entries for this race close on Friday at noon, and none will be received later. The start will be on Saturday, at 11 A. M., rain or shine. Sails and ballast are unlimited.

CAROLINA Y. C.—The club mentioned in FOREST AND STREAM of May 31 as the South Carolina Y. C. is the Carolina Y. C. of Wilmington, N. C.

CARMELITA.—It is reported from Rio that the schooner Carmelita which left there April 26, had put back with rudder damaged.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

CHATHAM.—Your fish is a scale carp.

O. O. P.—Norwich, Conn.—A tri-colored dog is black, white and tan.

H. R., Pittsburgh, Pa., wants to know whether any shooting or angling club in the Eastern States has ever had more than sixty members present at an encampment.

R. Philadelphia, Pa.—My five months old setter is bow-legged. Can I do anything for it? Ans. Unless it is a malformation he may outgrow it. Give him plenty of exercise and a liberal allowance of food.

H. D. T., Columbus, Kan.—One of your birds is a sora rail (*Porzana carolina*), and the other is the marshtern (*Hydrochelidon lariformis*), a species which is abundant in many localities over the western plains. It belongs to the group of birds called sea swallows here on the coast.

AMATEUR, Paterson, N. J.—Could you inform me what kind of bait chub may be caught on this time of the year? Also will they rise to a fly? Ans. All fish that by any stretch of name might be called chub can be caught now. The chub (*Semotilus*) takes the fly, but if you want bait you had better get a minnow net and drag it for them.

KANUCK.—A friend and myself are about to make a canoe cruise on the St. Francis River, of Lower Canada, and we would like information on the following points: 1. What flies to use for trout and bass during the last of June and July? 2. Is there enough shooting during these two months to pay for carrying a gun? 3. Is there a custom house fee on guns going over the border? Please give full information on this point. Ans. 1. For trout take Montreal, coachman, queen of the water, grizzly king, Abbey, Oak and some hackles. For bass, cheney, red ibis, oriole, Henshall, jungle cock and Alexandra. 2. No, game is out of season. 2. You will have to leave a deposit with the customs officers.

JUST OUT!

THE ANGLER'S GUIDE BOOK

TO THE

Fishing Waters of the United States and Canada.

COMPILED AND EDITED BY WM. C. HARRIS.

12 mo., 288 pages. Handsomely bound in cloth and gold. Price, postpaid, $1.00.

In collecting the material for this Guide Book, 17,827 special communications have been received, and every available, accredited authority consulted and "boiled down." The result is before the reader in form of 2,105 center points, from whence over 7,000 angling waters are more or less accessible. Of these the following essential data are given:

1—How they are reached. 2—Distance from nearest point by rail, road, or other public transportation routes. 3—The species of fish therein. 4—The fishes that are most abundant. 5—The best months for fishing. 6.—Local baits used. 7—Methods of local anglers. 8—Hotel accommodations and charges, also those of private boarding houses. 9—The favorite grounds, when known, of local anglers. 10—Cost of guides, boats and bait. 11.—Where salt water exists, the best tide to fish in. 12—Cost of permits when required.

By an arrangement with Mr. Harris, the editor and compiler of the Guide Book, we have been assigned the retail agency of this publication for the city of New York.

HINDS' BLACK-FLY CREAM,

For Repelling
Flies, Mosquitoes, Midges and other Insects, and protecting the Skin from Sunburn, Irritation and Infection.

No Tar. No Stain.

GLENS FALLS, N. Y., June 15, 1884.
Mr. A. S. Hinds, Portland, Me.:
DEAR SIR—I have not sooner acknowledged the receipt of box of "Black-Fly Cream," as I desired to first test it; this I have now done on two fishing trips where I found the Mosquitoes, Black Flies, Punkies and Moose or Deer Flies in great abundance. Although all these pests swarmed about me, I found the *Cream a perfect preventive* against their bites when it was applied to face, hands, ears and neck. For many years I have sought after *the* insect repellent, and have tried all manner of compounds, but yours is the most thorough, at the same time cleanly and not unagreeable.
Yours truly, A. NELSON CHENEY.

Price. 25 Cents, Postpaid.
SOLD BY DEALERS IN SPORTING GOODS.

"Repellene."

An infallible preventive of the attacks of Mosquitoes, Black Flies, Gnats and all other insects. Neat, clean and easily applied. Contains NO TAR, will not *stain* nor *injure* the skin, easily washed off, may be carried without danger of leaking or spilling. Price 25 cents per box. Agents—T. J. Conroy, 65 Fulton st., N.Y. Abbey & Imbrie, 18 Vesey st., N. Y.

JUMBOLENE

(Trade Mark Registered.)

Black Bass Four-Multiplying Reel.

Designed and made expressly for the "Standard Henshall" Black Bass Rod, which has the reel above the hand. This Reel has our new Lever Drag (patent applied for), as shown in the engraving, by which the line can be stopped when casting at any point in an instant, simply by the pressure of the thumb. And also when the fish is hooked the tension can be regulated by the thumb from a free running to a light drag, or a heavy drag to a complete stop. This Reel also has an Adjustable Drag and Adjustable Click. It is made of the very best of German Silver, has steel gears and steel pivots throughout; is handsome, substantial and well made in every way. This Reel is warranted just as represented, and if not satisfactory can be returned and money will be refunded. Price 15.00.

OUR HEXAGONAL SPLIT BAMBOO

"Standard Henshall" Black Bass Rod,

Which has the endorsement of Dr. Henshall, and from the large number of orders received this season, proves it to be the black bass anglers' favorite. Length 8ft. 3 3-10in.; weight 8oz.

Hornbeam Rods

A SPECIALTY.

W. HUNTINGTON,
WILTON, CONN.,

Makes a specialty of the manufacture of FINE HAND-MADE RODS of Hornbeam for fly fishing. Every fly-fisher should have one of these rods, for whatever preference he may have these are the only thoroughly reliable rods, secure against breakage and capable of real hard usage. With one of these rods a sportsman may venture into the woods for a season and take no other rod, and be fairly sure of returning with it in a serviceable condition. As made from wood of my own cutting and seasoning, they are powerful, easy in action and full of endurance. For circular send to WALLACE HUNTINGTON as above.

3-Piece Fly Rod, Brass Click Reel,

100ft. Linen Trout Line, 6 Flies, 6 Hooks to gut and Leader, complete, by express, $4.50; by mail, postpaid, $5.00. 3 Sample Flies, by mail, 25 cts. CANOE HANDLING.

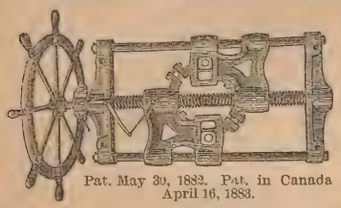
By C. B. VAUX ("DOT").

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners; and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.



Yachting Goods.

"FOREST AND STREAM SERIES."

DEER HUNTING.

BY JUDGE JOHN DEAN CATON.

BY and by it will be time to hunt antelope and deer. It is always time to read about them. Judge Caton's book on the antelope, elk, deer, moose and caribou of America discusses in a readable way the life history of these animals and the methods of their capture. It is the work of an enthusiastic sportsman who has nad a wide experience and has devoted the leisure of years to studying these interesting game animals. The volume is very fully illustrated, and is a perfect storehouse of information and entertainment. The first edition was sold by the Boston publishers at $4. Price $2.50.

WOODCRAFT.

BY "NESSMUK."

A COMPACT pocket handbook of condensed, boiled-down, concise, clear, comprehensive, sensible, practical camp gumption. "Nessmuk" has been "in the woods" in Michigan, New York, Pennsylvania, and South America, and this is a book for outers, wherever they kindle their camp-fire. The author believes in "smoothing it." He has learned how; now he tells others. It is much easier to learn from "Nessmuk" than from Dame Experience. We should not be surprised if "Woodcraft" completely revolutionized the methods of camping out. If you are going to the woods, read "Woodcraft" before you go. It may add to your trip a hundred fold. Price $1.00.

DOG TRAINING.

BY S. T. HAMMOND.

HE was a promising puppy, and when you turned him over to the breaker to be educated, you thought he was bound to make "the best dog in the world." And you'll not soon forget how disappointed and disgusted you were when the dog, the breaker and the big bill—all three turned up together, and you saw that the animal's spirit was broken and it would take a steam calliope to make him mind. Now, this could not have happened if you had been wise enough to buy a copy of Hammond's book, and in your odd leisure moments *train* the dog yourself instead of having him *broken* by some one else. We are selling edition after edition of this book, and it is revolutionizing the system of preparing dogs for work in the field. Price $1.00.

SHORE BIRDS.

A PAMPHLET for those who "gun" along the shore. Tells of: I. Haunts and Habits—Where the bay birds live and what they do at home. II. Range and Migration—Where they go to breed and where to spend the winter. III. A Morning Without the Birds—An episode of shore shooting. IV. Nomenclature—A list of our American species of *Limicolæ*, with a description of each species. V. Localities—Where to go to shoot them. VI. Blinds and Decoys—How to shoot them after you have reached the grounds. 45 pp., paper. Price 15 cents.

ANGLING TALKS.

BY GEORGE DAWSON.

AS a political writer of conceded power, Mr. Dawson wielded a trenchant pen; when he terned from the conflict of parties to the praise of the favorite pastime of "simple wise men," his essays, limpid as the crystal streams, are aglow with the soft summer sunlight and melodious with the songs of birds. When angling was the theme, he wrote from a full heart and in closest sympathy with the scenes and pursuits described. These "Talks" are brimful of manly, wholesome sentiment; there is in them all not a particle of cant. Their sincerity and overflowing spirit at once win the reader, and he perforce shares the author's enthusiasm. The effect is magical, like that of the mimic players in Xenophon's *Memorabilia:* he who reads, if he be an angler, must go a-fishing; and if he be not, straightway then must he become one.—*Extract from Publishers' Preface.* Cloth, price 50 cents.

CANOE "AURORA."

BY DR. C. A. NEIDÉ.

A CHARMINGLY written and always entertaining account of a canoe cruise from Lake George, New York, down the Ohio and Mississippi Rivers to the Gulf of Mexico, by the Secretary of the American Canoe Association. To read the cruise of the "Aurora" is the next best thing to having made it; and the reading is decidedly more pleasant than would have been participation in some of the misadventures related. 216 pp., cloth. Price $1.00.

EVERY ANGLER KNOWS

That one-half the pleasure of angling is in having **Fine, Light, Reliable Tackle.** We make a specialty of just this.

SPALDING'S "TRADE MARKED"

TRADE SPALDING MARK.

NEW MARLIN RIFLE.

.32 and .38-Caliber.

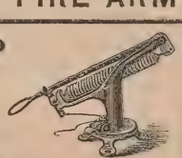
Made with Rifle Butt.

Penetration Nearly Double that of other .32 and .38-Caliber Repeaters.

PRICES:

24in., 7¼lbs., $22.00. 28in., 7½lbs., $24.00. Set Triggers, $5.00 extra.

One great objection to magazine rifles heretofore has been that if one or more of the cartridges contained in the magazine were slightly shorter than regular, the mechanism would become clogged and the arm refuse to work, frequently at a critical moment. *This trouble is entirely obviated in these new guns by a recent invention patented by us. Even if one or all of the cartridges in the magazine should be half an inch too short the gun will work perfectly.* Every one who ever used a repeating rifle will appreciate this improvement.



All MARLIN and BALLARD RIFLES have been largely Reduced in Price.

Send for full Catalogue. THE MARLIN FIRE ARMS CO., New Haven, Conn.

GLOBE FLIGHTS PERFECT TARGET.

The Globe Flight consists of a pasteboard disk, 5½ inches in diameter, the center cut out to admit a rubber ballon 2¼ inches in diameter, when inflated; 100 can be carried in a coat. There is no rubbish. They may be thrown from any C. P. Trap or by hand. They present a perfect mark, as the balloon is red in color and quickly attracts the eye. A single pellet of shot will puncture the balloon and it collapses instantly. Its use will obviate all causes for dispute. They are all perfect, and fly from the trap perfectly. They will not break unless hit. Every Flight guaranteed perfect, and full count. Packed in small packages, 500 each. For sale by all dealers in sporting goods. Price $20 per thousand. We will pay $2.50 per 1,000 cash for the Pasteboard and Tape in perfect condition at either of our offices.

Samples sent free. Send 4 cents for postage.

In the Stud.

Hillside Kennel.

Gordon Setter "ARGUS."

Argus is thoroughly trained for field work; has an excellent nose and great endurance. The following are his bench show winnings: 1st prize in Toronto, puppy class, 1880; 2d prize, London, 1881; 1st prize, Cleveland, also special for best Gordon setter exhibited, 1882, 1st prize, champion, Ottawa, 1883; 1st prize, champion, Chicago, 1883; 1st prize, Montreal, and special for best Gordon setter F, 1883; 1st, champion, London, also special for best Gordon setter dog in show, and special for best Gordon setter dog or bitch, 1883.

Argus has been awarded prizes under the following judges:—John Davidson, Major J. M. Taylor, Harry Malcolm, James Watson, W. J. Munson.

Stud Fee, $25.00.

STUD FOX-TERRIER

Champion Raby Tyrant,

(K.C.S.B. 11,179.)

Pupped October, 1880. Weight 16½ pounds.

Raby Tyrant is a white dog, with an even marked rich black and tan head. He is a thoroughly game and stylish terrier, possessing a beautifully shaped long punishing head, with perfect drop ears, small eye, rare neck and shoulders, deep chest, well ribbed and muscular quarters, short, straight legs, excellent feet, great bone and substance, with an exceptionally hard and dense coat.

Raby Tyrant is without doubt one of the most successful terriers of the present day. He has been exhibited 67 times, 33 different judges having adjudicated upon him, and has won 47. First 10 cups and specials; 12 second and 9 third prizes. His breeding is undeniable, combining as he does the choicest and most valuable blood that can be obtained. At the stud Raby Tyrant is proving himself eminently successful.

Fee, $15.00.

JOHN E. THAYER, Hillside Kennels, Lancaster, Mass.

Kalmia Kennels.

Address SAMUEL EDEN, Supt., Huntington, L. I.
